In our State of Oklahoma the flood-control dams and connected hydroelectric facilities already completed and the others now under construction will necessitate a total expenditure of over $250,000,000.

The construction of other dams and power facilities now planned and being planned will cost another quarter of a billion dollars, so that the total cost of controlling Oklahoma floods and developing a million kilowatts of electric power will be approximately one-half billion dollars.

Through this program hundreds of thousands of acres of our richest lands will be reclaimed and at the same time electric-power development will be doubled in Oklahoma.

When this power is developed it will be used and the result will be a duplication of industrial activity now found in the Tennessee Valley and in the Columbia River Basin in the Pacific Northwest.

Oklahoma's dream of industrialization is already coming true.

Pitfalls of a Fallacious Political-Economic Fiscal Policy

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28 (legislative day of Wednesday, March 8), 1950

Mr. FERGUSON. Mr. President, the term "expanding economy" is coming into more common use and acceptance in this country because it reflects that dynamic spirit which has made America great. The President played upon that acceptance when in his state of the Union message he painted the economic future of the United States for the next half century in terms of glowing optimism. An expanding economy, bringing with it greater well-being for all people, is a legitimate and greatly desired goal of all American activity. Sober thinking, however, impresses one with the undeniable fact that an expanding economy must rest on solid foundations of bedrock. Careless thinking, reckless practice and political optimism in the fields of economics and fiscal policy lead not to the desired goal but to ruin.

A correspondent has sent me an article from the Brooklyn Eagle which quotes two distinguished Americans, James A. Farley and Dr. Edward G. Nourse, on the pitfalls and fallacies of a political-economic fiscal policy which can offer only bogus security and prosperity. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEFFERNAN SAYS, "POLITICAL HAY AND A 10-CENT DOLLAR"

When at the recent hundred dollar a plate campaign fund reimbursement banquet the well-rounded periods of the grand cavalier of the Democratic action left wing got a meager Chautauqua salute, while the unterrified from Park Avenue to the Battery roared their applause at the mention of James A. Farley's name, some political writers jumped at conclusions. Mr. Farley was candidating himself for the Democratic gubernatorial nomination.

However, on Friday night at Syracuse, Mr. Farley made an address which had no apparent voter bait in it. There's a little classic the former Postmaster General wrote some time ago, about as long as a famous Gettysburg speech. It was on the making of a good politician. Summed up it is that he must first be a good American. "This problem," said Mr. Farley on Friday night, "is not a political issue. It is an American issue."

Here are a few paragraphs from Mr. Farley's address:

"In an address early in January, President Truman said that on the basis of the growth of this country over the past 50 years, we would in another 50 years have a national income of a trillion dollars. I have no doubt about his figures nor his expectations, but we can reach some frightening conclusions when we take the past 50 years as a measure of the increase of the next 50 years.

"One of those conclusions is that if we take the cost of government for 1900 and compare it with the cost of government for 1950 and then figure the same rate of increase for the next 50 years, our Government would cost $6,000,000,000,000, or six times as much as the whole national income. On that basis, we would also have working for the Federal Government alone 20,000,000 men and women. The lesson of these simple figures is that unless we find some way to reducing the cost of government it will soon grow so great as to consume not only everything that we all earn, but everything that we have all saved, and ultimately everything that we call property, which is owned by all of us."

Almost as an echo of Mr. Farley's warning is an article by Dr. Edward G. Nourse in the January Tax Review. There's room for one paragraph only:

"We shall find that this beautiful theory of 'managed inflation' means we get on a fractious horse and we run the grave risk that we can't control it. When the rate of inflation begins to accelerate and the people begin to discount the future value of the dollar, then we are going to be in for trouble. I was impressed recently in a meeting of top-drawer executives, that when they got to talking in rather loose terms about some of these elements of danger, they begin to talk about the possibility of a 10-cent dollar. When people even speak of this as a possibility, then we get a long way from the idea of a healthy stimulative effect of deficit financing and a mildly inflationary trend which would give us confidence that people and business will spend vigorously. The next step moves away from the stimulus and the incentive stage to the fear stage. This is the natural consequence if we pursue this bland policy—and I characterize it again as a political-economic fiscal policy—of deficits as a way of life, or inflation as the means to full employment."

The eminent economist who recently headed the President's Economic Council is not happy over the prospect of 10-cent dollars. Sympathetic as he was with the principle of making hay while the sun shines against the day of rain, he does not like the political hay that is sure to get all wet when comes the deluge.

Ireland's Day

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28 (legislative day of Wednesday, March 8), 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Boston Herald entitled "Ireland's Day" with which I am in complete agreement.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IRELAND'S DAY

Now that the tumult and shouting has died it is possible to give attention to some of the profounder thoughts expressed in connection with St. Patrick's Day. Thoughts, we said, but really there is only one thought on the minds of most Irishmen these days. And that is ending partition.

The only St. Patrick's Day card we received was from the Irish Legation in Washington. It showed a map of the Emerald Isle with 26 counties in green, and 6 in orange. "On this St. Patrick's Day," it urged, "pledge yourself to help undo the dismemberment of St. Patrick's Island."

The desire of the people of Ireland for national union is an entirely natural one. History, geography, cultural associations, and economics all point to island unity. And there can be no doubt that the action of the British Government in arbitrarily partitioning the northeastern Ulster Counties after World War I disregarded the expressed desire of the great majority of Irish people.

Remedying the evil now is not so simple, however. The people of Ulster, or a substantial part of them, now favor continuation of their British tie, but perhaps because they have been treated better than other Irish by the British. Shall their view prevail or shall the views of the Irish people as a whole? It is a question for a Solomon, and one suspects that only an Irish Solomon can safely render a verdict.

And yet the answer profoundly affects the rest of the world. In this cold war between West and East, it is vital that all on our side work together. Yet the bitterness engen-

UNIVERSITY OF MICHIGAN LIBRARIES

gered by the partition controversy is deeply affecting western unity. Ireland remains outside the United Nations because of Russian opposition to her membership. But she refused to join the Atlantic Pact in protest against partition. And harmony within the Council of Europe and OEEC is jeopardized by Anglo-Irish friction over the same issue. Conceivably, a united Ireland might even return to the British Commonwealth.

Perhaps Ireland makes too much of the dismemberment issue. But a restoration of good feeling between the two parts of Ireland and between the free Ireland and Britain is urgently necessary. Settlement of the partition feud appears to be an unavoidable prerequisite.

The democratic solution would be for Ireland to win a sufficient number of Ulstermen to its side in the antipartition fight to force the issue in the six counties themselves. And there is evidence that a concerted effort to this end is now in progress. In a recent speech, Irish Internal Affairs Minister Sean MacBride reiterated his government's guaranty of complete religious and democratic freedom for Protestant Ulstermen under a proposed united Ireland and offered to give them "any (other) reasonable safeguards that may be necessary to allay any fears, real or imaginary, that they may have."

In the past the industrial North has had an economic incentive to keep aloof from the poorer South, but the association with Socialist Britain also has its drawbacks and the tide of opinion may well be changing for this reason, too.

We join our good wishes to the hopes of the Irish orators. We have taken the pledge.

The Nation Needs the Navy

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an article written by Admiral Louis E. Denfeld, United States Navy, retired, former Chief of Naval Operations, entitled "The Nation Needs the Navy," appearing in Collier's of April 1, 1950.

In the light of the existing world conditions, the opinions of Admiral Denfeld, one of the great Americans of this era, a distinguished gentleman and an experienced officer, are worthy of the serious consideration by all Americans. His opinions should be of particular interest to all officials entrusted with responsibility for our national defense and to Members of the Congress.

The article follows:

THE NATION NEEDS THE NAVY

(By Admiral Louis E. Denfeld, former Chief of Naval Operations)

We can win a world war of the atomic bomb and the hydrogen bomb—yes; we may be able to prevent it—if we prepare for it now. I believe the country today neither realizes the problem nor is properly equipped to meet it. So far as the strength of our defense as a whole is concerned, the trend is downward. So far as the Navy is concerned, the intent of the Pentagon administration is apparently to reduce it to a minor role.

The Navy has been plagued by having its strategy dictated by nonprofessionals who are ignorant of the conduct of warfare in general, and by others who know nothing of the Navy or its use of air power.

The country's chief mental hazard just now is overreliance on one concept—the Air Force idea of intercontinental bombing, which is the most expensive way, and perhaps the most ineffective, to get explosives to an enemy's vitals. The closer you get to a target the cheaper and more efficient is the delivery of a weapon, whether from a bomber, a field piece, or a fleet. We need to operate from bases as near the enemy as possible, be they land airfields or the floating bases of the Navy's task forces.

Another mental hazard is too great reliance on the bomb itself. Suppose we do manage to transport concentrated explosives in $5,000,000 airplanes across the polar ice cap. We can't win a war by terror. The Russians die readily, but they don't scare readily. To defeat the Soviet Union, if it brings war on us, we shall have to overcome the will of the Russian people—to convince them that they would be better off in a world where our ideas prevail than in one ruled by the Kremlin philosophy. We shall not do that merely by obliterating their chief cities and killing their people.

Nor can we protect our friends in Europe solely by dropping bombs, no matter how awful their effect.

Look at the geography of our potential enemy. The Soviet Union occupies a great land mass. On the north the coastal waters are shallow, and closed by ice several months of the year. Most Russian ports and harbors are on enclosed bodies of water. The entrances to the Baltic and Black Seas are controlled by other nations. This explains the Russian drive to become self-sufficient and virtually independent of outside commerce.

Suppose we bomb her principal cities and her principal ports. That does not mean that she is crippled politically, industrially, or militarily. Under intercontinental bombing she can and will decentralize further, and expand into western Europe, all of Asia, and Africa, until she gets ready to move into the Western Hemisphere.

We cannot win a war on foreign soil by staying at home. A powerful Navy will be an effective partner of the Army and Air Force, carrying the war to the enemy and keeping it there. It can capture and hold bases near the enemy's homeland, and deliver the GI's without whom victory is never complete.

The Air Force was perfectly justified in developing the B–36, the plane on which it would rely for intercontinental bombing. As provided in the functions paper written after the meeting of the Joint Chiefs of Staff at Key West, each service should have the right to carry a new weapon up through the prototype stage. But I don't believe the Air Force was justified in investing $1,000,000,000 in the B–36 before that bomber had been thoroughly tested.

I was removed as Chief of Naval Operations last October for criticizing, among other things, this heavy-bomber thinking.

The original order for 100 B–36's, placed during the war and later reduced to 95, surely gave the Air Force enough latitude, and enough money. With the changes the total cost per plane exceeds $6,000,000. In January 1949, although we in the Navy understood that the Air Force intended to cut back the B–36 program, more were ordered without consultation with us. In April, about the time the Navy was denied its own new weapon, the flush-deck carrier, still more B–36's were ordered, and in accordance with what I conceived to be the spirit of unification, I did not protest when the matter came before the Joint Chiefs of Staff.

The whole B–36 program, as laid before Congress, will cost between $988,500,000 and $1,022,000,000 for 170 planes, or about $5,800,000 each. Even disregarding the doubt about intercontinental bombing, this is too large a piece of the country's military dollar to spend on a weapon that may be highly vulnerable.

The House Armed Services Committee asked for a test of the B–36 against the Navy's fast fighter, the Banshee. Secretary of Defense Louis Johnson, in testimony before the committee, made much of the fact that the Joint Chiefs of Staff, over my signature as senior officer, unanimously opposed the test. We did oppose a public test, but by all means the Banshee and every other available fast fighter should be tried against the B–36 in secret.

The Weapons Systems Evaluation Group is the proper agency for this test. This group is headed by Lt. Gen. John E. Hull, who was my Army commander when I was commander in chief in the Pacific, and in whom I have the highest confidence. To the extent its conclusions would not reveal information of value to a potential enemy, they should be made public.

The Air Force is tied to a single weapon, the airplane. The Navy is tied to a function, command of the sea, and its weapons change.

The Navy must be kept a flexible and mobile force, for a democracy such as ours is forced to fight at a time and place that a totalitarian enemy chooses, and we must be ready to wage any kind of war in any part of the world. Who knows where a war will start or at what time of year? Control of the seas means that we, not our enemies, dictate strategy.

An atomic war will bring changes both in defense and offense. We are being warned by scientists and others that if Russia attacks us she will attempt, by exploding hydrogen or atomic bombs, to cripple our great ports on both the Atlantic and Pacific coasts. Atomic bombs could be dropped from the air, discharged from a surface ship or submarine at sea, or smuggled in by merchant vessel. Loss of life would be tremendous, ships present would be rendered useless, and the harbor would be poisoned until fresh river water cleansed it.

But naval strategy takes account of this danger. No great concentration of warships can be permitted in any one port. As proved in the last war, our task forces can be fully supplied at sea. If our ports are actually choked by bombs, supplies can be sent out and received over beachheads, as they were in our invasion operations during World War II.

The answer to superbombs, which take their greatest toll against large cities and their masses of population, is dispersion and mobility; and the Navy provides dispersion and mobility at sea through its task forces.

MINES DEADLIER THAN BOMBS

As a matter of fact, mines constitute a greater danger to ports than do atomic bombs because they last longer. The Russians are known to be mine-minded. Whereas an American likes to blow something up while he can see it, a Russian is content to sow an area with death and let it flower when it will.

Army spokesmen have claimed that large-scale amphibious operations such as we knew in World War II are no longer possible because of the atomic bomb. This is a dangerous philosophy and can only mean rigidity of plan and abandonment of one of the great arts of warfare in which we lead. As Gen. Dwight D. Eisenhower said recently in answer to a question as to whether amphibious operation will be a part of warfare of the future, "We would be very foolish today to allow to die in our services the very great knowledge we have of that type of operation. We are ahead of everybody in amphibious operations. * * * It would be foolish of us to drop back. We should keep pushing ahead. I would be very much against letting that type of warfare be neglected."

Another way in which world war III will differ from previous conflicts is in the field of ideas. It has been said that a Russian idea captured certain Chinese and that those Chinese then captured China. Last time nazism and fascism had little appeal for our people. We know only too well that communism does appeal to some Americans. And one man possessed by an idea can destroy a city, by putting poison, germs, or gas in its water or its air.

The question is often asked: "Why do we need a powerful Navy when no potential enemy has sizable naval forces, and when we have British, French, and Dutch Navies between us and the enemy anyhow?" Even Gen. Omar N. Bradley has been touched by this thinking.

In his memorandum to Secretary Johnson opposing the Navy's proposed flush-deck carrier, he advanced this as one argument: "The U. S. S. R., except possibly in the field of submarine warfare, is not a naval power of consequence. Further, the U. S. S. R. is not dependent on maritime shipping to reach sources of raw materials. Thus, the vast preponderance of Allied naval power—which in addition to the United States Fleet, overwhelmingly the largest in the world, includes the second naval power, the British Empire, and the additional naval forces of other potential allies—will have but little opportunity to operate against Russian surface vessels and should be more than adequate to cope with the major naval threat, the hostile submarine."

We need a fleet not merely to match the Russian Navy, but to overcome it. We need the kind of Navy that can go after the Russians, not merely meet them halfway or off our own coasts. Furthermore, the uninformed seem to think that defeating an enemy's navy is an end in itself. They get this from the Army concept of forcing the surrender of an enemy's army, which means the war is won.

Our great fleet, to which General Bradley referred, is largely in moth balls. On the other hand, the U. S. S. R., besides maintaining great land armies and building a large air force, now has a navy greater than Germany's was in 1939, and is developing stronger naval forces suited to its particular geography. In terms of ships in commission, the Russian Navy has more cruisers and battleships than we have, and many times more submarines.

In combat ships, we outnumber Russia only in carriers and destroyers. As time goes on, unless the attrition of our Navy is stopped, the weight will shift further in the Soviets' favor.

It is common knowledge that the Russians have from 300 to 360 submarines, some of which are of the high-speed snorkel type that can breathe without surfacing. It is well to remember that the Germans, starting with not many more than 50 U-boats, were almost victorious in the early stages of two World Wars. The Russians can start with six or seven times that number.

Jane's Fighting Ships, the recognized private authority on the world's navies, puts the number of Russian submarines now in existence at 360 and reports that the U. S. S. R. hopes to have 1,000 by 1951. In addition, Russia is said to be completing two or three battleships with towers for firing radio-controlled aerial torpedoes. Our only battleship in commission is the *Missouri*—and that perhaps not for long.

Certainly if Russia sees our fleet deteriorating she will expedite her own shipbuilding in inverse ratio and bring the war to us on the sea, under the sea, and over the sea. And if the Russian high command can send against us anything like 1,000 submarines of the improved type that the Germans used at the end of World War II we must expect terrific losses, and shall need not only a big Navy but a big merchant fleet.

Russia realizes the importance of sea power to us. She knows that unless the United States Navy can keep command of those sea areas which must be used to support an overseas campaign all of our armed forces will remain in this country biting their nails and reading news of the overrunning of the homelands of our friends and allies.

In case of war, Russia will try by any means to deny us command of those sea areas, not by submarines alone. She will use her land-based air against our ships, both merchant and naval, in European and Asiatic waters. She may use guided missiles. In short, the idea advanced by critics of the Navy that we can go where we please when we please is dangerously fallacious. We're going to have to fight our way through, as always.

Only the Navy can provide immediate fighting power to protect our ships at sea, and it must be given the means and skill to do the job. It can have these only if it remains effective in peacetime, because a Navy is not something that can be built overnight.

It would be easier to guess the nature of a world war III if we knew when it was coming, because the concept of warfare changes so fast. If it should come in the not distant future, an educated guess is that the fighting at sea would be intense from the outset. While Russia's ground troops marched westward and her air force bombed the Allied strong points, the Russian navy would try to launch attacks on our coastal cities with atomic-headed missiles from submarines or surface ships.

MENACE TO WESTERN EUROPE

The bulk of her navy, operating under land-based air cover, might try to sweep around Europe from the Baltic and northern waters and to control the vital coastal areas which we would need in aiding the beleaguered countries of western Europe.

Both in land and sea strategy the Soviet commanders would take full advantage of the Communist fifth columns that exist in the industrial centers of Europe.

The encircling naval movement would threaten our lines of communication through the Mediterranean to the important oil sources in the Near East. They would also threaten Allied control of Africa. Whether or not through our neglect, the bulk of Asia has been communized. We should not repeat the error by letting the poison spread through Africa. Russian soldiers might not be far behind any successful Communist Party missionaries.

We have the job also of supporting our occupation troops, both in Europe and Japan. Their capture would make Bataan look like a minor disaster.

The Atlantic sea lanes would have to be kept open for strategic and critical materials—uranium, for example—as well as for munitions needed by our European allies. On this side of the ocean, we have treaty obligations with Latin America and Canada which mean defense of the whole Western Hemisphere. In the early stages this would fall primarily on the Navy. Our great ports must be kept open and coastal shipping must be protected. Venezuelan oil must not be cut off. There must be free access to and passage through the Panama Canal.

In the Pacific, Russia has about 70 submarines—as many as we shall have in operation in all oceans under the budget proposed for the fiscal year to begin next July 1. She is able to ship the parts over the Trans-Siberian Railroad and assemble them in Pacific ports.

The outlook for our defenses in the Pacific will grow gloomier if our naval forces are allowed to shrink further. The spread of communism through China assures Russia the ice-free ports on the Pacific which she has long coveted.

We must keep unbroken our present chain of defenses from Japan to Okinawa, the Philippines and Guam, backed up by the islands of the trust territories (the Marianas, Carolines, Marshalls, and Palaus) and Hawaii. Guam has been built into a powerful base and should be kept powerful.

The island of Formosa is a desirable link in the chain. I cannot forget that Jap planes from airfields in Formosa, and others ferrying through Formosa from Japan, caused us a lot of trouble in retaking the Philippines.

There is grave danger of communism spreading not only throughout the Asiatic mainland but to Indonesia. The Philippines must be defended against infiltration, or direct attack by airborne landings. We must keep naval bases and airfields in those areas, and enough men, ships, and planes to strike an immediate blow anywhere in the far Pacific. The lessons of Pearl Harbor and Guam, the capture of our troops in the Philippines, and the long, hard fight back across the Pacific must not be forgotten. This time our outposts are even closer to the Asiatic mainland—in Japan—and supply lines from the United States would be even longer.

Army and Air Force spokesmen are fond of saying there will be no island-hopping in the next war, and that therefore the Navy's emphasis on its aviation needs is overdone. But if we do not keep up our guard in the far Pacific we may have to hop islands all over again someday. Let's not get "caught in the bight" a second time.

The northern end of our defense chain rests on our bases in the Aleutians and Alaska, and a weak anchor it is. On a clear day the Siberian mainland can be seen from a hill on the Alaskan side, 55 statute miles away; indeed an American island in the Bering Strait is less than 3 miles from one owned by Russia. Our country is belatedly coming to realize the danger there.

In the Pacific Northwest, needless alarm was created by Air Force reference to the relative vulnerability of that section in explaining the transfer of certain production from Seattle to Kansas. Russia's copies of the B–29 doubtless can reach Puget Sound, but many other sections of the country are equally vulnerable. Indeed, no part of the country is really safe.

Greenland, whose strategic value we have long overlooked, offers a stepping stone to the United States almost as convenient as Alaska. It is an easy jump from the Soviet air and naval bases in Franz Josef Land and from Spitsbergen, where Russia has a suspiciously large number of "miners" behind a local iron curtain.

Peary Land, the extreme northern part of Greenland, has snow-free areas usable for landing fields. Even the névé of central Greenland will support planes, troops, and mechanized units. It is certain that if we do not use it the Russians will.

SOVIET AIR POWER IN ARCTIC

The Russians are an arctic people, much more skilled than we at polar operations. They have ringed the Arctic Ocean with airfields from which to launch attacks on us in case of war. They have about 60 arctic research establishments comparable to small American colleges. During the warmer months they can now go by ship from Archangel to Siberia via the Arctic Ocean. We are prone to think of that ocean as impassable, but a powerful ice breaker such as the Russians are known to possess could plow right across it, making way for a convoy.

Even now our largest ships cannot go through the Panama Canal, and if it should be closed by a bomb the route around the Horn would assume great importance. To protect that route, we would have to keep the enemy out of the islands that lie between Antarctica's Palmer Land Peninsula and the tip of South America. Russian exploring ships and planes have recently been reported in that area. The Navy's Operation High Jump II, which would have increased our

UNIVERSITY OF MICHIGAN LIBRARIES

knowledge of Antarctica and given our men needed training under conditions like Greenland's was canceled last summer for reasons of economy. We couldn't train in Greenland itself for diplomatic reasons.

The country cannot afford in peacetime the forces which its military leaders feel it otherwise should have. This economic ceiling is inescapable, but beneath it come the allotment of available funds between the services, and the designation of how each service shall spend its allotment.

In my opinion, the 1951 budget proposals throw the defense structure out of balance heavily in favor of the Air Force. The Air Force retains its 48 groups and 13 separate squadrons, totaling 416,000 men, little changed from this year. The Navy and Army are cut.

The Navy has been told it can have for fiscal 1951 a total of 238 major combatant ships of specified types, and reduced numbers of air squadrons. When I was Chief of Naval Operations I protested against the practice of the Secretary of Defense and the Joint Chiefs of Staff in telling each service what it could do with its money, contending that it should be permitted to decide how best to use the funds. I still hope the system will be changed.

How the consistent use of such restrictions can throttle a service is shown in the case of the Marines, who find their fears of relegation to guard duty being realized by indirection. In 1946 the Army proposed that "it be recognized that the land aspect of major amphibious operations in the future will be undertaken by the Army, and consequently the Marine forces will not be appreciably expanded in time of war"; and that "it be agreed that the Navy will not develop a land army or a so-called amphibious army, Marine units to be limited in size to the equivalent of the regiment, and the total size of the Marine Corps therefore limited to some 50,000 or 60,000 men."

By the end of fiscal year 1951 the Marines will have been cut to 62,000 enlisted personnel, not far above the figure proposed by the Army. Worse, they have been told that they may have only six infantry battalions. The funds are almost sufficient to maintain a peacetime division on each coast, each with six battalions of infantry, which the Marine Corps wants to do. Now it is expected still to maintain two divisions. But a three-battalion division is really only a regiment, and is inefficient both for peacetime employment and as a basis for quick wartime expansion.

The Navy has several weaknesses: It is short of combat carriers, it is short of modern airplanes, and it needs funds to install the latest equipment on destroyers, destroyer escorts (the slower kind used for escort duty), and submarines. The needed equipment, which is mostly electronic, is expensive. The minimum number of combat carriers in operation should be 10. As to the number of planes, the recommendation of the President's Air Policy Commission (Finletter Board) made 2 years ago seems reasonable: This was for 5,793 front-line planes, and 5,100 in support, a total of 10,893. The 1951 budget figure is 8,415, including 1,844 for the Naval and Marine Reserves.

More of our submarines should be modernized into the snorkel type, with their high submerged speed. The Navy should also be permitted to build its flush-deck carrier, construction of which was canceled by Secretary Johnson. It will take 4 years to build under peace conditions.

Time is of the essence in warfare. In peace we have plenty of time but limited funds. In war we have unlimited funds but no time. A war is fought with weapons that are in the prototype stage when hostilities begin.

All three services should be at work on new weapons, sacrificing numbers of personnel if necessary during peace to concentrate on equipment. Men can be recruited and trained much faster than weapons can be designed and manufactured.

I have been accused obliquely of neglecting antisubmarine warfare. The statement is made that although that is a primary naval mission only bout 8 percent of naval appropriations was devoted to that heading. This is an absurd charge. Antisubmarine warfare is a mission of the whole Navy.

Furthermore, antisubmarine warfare is not a mere matter of finding the submarines on and under the high seas and bombing them to death. That, in fact, is the least efficient means of combating them. The best way to get submarines is in the shipyards where they are being built and fitted, in the submarine docks and pens where they are being refueled, rearmed, and supplied with trained crews. Effective attacks on such targets have to be made by low-level bombing, which is only emphasized in this country by naval and marine aviation. The flush-deck carrier was designed to be an essential tool for that operation.

A submarine on the high seas will always be, to a certain extent, a menace.

The antisubmarine is one device developed during my tour as Chief of Naval Operations. This is a small interceptor sub that can lie in wait along the sea lanes. Other submarines—able to surface quickly, fire guided missiles, and submerge again speedily—are part of the Navy's program.

I brought to Washington a top submarine expert, Rear Adm. Charles B. Momsen, inventor of the Momsen lung and other devices, and put him in complete charge of antisubmarine warfare preparation. I highly approve of the recent appointment of Vice Adm. Francis S. "Frog" Low, another submarine expert, as Deputy Chief of Naval Operations for Logistics.

We have a tremendous fleet in moth balls. Under grease a recent count showed 87 carriers, 58 cruisers, 14 battleships, 204 destroyers, 92 submarines, and about 1,500 other vessels. They are surveyed now and then to eliminate those that wouldn't be useful in a future war.

But it would take, under present conditions, from 3 to 9 months to unwrap ships of the moth-ball fleet. As they increase in age and need up-to-date improvements, the process will be longer. The carriers might have to be modernized, chiefly through the strengthening of their decks, and this would take from a year to 18 months even on wartime schedules with the mechanics working around the clock.

After these ships left the moth-ball fleet and put to sea it would take in some cases months for them to become efficient fighting ships. The training required to weld a carrier and its embarked air squadrons into an effective unit is a long, exacting job.

The modern Navy is a carrier Navy. We have three of the Midway (45,000-ton) class, and are allowed to keep four of the smaller (27,000-ton) Essex class. In setting up a task force, the Commander in Chief of the Atlantic or Pacific Fleet assigns cruisers and destroyers (and sometimes submarines) to support the carriers. A hunter-killer group used in antisubmarine warfare usually consists of a light carrier and half a dozen destroyers. In any expansion of the fleet for war, numerous hunter-killer groups will be formed as soon as flat tops and destroyers are out of moth balls and their crews have been trained. Other destroyers will be used for convoy work.

Air Force leaders have taken fright at mention of the fact that the Navy, too, could use the atomic bomb, fearing that the Navy is encroaching on their field of strategic bombing. Far from envying that role, the Navy questions the effectiveness of the atomic blitz.

I believe that in time atomic weapons for tactical use against military targets—airfields, troop concentrations, ships—will be perfected for all three services. There are many fields in which the Navy could use them, such as against submarine-building yards and submarine bases. Sub pens were hard nuts to crack in both World Wars.

At the present stage of development, atomic bombs are too costly for tactical use, especially against moving targets such as ships. The effects of radioactivity have been exaggerated. The experiments at Bikini were against ships huddled together as targets in an enclosed body of water, but a convoy in the open ocean would be far less vulnerable and would quickly leave contaminated waters behind.

THE FLEET'S MOST VITAL TASK

My policy as Chief of Naval Operations was to try to build a fleet, and maintain one, that could keep the sea lanes open for the unmolested importation of vital materials without which our industry would have to bank its fires, and for the safe transportation of air power, manpower, and industrial power to the enemy's coast. That kind of Navy is not measured by tonnage alone, but by application and efficiency. And from bitter experience I do not believe that the Army, the Air Force, or the budget manipulators know as well how to tackle the problem as we of the Navy do.

The Navy is in danger of losing one of its greatest assets—its spirit. I am gravely concerned to see such great naval fighting men as Admirals Blandy and Bogan discouraged and choosing retirement, and an attempt being made to withhold promotion from Capt. Arleigh A. Burke. Our Navy selection system has stood the test of 30 years and two World Wars. It would be a pity, indeed, if promotions should be awarded through pressure and influence rather than merit.

I am concerned also at the prospect set before young officers entering the service. They have the inspiring example of the five Crommelin brothers, all naval officers, two of whom gave their lives in World War II. But they see one with a particularly distinguished career—Capt. John G. Crommelin—so alarmed at the Defense Department's conduct of naval matters that he gives up his chance of promotion to make public protest.

Encroachments on the Marine Corps have disillusioned its leaders and disturbed its entire personnel. Gen. Merritt A. Edson, the Medal of Honor man who made the Tarawa landing possible, retired in disgust. The Marines are our emergency fighting force, ready to go anywhere without notice, whose claim to honor, in the words of their commandant, Gen. Clifton B. Cates, is that they "have sought for themselves little more than a life of hardship and the most hazardous assignments in battle." The efforts to cut their amphibious and air activities and reduce them to guard duty are indeed disgraceful.

The Navy has always emphasized decentralization of authority. The nature of warfare at sea dictates this. The commander of even the smallest war vessel is pretty much on his own. Efforts to impose on the Navy, in the unification process, a centralized system such as is embodied in the Army's General Staff organization have not only increased overhead costs but have resulted in loss of initiative and feelings of frustration.

Morale and fighting spirit demand that every American in uniform must feel that his own is the best service in the world. He is entitled to and must have the respect not only of his superiors but of the men in all the other military branches. This pride of service is being replaced by growing disillusionment. The trend can be stopped by more enlightened leadership in the Defense Department, and the active encouragement of self-reliance in all ranks.

I believe that the hearings in Congress which resulted in my removal as Chief of Naval Operations have greatly improved public understanding of national security. My recompense for the treatment I have received lies in the belief that, once informed, the American people will act wisely.

Swiss Cheese Land in Wisconsin—No. 2

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including the second of two extensions on the subject of the Swiss-cheese industry in my district as reported by Mr. Emery A. Odell, publisher of the Monroe (Wis.) Evening Times:

WASHINGTON TOWNSHIP REMAINS TRULY RURAL

Washington is a township unit by itself, having no corporate village. It is wholly rural, the sole occupation being dairy farming.

Of average size in land area, 22,871 acres, it has 21,581 acres in farms averaging 187 acres. Cows being milked are reported at 3,189, with average production per 100 acres of 96,092 pounds of milk. Thus, Washington ranks with Monroe, Clarno, Sylvester, and Jefferson as one of the five leading milk-production townships in Green County. The population, however, is only 672.

The way in which the various branches of the Little Sugar River reach out over the township has made highway bridges a costly public problem. This has been overcome largely by modern improvements in construction. Substantial steel and concrete structures now cope with the menacing streams.

All highways have been widened and hard-surfaced for modern motor traffic. Except for the two eastern corners, however, the township is without permanent pavement.

Native rock quarried from the hillsides, in addition to being crushed for the hard-surfacing of roads, now is pulverized to add to the fertility of the soil in the modern farming methods, contributing an effective step in overcoming erosion and loss of valuable soil.

Highways and bridges were always controversial issues on the county board and the interest of Washington Township figured in the forefront. Supervisors recognized the natural situation and regularly conceded the road and bridge chairmanship to the Washington member. Washington Township chairman, C. W. Loveland, now holds chairmanship of the Green County board.

The oldest Green County cheese factory still operating is the Wittenwyler-Burgy, located in the southeastern corner of the township. It was started by Nick Gerber in 1870 as the third of his factory enterprises and has been in continuous operation since.

The factory was in Bilten territory, although that main settlement was further to the north and west of Monticello. Highway changes removed the old surviving Gerber plant to the side road nearly 30 years ago.

This part of Washington township is interesting since as early as 1837 it was settled by people of English descent, some from New England and others from the South. Interest of the settlement was represented in a rural community surrounding Center Methodist Church erected in 1874. Names well remembered with many of the families still represented in Green County life include Holloway, Loveland, Lemon, Harper, Simmons, Fessenden, Crouch, Smith, Perrin, Clayton, Confer, Norton, Gill, and Grinnell.

Center Church was closed and moved away to the Loveland farm a few years ago eliminating the once active community center.

Bilten settlement organized the Bilten Swiss Reformed Church, the structure dedicated in 1876 resembling the house of worship in the Old World. This church, now known as Washington Reformed, remains active today with a pastor supplied from Monticello.

The old Gerber factory, Wittenwyler-Burgy, always has made Limburger. American farmers at first complained of the odor but when Gerber began shipping cheese east they took note of the checks which came back. It did not take them long to join in the cheese production as a community industry.

Gerber first bought the milk outright and then in 1873 John Boss bought the milk and conducted the factory. It became a farmer cooperative in 1893 under the name of Wittenwyler-Burgy. Jacob Burgy, now 80, who has lived on the adjoining farm since he was 3 years old, has been secretary-treasurer of the factory since 1893 and has figured the milk payments to the farmers for those 56 years.

His grandparents and their son, Jacob, Sr., came by sailboat from Switzerland in 1847. They first located on a farm north of New Glarus. They moved in 1870 to Washington township, acquiring the Frank Parkin farm. The Burgy farm now consists of 410 acres and is operated by Mr. Burgy and his son, Fred T. Mr. Burgy makes his residence in Monticello.

The township has one public building, the town hall, located at the intersection of county trunk highways C and N, west of Monticello.

Close by on the east-west highway is the Town Hall streamlined Swiss cheese factory, newest of the farm plants within the township boundaries.

Town Hall factory is owned and in complete control of the cooperative with 30 patrons delivering milk. The plant has been successful beyond expectation after a year of operation.

GERBER WAS CASUALTY OF EARLY CHEESE BATTLE

There has been nothing spontaneous about the development of the Swiss cheese industry in Green County. The infant, fathered by Nick Gerber, had to battle for its life almost from the cradle.

For 20 years the settlers had been raising wheat with notable lack of success. Milk was skimmed for butter, and the skim milk went into cheese for home use. Identity as to type was completely lacking until Gerber founded the first factories in 1868 and 1869.

Consumers were tiring of skim-milk cheese and the demand was for Cheddar or American type. Some even went abroad to London, but heavy expense and losses cut off this market.

Swiss and Limburger cheeses were new, and demand had to be created. Curiously enough, it was New Glarus, center of the first Swiss settlement, which almost struck the death blow to the struggling industry. In 1870 an American cheese factory was opened in the village which never had a Swiss cheese plant. The factory was supplied by 400 cows.

Dayton began manufacturing American cheese with 180 cows, and American factories also were started in Mount Pleasant Township, York, and Albany. By 1873 there were 4,260 cows in the American cheese-production picture, as compared with 1,300 cows supplying Gerber's factories.

Gradually, however, the arguments of Gerber for foreign-type cheesemaking began to gain notice. He claimed 250 pounds of Swiss cheese to the cow and that his four Limburger factories averaged about 300 pounds.

"Still we are not happy," he admitted as he argued with the farmers being influenced against his venture.

He gained further support, however, from Farmers Grove, Adams Township, where Jacob Karlen, Monroe, began opening Limburger plants. The size of the checks Gerber was receiving from buyers in the East also began to interest the farmers.

Gerber's Green County factories numbered eight, including one in Mount Pleasant where he made cheese and resided with his family. He bought the milk from farmers and had his own cheese outlets. As new factories appeared, he also bought cheese and the industry was considered to be fairly launched on a basis helpful to farmers.

Gerber met with financial reverses. He spent 10 years in pioneering before a serious market slump and new competition caught up with him. His resources were swept away and his Green County Cheese Manufacturing Co. failed. He went to eastern Iowa to make a new start but after a second unfortunate ending in 1882 he retired from the cheese business and returned to Monroe where he died May 9, 1903.

Karlen, John Boss, Jacob Regez, and the many others who followed went on to promote and foster growth of the foreign-type industry which now has Monroe for the trading center.

New Glarus later lost its only factory when the condensery business came into flower. Condenseries now operating at New Glarus, Albany, and Browntown have had the effect of pressing inward on cheese factory milk sources, as well as moving outward to take the milk of adjacent counties.

In 1948, these condenseries produced 45,543,000 pounds of evaporated milk, 2,255,000 pounds of powdered skim milk, and 2,043,000 of powdered whole milk. Butter production was 3,329,000 pounds.

There was some indication last year, however, that cheese factories were more than holding their own.

While the condenseries and butter plants showed declines from the total of 58,600,000 pounds for the former and from the 4,067,000-pound butter output in 1945, cheese production made a healthy gain from 1945 to 1948.

Green County factories had set a new high in Swiss production in 1945 of 13,095,000. The total had climbed to another record of 14,569,000 in 1948.

Limburger production in 1945, however, of 2,538,000 pounds was above last year's 2,265,000. Brick was up slightly from 1945's 255,000 pounds to 266,000 in 1948. Green County American output in 1948 was only 822,000 pounds.

The soaring Swiss production has resulted despite the dwindling number of factories. There were 152 plants in Green County 20 years ago producing 16,000,000 pounds of all types of cheese, half of it Swiss.

The factory figure had dropped to 125, 10 years ago but Swiss output climbed to 10,625,000 pounds. Last year 80 factories produced a total of 17,903,000 pounds of all types of cheese, including 14,569,000 pounds of Swiss. This is 33.7 percent of the total Swiss output in Wisconsin.

This bespeaks constant improvement of factory efficiency and techniques, more modern plants, improved herds, and farm practices. The higher production came from fewer factories, a narrowing milk land area due to inroads of other dairy products plants and in some cases fewer but more productive cows.

These changes, including streamlined factories, however, have not entirely erased the marks left over by pioneers of Bilten area who had the strongest faith in the cheese industry.

UNIVERSITY OF MICHIGAN LIBRARIES

MODERNIZATION OF FACTORIES ASSURES FUTURE OF INDUSTRY

Probably the most startling development in eight decades of Swiss cheesemaking in Green County has occurred in the last 2 years or more.

Most residents, in and out of the industry, have been aware of some part of it. Others, but only a few, have realized its full extent. Everyone, however, should benefit in the future from the all-inclusive scope of the program.

This change for the better concerns the widespread rebuilding, remodeling and in some cases replacement of farmer factories which have been the background of the cheese enterprise.

A. J. Reppen, State inspector of factories for the Department of Agriculture, is authority for the report that 63 of the 78 licensed plants in the county had shared in this modernization project by October 1, 1949.

His report becomes all the more impressive by revealing that Franklin Swiss factory, 4½ miles southwest of Monroe, was the first to complete remodeling, having started late in 1946 and finishing in 1947.

These projects stemmed from many sources of stimulation: urging of the State for improved sanitation conditions, a desire to advance quality of cheese and make manufacturing less hazardous, and a realization that only through modern making methods and practices could factories compete on markets in the favored position won through decades of fine Green County foreign type cheese.

The projects have involved new making rooms, in stainless steel fittings, stainless steel intake tanks, larger automatic boilers to supply heat at constant temperature levels and steam for cleaning fittings and filters, gleaming white tiled walls for making rooms, curing and holding cellars, full control refrigeration systems, automatic can washing machines and even special lights for suppression of unwanted bacteria action.

Modern truck loading and unloading platforms are common features. Septic tanks and underground systems for disposal of wastes and a general brightening of factory exteriors and premises are featured on every hand.

Investment has ranged from $35,000 to well above $100,000. Making capacity has been expanded by additional kettles and storage facilities increased. Many times this has meant closing of antiquated factories or plants which no longer fitted into the economic planning of the cooperatives and their patrons.

In addition to the 63 factories already modernized, Reppen reports several others were ready to begin work late in 1949 or early in 1950. A few more factories may drop by the wayside but there will be no slackening of production capacity in view of the general increase in operating facilities by the more modern units.

The trend to improved plants began as early as 1928 when the number of factories had declined to a total of 152 after decades of continued increase. Production that year was 16,000,000 pounds, half of it Swiss. Ten years later, the number of factories was down to 125 but Swiss production had moved up to 10,655,000 pounds.

Last year there were 83 factories producing a total of 17,903,000 pounds, 14,569,000 of it Swiss.

It is impossible to pick out factory projects as particularly outstanding. There are too many of them and each represents some special enterprise which makes it almost unique.

We can, however, call attention to the pace-setting Franklin factory, the streamlined Town Hall plant which replaced four other units in a merging operation, and the large Jefferson Center factory at Twin Grove, planned for expansion to at least 24 kettles, as prime examples of new Swiss plants.

The largest of the new Limburger plants is the Wyss co-op factory on county trunk N 5 miles north of Monroe, operating under lease to the Kraft Foods Co. The latter two plants have adopted exterior architecture of Swiss lines, making them colorful additions to the rural scene.

Following in alphabetical order are the Green County factories which have modernized in the last 2 years:

Swiss: Advance, route 5, Monroe; Apple Grove, route 1, Argyle; Balls Mill, route 2, Monroe; Bidlingmaier-Isely, route 4, Monroe; Biggs Co-op, northeast of Argyle; Brager, northeast of Blanchardville; Burkhalter, route 2, Monroe; Davis, Browntown; Decatur, west of Brodhead; Dill, west of Browntown.

Fairview, route 1, Monroe; Farmers Grove, route 1, New Glarus; Five Corners, southeast of Monroe; Flanagan-Olson, east of Argyle; Franklin, route 1, Monroe; Giese, southwest of Brodhead; Green County Co-op, Monroe; Gutzmer, east of Woodford; Hay Hollow, east of Blanchardville; Health Valley, near Juda; Holstein Prairie, west of Monticello; Casper Jaggi, Brodhead; Jefferson Center, Twin Grove; Jordan Center, northwest of Monroe.

Jordan Prairie, northwest of Brodhead; Klondike, northwest of Monroe; Krause, route 4, Monroe; Kubly, route 1, Monroe; Maple Grove, southeast of Juda; Maple Leaf, route 1, Albany; Monroe Co-op, Monroe; Monticello North Side; Newman, southeast of Juda; Pleasant Valley, route 3, Monroe; Poplar Grove, west of New Glarus (not making Swiss in 1949 but licensed); Prairie Hill, route 5, Monroe; Priewe, route 1, Monroe; Puddle Dock, east of Argyle; Ridge, northwest of Monroe.

Rock Hill, route 2, Brodhead; Saw Mill, east of Blanchardville (licensed but not making Swiss in 1949); Spece, west of Browntown; Speich, route 2, Monroe; Spring Creek, route 2, Brodhead; F. L. Stauffacher, route 4, Monroe; Strommen, near Blanchardville; Town Hall, route 2, Monticello; Twin Gable, Martintown; Union Hill, route 1, Juda; Walnut Grove, east of Blanchardville; West Clarno, route 1, Monroe.

Whitehead, route 1, Monroe; White Oak, route 2, Monroe; York Center, east of Blanchardville, and York Prairie, northeast of Blanchardville.

Limburger: Clarno Center, route 5, Monroe (also licensed but not making Swiss); Grinnell, north of Monroe; Wyss (Kraft Foods licensee), north of Monroe; Milwaukee Cheese, Monroe (also licensed but not making Swiss—producing brick type special cheese); Pioneer, route 2, Monticello; Silver and Lewis, east of Monticello; Spring Cheese, route 1, Monticello; Wittenwyler-Burgy, southwest of Monticello; Wuetrich (Four Corners), 6 miles northeast of Monroe.

There were 63 factories in Green County making Swiss October 1, not including four others licensed but producing other types. One Swiss factory license north of Browntown was withdrawn shortly before the list was compiled. Eleven factories are licensed for Limburger and 10 hold American permits. One factory, Poplar Grove, is licensed for brick muenster.

Lakeshire-Marty Co. holds the only processed cheese license for Swiss gruyere. One firm, Paul Grossenbacher, New Glarus, holds a cheese food compound license.

Three factories have butter-plant licenses and there are condensery permits at New Glarus, Albany, and Brownstown, the latter also holding a powdered-milk permit. Frautschy and Herbert Clarno, have the only milk-receiving-station license.

That completes the present day report on Green County's foreign-type cheese industry, except for the number of kettles in the Swiss plants. This figure has changed so rapidly since 1947 that a definite total would be good only as of the moment. It is believed, however, that more than 450 kettles are now set up in various plants with more envisioned.

With this report, the series on Swiss cheese's 80 years of production development comes to a close. The Green County cheese story, however, will remain an unending history with bright pages in the future.

It will have that encouraging prospect if today's heirs of nineteenth century tradition contribute their share to continued advancement of dairy farming, and to an industry which has premium appeal throughout the Nation.

STEINMAN DAIRY TOLD STORY OF PIONEERING

Green County historians of the future owe a great debt to the memory and diary of J. C. Steinman who in his twilight years answered a question too long unasked:

"Where would one go to establish the exact location of the first Green County cheese factory turning out a product having a cash value in an outside market so a tablet could be erected to honor the men whose vision launched Green County's dairy business?"

The question was asked by Emery A. Odell, publisher of the Monroe Evening Times. Mr. Steinman who had kept a daily diary for 40 years had the answers. As a boy of 14 he had worked on the J. C. Blum farm and delivered milk to the first Limburger factory a mile away on the Albert Babler (now Meadow Valley) farm.

His diary also supplied the location of the first Swiss cheese factory on the Dietrich Freitag farm.

Mr. Steinman was 13 when he went to work at $6 a month. His mother brought him to Monroe on his seventh birthday from New York after 57 days on the ocean. They learned his father had enlisted in the Civil War for what he thought was a short term of service while awaiting his family. He was killed in action. The mother and son joined an uncle in Monroe, Dietland Thomm, and then located later in Washington township.

When Mr. Steinman was 20 he became a Limburger-cheese maker for Jacob Karlen at Farmers Grove. Later he was in business in Monticello and an influential citizen. He served 13 years on the county board, 9 as county supervisor of assessment and bank director and was active in the Swiss Reformed Church at Monticello. He died in 1942 at the age of 88.

The boulders placed in 1939 at the two factory sites by the Green County Historical Society and Mr. Odell presented a problem. Native stone was sought but since the site of the first Limburger factory was in the unglaciated area, a boulder finally had to be brought from Monticello Woolen mill site.

Nazism is Still a Dominant Factor in Germany

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. MULTER. Mr. Speaker, we hear all sorts of perturbing reports on conditions in Germany which make us wonder whether continued neglect of the situation may not prove to be tragic in the years to come. We hear reports about the revival of nazism and anti-Semitism, reports on the trend toward dictatorship, the failure of our denazification policy, the lack of a sense of guilt and shame on the part of Germans

for the horrible crimes committed during the recent war, and the ridiculous efforts to pin the blame for starting the war on the Allies or anyone but the Germans.

Dr. Saul K. Padover, a noted American author and historian, who knows conditions in Germany well and has served with the American military government there immediately after the war, has gathered some pertinent information on the trend of thinking in Germany today. Dr. Padover, who is dean of the School of Politics of the New School for Social Research in New York and the author of several books on Thomas Jefferson and on the European politics and history, draws some interesting conclusions on the basis of the information gathered.

Following is a brief article written by him entitled "Nazi Domination of the German Mind," published in Hadassah Newsletter, March 1950:

NAZI DOMINATION OF THE GERMAN MIND

(By Saul K. Padover)

Public-opinion surveys of Germany add up to a pretty discouraging picture. They show that in 1950 the Germans are much the same as they were 10 years ago. In some respects, indeed, they are worse.

Perhaps it was too much to expect that a defeated people would alter its ways and thought under the rule of conquerors; but the data contained in the surveys are almost too overwhelming as evidence of the nearly total failure of the occupation.

NO FAITH IN RADIO OR PRESS

The Germans believe in less and are distrustful of more. Nearly half of them do not listen to the radio, and only a little more than half, 56 percent, read newspapers, compared with 75 percent 4 years ago. Many have stopped reading the press because they have no confidence in its veracity or impartiality.

A large segment of the population is convinced that the occupying powers are a hindrance to German recovery. Shortly after the war, well over half of those interviewed thought that the Allies were there for the good of Germany. Today fewer than one-fourth (23 percent) think so.

There is no grass-roots political movement. Germans are still apathetic to politics in general and to politicians in particular. Political parties are viewed with skepticism and political officeholders with disrespect. Two out of three Germans say they would turn down a responsible political post if one were offered them. Sixty-four percent admit they are in no way interested in politics. During elections they vote in great numbers, but mainly because they are ordered to do so.

RACE BIAS AND NATIONALISM PERSIST

Race prejudice has shown some fluctuations. While anti-Semitism has declined slightly, racist and other bias has increased. Nineteen percent are still outspokenly anti-Semitic, despite the fact that the Jewish population has been reduced to a mere 20,000 as against 500,000 in 1933. Intense nationalist and racist feelings are stronger than ever.

An illuminating survey has been made on Hitler's Mein Kampf, which was in effect the bible of the Third Reich. But who really read it?

We now have exact information on the subject, and it tells us much about the German mind, politics, and social structure. The following data, to be sure, relates only to the American zone and Berlin, but it is a safe assumption that it reflects the rest of Germany.

To begin with, an astonishingly large number of Germans—19 percent—say that they have read all or part of Mein Kampf. On the basis of population of some 70,000,000, this means more than 13,000,000 readers. Of these, 5 percent, or 3,500,000, claim to have read the whole book.

Who were these readers? Forty-four percent of them were Nazi Party members. Three-fourths of them had nine or more years of education. Well over half (54 percent) belonged to the upper and upper-middle income groups. The majority of readers were professional men, businessmen and government officials.

TREND TO DICTATORSHIP, NOT DEMOCRACY

While Mein Kampf is not being read today, at least not openly, nazism is still very much alive. In November 1945, 42 percent of those interviewed said that Hitlerism was a bad thing. Today, only 38 percent consider it bad.

Democracy—its principles and outlook—is an alien mode of life to most Germans. Sixty percent express the opinion that, if they had to choose between a democratic government that did not guarantee economic security, and a dictatorship that did, they would prefer the dictatorship. A year ago only 56 percent gave dictatorship as their preference.

There is no vigorous intellectual life, no soul searching, and no desire to examine what ails the nation. The overwhelming majority of Germans vehemently reject the charge, or even the suggestion, that the German people are responsible for the war or guilty of any crimes. If anybody is guilty, they say, it is a few Nazis and the Allies—for having allowed the Nazis to come to power. The Nazis, of course, say that the Allies are the criminals. Every trend indicates that most, if not all, Germans are ripe for a new dictator. What hope there is lies in the young people, and we are now, belatedly, trying to do something about them.

EAST-WEST RIVALRY REINSTATING THE NAZIS

What makes the situation more tragic is that both the Anglo-Americans and the Russians are now wooing the Germans. In the struggle between the East and the West, the enemy of a few years ago has suddenly become a desired object to be won and cherished. Denazification has been abandoned. The Americans are pinning their hopes for the success of the Marshall plan on a restored Germany. Nazi leadership, in business and in public life, is rapidly coming back. The Nazis are now winning the war.

The present Government of western Germany is not Nazi, but it is rigidly conservative. As such, it is not the kind of government that can democratize Germany.

An Eminent Scientist Analyzes the National Science Foundation Bill as Amended

---

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. O'HARA of Illinois. Mr. Speaker, among the scientists and educators of the Nation, as I have remarked on other occasions, there is a strong feeling that the great promise held forth both to our industrial development and our security by the National Science Foundation bill is sadly dimmed by the Smith amendment. This feeling is growing, and I am sure my colleagues would wish to give the subject further study in the light of the intelligent and well-considered objections raised in so many quarters of unquestioned loyalty.

Among the many letters on the matter received by me from my district, which includes the great University of Chicago, is the following from Joseph E. Mayer, of the faculty of the Institute for Nuclear Studies of the University of Chicago:

THE UNIVERSITY OF CHICAGO,
INSTITUTE FOR NUCLEAR STUDIES,
Chicago, Ill., March 27, 1950.

Hon. BARRATT O'HARA,
House Office Building,
Washington, D. C.

DEAR MR. O'HARA: The passage by both Houses of Congress of a bill establishing a National Science Research Foundation has been a source of great gratification to those interested in the strengthening of fundamental science of this country. We look forward with satisfaction to what we hope will become great benefits from this bill. Nevertheless, there are certain features of the bill which may not be ideal. In particular, some changes have been made by the House in the original bill, H. R. 4846, at least one of which, if retained, would be so undesirable as to be considered completely crippling.

I find section 14 (1), which requires FBI investigation and certification of loyalty by the FBI for recipients of scholarships and all persons employed by the foundation, to be incredibly bad as written at the present. The objections to this section are various.

(1) The broadening of the requirement of FBI investigation to recipients of scholarships independently of the eventual employment of these recipients in any classified work is a completely undesirable extension toward the methods of a police state, and is in direct opposition to our American democratic way of life.

(2) The extension of the duties of the FBI to include the investigation of a large number of people not connected with classified information necessarily reduces the effectiveness of the FBI in fulfilling its useful function of investigating persons who have access to secret information.

(3) The extension of the function of the FBI beyond that of investigation, to give certification of loyalty, will necessarily further reduce the usefulness of the FBI and at the same time is a completely undesirable unification of two different functions into the hands of one organization which smacks of the methods of totalitarian governments.

(4) The particular requirement placed on the FBI to declare disloyal any person who has at any time been a member of an organization declared subversive is an incredible extension of the definition of disloyalty. Many individuals have mistakenly and innocently joined such organizations either before or after they had been declared subversive. Indeed, in many cases these organizations, which sometimes had the highest aims, were in no sense subversive in their original inception and individuals who joined at that time and later resigned should not be penalized for the later changes in the conceptions of the organization.

I find that section 14 (m), which requires FBI investigation of any national of a foreign country who shall be associated with the Foundation in any capacity, to be very undesirable. It is probably not extremely important that National Science Foundation money shall be used to support the researches of foreign nationals in this country. However, the inclusion of this section would greatly complicate the operation of a university research project supported by the Foundation. The United States has profited greatly from foreign scientists who have come to this country either permanently or as temporary visitors. The temporary visitors bring to our research projects a knowledge of the

UNIVERSITY OF MICHIGAN LIBRARIES

methods used abroad and furnished tremendous stimulation to our own progress. There is no reason why fundamental research projects in this country should be excluded from availing themselves of this benefit. Section 14 (m), if retained in the bill, would have only this effect.

Section 15 (a), which has been amended to limit the annual appropriation to the Foundation to $15,000,000, appears to me to be unwise. I would not look forward to having the dominant source of funds for science in this country coming from the Federal Government. I would doubt if the Foundation appropriation should exceed $15,000,000 in the first few years. However, the writing of this limitation into the law presumably excludes larger appropriations at later times. I believe that considerably larger appropriations will be eventually desirable. The present budget of the Office of Naval Research, spent largely on fundamental scientific research without any appropriation for scholarships, is approximately half this figure. I would believe that the Science Foundation should eventually support the great majority of these projects now supported by the ONR, which are in a field of science much more limited than that of the Science Foundation. The effect of the limitation to $15,000,000 may well be to decrease the total Government support for research in the fundamental portions of physics and chemistry.

Section 10 (b), which requires a loyalty oath for any recipient for a scholarship or fellowship, appears to me to be undesirable. I do not believe that loyalty oaths play any role other than that of irritant. I do not find this amendment in any way crippling to the fundmental purposes of the bill, but I would oppose its retention.

Finally I find it undesirable that any provision is made for the National Science Foundation to support classified research. I believe that classified research should be supported by the appropriate division of the Secretary of National Defense and by the Atomic Energy Commission. The inclusion of support for classified research in the National Science Foundation in times of peace weakens and complicates the operation of that Foundation. I would prefer to have a scientific foundation even if it includes classified research than to have none at all, but I would prefer to see all reference to classified research eliminated from the bill.

Very sincerely yours,

JOSEPH E. MAYER.

Swiss Cheese Land in Wisconsin—No. 1

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the dairy industry is Wisconsin's biggest business. It is composed of thousands of farmers who own and operate their farms.

Green County, Mr. Speaker, is in my congressional district, and I am very proud of it. Recently Mr. Emery A. Odell, publisher of the Monroe Evening Times, published a booklet entitled "Eighty Years of Swiss Cheese in Green County, 1869–1949." In a masterful way he has pointed out the development of this Swiss cheese industry in our State. He calls attention to the fact that dairying history appears to have reached the point where the past is more dependent upon the record in keeping alive the story of the origin of our unique cheese enterprise. He said, "Links between the living and the past are steadily reduced with the passing years."

Mr. Speaker, this story deserves perpetuation in the archives of our Government and with leave to extend my remarks, I am including the first installment herein:

SWISS CHEESE LAND—No. 1

GERBER'S FACTORY LAUNCHED INDUSTRY IN COUNTY IN 1869

This year marks the eightieth anniversary of the most significant event in Green County history, the opening of the first farmer factory for the manufacture of Swiss cheese.

It was the start of the factory system and the pioneering step in production of regular Swiss and Limburger types in Wisconsin.

Changes have come with the years and the old frontiers have been driven back in places but the general geographical locale, with Monticello and Monroe as concentration points, gives promise of holding firm as the greatest centralization for specialized cheese production in dairy history.

The steadfast resistance to encroachments is a tribue first to the vision of Nick Gerber, who founded the first Swiss factory in 1869, and to the dairy-minded settlers from Switzerland who occupied the area which became known as Bilten, a district without definite limits but settled by people of unlimited capacity for knowing how to put the land to work.

Nick Gerber introduced manufacture of Limburger in the Mohawk Valley of New York State before coming here. He never realized upon the enterprise he fostered in Green County, but the residents of Bilten and the contiguous area, with Monroe as its hub, went on to build an industry to which the county owes much of its comfortable condition of today.

Mr. Gerber's first Limburger factory in Green County on the former Albert Babler farm, New Glarus Township, and the first Swiss factory on the Dietrich Freitag (now the Nick Freitag) farm in Washington Township, disappeared long ago. Nothing remains today except a portion of the latter building, now a machine shed, and two markers erected by the Green County Historical Society 10 years ago.

His third factory, however, started in 1870 in Washington Township for Limburger making flourishes today as the Wittenwyler-Burgy factory, producing a delicate brand in a greatly improved plant.

Best picture of Green County's old Swiss-cheese frontier is found in a 25-mile radius north of Monroe, including Monticello, Washington, New Glarus, and Monroe Townships. Anyone who has an interest in what has been happening amid these hills for the last 80 years can see the story of Swiss cheese, of Bilten settlement, and the modern-day perfection of dairying and factory production in a brief afternoon's ride in the colorful countryside.

It will be a ride revealing in striking contrasts with methods of the past and yet giving full evidence of the unchanged strength of the people and the system which made the Swiss and Limburger industry flourish.

Driving north from Monroe, one finds that Monticello is the threshold for entry into the land of cheese. It is a village which, as a center for the immediate cheese-making area, reflects the character and enterprise of the families who came from Switzerland more than a century ago.

In that century the lands have been farmed diligently but with care. There are no signs of neglect or deterioration. Everywhere in the farm lands and in the village there is a Swiss air of prosperity.

In 1847 Monticello was unnamed and not recognized as a stopping place by the Government mail carrier between Monroe and Madison. Now it has all the indications of modern community progress, meanwhile retaining architecture of foreign derivation.

On the village's main street are two structures of rough stone exterior with rounded line and tower effect. The names "chateau" and "chalet" further suggest Switzerland. These buildings are of native limestone quarried from the hills from the same underlying bedrock known to impart desired qualities to milk products.

Monticello was dependent on stage coach transportation until the Illinois Central was built through from Monroe to Madison in 1888, the same year that the Milwaukee road extended the Brodhead branch connecting Monticello and New Glarus.

The first brick building block was erected in 1888 by J. C. Steinman who was long an influential citizen of Monticello and a county official. He was familiar with the cheese industry from its infancy. His sons and grandsons followed in the building profession with advanced ideas of architecture in home, business structures, and modern cheese factories.

On reaching the end of the main street, the tourist may turn briefly to the right to see the Monticello northside Swiss factory, one of the larger producing units in the area.

But it is to the left from the main street that the threshold to the pioneering cheese county lies. A modern hard surfaced road leads out of the village in a sweeping turn cutting through pasture lands into the valley known as lange where Brown Swiss cattle have grazed these many years. The silver tones of their bells can be heard throughout the outdoor grazing season as they welcome the tourist into the land of the Swiss.

A mile or so off Monticello's main street is the Nick Freitag farm. It is identified by buildings on both sides of the road.

And one of these buildings on the right was the cradle of the Swiss cheese industry in Green County. A stone marker with a bronze plate, on the left almost at the driveway to the house, tells the story.

FIVE PATRONS SOLD MILK TO FIRST SWISS FACTORY

What is left of that first Swiss cheese factory in Green County still stands as a landmark on the Nick Freitag farm just north out of Monticello on the Madison road.

A portion of the old building, on the right side of the road, is used as a machine shed. It still houses some of the early cheese-making equipment. The brick chimney marks where the stone boxed walls contained the wood fire for the boiler.

The large kettle was supported on an iron arm and was swung into place over the wood fire bed for forming the curd. Revolutionary changes mark the present-day operations, but the fundamental manufacturing process is the same.

Nick Gerber started the factory in 1869 with five patrons, Dietrich Freitag (father of the present farm owner), Jost Voegeli, Dietrich Stauffacher, Jans Blumer, and Melchior Schlittler. He operated it until 1875 when it was taken over by the farm patrons.

The Freitag farm dates back to Hiram Washington Bane, who obtained the Government grant in 1844. Bane conveyed the original 40 acres to Fridolin Streiff, one of the New Glarus founders, in 1848, and Streiff made cheese there in 1850. Streiff and J. Jacob Tschudy had been the leaders sent out from Switzerland to locate and lead the original colonists to their new home. Dietrich Freitag bought the land in 1869, the year that saw the Swiss cheese industry launched on his land. His son Nick, born there nearly 73 years ago, holds the original Government patents of conveyance.

Next farm around the bend in the road is the Voegeli Valley Grove farm in possession of the family since Jose Voegeli located there in 1854. It is one of the show places of Wisconsin and famed far and wide as an outstanding Brown Swiss breeding farm.

Three generations of the family made brick and Limburger there, and the old copper kettles are retained as antiques. Jacob, son of Jost, erected a large barn, 144 by 52, and one of Green County's largest, as Voegeli's Brown Swiss hotel in 1917. He also erected the fine home which, combined with hillside setting of the striking barn, offers one of the outstanding rural vistas of the Nation as seen from the road.

To the north, the highway knifes through the Stauffacher brothers property, now run by Conrad Stauffacher, Jr., as another of the outstanding examples of modern farming. The residence on the right towers at the edge of a bend in the road. The huge barns and dairy buildings, all electrified and kept in immaculate condition, attract many touring dairy industry groups annually.

Conrad Stauffacher, Sr., who came to this country from Switzerland in 1871, built up the 600-acre property. His sons, the late Fred H. and Conrad, Jr., took over in 1923 and pioneered in strip cropping and contour farming.

Continuing north, the entrance of New Glarus Woods State Park is reached. There a turn to the left is made, past the marker designating the road as the Old Lead Trail, reminder of the lead-mining days in Exeter.

Driving west, the first break in the woods to the north reveals a brief glimpse of New Glarus in typical Swiss valley setting. After passing the intersection with county trunk N the next turn to the left off the trail onto an unmarked road is the gateway to the Bilten settlement movement.

Houses and barns are secluded, almost hidden from view in the valleys.

The white-frame Meadow Valley School is seen at the bottom of a long hill. Directly ahead is Meadow Valley farm, once the Albert Babler place, with its huge barn and scenic, wide valley.

Here another historical society marker designates the site of the first Green County Limburger cheese factory, also started by Nick Gerber in 1868.

The country road presents unending surprises as the journey continues. It follows a branch of Little Sugar River which becomes a lively stream at this point, a lure for trout fans.

The pleasing panoramic page of history is graphically illustrated with the variety of dairy barns, all of double doors, stone-masonry foundations, and foreign-type grillwork mow ventilators.

Entering Washington Township, the traveler comes upon the Fred K. Hefty farm which has been in the family a century. The buildings are landmarks of early dairying, offering some of the best examples of Swiss rural design. The gable of the white-frame barn, which is of unusual lay-out, bears the date 1848.

The large barn's stone basement houses a large Holstein herd and the double doors provide ventilation. A driveway opens into the upper level barn loft.

Across the road is the quaint stone barn, built in 1862, with overlapping brick ventilators, the work of Swiss stonemasons in faithful reproduction of an Old World design. It is a prized landmark.

Mrs. Hefty, widow of Fred K., still lives on the farm which comprises more than 400 acres.

The large, fine farm properties representing a century of ownership in the Freitag, Hefty, and Voegeli families were linked in a triple wedding in 1895. The son and daughter of Dietrich Freitag married a son and daughter of Friadolin Hefty, while another Hefty daughter married a son of Jacob Voegeli. Nick Freitag still lives on the farm where he was born on Christmas Day, 1871, and his sister, Mrs. Fred K. Hefty, resides at the Hefty farm. The other bride, Mrs. Albert Voegeli, resides in Sylvester, and conducts her own farm.

From the Hefty farm, the tour winds east to the intersection with county trunk N where the cheese student can turn south. A short drive beyond is the Town Hall Swiss factory at the intersection of country trunk C.

This fine new Swiss plant, served by 30 patrons, was opened in July 1948, and stands out as one of the best of modern white-tile factories—a perfect example of the enterprising industry founded on the farmer-patron system by Nick Gerber.

Further south, halfway to Monroe on county trunk N is the new Wyss Limburger factory, completed in May 1948, and operated as a Kraft Foods Co. producing unit with cooperative ownership. Here again is a modern example of Swiss architecture, combining the Old World atmosphere on the exterior with the gleaming, stainless-steel efficiency of the modern day inside.

Five miles south, the tour turns back to Monroe on Highway 81, the Argyle Road. That completes the visit to the frontiers of the Swiss industry which have shifted slightly to the south in the last 80 years but continue to hold firm with Monticello and Monroe as the anchor points of the concentration.

BILTEN SETTLEMENT PACES MODERN DAIRYING INDUSTRY

Green County's distinctive cheese industry originated in the fertile valleys of Little Sugar River.

Imported from Switzerland the now important dairy business did not come all at once. The unfolding took 20 years before the cheese factories came.

Original colonists of 1845 founding New Glarus were industrial people engaged in textile weaving in the province oppressed at the time by war. Because of their fear of hard times and famine they felt forced to look elsewhere for livelihood. They came here in Wisconsin seeking homes in new country.

A second sizable group, 70 at one time, came from the town of Bilten, off in a corner of Canton Glarus in Alpine lowlands. Bilten was more agricultural for it had pasture lands. The new group knew cows and was experienced in their care. The journey was by ocean-sailing vessel, the lake route to Milwaukee and overland to New Glarus. Arriving in New Glarus in 1847, they set out at once for the country where they might have land, timber, and stone. The few artisans among Swiss settlers were masons, which accounts for the general prevalence of stone in the old time building of homes, barns, stable basements, school houses. Many of the structures still mark the landscape, especially the barn basements and spring houses.

Land around New Glarus had been taken up and their search took them into Washington Township south of New Glarus and north of Monroe. Government land was available at low price. They established homes as a community group and named it Bilten settlement.

New Glarus township was absorbing the in-pouring population previous to 1847 but the years immediately following the movement was greatly increased. Green County's population in 1840 was 933 and during the decade from 1840 to 1850, the period covered by rapid settlement due to increased immigration, it rose to 8,566. Swiss participation amounted to 364. This means that only 4 percent of the total population at the time were to stamp their habits and characteristics so indelibly on the history and industry of Green County.

Bilten settlement of 12 families soon proved important far beyond its number in its immediate influence on countrymen back in the old homeland, as shown by later marked penetration by Swiss people. The years immediately following 1847 saw population boundaries extended to unoccupied Washington Township valleys to the west and south.

The first cows, one to a family, and selling at $12, were received at New Glarus in 1846.

Nick Gerber, also a Glarner (born 1836, died 1903), came to America in 1857 and located at Booneville, N. Y., where he opened the first cheese factory, introducing Limburger in the Mohawk Valley. He spent 11 years there, and in 1868, informed of the successful start being made in raising cattle in Green County, he came here to investigate.

He met Albert Babler at New Glarus and toured the Bilten area, where he found just what he was looking for in a new country. He at once arranged with farmers to take their milk, opening a Limburger factory in a log building on the Albert Babler farm in New Glarus Township.

He made the cheese himself and had outlet for his product in the East. Six farmers delivering milk to the first Limburger factory had less than 50 cows—Albert Babler, 15; George Legler, 10; J. C. Blum, Andrew Hoesly, Balthazer Kundert, and Christopher Babler, the remaining 25.

What was then known as Long Valley extended across the top of Washington Township to Monticello. Bilten settlers claimed the valley and others of the smaller tributaries of Little Sugar River. Another valley to the south and west was left for the arrivals from Bern. They came from the valley of Emmen River, Emmenthal, where Swiss cheese made in the form of large wheels originated.

A few cheesemakers applied their skill and took rightful place in what was to become Green County's basic industry. Beginning the making of regular Swiss in 1869, the industry was developed in both Swiss and Limburger.

Nick Gerber had the necessary contacts for sale of his products in the East. They now are staple cheese items on counters of food markets the country over. Thus, the development marked the beginning of factory manufacture of Swiss and Limburger cheese here and in Wisconsin.

BILTEN DISTRICT PIONEERS CLEARED HEAVY TIMBERLAND

Mention of Bilten settlement after 100 years is apt to sound legendary to most present-day readers. Those familiar with the history of the region and the institution of dairying when the country was mostly timber, however, do not hesitate to credit Bilten as the stimulus of early-day cheesemaking.

Adam Blumer, 1737 Fourteenth Street, this city, was born in Bilten settlement. His grandfather, also Adam Blumer, came from the old town of Bilten with his wife and five children. The grandfather was reared on a dairy farm where he was familiar with cows and cheesemaking.

Arriving in Green County he entered 240 acres of land from the Government in Washington Township, west of Monticello. The year following he bought five cows and was making butter and the farm variety of cheese from skim milk.

The land was heavily timbered. He bought two ox teams and started clearing and building with logs. Ten to twenty acres of land had to be broken every year in addition to the farming duties. The son, Adam Blumer, later head of the Monroe brewery, the youngest of the family, was 5 years old when he came here. The father died in 1855.

Adam Blumer, the grandson now retired and living here, became master brewer. The Blumers moved to Monroe in 1891. In re-

UNIVERSITY OF MICHIGAN LIBRARIES

calling his farm experience, he said as a boy he had the care of three spans of horses and milked 12 cows morning and evening when his father had 101 cows on the Blumer farm.

The Blumer farm was the dividing point between the north and south valley of the Little Sugar River west of Monticello. Because the settlers were from Bilten, it became known as Bilten Thaele (Bilton Valley). They were Glarners, among them the families of Frick Becker, Henry Hefty, three Bontley brothers, Andrew, Casper, and John; Adam Blumer, three Blum brothers, Werner, Fred, and Jacob; John Schuler, Gottlieb Wittwer, Jacob Schlittler, Alex Tschabold, Henry Aebly.

The west end of the Little Sugar Valley in Washington Township was known as Berner Thaele, the settlers coming from Canton Bern. Among them were Jacob Zimmerman and sons, Jacob and John, Christ Loertscher, Christ Theiler, Jacob Theiler and Jacob Weissmiller.

Werner Blum, grandfather of the Monroe family, came in 1848 and took up land at the extreme west edge. This area was known as Fox Hollow because it appeared to be the favorite haunt of fox. Blum in his later years became one of the founders of the present Washington Reformed Church. His son, the late Werner, was the first American-born Limburger maker in the township.

During early building, the newcomers managed to hold together as a group insofar as possible, for the old ties of their fatherland held firm. Settlers who came later had to spread out into new country, but identity as to Canton and community of origin was fairly established by their countrymen here.

Bilten descendants have been proud of their connection with the original expedition because of the success attained in their venture after failure of wheat growing. Family names and dates of establishment in new world homes were enlightening and meant much to their countrymen. Thomas Hefty, Rudolph Blum, Casper Becker, J. Jacob Zwickey, all came in 1847; Emmanuel Weissmiller and Anton Baumgartner in 1848; Adam Blumer 1849, David Benkert 1851, Martin Zumbrunnen 1852.

Americans had settled in central Washington after Bilten settlement was established. Recorded dates of arrivals include Linus Hare, Eldridge Cheesebro, Hames Confer 1854; John Naughton, Silas Moore, 1856.

Glarners and Berners settling in the northern section of Washington Township had the Little Sugar River fork separating the two valleys.

The Freitag, Stauffacher and Voegeli farms to the east on the main Monticello and New Glarus highway are in the big valley sloping to the east where the Little Sugar tributary in Mount Pleasant takes its course eastward to main Sugar River and eventually to Rock River.

The Glarners and Berners got along harmoniously. They finally joined in bringing Swiss cheese to Green County and the old divisions have disappeared in the promotion of common interest in the industry.

Oscar Ewing Reports on Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. MULTER. Mr. Speaker, some very interesting observations were recently made at the midwinter conference of Hadassah, the women's Zionist organization in this country which is doing such fine humanitarian and medical work in Israel, by Federal Security Administrator Oscar R. Ewing. He had visited Israel several months ago. His impressions and sentiments indicate how quickly he grasped an understanding of the state and its people, the problems facing them, and their determination to settle these problems in a democratic fashion as understood in the western sense.

I am glad to place in the RECORD excerpts from his address at the Hadassah conference, as they appear in the Hadassah Newsletter, in the issue of March 1950:

HADASSAH'S WORK IN NOBLE AMERICAN TRADITION

(By Oscar R. Ewing, Federal Security Administrator)

Even if I had never visited Israel I would have been delighted to come to this meeting of Hadassah. But I have just returned and the impact of my first-hand impressions is so great that nothing could have kept me away today. For 38 years the women of Hadassah have been engaged in a great humanitarian program. Those of us who have seen the end product of that program know how well you have wrought. I congratulate you for the good that you have done, for the idealism which inspires you, and for the determination with which you are facing the future.

The people of Israel are supremely sure that they can solve their problems. I share their confidence. I know that they are building for the centuries. They have had the courage and the imagination to pluck from the disasters of our generation the victory of hope and of fulfillment.

PROUD OF UNITED STATES ROLE IN HELPING ISRAEL

I am proud of the part played by the American Government, during the vicissitudes of the past several years, in ultimately making it possible for the new State of Israel to be born. I am equally proud of the voluntary role played by American citizens, including especially the members of Hadassah, in helping to bring success to Israel.

But more than this, I am proud that there are among my fellow humans people who have been able to live through the centuries of European persecution, through the concentrated poison of the Hitler terror, without succumbing to the pitfalls of self-pity or vindictiveness.

The people of Israel, as I saw them, had no time to worry about the past. They are too busy building the future.

Everywhere I went—along the roadsides, in the towns, in the villages, on the farms—there was construction. New buildings were going up, new houses, new shops and mills, new lands being surveyed for farming improvements. The real national song of Israel is played with the plow and the saw.

Yet I do not believe it will be possible for Israel to achieve success unless there is continued help from its friends abroad; and by that I mean principally in America. Every citizen of the United States ought to be proud of the voluntary assistance that has been rendered by you and by many other American organizations toward the upbuilding of Israel.

MORE DRAMA IN PEACEFUL CONSTRUCTION

This work must continue. It is only half done. The melodrama of past battles, the headline urgency of past suffering, may have gone. But they are replaced by an even more dramatic and an even more urgent need today.

I think there is more glamor in bringing up a nation of healthy children than in fighting a battle in the desert. I think there is more drama in establishing a stronghold of peaceful, constructive, democratic civilization along the Mediterranean than in the battle for international recognition, however important this may have been in the past.

Some people in this country seem to be concerned about the question of dual loyalty among American citizens who take an earnest interest in the future of Israel. I think such fears are silly. It is part of the American nature to help other people. It is part of the American tradition for us to hold strong sentimental attachments to others abroad.

AID TO OTHERS IN AMERICAN INTEREST

My ancestry is a Scotch-Irish mixture, and I am not ashamed of the fact that, during my recent trip abroad, I felt an especially warm feeling when I was in Ireland and in Scotland. I do not see that this is, in any fundamental way, any different from the feeling that many American Jews have for Israel.

I will go beyond that, I believe that the American influence—in its proper interpretation—is a healthy thing everywhere in the world. Wherever we let our own spirit of individual liberty, of human dignity, of democratic methods, of equal opportunity, make itself felt, we are striking a blow for freedom everywhere and for the fundamental interests of the American people.

Israel is a stronghold of democracy in the western sense. If we reinforce the country's economy, if we bolster its faith in western democratic ideas, we are not only helping the people of Israel but we are also acting in the highest interests of the people of America.

That is the way I see the work of Hadassah. I salute you as stanch Americans precisely because of the magnificent work your organization has done for Israel. I know you will go forward with courage, with imagination, and with determination.

Methodist Church Backs Point 4 of President Truman's Plan

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. O'HARA of Illinois. Mr. Speaker, yesterday during the debate on the ECA bill I stressed the importance of title 3 which aims at building a world of contentment and of good will through the use of our capital, our skill and our know-how in the development of other lands under point 4 of President Truman's inaugural address plan.

I was happy this morning to receive a telegram from Charles F. Boss, Jr., of Chicago, who is the executive secretary of the Commission on World Peace of the Methodist Church, which gives us assurance that the great Methodist Church, and its large membership in all the States of the Union, are behind President Truman in this most important point 4. The telegram follows:

MARCH 27, 1950.

Hon. BARRATT O'HARA,
House Office Building,
Washington, D. C.:

In annual session November 8 and 9 the Commission on World Peace of the Methodist

Church unanimously adopted the following statement: "We rejoice in the point 4 proposals of President Truman's inaugural address. To make the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas, and calls for the further implementation of these proposals, by such public and private funds and other resources as may be needed." I, therefore, wish to urge your hearty support in the adoption of title 3 of omnibus bill 7797, act for international development, calling for the appropriation of $45,000,000 to be used in both the United Nations and the United States technical assistance program.

CHARLES F. BOSS, Jr.,
Executive Secretary.

International Trade Organization

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. JAVITS. Mr. Speaker, there must be an end to the fear which seems to be paralyzing action by the administration to call up for hearings the resolution providing for United States membership in the International Trade Organization and approval of its charter. The evidence is cumulative and very strong, particularly from business leaders in the best position to know that the International Trade Organization is of the most vital importance to our Nation's effort as the leader in world trade. The appended letter brilliantly analyzing the implications of ITO to the prosperity of the private economy of the United States from the vice president in charge of foreign operations of the Ford Motor Co., one of America's great corporations, speaks eloquently on this point:

FORD MOTOR CO.,
New York, N. Y., March 17, 1950.

Hon. JOHN KEE,
Chairman of the House Foreign Affairs Committee, Washington, D. C.

SIR: As head of Ford International, I should like to advise you of my hearty endorsement of House Joint Resolution 236 and to urge congressional approval of the Havana Charter. From 30 years of active experience in selling American products in the foreign markets, I have learned on a day-to-day basis the problems of foreign trade. Today, as always, there are a number of people who speak authoritatively on the subject without personal experience with these problems. It is easy to sit back in the comfortable quiet of the study and think up criticisms and theoretical solutions. It is something else again to have to face the increasing obstructions to foreign trade and work out correctives that will make possible the survival of the trade in which we Americans believe.

Anyone who has to deal with this problem every day knows that without some concerted attack on the mounting road blocks that impede competitive private trade today, we American businessmen are going to lose our foreign markets.

We, in America, stand before all the world for freedom, individual initiative, the benefits that result from industrial democracy, free enterprise, and advanced technology. The decisions we take, particularly on foreign legislation, have decisive influence on the economic and political decisions in almost all other countries. We have provided the initiative for the restoration of multilateral trading—principally because our economy and our business way of life cannot survive without it. The Habana charter offers a vehicle for the restoration of multilateral trading.

We, in the United States, have taken the initiative for the restoration of international trade because of the wide area of free trade within the United States. It would be unfortunate—politically as well as economically—if we were to walk out on the deal just when there seems to be a chance of putting it over. We, as a Nation, have a keen appreciation of the fact that the economic progress of the world, including the United States, can be exactly measured by the progress which is made in the exchange of goods and services. Among nations, of course, this exchange is nothing other than international trade. I believe that world peace will result only from a combination of three factors, namely, sound diplomatic policy, sound military policy and a sound basis for the conduct of international trade. These are the keystones which are fundamental to peace and to the orderly development of the United Nations.

The practical solution to the present barriers to international trade requires (and the ITO provides) a concerted attack on all trade barriers, including our own, without delay. Four years have passed since the end of the war, and 2 years have passed since the Habana charter was drawn up. If the trend toward Government controls, State trading, and economic nationalism is to be reversed, further delay will make the job almost impossible. Vested interests grow rapidly around Government controls, making them difficult to shake off when they are long established. Even in countries where controls have been imposed as emergency measures, this is the case. If these controls and barriers are not rooted out soon, American hope for closer economic and political relationship with the non-Communist world will be seriously retarded.

The December 1949 issue of Fortune magazine contained an interesting article on the United States tariff and made the important point that, if the United States really intended to take the lead in promoting international trade, we should not only consider lower tariff rates but should give particular attention to procedural tariff reform which are often referred to as the invisible tariffs. Such are the complexities of the law and the regulations that it has become a specialized branch of the law and there has developed a large group (expert in its intricacies) known as custom brokers. Briefly, administrative and procedural reforms in the customs law and practice are even more important than a reduction in tariff rates.

When the need for action is so apparent, it seems only common sense to pick the best available plan or plans to improve international trade and go to work. The Habana charter drafted after months of arduous negotiation, under the able and patient leadership of William L. Clayton, chief of the United States delegation to the Habana Conference, within the framework of the United Nations provides a practical method to launch an orderly attack on governmental controls and trade barriers. Only a large number of trading nations, such as that grouped in the ITO, can even hope to tackle the restrictions now preventing restoration of multilateral trade. It it easy for individual nations to set up trade barriers, but they almost never take them down unless they are sure other countries will do the same. The Habana charter is the contract of 54 nations to do just that. Without an overall agreement of this sort, hope for reversing the present trend toward more and more trade barriers and government controls seems dim indeed. With the ITO, backed by energetic American support, we would have our best chance of sustaining the United States exports, encouraging private enterprise, and at the same time, we would contribute greatly to the important task of bolstering economic recovery abroad. Unless international trade is stimulated and encouraged, the important gains made in European recovery through ECA and other American assistance will be lost and the money contributed by the United States will be completely dissipated.

Of course, the charter can be criticized. It can be criticized both for its omissions and its commissions. In other words, some essentials have been left out; on the other hand there are certain things in the charter on which we may have reservations or which are not phrased strongly enough, having been watered-down or overqualified in the process of negotiation.

But—the essential considerations are these:

First, the charter does present after years of negotiations the best practicable compromise arrived in democratic fashion among the freedom-loving nations;

Secondly, the charter provides that indispensable element in the whole United Nations scheme of things; namely, an agency which has for its broad mission the purpose of dealing with problems dealing with international trade and providing a forum for their discussion and solution.

Since the initiative for the creation of this agency came from the United States and since without it the United Nations is incomplete, I strongly recommend that the charter be adopted by the Congress with any such reservations as in its opinion it feels essential to the preservation of American principles and interests.

Very truly yours,

GRAEME K. HOWARD.

The Isolationist Come-Back

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I am inserting a column by the eminent student of foreign affairs, Mr. Walter Lippmann. Twenty years from now may be too late, and by that time saying "I told you so" will not do any good to the millions who may have lost their lives if we stupidly annihilate any opportunity to carry forward an intelligent foreign policy. The entire future of the world, as well as this country, is at stake, and to stoop to partisan politics at this time may be to bring on mass destruction of our civilian population a few years hence.

The article follows:

TODAY AND TOMORROW—THE ISOLATIONIST COME-BACK

(By Walter Lippmann)

At the week end the true character of the McCarthy affair became much clearer. Senator VANDENBERG's statement and Mr. Stimson's letter brought out the critical fact that the Republican opposition in Congress is now in open rebellion against the men who have led the Republican Party since Pearl Harbor.

UNIVERSITY OF MICHIGAN LIBRARIES

VANDENBERG and Stimson represent, and indeed played the leading part in forming, the bipartisan policy of national unity for war and peace. But whereas once they spoke with authority for the Republican Party, they are now on the outside appealing and protesting against the men who have captured the leadership of the party.

The men who have captured the leadership of the Republican Party are the old isolationists, that hard core of irreconcilable and unreconstructed isolationists who dominated the party from the Harding administration until Pearl Harbor. During the war and for a few years after it they deferred to the other Republicans. But now they have recovered their power. Though MCCARTHY himself is small potatoes, Senator BRIDGES, and above all Senator TAFT, are not. In the collapse of the bipartisan policy the old isolationists have once again taken over the party.

That is why Senator TAFT and Senator BRIDGES are not troubled by the fact that the method of the assault on Secretary Acheson, on Ambassador Jessup, and on the State Department in general is paralyzing the conduct of our foreign policy and is undermining the prestige of the United States throughout the world. In the last analysis MCCARTHY and the more important Republicans who are backing him do not believe in a foreign policy in which the United States plays a responsible and cooperative role in the world. They do not really care how much they injure American policy because they do not like the foreign policy which, since Pearl Harbor, they have been compelled to support. They would not regret, they would be very much pleased, to see the whole national effort of the United States in war and peace cease to be a matter of popular pride. For then their own records in war and peace, which have been embarrassing to them, would be vindicated.

This isolationist come-back was not at first clearly recognizable because the leading figures in it have been so ardent for intervention in China. Moreover, some of the leading crusaders for intervention in China, notably Senator KNOWLAND and Senator SMITH of New Jersey, are not isolationists and have not meant to throw the country back into the position it was in from Harding to Pearl Harbor. But the acid test of isolationism has never been mere withdrawal within the 3-mile limits. Some isolationists have been pacifists. But most of them have been men who, in any action abroad, wished to act alone and unilaterally, or not at all.

The real isolationism is a dislike of collaboration with other powers, and especially with European powers. Even Senator TAFT, who is a good deal of a pacifist, was willing to use the American Navy in Formosa in an American adventure. But the formation of a common policy in Asia with the other leading and friendly Asiatic powers—notably with Britain and India—has not interested him. In fact, the Republican position on China is essentially a veto on any change of American policy which would permit us to work with Britain and India, in the United Nations and elsewhere, on Asiatic problems.

It is not a debating point, but the deep truth of the matter is that the isolationist campaign which began with Formosa and went on to the McCarthy business is playing straight into Russia's hands. I believe that every informed and serious observer would agree that the great objective of Soviet foreign policy is to push the United States out of Europe and Asia and back into the Western Hemisphere. Everything that happens here which renders it impossible for the United States Government to work with our allies and partners brings the Soviet Government nearer to this objective.

The Republican campaign about China, though it cannot possibly restore Chiang Kai-shek, has made it impossible for this Government to take any of the necessary measures of an Asiatic policy. As long as we are entangled with Chiang and indirectly at war with Red China, we are not only in conflict with Russia, but we are divided from Britain and India, and we are denied the possibility of dealing with the situation in southeast Asia through the United Nations. It is perhaps no accident that the Harding Republicans who made the League of Nations unworkable should now be making the United Nations unworkable. The details of the story in 1950 are different from the details of the story of 1920. But the results are very similar.

Those who know the story of 1920 and of how the isolationists defeated Wilson will remember that the first isolationists did not begin their campaign by demanding that we withdraw from Europe. Though they ended by making a separate peace with Germany, they began with a furious assault on what they regarded as Wilson's softness in dealing with Germany. The original attack was very like the Knowland-Smith, or the MacArthur, attack on the softness of the administration's China policy. Then, as now, isolationism evolved from a campaign for a super-hard policy into a general rejection of all policy—much as the immediate result of the Formosa crusade against communism was the vote in the House to refuse aid to Korea.

Then, as now, it should also be noted, isolationism grew as the Wilson administration adhered rigidly, stubbornly, and unimaginatively to its own policy. In the end, the Wilsonian peace was broken down and then rejected because Wilson, who was a sick man, was too inflexible to work with his critics or to rally his supporters. Mr. Acheson would do well to ponder that experience.

Army Engineers Commended

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I present an editorial appearing in the March 23, 1950, edition of the Shreveport Journal regarding the splendid work of the Corps of Engineers of the United States Army. It reads, as follows:

ARMY ENGINEERS COMMENDED

Under the caption, "Army engineers earn praise," the Journal some time ago commended the long-time service of these engineering authorities for their record in planning and having charge of flood control and other waterways projects.

Congressman OVERTON BROOKS, who recognizes the value of the Army engineering corps, had the editorial in question inserted in the CONGRESSIONAL RECORD. This fact was noted with interest by George H. Palmer, president and publisher of the Marine News, New York, who in a letter to the Journal advised that its published comment had come to his publication's attention, and continued on the subject, which is of special interest to Red River Valley residents:

"It always gratifies us to see that distinctive organization, the Army engineers, commended and defended. Some of the things that have been said about them lately border on puerility and asininity.

"An editorial in the Engineering News-Record in September 1935, titled 'An Enviable Record,' said: 'For more than a century, Congress, in planning for the Nation's waterways, has laid upon the Corps of Engineers of the Army the responsibility of investigating proposed work and of carrying on work that it authorized. This year, seemingly in acknowledgment of that long service, Congress named the corps as the permanent agency to carry forward such work. The service record thus recognized is one of which any body of men may well be proud. Scandal, graft, undue respect for political influence—these stains that frequently mar the record of so many public bodies—are peculiarly absent from this one. Year after year the multitude of schemes for river improvements, harbors, and waterways that are pressed upon Congress by their enthusiastic promoters have been referred to the Army engineers under whose supervision they have been carefully analyzed, made the subject of public hearings, and, ultimately, the subject of a favorable or unfavorable report to Congress. And not infrequently unfavorable reports have been made in defiance of the demands of politically strong individuals. Though difficult at the time for the officers concerned, this firm adherence to the conclusions drawn from an engineering study has benefited the corps by building up in the minds of Congressmen full confidence in the inherent honesty of that organization. Congress now has written its acknowledgment of that confidence into the law of the land. Engineers in civil life will gladly add their approval, for though they may at times disagree with the Army engineers' conclusions or may rebel against their occasional displays of arbitrariness, yet they recognize that in the long run the record of the Corps of Engineers is one that does honor to the whole profession.'

"Two years later in August 1937 the late Gen. Hugh Johnson said in the press that:

" 'The United States Corps of Engineers mapped the West, laid out the great transcontinental rail routes, improved all our harbors and inland waterways, harnessed the rivers, created the Great Lakes navigation system—by all odds the most efficient waterway development in human history—and built the Panama Canal after many attempts had failed. Through more than a century that corps has built for itself, in the confidence of Congress and the country, an almost incredible something that exists nowhere else in this or any other government—absolute assurance of impartial, completely nonpolitical, nonbiased, efficient, and incorruptible planning and administration.'

"A large part of the present strength and wealth of America is its harbors and waterways and its flood-protection works, vital both in peace and in war. Growing strength and added wealth depend largely upon their continued development. With their distinctive record and accumulated experience who is better qualified than the Corps of Engineers to plan and supervise this investment in the building of a nation?"

The Army engineers have been tried and proved to be efficient in handling flood and other waterway problems, which affect the entire Nation. A sensible move for the Government is to let the set-up go undisturbed instead of trying something new as a sort of experiment.

Throughout the Red River Valley, and the valleys of the Mississippi and other streams of this and other sections of the country, the service rendered by the Army engineers is regarded as the best possible service of the kind to be had. There have been efforts, some not in the distant past, to have Army engineers replaced with others to be politically chosen, but these efforts have failed to get the results desired by those wishing them put in effect. In the Red River Valley especially the Army engineers' work is appreciated. Repeatedly waterway leaders of this section have commended the Army corps, and justifiably. Only recently their efforts contributed to control of the swollen Mississippi and its tributaries.

For Federal Regulation of Life-Insurance Companies

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. CELLER. Mr. Speaker, of paramount importance in the news is the announcement of a new plan whereby the Equitable Life Assurance Society of the United States states that it would buy new freight cars and lease them to the railroads.

The Committee on the Study of Monopoly Power of the House Judiciary Committee examined to some extent the assets and operations of life-insurance companies. It was ascertained that assets are now between fifty-five and sixty billion dollars and that the companies have been finding it more and more difficult to invest these huge assets profitably and efficiently.

We now find that the Equitable Life Assurance Society has a new plan to buy and lease freight cars to the railroads. Standing by itself, this proposal appears sound and should be most helpful to the railroads, most of which are in financial difficulties. It points up, however, the need for thorough exploration of the ever-growing magnitude of the assets of life-insurance companies and the lack of proper and organized supervision of same by State agencies.

The preliminary investigation made by our committee showed that with few exceptions, regulation of the disposition of these assets was negligible. The larger of these companies are practically laws unto themselves. Their combined power is incalculable. Today, the Equitable Life Insurance Co. buys and rents freight cars. Another of the so-called Big Five—Metropolitan, Prudential, New York Life, Equitable, and Mutual—may possibly next buy and rent locomotives or Diesel engines, and the third, passenger cars, the fourth, parlor cars, while the fifth might propose to electrify railroads. Many railroads are down at the heel and need help, and the insurance companies can be a source of great aid. However, what are the end results? These insurance companies would practically control the railroads—and this is not looking for ghosts under the bed.

The insurance companies are already involved in numerous types of business. They construct housing projects: they build commercial and industrial structures and rent them for short or long periods. They are in the banking business and make loans to all manner and kinds of business. There is neither floor nor ceiling to their financial activities, save that they may only invest in capital stock to a limited degree.

The admitted assets, according to Dunne's International Insurance Reports, as of December 31, 1947, of the big five insurance companies, were: Metropolitan, $8,548,422,601; Prudential, $7,321,488,722; Equitable Life Assurance, $4,504,971,753; New York Life, $4,234,184,598, and Mutual Life of New York, $1,942,722,347. Since 1947, the figures have gone considerably higher. They are permitted to throw their financial weight around for good or ill with little or no outside supervision. It is for good, when men like Thomas I. Parkinson, president of Equitable are in control, but what of his successors? What guaranty has the policyholder and the public that efficient and just management will always be present?

We cannot leave such power to chance.

Although the companies are usually mutual, the policyholders have neither control nor voice in the management. The State laws make it impossible. The officers and boards of directors are self-perpetuating.

I am personally convinced that Federal regulation is necessary. Insurance is interstate commerce. It is not, of course, my thought to superimpose Federal regulations upon State regulations which would result in 49 regulatory bodies. Rather, the solution lies in Federal regulations which would govern in any conflict between State and Federal law. What the shape and stringency of that regulation should be, I cannot now say. Further inquiry is needed.

Our inquiry clearly indicated that there is no greater safety in big insurance companies than there is in small insurance companies, and the premium rates are no lower.

If Arizona Is Not To "Die on the Vine," Congress Must Act

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. MURDOCK. Mr. Speaker, the fact is generally recognized that Arizona desperately needs water which is now flowing in the Colorado River within her own limits for 300 miles across the State and 400 miles along her border. It is a less-known fact that if Arizona is to get her legal quota of that water, there must be—because of Arizona's unique circumstances—an authorizing act of Congress as the necessary first step.

Ah, you may say, since diverting Colorado River water into Arizona is too expensive for Arizona to do, of course, it requires an authorization for the Federal Government to do it, and that is the reason why an act of Congress is the first step. That is true, but that is not the reason to which I now refer. There is another more compelling reason why authorization by Congress is absolutely necessary to enable Arizona to get her own water, or any other benefits, from the Colorado River. Please get this explanation: Arizona's Colorado River problem presents a unique case because of a certain legal fact which does not apply to any other Colorado River Basin State nor to any other State in our Union. It applies to Arizona alone. Congress walled Arizona off from the Colorado River in 1910.

No, I am not thinking now of the physical features or handicaps which must be overcome to put Colorado River water on Arizona land, but I am thinking of this legal fact—the shutting off of Arizona from the benefits of the Colorado River—which fact must be known and understood for any appreciation of Arizona's peculiar problem. This great handicap imposed on Arizona—to which I have recently referred in committee and on the floor of the House—was originally imposed by Congress, and it can only be overcome by Congress. This hampering condition is a provision which Congress wrote into Arizona's Enabling Act of June 20, 1910, as found in section 28 thereof. The provision reserved to the United States, and caused to be withdrawn, all power dam sites and lands bordering the Colorado River. Arizona was required to accept the provision and to incorporate it into her State constitution. It is found today in section 6 of article 10 of the Arizona Constitution.

Now the effect of this provision of the enabling act, passed by Congress and required of the new State in her constitution is to legally fence Arizona away from the Colorado River so that Arizona can build no dams or power plants on the Colorado and can divert no water from the Colorado River without an authorizing act of Congress, even though the legal right to her use of the water is absolutely clear.

Am I, a layman, the only authority pointing out Arizona's situation on account of this enabling act provision? Certainly not. Able lawyers have done so, and the Supreme Court has done so in the case of *Arizona* v. *California* (283 U. S. 423). Quoting the Supreme Court in that case:

> Arizona has, of course, no constitutional right to use, in aid of appropriation, any land of the United States, and it cannot complain of the provision conditioning the use of such public land.

What the Court was referring to was the fact that Arizona was required by its enabling act to disclaim all right and title to the unappropriated and ungranted public lands lying within its boundaries. Furthermore, reserved to the United States, and expressly excepted from any and all grants made to the State, was "all land actually or prospectively valuable for the development of water power or power for hydroelectric use or transmission" which might be designated by the Secretary of the Interior within 5 years after the admission of the State. Thereafter, all power sites and public lands along the river were so designated by the Secretary of the Interior. Thus Arizona was fenced off from the great Colorado River which flows 300 miles across the State and 400 miles along her border, although the Colorado River is Arizona's greatest resource. Let me repeat: These conditions were not imposed upon any other Colorado River Basin State. Congressional action brought about this condition. As a Member of Congress, I say that it is the duty of Congress to see that Arizona

UNIVERSITY OF MICHIGAN LIBRARIES

receives her due share of that water from which she was fenced off, and to which she is otherwise legally entitled.

Granted all that is said above, it may be said and it has been said, "There should be a decision by the Supreme Court clearing Arizona's title to the Colorado River water she seeks before the irrigation project is authorized." I have frequently said that nobody is more anxious than I for an immediate and definite decision by the highest Court of the land, as to Arizona's legal rights on the Colorado River. However, the ablest lawyers in the West, including some of the ablest lawyers in the United States Senate, have declared that such an authorization act which passed the Senate February 21, 1950, by a vote of 55 to 28, is the one and only method of getting this water controversy squarely before the Supreme Court. The method of litigation has been proposed during the last 4 years, and suit resolutions were considered by four different committees, two in both Houses of Congress in the Eightieth Congress and in the Eighty-first Congress, but none of the suit resolutions were favorably acted upon. Thus the many lawyers on these committees must have agreed with what able water lawyers in the West say is a legal fact—that an authorization by Congress is a necessary first step before there can be final litigation of Arizona's rights in the Colorado River.

Senator Paul Douglas Versus Natural Gas Monopoly

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. PRICE. Mr. Speaker, no one in the Nation has done more to make the issues clear in the attempt to take the independent producers of natural gas out from under Federal regulation than has the Senator from Illinois, Hon. PAUL DOUGLAS.

As one who opposed this legislation when it was considered in the House in the first session of the present Congress, I give every ounce of moral support possible to PAUL DOUGLAS in his gallant fight in behalf of the millions of American consumers who would be victims of increased rates if the so-called Kerr bill becomes law.

In this connection I include with my remarks an article by Marquis Childs which appeared in the Washington Post, of this morning. Mr. Childs' article follows:

DOUGLAS AND THE KERR BILL—GAS MONOPOLY FIGHT

(By Marquis Childs)

Being a United States Senator is really tough these days if you take your job at all seriously. In an earlier day, some high-falutin' oratory got you over the rough places.

But in the face of an issue as that presented by Senator ROBERT KERR's bill to take the independent producers of natural gas out from under Federal regulation, oratory is not enough. It takes hard, thorough, conscientious digging into the facts and figures that spell out certain basic economic relationships in this country.

That hard, thorough, conscientious digging is what Senator PAUL DOUGLAS, of Illinois, has supplied in the controversy now moving toward a climax. His initial speech and the part he is playing in the give and take of debate constitute a remarkable performance.

DOUGLAS has got down to the hardpan of the argument so that no one can fail to see what the realities are if they choose to.

In the background knowledge he has brought to the fore and in the way he marshals it, DOUGLAS makes old-timers think of Senator George Norris at his best. For one thing, DOUGLAS' presentation is completely in the American tradition. It owes nothing to any alien ideology.

The Senator from Illinois went back to the early attempts of State governments to regulate private monopoly in the gas and electric industry. Here, as he pointed out, was none of the vital force of competition which can and does under our system act to bring prices down and give the consumer value and quality.

"This was not," said DOUGLAS, "public ownership. It was an attempt to avoid public ownership by providing for private ownership and operation but with public regulation to protect consumers and also investors. It was not socialism as some may imply, but America's answer to socialism."

In this last there is good American common sense. It is a sound and valid answer to the distorters who cry socialism at every form of Government activity.

But the States found themselves debarred from regulating the sale of natural gas transported from one State to another. Only the Federal Government has the power to regulate interstate commerce. For that reason, as DOUGLAS develops the argument, Congress adopted in 1938 a law giving the Federal Government through the Federal Power Commission authority over the sale and transmission of natural gas.

In the course of the debate the Senator has presented a remarkable array of figures, statistical tables, and supporting data. They show in a way difficult or impossible to refute that the so-called independent producers are, for the most part, the big oil companies. These companies, which in past years have shown exceedingly generous profits, would be in a position to make an extraordinary killing on the basis of the gas reserves they own and the contracts now in existence, if Congress gives them a go sign.

DOUGLAS has thoroughly analyzed these contracts and he seems to me to knock down one of Senator KERR's chief arguments, which is that they provide for a fixed price over a long period of years. Even if the companies were freed from regulation, that is to say, they could not hike the price. But DOUGLAS points out that most of these contracts have favored-nation clauses providing an increase for the company if it can be shown that a higher price is being paid to another producer.

And, incidentally, throughout the debate the Senator from Illinois has kept away from name calling. He has not felt it necessary to impugn Senator KERR's motives. Consistently he has pounded in facts and figures and always he's come back to the main theme—that the choice is between unreasonable profits for a few producers with drastically increased prices to northern consumers and, on the other hand, reasonable profits and comparatively low prices benefiting millions of citizens.

The vote on the Kerr bill will be closely scanned in a great many States, and one reason is because Senator DOUGLAS has contributed so much toward making the issue crystal clear. He got his preparation years ago when the jerry-built utility empire of Samuel Insull was crashing into ruin in Illinois.

They say that PAUL DOUGLAS is running for President, or anyhow, Vice President. He puts this aside, sternly saying that all he wants to do is be a good Senator. And that, in my opinion, is one of the best possible ways to run for President.

Best Highway Route Through the Rocky Mountains Neglected

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. WHITE of Idaho. Mr. Speaker, when the uncompleted section of the Lewis and Clark Highway between Missoula, Mont., and Lewiston, Idaho, is finished, we will have an arterial road between Chicago and Portland, a short route traversing the lowest pass through the Bitter Root Mountain range that makes the boundary line between Montana and Idaho.

Inserted herewith for the information of my colleagues are the facts presented to the members of the Public Works Committee in my statement concerning this road, when the public-roads bill was under consideration by that committee:

STATEMENT OF THE HONORABLE COMPTON I. WHITE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF IDAHO, BEFORE THE PUBLIC WORKS COMMITTEE

The CHAIRMAN. Please state your name for the reporter.

Mr. WHITE. COMPTON I. WHITE, Congressman representing the First District of Idaho.

I want to talk to you about one of the most important transcontinental roads across the country.

The CHAIRMAN. We are glad to have you with us, Mr. WHITE, as always.

Mr. WHITE. For the purpose of the record, and for the information of the committee I would like to use two maps.

Mr. Chairman, I want to talk to the committee a few minutes about an arterial road under construction across the State of Idaho.

I want to call the attention of the committee to a peculiar situation that between U. S. No. 30, which crosses the southern part of Idaho, and U. S. No. 10 which crosses the northern part of Idaho we have a blank space here in the great United States of 330 miles. There are 330 miles in Idaho between Wallace, Idaho, on U. S. No. 10, and Gooding, Idaho, on U. S. No. 30, where there is no way of crossing that country, right across Idaho, which is the route traveled by Lewis and Clark on their famous expedition when they made an exploration of the Columbia Valley and the Pacific Northwest in 1805.

They came to where Missoula, Mont., is now and from there across the Bitter Root Mountains, and got down to the Salmon River but had to retrace their steps back to the Lolo and found a route, the lowest pass through the Bitter Root and went on down through that pass to the confluence of the Snake and Clearwater Rivers and on to the mouth of the Columbia at Astoria.

Later when General Howe, in his campaign against the Indians thought that he had Chief Joseph surrounded, Chief Joseph and his Indians got away, got through the Bitter Root Mountains by the pass followed by Lewis and Clark, and got out on highway of

the plains of eastern Montana, and got almost to Canada.

The CHAIRMAN. What year was that?

Mr. WHITE. That was back in 1877. 1805 was the time Lewis and Clark made their famous expedition to the Northwest. When Chief Joseph eluded General Howe and took his horses, his squaws, and his people with him he went through this famous Lolo Pass which is traversed by the Lewis and Clark Highway. This road is now under construction and has been for a long time but if you look at the map here (indicating) you will see that there is a dead end to it on both sides. This arterial highway is almost completed. There is about a 40-mile stretch of it remaining to be built. This road extends down from U S 10 down to Lolo Pass, and it ends there, a dead end. It is built up along the Clearwater River, up to a point in the mountains, and there it ends.

The CHAIRMAN. Yes.

Mr. WHITE. And for 30 years we have been trying to induce the Forest Service and the United States Bureau of Roads to complete that highway project.

They have spent up to now over $4,000,000 on it, and I will get the exact figures, and it is being left neglected and uncompleted. We have $4,000,000 invested in that road, and we do not get a nickel out of this road investment that has been made. We do not get any gasoline tax, and we do not get much in the way of service. It is just a dead investment. We need a little more money to complete that road. It is on the Federal aid system. It will be a short cut from the East down through Lewiston and Walla Walla down along the Columbia River into Portland and to the Pacific at Astoria. It is one of the most important roads that we have that remains to be built. I have the figures from the Bureau of Public Roads showing that there has been $2,424,820.62 invested in that road, in addition to over $2,000,000 in other road money, and it is still a dead end.

The CHAIRMAN. I do not mean to interrupt the continuity of your very excellent presentation, but let me ask you this, Mr. WHITE: Has your State highway commission selected that road for construction?

Mr. WHITE. I think some years ago it was put on the Federal aid system. It should be built, as other roads in the national forests are with funds allocated to the national forests. Yes, the State is going the limit with their limited means in matching Federal-aid money.

The CHAIRMAN. That is right, the commission has recommended that as a priority road.

Mr. WHITE. They are building short sections. The Forest Service seems to be bypassing the thing. The Forest Service let a small clearing contract about 2 years ago. I asked then what they were going to do about it this year, and they said we will carry that little $300,000 clearing and a mile and a half construction contract over until next year. This highway project is being stymied and blocked. It is one of the most important roads for military defense and for the utilization of our resources and the use of travelers and tourists to go through the country. It is a short cut, if you please, between Chicago and all of the big cities beyond there, to Portland, Oregon, and Pacific coast cities.

The CHAIRMAN. I think you are absolutely sound. As you know, this committee makes a lump-sum appropriation.

Mr. WHITE. Yes.

The CHAIRMAN. It is up to the Bureau of Public Roads and the highway authorities of Idaho to spend that money where they think it ought to be spent.

Mr. WHITE. It is up chiefly to the Forest Service. Lewiston is one of our biggest Idaho cities, and it is dependent on the development of that road for its natural growth. The representatives of the chamber of commerce went to the Forest Service when Fred Morrell was regional forester some years ago, to their headquarters at Missoula, to work out some plan for completion of the road. They were promised some forest-road money would be spent to finish the road each year.

The CHAIRMAN. Thank you very much.

Mr. WHITE. I want to tell you just a little more about this road, and then I will yield.

The CHAIRMAN. All right; go right ahead.

Mr. WHITE. They went over there to the regional headquarters of the Forest Service and saw Mr. Morrell and he told these people that they could not build this 45 miles as one project, but that each year they would put some money on the project. The Forest Service kept their agreement for a few years, and then the money previously allocated for this project was transferred somewhere else, and that road is still standing there incomplete. Four million dollars' investment made on which we are getting nothing at all.

I wanted the committee to know something about it. Thank you.

The CHAIRMAN. We are mighty glad to have that information and we thank you very much, Mr. White. We are always glad to have you appear before us. You always bring a map with you when you come, and if you do not bring a map you bring photographs, and you always put on a good show.

Tax Discrimination

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. WOODRUFF. Mr. Speaker, Congressman DANIEL A. REED, Republican of New York, ranking minority member of the tax-writing Ways and Means Committee charged today that the Bureau of Internal Revenue's recent ruling exempting from the 20-percent amusement tax the proceeds of the Democratic Jefferson-Jackson Day Rally was a shocking example of taxation by political connivance and political favoritism and that the Federal Government had been cheated out of over $100,000.

Congressman REED declared:

In view of the position of the Bureau of Internal Revenue that the $1 paid to attend the Republican Lincoln Day box-supper rally at the Uline Arena in Washington was subject to the 20 percent amusement tax, I requested on February 20 the Bureau to advise me whether a similar tax was payable on the $100 per person Democratic Jefferson-Jackson Day rally held in the Armory in Washington on February 10.

After more than 1 month's delay I have just received the Commissioner's reply that the approximately $530,000 proceeds from the Democratic spree is not subject to either the admission or cabaret tax in the same manner that the proceeds from the Republican rally were held taxable. In view of the basic similarity of the two events, both of which included professional entertainment and political speeches, this ruling is a shocking example of taxation by political connivance and political favoritism. Although the Presidential henchmen hunger for the pennies paid by even our children in the form of the amusement tax on their movies, museums, playgrounds, county fairs, and many other simple pleasures, they avoid applying the amusement tax to any fund destined for the Democratic coffers for use in fostering their socialistic program.

As a result of the Bureau's ruling, the Federal Government has been cheated out of over $100,000 in revenue. Even more significant than this is the revealing fact that the Democratic Party is unwilling to help the working men and women of America shoulder their tremendous tax burden.

This type of tax discrimination and favoritism is indeed a new low in politics.

Discrimination in the City College of New York

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. KLEIN. Mr. Speaker, I feel quite sure that Members will agree with me that loyalty to this Nation and to its democratic institutions and traditions should be a prime consideration in the selection of the teaching staff of any school, college, or university; and, with a choice of proved loyal Americans, that the designation should be made to the candidates considered best qualified, without regard to race, religion, or national derivation.

In the City College of New York an anomalous situation has been uncovered in which it would appear at this stage of the investigation that a certain Prof. William Knickerbocker has been able to force the promotion of two individuals of less than unquestionable loyalty to the United States, and not alone to its institutions; and that in the process he has been able to bypass qualified candidates who happen to be Jews or Negroes.

Under leave, I am inserting in the RECORD a statement from the Nonsectarian Anti-Nazi League of 165 West Forty-sixth Street, New York; a news article from the Herald Tribune of Sunday, March 26; and miscellaneous clippings on the subject from the New York Post-Home News:

NONSECTARIAN ANTI-NAZI LEAGUE
TO CHAMPION HUMAN RIGHTS, INC.,
New York, N. Y., March 17, 1950.

Hon. FRANCIS T. SPAULDING,
Commissioner of Education of the State of New York, Albany, N. Y.

DEAR MR. COMMISSIONER: In view of continued and very widespread public concern as to whether practices detrimental to the rights of religious and racial minorities in the City College of New York have been effectively terminated, the directors of the Nonsectarian Anti-Nazi League consider it imperative that the office of commissioner of education should institute a sweeping independent investigation of antidemocratic practices within the administration of the

UNIVERSITY OF MICHIGAN LIBRARIES

City College, including a general review of background educational attitudes, promotion practices, and public policies with respect to intergroup relationships.

Such a study ought to give consideration to general civic and educational values, rather than to narrowly circumscribed academic regulations concerning primarily administrative matters.

Without impugning the methods or motives in your disposal of the City College case recently before you, we feel that we should point out that your action was based solely upon narrow technical grounds, and only upon the papers submitted to you from below, without any independent investigation whatsoever on the part of your office, and in spite of formal recommendations on this subject made in a unanimous report of a special committee of the City Council of New York.

We are especially disturbed by a generally understood custom with respect to current faculty appointments at City College, pursuant to which City College graduates are in effect discriminated against for appointment to the faculty of their own institution. Such a procedure, while defended by the City College administration as an attempt to prevent "academic inbreeding," when practiced to the considerable extent apparently prevailing, actually works a discrimination against graduates of City College, and particularly against the great majority of those graduates who happen to be of the Jewish faith, as well as the smaller group which happens to belong to the Negro race.

At present it is estimated that between 80 and 85 percent of the City College student body is of the Jewish faith, and that only 22 to 27 percent of the faculty of full professorial rank is of the Jewish faith. It is obvious that the general pursuit of the principle of "no inbreeding" means that the majority of City College graduates who are of Jewish faith have vastly less possibility to develop academic careers than is the case for the average Gentile college graduate.

"No inbreeding" thus becomes nothing but a new name for the numerus clausus and other time-worn devices of religious and racial discrimination.

This peculiar and all but unique inversion of the feeling of academic self-confidence which seems to have now developed at the City College is, in the opinion of a considerable portion of the academic community, strongly suspect of being a mere camouflage for a much more sinister purpose—a purpose which has at other times and places been cloaked by the phrase "quota system," or openly practiced according to dictates of agitators of the John Elliott Rankin stripe. In the particular case of Prof. William Knickerbocker, the chairman of the romance language department at City College, this lack of institutional self-confidence in the college's own academic products has been carried to a further extreme, as may be observed by even a casual study of appointment and promotion policies, with the result that not only have City College graduates—and particularly those who happen to be of the Jewish faith or the Negro race—been subject to discrimination, but in an effort to avoid granting promotions in this group, definite preference has been given, on important occasions, to teachers whose personal histories should have led them to be held in doubt as to their qualifications for advancement in an institution founded on democratic traditions.

Without meaning to imply that a specialist in a field of art or literature should be compelled to adhere to any specific doctrine, it is nevertheless established American practice to contend that, particularly on the undergraduate level, a devotion to civic principles, including democracy and Americanism, is at least highly desirable.

It is noteworthy that during the administration of Professor Knickerbocker two very important promotions were made where the instructors had earned considerable portions of their academic standing as a result of activities carried on, with Professor Knickerbocker's knowledge or possible advice, in countries and institutions at the time clearly and openly at variance with democratic traditions.

The first is the case of Prof. Guido Errante, who joined the City College staff as an instructor in 1932. During the ensuing years from 1932 to 1938, while serving as an instructor, Errante was also a featured New York correspondent for Il Giornale d'Italia, of Rome, a newspaper at that time edited by Virginio Gayda and internationally notorious as the most quoted Roman press outlet of Benito Mussolini's Fascist regime.

Errante, however, was strongly recommended by Professor Knickerbocker for promotion to an assistant professorship in 1944—this recommendation being made over the heads of at least four other instructors possessing similar or greater seniority and academic attainments. Of these four, whose availability was thus ignored, three were Jews and all were City College alumni. Yet, in advancing Errante's claims, Knickerbocker justified his action in a meeting of members of the department, on the ground that Errante's journalistic experience was of a character to merit his promotion. Thus, service as a correspondent for Il Giornale d'Italia during the critical period 1932–38 became a basis for credit toward promotion in the romance languages department. Errante, in 1947, thus became an assistant professor.

In 1949, Knickerbocker again recommended Errante for further advancement—this time to the rank of associate professor—a recommendation which is still pending.

If experience in Italian journalism had been a sine qua non at this time, it is scarcely necessary to remind you that there were in the United States a considerable number of exiled scholars who had been forced to leave Italian universities as a result of the totalitarian policies of Mussolini, and many of these scholars were then securing appointments at institutions of the first rank, including Columbia, Harvard, Yale, the University of Chicago, and other schools of similar rating.

To give preference under such circumstances to a man, one of whose claims for promotion included his service as a New York correspondent to the outstanding newspaper of Mussolini's Fascist regime, at the expense of relegating qualified City College graduates (sometimes with the suspicion that such action might have been related to the fact that they were of Jewish faith) further down the promotion ladder, would cast grave doubt upon the conduct of this particular department's business.

A parallel example is to be found in the case of Dr. Gaston Gille, who, after serving for several years as a lecturer or instructor at City College, was given leave of absence to complete his doctorate at the University of Paris in 1941, at a time when Paris was under the jurisdiction of a puppet regime established by Adolf Hitler—the head of which regime was subsequently imprisoned for life by decree of the French Republic.

It is entirely possible that Dr. Gille (who also served for a time in the French Army) may have completed his study of the French language at Paris in 1941 without becoming seriously infected with any of the doctrines of anti-Semitism which so characterized official Paris of that day. Yet, it would seem to cast considerable doubt upon the conduct of the romance languages department—in which a majority of the students were and are of that particular religious groups against whom the then-existing regime in Paris had directed its most hateful venom—that such a leave should have been granted at that particular time, and have been immediately followed by recommendation for and promotion to an assistant professorship, over the heads of at least three Jewish members of the department with equal or greater seniority, and at least equal academic attainments. This promotion—as also in Errante's case—was soon followed, by Professor Knickerbocker, with a recommendation for a second advancement, to the rank of associate professor—again over the heads of three or more equally qualified Jewish members of the department.

It would appear that much of the doubt that the public continues to feel with regard to the loyalty of the City College administration to established practices of American democracy cannot be wholly allayed until these and other instances of similar type have been fully and publicly investigated.

We commend to your attention therefore an immediate investigation of the entire promotion policy at City College under the no inbreeding rule of the present administration, and with particular reference to the romance languages department.

Such an investigation should consider not only the question of dubious advancements or advancements out-of-turn, as in the instances just cited, but also the circumstances under which at least four members of the faculty in this department were apparently penalized for having spoken out against certain openly anti-Semitic utterances made by the department's chairman.

The equally urgent issues of Negro segregation and inadequate faculty representation, which were partly raised, but never fully investigated, in the case of Dr. William C. Davis, should also be adequately dealt with by your office.

In view of the above considerations, and in view of the record, the League's board of directors, following 3 weeks of intensive review of the whole situation, therefore urgently requests that you institute a complete investigation, on your own, of the entire question of appointment and promotion policies within the faculty of City College, together with instruction or administration policies which tend to limit or affect the basic rights of Americans, regardless of race, creed, or color.

Only in this way will it be possible to meet the grave questions which have already brought our city's largest educational institution into an embarrassing degree of public obloquy.

The world's largest city cannot afford to maintain an educational institution which is even suspected of having succumbed to those practices which have from time to time irreparably harmed other American educational centers, as notably in the instance of the University of Louisiana during the administration of the late Huey Long. These are practices and customs which do not belong in our community, and the traces of which we hope your office will be able to eradicate.

Respectfully yours,

JAMES H. SHELDON,
Administrative Chairman.
HERMAN HOFFMAN,
Chairman, Board of Directors.

[From the New York Herald Tribune of March 26, 1950]

INQUIRY SOUGHT IN ALLEGED BIAS AT CITY COLLEGE—ANTI-NAZI LEAGUE CONTENDS MINORITY GROUPS SUFFER IN FACULTY APPOINTMENTS

(By Judith Crist)

A request for a sweeping independent investigation of antidemocratic practices within the administration of City College has been submitted to State Education Commissioner Francis T. Spaulding by the Nonsectarian Anti-Nazi League, 165 West Forty-sixth Street, it was learned yesterday.

In a letter to Dr. Spaulding, James H. Sheldon, administrative chairman of the League, asked also for a general review of background educational attitudes, promoting practices, and public policies with respect to intergroup relationships.

The investigation, which Mr. Sheldon said yesterday should be conducted "by a half dozen first-rate educational authorities from out of State," would revolve around two major complaints. Neither of these, Mr. Sheldon said, had been brought before the commissioner in previous cases involving City College.

KNICKERBOCKER INVOLVED

The first has to do with what was termed the discriminatory effect of the college's policy against "inbreeding" on its faculty. The second is concerned with the appointment and subsequent promotion of two members of the romance languages department by Prof. William E. Knickerbocker. Dr. Spaulding recently cleared Professor Knickerbocker of long-pending charges that he had already made anti-Semitic statements, but his specific actions in the two faculty cases, Mr. Sheldon said, had not been examined by the commissioner.

The college's professed policy of preventing "academic inbreeding" by appointing few City College graduates to its faculty, Mr. Sheldon said, "actually works a discrimination against graduates of City College and particularly against the great majority of those graduates who happen to be of the Jewish faith, as well as the smaller group which happens to belong to the Negro race."

He said that between 80 and 85 percent of the student body is Jewish, while less than 30 percent of the faculty is of that faith. "It is obvious," he said, "that the general pursuit of the principle of 'no inbreeding' means that the majority of City College graduates who are of Jewish faith have vastly less possibility to develop academic careers than is the case for the average Gentile college graduate."

A preliminary inquiry revealed, he said, that in the last year, in the chemistry department, 21 persons were recommended by the department for tenure, of whom 14 were Jewish. All 7 of the non-Jews were given tenure but only 6 of the 14 Jews received it from the higher nondepartmental faculty committees that passed on departmental recommendation. In another situation, he said, 8 men, including 6 Jews who were City College graduates, were recommended for tenure. Two Jews—and the two Gentiles—got it.

In the electrical engineering department last year, Mr. Sheldon said, seven tutors who were City College graduates were recom- Under the "no inbreeding" policy, he said, five of the tutors, who were Jews, were dismended by the department for retention. missed. The two non-Jewish tutors were retained. "That is too large a number," he said, "to be pure accident."

"The 'no-inbreeding' clause," Mr. Sheldon said, "thus becomes nothing but a new name for the 'numerus clausus' [quota system] and other time-worn devices of religious and racial discrimination."

Not only have City College graduates, particularly Jews and Negroes, been discriminated against in appointments and promotions, Mr. Sheldon said, "but in an effort to avoid granting promotions in this group, definite preference has been given, on important occasions, to teachers whose personal histories should have led them to be held in doubt as to their qualifications for advancement in an institution founded on democratic tradition."

CASE OF REPORTER NOTED

Two cases Mr. Sheldon cited to the commissioner were in Professor Knickerbocker's department. The first was of Professor Guido Errante, who was a correspondent from 1932 to 1939 for Il Giornale d'Italia, Virginio Gayda's newspaper that was regarded as a press outlet for Benito Mussolini's regime. Mr. Sheldon said Professor Knickerbocker subsequently had successfully urged Professor Errante's promotion on the ground that his journalistic experience added merit to his case.

The second case was that of Dr. Gaston Gille, whose promotion has also been successfully urged by Professor Knickerbocker. Mr. Sheldon said that Dr. Gille completed his doctorate studies at the University of Paris in 1941 with the full approval of the Vichy regime.

Both men, Mr. Sheldon said, had been promoted over the heads of three or more equally qualified Jewish members of the department.

"It would appear," Mr. Sheldon told the commissioner, "that much of the doubt that the public continues to feel with regard to the loyalty of the City College administration to established practices of American democracy cannot be wholly allayed until these and other instances of similar type have been fully and publicly investigated."

[From the New York Post of March 20, 1950]

ANTI-NAZI GROUP ASKS CCNY PROBE

The long-smouldering controversy over alleged discriminatory teaching at City College was fanned into a new flame today when the Nonsectarian Anti-Nazi League demanded a sweeping independent investigation of antidemocratic practices within the CCNY administration.

Charging that the officially backed no inbreeding policy in faculty appointments and promotions is but a device for religious and racial discrimination, the League said:

"One result of this policy has been the promotion to a professorship of a man who, while an instructor on the City College staff, served as a correspondent for Mussolini's leading Fascist newspaper, Il Giornale d'Italia.

"Another result has been granting a leave of absence to a second instructor to complete a French doctorate at a university then under the jurisdiction of Hitler's Vichy regime."

The League said the office of New York State commissioner of education Spaulding has so far conducted no investigation of its own into charges of anti-Semitic policies by Prof. William Knickerbocker of CCNY and anti-Negro acts by Dr. William C. Davis.

[From the New York Post of March 23, 1950]

ALLEGAROO AND BIGOTRY, TOO?

I was happy to see that the Nonsectarian Anti-Nazi League insists on Mr. Spaulding making a genuine investigation into the question of discrimination at City College. I think it is just about time that we brought into light of day exactly what goes on in City College and why it is permitted. At least in New York City, the people have reason to believe that discrimination just won't be tolerated.

STEPHEN A. MARKS.

[From the New York Post of March 27, 1950]

TEACHER QUOTA?

As a graduate of City College, I am glad that the Nonsectarian Anti-Nazi League is at last trying to bring out the facts concerning the use of "no inbreeding" policy with respect to appointments at the institution. Before I graduated, I had hoped to follow an academic career, but everyone from whom I sought advice advised me against it, pointing out that out-of-town appointments for members of a minority group were violently restricted and that the policy in city institutions was such that only a fraction of those who belonged to a minority group could ever hope to be appointed. With the situation such as it is in out-of-town schools, where does an aspirant for such a career look if not to the colleges maintained by the city of New York? If the people really find out what goes on, the situation will certainly be corrected.

SIDNEY BERNSTEIN.

Informational Broadcasts by Members of Congress

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. LOVRE. Mr. Speaker, under leave to extend by remarks in the RECORD, I wish to insert the following letter addressed to Mr. Robert J. Coar, coordinator, Joint Senate and House Recording Facility, by the Chairman of the Federal Communications Commission, Wayne Coy.

It is my opinion that this communication clarifies the policy of the Commission to a great extent, and is helpful in ascertaining procedure to be followed with respect to informational broadcasts by Members of Congress.

Mr. Coy's letter follows:

FEBRUARY 17, 1950.

Mr. ROBERT J. COAR,
Coordinator, Joint Senate and House Recording Facility,
Old House Office Building,
Washington, D. C.

DEAR MR. COAR: I have your letter of February 2, 1950, in which you ask for information concerning the Commission's position with respect to certain transcribed radio programs regularly furnished to local radio stations by Members of Congress. You set out in your letter a quotation of a statement of a station licensee who quotes his Washington attorney as reporting to him certain statements allegedly made with respect to these programs by the enforcement section of the Commission, to the effect that they have always been considered as political broadcasts. The Commission has no enforcement section, and to the best of our information no such general statement which disregards the decisive importance of the specific factual circumstances relevant to each situation has ever been made by any member of the Commission's staff. If you should furnish us with the names of the

UNIVERSITY OF MICHIGAN LIBRARIES

station licensees and the Washington attorneys quoted, we would be pleased to look into the matter further to ascertain the facts.

We have summarized below the Commission's position with respect to the questions raised by your letter, to the extent that they can be definitely answered on the basis of applicable law and in the absence of specific factual circumstances.

Under the Communications Act of 1934, the selection and presentation of radio program material are generally the responsibility of the individual radio station licensees, subject only to their obligation to conform the operation of their stations to the statutory standard of the public interest, convenience, and necessity. Section 315 of the act provides that where a station allows its facilities to be used by a legally qualified candidate for public office at any election, it must provide equal opportunities for all other legally qualified candidates for that office to use its facilities. But regular broadcasts by Members of Congress to their constituents under circumstances which establish that they are not in connection with an election campaign would not appear to come within section 315, and this provision of the Communications Act does not expressly require that licensees provide equal time to representatives of opposing views in connection with any other types of programs except those covered by section 315. It is important to note, however, that the ascertainment of when an election campaign begins and who is a legally qualified candidate for public office presents questions of fact, which, in all cases, must be resolved by reference to the particular facts and circumstances as well as pertinent State and local statutes. It will depend, therefore, on the particular circumstances involved, whether the broadcast of transcribed speeches by Members of Congress will bring into operation the requirements of section 315. In the light of these problems, the Commission has consistently followed a policy of determining whether a particular case falls within the provisions of section 315 only when the complete facts in an individual case are presented to it.

Moreover, it should be pointed out that the Commission does not determine the programs or persons to be presented by any radio station, and is specifically prohibited by section 326 of the act from exercising any powers of censorship over radio-program material. Its duty to insure that operation of stations is in the public interest, as required by the Communications Act, is performed by periodic review of the over-all applications for renewal of station licenses. The Commission has consistently held that one of the important elements of such operation in the public interest is the presentation of a balanced, well-rounded program service including the expression of representative opposing viewpoints on controversial public issues of interest and importance to the community served by the particular station. At the time of such review, however, we are not concerned with whether a particular station was correct or incorrect in presenting or refusing to present any particular program or person, except as it is one factor in our determination of whether the station's over-all program service demonstrates its ability to serve the public interest. In this connection your attention is called to the Commission's report in the matter of editorializing by broadcast licensees, a copy of which is enclosed.

It is hoped that the foregoing discussion will serve to illuminate the problems covered in your letter. For your information there is enclosed a copy of section 315 of the Communications Act as well as a copy of section 3.190 of the Commission's Rules and Regulations which deal with the question of political broadcasts. If there is any additional information concerning this matter which we can furnish you, please do not hesitate to let us know.

By direction of the Commission:

WAYNE COY, *Chairman.*

Bad Security Risks on the Federal Pay Roll

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. HILL. Mr. Speaker, I wish every Congressman could find the time and opportunity to read the discussions carried on inside the committee rooms, and especially when the subcommittees of House are considering various issues on current legislation.

Since we are all concerned with foreign affairs and rightly so, an article in the New York Daily News of March 24, 1950, wherein our colleague and personal friend, Representative CLEVENGER, of Ohio, asks some very pertinent questions of Bernard L. Gladieux, executive assistant to Secretary of Commerce Sawyer, this will interest every one of us. You will notice in this discussion that even the Democratic Chairman ROONEY of the subcommittee was quite disgusted with the testimony of Mr. Gladieux.

In considering the employment by the State and Commerce Departments of bad security risks, who is to blame for the employing of this type of person in the first place? Whether they are soft-shouldered on Russia, believe in appeasement, or are homosexuals, the question in my mind is why is such a type of citizen considered for these top positions when there are so many good Americans that we could employ. It would be interesting to know who promotes the hiring of such misfits.

The article follows:

CAPITOL STUFF

(By John O'Donnell)

WASHINGTON, D. C., March 23.—That secret session of the House Appropriations Committee last February 27 high lights the tremendous problem confronting Americans of both parties when it comes to stamping out bad security risks and traitors who have bored deep into our Government. In particular, a reading of the transcript of the testimony (still with much supersecret data stricken out) reveals a situation we have long complained about.

This is it:

You can kick out a bad security risk from the State Department, for example, and find that he has popped up again on some other Government pay roll. That is particularly true of sex perverts, homosexuals, and those with twisted emotional aberrations. They are susceptible of being blackmailed for national secrets or capable of an emotional attachment for a foreign representative or a cold war opponent.

Back when the shooting war ended, the phonies, the privileged draft dodgers, and the rest of the trash which riddled the Moscow-praising Office of War Information, the UNRRA, civilian aids to Lend-Lease, etc., were, according to public declaration, washed off the public pay roll.

But many of those old familiar names popped up again on the State Department pay roll or overseas in some branch of the civilian government of surrendered Germany or as aids at the various war crimes trials. All strictly phonies; all on the pay roll. And it still goes on.

When the competent Under Secretary of State, John Peurifoy, a month ago told a Senate committee that his security board had fired 91 State Department employees for flagrant sex perversion, he could assure the questioning Senator, STYLES BRIDGES (Republican, New Hampshire) that none of them had slipped back into the State Department, but he had no way of being sure that they hadn't got into some other Federal set-up.

That was testimony on the Senate side of Capitol Hill. Now it's revealed that over on the House side, at the same time, the problem of the security danger of homosexuals in Government was being taken up by a subcommittee headed by JOHN J. ROONEY, of New York. This time, the investigation was directed not at State but at Commerce—where a foreign spy could find a ripe field of operation in Commerce's National Bureau of Standards, in Foreign Trade, in Civil Aeronautics, the Weather Bureau, and the Coast and Geodetic Survey.

Bernard L. Gladieux, executive assistant to Secretary of Commerce Sawyer, and in charge of security, was in the witness chair. When the unhappy Gladieux stepped down from the stand, he had been hauled over the coals by Democratic Chairman ROONEY and Republican KARL STEFAN, of Nebraska, and CLIFF CLEVENGER, of Ohio.

CALLS COMMERCE STORY INCREDIBLE

ROONEY had kicked the administration's security expert in Commerce brutally—and stated bluntly that in his view Gladieux's testimony was incredible when he said that his operations had failed to uncover a single sex pervert risk among the 46,000 employees.

But it was the tough CLEVENGER who hauled out for the record the fact that because of the directive issued by President Truman, which impounds in secrecy evidence on security dug up by department investigators, the bad security risks kicked out of one department can get another job in the Government—and have.

We quote from the record:

CLEVENGER. "The reason I am asking this (whether you would put other departments on notice in the cases of individuals dropped for sex perversion) is this: It is the third year I have gone through this situation. The identical situation came up a year ago. My question as to whether that was done (notifying other Government departments) is on the record. The forthright reply by the officer was that the President's directive was that this should not be done."

RED HERRING OR DEAD MACKEREL?

"Now, I want to say this, I am not so sure that the Chief Executive in the White House knows the difference between a red herring and a long-dead mackerel, lying in the moonlight, shining and stinking and stinking and shining.

"But I do want to make sure that if we find any more of this sort of tripe in our Government employment that they do not go back on the pay roll in any Government department. After the security effort has been made and these persons are discovered and admit their guilt, I do not think there is any right to whitewash them and let them be reemployed in some other department that has not checked up on them. I'm sticking my neck out, but it's about time somebody did because these people are fooling with the security of our country."

The unhappy Gladieux muttered something about thoroughly agreeing with the Ohioan's sentiments and said his outfit had taken every reasonable precaution to warn other departments about homosexual risks, when the Republican broke in:

"So did this fine officer from this other department. All respect to him, but by presidential directive he was forbidden to do so. I sympathize with him, but I also sympathize with my country when all of us are trying to bolster up its security."

Gladieux got little sympathy from the chairman, ROONEY. When Sawyer's assistant insisted that he had been diligent and cautious in investigating loyalty in the Commerce Department and wound up with a flowery defense and praise of Congress, ROONEY snapped at him:

"That is so much nice language, and to me it doesn't mean a thing. You came up here to acquaint us with the situation in the Department of Commerce. The results are nil. We have not had the cooperation from you that we had from the State Department. You refused to take us into your confidence. I have tried to handle it in an amicable way. You reacted in the other direction. Now we are far apart and will stay that way. They speak of communism in the Department of State. I think the Communist situation is in the Department of Commerce."

Flood Control and River and Harbor Projects

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following table:

List of projects showing 1951 budget estimates, House committee allowance, and congressional district

FLOOD CONTROL, GENERAL

Project	Approved budget estimate	House committee allowance	Congressional district
Arizona: Tucson	$700,000	$350,000	2.
Arkansas:			
Blakely Mountain Reservoir	3,500,000	2,500,000	4 and 6.
Bull Shoals Reservoir, Ark. and Mo.	18,000,000	14,000,000	3.
Narrows Reservoir	1,750,000	1,500,000	4.
Nimrod Reservoir	150,000	----------	5.
Norfork Reservoir, Ark. and Mo.	170,000	150,000	3, Arkansas; 7, Missouri.
Red River levees and bank stabilization below Denison Dam, Ark., Tex., and La.	700,000	500,000	4 and 7, Arkansas; 1, Texas; 4 and 8, Louisiana.
West of Morrilton	600,000	----------	5.
California:			
Cherry Valley Reservoir	500,000	450,000	2.
Farmington Reservoir	1,634,000	500,000	3.
Folsom Reservoir	6,500,000	4,000,000	3.
Isabella Reservoir	3,500,000	2,000,000	10.
Los Angeles County drainage area (exclusive of Whittier Narrows Reservoir).	9,500,000	7,500,000	21.
Merced County stream group	234,000	200,000	9 and 2.
Pine Flat Reservoir	13,500,000	10,000,000	9.
Sacramento River and major and minor tributaries.	1,000,000	750,000	1, 2, and 3.
Whittier Narrows Reservoir	7,500,000	5,000,000	21.
Connecticut:			
Mansfield Hollow Reservoir	2,860,000	2,000,000	2.
Winsted	88,500	[1] 50,000	5.
Florida: Central and southern Florida.	7,500,000	5,000,000	6 and 4.
Georgia: Clark Hill Reservoir, Ga. and S. C.	22,000,000	16,000,000	10, Georgia; 3, South Carolina.
Idaho: Lucky Peak Reservoir	5,000,000	3,750,000	2.
Illinois:			
Columbia drainage and levee district.	250,000	100,000	26.
Chouteau, Nameoki, and Venice drainage and levee district.	60,000	[1] 30,000	25.
Degognia and Fountain Bluff drainage and levee district.	160,000	80,000	26.
East Cape Girardeau and Clear Creek drainage district.	450,000	400,000	26.
East St. Louis and vicinity	500,000	200,000	25.
Farm Creek Reservoirs	1,000,000	600,000	18.

Lobbying

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I would like to include an article by Norman J. Futor, which recently appeared in 10 Federal Bar Journal 366, with slight revisions. In general, Mr. Futor's position is that:

First. Section 307 is a section which broadens and amplifies section 305 rather than restricting or limiting it.

Second. In cases in which applicability is predicated on expenditures, section 307 has no bearing on section 305.

Third. The distinctions between section 305 and section 308 are "distinctions without a difference"—differences in form rather than differences of substance.

Fourth. Sections 305 and 308 have concurrent applicability but have virtually identical reporting requirements.

Fifth. Neither section 305 nor 308 are limited in any way by any "principal purpose" concept—the only limitation on the applicability of either section is the doctrine of "de minimis non curat lex."

Sixth. The act is constitutional.

Seventh. Section 308 is not affected in any way by section 307.

It is interesting to note that the constitutionality of the act was sustained on March 14, 1950. In the case of *United States* v. *Roger C. Slaughter* (Criminal No. 1433–1448), defendant had filed a motion to dismiss the indictment on the ground that, inter alia, the Lobbying Act is unconstitutional as being so vague and uncertain as to violate the fifth and sixth amendments to the Constitution and that it offends the first amendment "because it deprives the people of civil liberties thereby protected." In dismissing defendant's motion, and sustaining the indictment—charging defendant with violating section 308 of the act—Judge Schweinhaut rejected the defendant's attack on the constitutionality of the statute.

The judge said that section 308—may stand alone and apart from other provisions and * * * is not on its face unconstitutional. * * * The section does not abridge constitutionally guaranteed privileges (freedom of speech, press, petition, etc.) since it leaves everyone free to exercise those rights, calling upon him only to say for whom he is speaking, who pays him, how much, and the scope in general of his activity with regard to legislation. This, the Congress should and, in the court's opinion, does have the right to demand.

The article follows:

AN ANALYSIS OF THE FEDERAL LOBBYING ACT[1]

(By Norman J. Futor*)

INTRODUCTION

A basic legislative problem is the adjustment of the conflicting interests represented by the divers State and National organizations of interest groups: teachers organizations, labor organizations, farm organizations, religious organizations, veterans organizations, pension organizations, business organizations, real-estate organizations, public utilities, and so forth.

A legislator knows: (1) That any interest group believes that its program is meritorious and in the public interest; and (2) That

* Trial attorney, Antitrust Division, Department of Justice; formerly assistant attorney general of Oklahoma. For a short time the author assisted in the lobbying investigation conducted by Irving R. Kaufman (then special assistant to the Attorney General), now United States district judge (Southern District of New York), and is indebted to Judge Kaufman for acquainting him with many of the problems discussed in this article; however, the views expressed herein are those of the author and do not necessarily represent either the views of Judge Kaufman or the position of the Department of Justice.

[1] Federal Regulation of Lobbying Act (60 Stat. 839; 2 U. S. C., ch. 8A):

SHORT TITLE

SEC. 301. This title may be cited as the "Federal Regulation of Lobbying Act."

DEFINITIONS

SEC. 302. When used in this title—

(a) The term "contribution" includes a gift, subscription, loan, advance, or deposit of money or anything of value and includes a contract, promise, or agreement, whether or not legally enforceable, to make a contribution.

(b) The term "expenditure" includes a payment, distribution, loan, advance, deposit, or gift of money or anything of value, and includes a contract, promise, or agreement, whether or not legally enforceable, to make an expenditure.

(c) The term "person" includes an individual, partnership, committee, association, corporation, and any other organization or group of persons.

(d) The term "Clerk" means the Clerk of the House of Representatives of the United States.

(e) The term "legislation" means bills, resolutions, amendments, nominations, and other matters pending or proposed in either House of Congress, and includes any other matter which may be the subject of action by either House.

DETAILED ACCOUNTS OF CONTRIBUTIONS

SEC. 303. (a) It shall be the duty of every person who shall in any manner solicit or receive a contribution to any organization or fund for the purposes hereinafter designated to keep a detailed and exact account of—

(1) all contributions of any amount or of any value whatsoever;

(2) the name and address of every person making any such contribution of $500 or more and the date thereof;

(3) all expenditures made by or on behalf of such organization or fund; and

(4) the name and address of every person to whom any such expenditure is made and the date thereof.

(b) It shall be the duty of such person to obtain and keep a receipted bill, stating the particulars, for every expenditure of such funds exceeding $10 in amount, and to preserve all receipted bills and accounts required to be kept by this section for a period of at least 2 years from the date of the filing of the statement containing such items.

RECEIPTS FOR CONTRIBUTIONS

SEC. 304. Every individual who receives a contribution of $500 or more for any of the purposes hereinafter designated shall within 5 days after receipt thereof rendered to the person or organization for which such contribution was received a detailed account thereof, including the name and address of the person making such contribution and the date on which received.

STATEMENTS TO BE FILED WITH CLERK OF HOUSE

SEC. 305. (a) Every person receiving any contributions or expending any money for the purposes designated in subparagraphs (a) or (b) of section 307 shall file with the Clerk between the first and tenth day of each calendar quarter a statement containing complete as of the day next preceding the date of filing—

(1) the name and address of each person who has made a contribution of $500 or more not mentioned in the preceding report; except that the first report filed pursuant to this title shall contain the name and address of each person who has made any contribution of $500 or more to such person since the effective date of this title;

(2) the total sum of the contributions made to or for such person during the calendar year and not stated under paragraph (1);

(3) the total sum of all contributions made to or for such person during the calendar year;

(4) the name and address of each person to whom an expenditure in one or more items of the aggregate amount or value, within the calendar year, of $10 or more has been made by or on behalf of such person, and the amount, date, and purpose of such expenditure;

(5) the total sum of all expenditures made by or on behalf of such person during the calendar year and not stated under paragraph (4);

(6) the total sum of expenditures made by or on behalf of such person during the calendar year.

(b) The statements required to be filed by subsection (a) shall be cumulative during the calendar year to which they relate, but where there has been no change in an item reported in a previous statement only the amount need be carried forward.

STATEMENT PRESERVED FOR 2 YEARS

SEC. 306. A statement required by this title to be filed with the Clerk—

(a) shall be deemed properly filed when deposited in an established post office within the prescribed time, duly stamped, registered, and directed to the Clerk of the House of Representatives of the United States, Washington, District of Columbia, but in the event it is not received, a duplicate of such statement shall be promptly filed upon notice by the Clerk of its nonreceipt;

(b) shall be preserved by the Clerk for a period of 2 years from the date of filing, shall constitute part of the public records of his office, and shall be open to public inspection.

PERSONS TO WHOM APPLICABLE

SEC. 307. The provisions of this title shall apply to any person (except a political committee as defined in the Federal Corrupt Practices Act, and duly organized State or local committees of a political party), who by himself, or through any agent or employee or other persons in any manner whatsoever, directly or indirectly, solicits, collects, or receives money or any other thing of value to be

UNIVERSITY OF MICHIGAN LIBRARIES

an interest group may oppose him at the next election if he does not vote in accord with its views. In the light of these considerations, it is difficult to make any sense out of those State statutes which purport to require that discussion of legislation with a

used principally to aid, or the principal purpose of which person is to aid, in the accomplishment of any of the following purposes:

(a) The passage or defeat of any legislation by the Congress of the United States.

(b) To influence, directly or indirectly, the passage or defeat of any legislation by the Congress of the United States.

REGISTRATION WITH SECRETARY OF THE SENATE AND CLERK OF THE HOUSE

SEC. 308. (a) Any person who shall engage himself for pay or for any consideration for the purpose of attempting to influence the passage or defeat of any legislation by the Congress of the United States shall, before doing anything in furtherance of such object, register with the Clerk of the House of Representatives and the Secretary of the Senate and shall give to those officers in writing and under oath, his name and business address, the name and address of the person by whom he is employed, and in whose interest he appears or works, the duration of such employment, how much he is paid and is to receive, by whom he is paid or is to be paid, how much he is to be paid for expenses, and what expenses are to be included. Each such person so registering shall, between the first and tenth day of each calendar quarter, so long as his activity continues, file with the Clerk and Secretary a detailed report under oath of all money received and expended by him during the preceding calendar quarter in carrying on his work; to whom paid; for what purposes; and the names of any papers, periodicals, magazines, or other publications in which he has caused to be published any articles or editorials; and the proposed legislation he is employed to support or oppose. The provisions of this section shall not apply to any person who merely appears before a committee of the Congress of the United States in support of or opposition to legislation; nor to any public official acting in his official capacity; nor in the case of any newspaper or other regularly published periodical (including any individual who owns, publishes, or is employed by any such newspaper or periodical) which in the ordinary course of business publishes news items, editorials, or other comments, or paid advertisements, which directly or indirectly urge the passage or defeat of legislation, if such newspaper, periodical, or individual, engages in no further or other activities in connection with the passage or defeat of such legislation, other than to appear before a committee of the Congress of the United States in support of or in opposition to such legislation.

(b) All information required to be filed under the provisions of this section with the Clerk of the House of Representatives and the Secretary of the Senate shall be compiled by said Clerk and Secretary, acting jointly, as soon as practicable after the close of the calendar quarter with respect to which such information is filed and shall be printed in the CONGRESSIONAL RECORD.

REPORTS AND STATEMENTS TO BE MADE UNDER OATH

SEC. 309. All reports and statements required under this title shall be made under oath, before an officer authorized by law to administer oaths.

PENALTIES

SEC. 310. (a) Any person who violates any of the provisions of this title, shall, upon conviction, be guilty of a misdemeanor, and shall be punished by a fine or not more than $5,000 or imprisonment for not more than 12 months, or by both such fine and imprisonment.

(b) In addition to the penalties provided for in subsection (a), any person convicted of the misdemeanor specified therein is prohibited, for a period of 3 years from the date of such conviction, from attempting to influence, directly or indirectly, the passage or defeat of any proposed legislation or from appearing before a committee of the Congress in support of or opposition to proposed legislation; and any person who violates any provision of this subsection shall, upon conviction thereof, be guilty of a felony, and shall be punished by a fine of not more than $10,000, or imprisonment for not more than 5 years, or by both such fine and imprisonment.

EXEMPTION

SEC. 311. The provisions of this title shall not apply to practices or activities regulated by the Federal Corrupt Practices Act nor be construed as repealing any portion of said Federal Corrupt Practices Act.

SEPARABILITY CLAUSE

(Sec. 1 (b) of Legislative Reorganization Act of 1946 (Aug. 2, 1946, ch. 753, 60 Stat. 812) is a separability clause applicable to all titles of that act. The Federal Regulation of Lobbying Act is title III of the Legislative Reorganization Act of 1946.)

legislator shall be limited to discussion on the merits.

In the course of gaining election and reelection to office, a legislator has occasion to acquaint himself with the legislative programs of the various interest groups and to appraise the degree of concern which is manifested in such programs by the voters of his district. Unless voters of a legislator's own district display serious concern as to a particular legislative issue, the legislator will not be seriously concerned with the attitude of a particular interest group on that issue. For that reason, the State and national organizations of many interest groups devote considerable effort to stimulating their members (as well as members of the general public) to display a serious and intense interest in the sponsored legislation, so that the legislators may become aware of such interest. Such organizations undertake direct mail campaigns, advertising campaigns, and other campaigns calculated to stimulate activity at the local level.

"Lobbying" is a word which may conveniently be used to designate the processes used by organizations to stimulate such activity by their members (and by the general public) as will impress legislators with their serious interest in the sponsored legislation. "Lobbyist" is a word which may conveniently be used to designate such organizations and to designate their employees (who may be individuals, firms, or corporations). No good purpose is served by those State statutes which define "lobbying" as an attempt to influence legislation by unlawful activities. Since unlawful activities are already covered by other statutes, the word "lobbying" had best be reserved for attempts to influence legislation by lawful means.

In drafting a statute to deal with lobbying, it is not possible to distinguish between good organizations and bad organizations, or good legislation and bad legislation, or good lobbyists and bad lobbyists. Such distinctions can be made only on a subjective basis; there are no objective criteria on which such distinctions can be made. And for a statute, objective criteria are required.

The constructive approach to the problem is to make available, to the legislators and to the general public, statements as to the receipts and expenditures of the interest groups (and their organizations and employees) in connection with their attempts to influence legislation. Statements as to receipts (and sources thereof) and expenditures—and recipients thereof—will give some indication as to what the organizations actually do. It was to require such statements that the Federal Regulation of Lobbying Act was enacted.

I. NATURE, SCOPE, AND VALIDITY OF REQUIREMENTS

A. Reports and identifying data: The Federal Regulation of Lobbying Act requires the filing of reports in connection with the financing of attempts to influence legislation. It is well for all reports to include such identifying data as name and address, nature of business—and name of employer, if any—as well as data on legislative interests, anticipated duration thereof, and publications issued in connection therewith. Some but not all of such identifying data are expressly required by statute; but, by reason of the subject matter of the statute, all of such data serve to meet the requirement of adequate identification—a requirement inherent in the concept of reporting. The act requires that organizations and individuals shall—before beginning activities—register by filing a preliminary report (section 308); and that—after beginning activities—they shall file, for each calendar quarter, a quarterly report (secs. 305 and 308):[2]

(1) The preliminary report states the nature of the anticipated expenses, and (if for an employee) states what the reimbursement is to be for services and for expenses.

(2) The quarterly report is required by both sections 305 and 308 to contain certain financial data; i. e., data as to receipts[3] (in-

[2] Particularly in parts II and III of this article, considerable attention will be given to secs. 305, 307, and 308. Detailed treatment does not appear necessary in the case of secs. 303 and 304, and the following statement should suffice:

Sec. 303 requires the keeping of a record of certain data as to receipts and expenditures. Without the keeping of an adequate record, it would not be possible to file adequate quarterly reports.

Sec. 304 requires that, within 5 days after receipt of a $500 contribution, an agent must notify his principal of: (a) amount received; (b) date of receipt; (c) name and address of contributor. Were it not for sec. 304, a principal might prefer that the agent not give formal notice of the contributors' names; then the principal could file its quarterly reports without giving the names, and if a question were ever raised, the principal could plead that it had assumed that the lump sum which had been turned over by the agent had been received in the form of small contributions; and, in such a case, the agent could obligingly admit that he had failed to communicate full data to the principal. By penalizing an agent who delays more than 5 days in giving notice of all the data in question, sec. 304 serves to discourage such maneuvering.

[3] Receipts: In this context the terms "receipts" and "contributions" may be used interchangeably. "Contribution" is defined as "that which is contributed" and "contribute" is defined as: "to give (money or other aid) for a special object" (Webster's New International Dictionary; 13 C. J. S. 1318). "'Contribution' * * * may be employed as equivalent to, or synonymous with 'assessment' * * * and 'dues' * * *" (18 C. J. S. 1 citing *Jones* v. *Loaleen Mut. Ben. Assn.*, 169 NE 254, 258, 337 Ill. 431, and *Mueller* v. *Grand Cove, U. A. O. D.*, 72 NW 48, 69 Minn. 236). Thus, things of value con-

cluding contributions and loans [4]), sources [5] thereof, expenditures [6] (including loans [7]),

tributed to organizations and individuals may be considered as having been paid to or received by them and include such items as fees, salaries, and commissions received by them. The term "contribution" includes a gift, subscription, loan, advance, deposit, or gift of money or anything of value, including printed or duplicated matter. When an organization or individual uses printed or duplicated matter in a campaign attempting to influence legislation, money received by such organization or individual, for such printed or duplicated matter, is a contribution. Sec. 302 (a) of the act, dealing with "contribution," does not purport to limit the definition of the term, but extends its application as follows:

Sec. 302 (a): "The term 'contribution' includes a gift, subscription, loan, advance, or deposit of money or anything of value and includes a contract, promise, or agreement, whether or not legally enforceable, to make a contribution."

Some organizations do not receive any funds which are to be expended solely for the purpose of attempting to influence legislation. Such organizations make such expenditures out of a general fund raised by dues, assessments, or other contributions. The percentage of the general fund which is used for such expenditures indicates the percentage of dues, assessments, or other contributions which may be considered to have been paid for that purpose. Therefore, in reporting receipts, such organizations may specify what that percentage is, and report their dues, assessments, and other contributions on that basis. However, each contributor of $500 or more is to be listed, regardless of whether the contribution was made solely for legislative purposes. (See note 5.)

[4] Loans received are to be reported. (See note 3.) But since repayment will be involved, loan transactions are to be kept separate from other items of receipt or expenditure. In order that there may be a coherent running account in the quarterly report, the following are to be indicated: (1) Total now owed to others on account of loans; (2) borrowed from others during this quarter; (3) repaid to others during this quarter.

[5] Sources of receipts: It is required that the report identify each contributor whose contributions, from January 1 through the current quarter, total $500 or more.

Salary, commission, or fee can be considered a contribution for personal services, but identification in such case is accomplished when the contributor is named as employer.

An employee is to file, each quarter, as many reports as he has employers; except that: (1) If a particular undertaking is jointly financed by a group of employers, the group is to be considered as one employer, by all members of the group are to be named, and the contribution of each member is to be specified; (2) if the work is done in the interest of one person but payment therefor is made by another, a single report—naming both persons as employers—is to be filed each quarter.

[6] Sec. 302 (b): "The term 'expenditures' includes a payment, distribution, loan, advance, deposit or gift of money or anything of value, and includes a contract, promise, or agreement, whether or not legally enforceable, to make an expenditure."

Expenditures involve such items as public relations and advertising services; wages, salaries, commissions, and fees; contributions to other persons; printed or duplicated matter, including distribution cost; office overhead (rent, supplies, utilities, etc.); telephone and telegraph; travel and taxi; lodging, food, and entertainment.

[7] Loans made to other persons are to be reported. (See note 6.) But since repayment will be involved, loan transactions are to be kept separate from other items of expenditure or receipt. In order that there may be a coherent running account in the quarterly report, the following are to be indicated: (1) Total now owed to person filing; (2) lent to others during this quarter; (3) repayment received during this quarter.

[8] Recipients of expenditures: The report is to specify name and address of each recipient of an expenditure (including loans), and the date, amount, and purpose thereof. Section 305 provides a $10 limitation while section 308 provides no express limitation. But under the maxim de minimis non curat lex, no express limitation is necessary in the case of a person receiving less than $10 in the entire calendar year—such an item is too inconsequential to require identification.

[9] The term "person" as used in the Lobbying Act includes organizations as well as individuals. For the statutory definition of "person," see sec. 302 (c) of the act, set forth in note 1. For the statutory definition of "legislation," see sec. 302 (e) of the act, set forth in note 1.

[10] The distinctions to be made between secs. 305 and 308 are "distinctions without a difference"—see part II of this article, particularly subdivisions "C" and "D" thereof. See also note 64.

[11] *Bristol-Myers Co.* v. *Lit Bros.* (336 Pa. 81, 6A. 2d 843, 848 (1939)): "The court is not bound to a strictness at once harsh and pedantic in the application of statutes. The law permits the qualification implied in the ancient maxim, de minimis non curat lex. Where there are irregularities of very slight consequence, it does not intend that the infliction of penalties should be inflexibly severe. If the deviation were a mere trifle, which, if continued in practice would weigh little or nothing in the public interest, it might properly be overlooked."

[12] *United States* v. *Hocking Valley Ry. Co.* (194 Fed. 234, 249, 250 (N. D. Ohio 1911)).

[13] *Natl. Labor Relations Bd.* v. *Cowell Portland C. Co.* (108 F. 2d 198, 201 (CCA 9th, 1939)): "The quantity of cement shipped out of State was not de minimis merely because it is but a small percentage of respondent's total sales. Otherwise, we would have the anomaly of one plant under Federal regulation because exporting its entire product of 14,000 barrels while alongside it another competing plant under State regulation because, though shipping the same amount of 14,000 barrels, they constituted, say, but 4 percent of its product."

B. De minimis non curat lex: By reason of the de minimis doctrine, there can be no prosecution under the Lobbying Act for failure to file reports, in case only trivial amounts are involved in the attempt to influence legislation [11]—just as there can be no prosecution under the Interstate Commerce Act in the case of discrimination in rates, when the amount involved is trivial. In *United States* v. *Hocking Valley Ry. Co.*,[12] the court sustained an indictment charging a discrimination in rates in violation of the Interstate Commerce Act. The indictment had been attacked on the ground that the Interstate Commerce Act was too broad in scope, in that "mazes of complaints, involving matters of little consequence," could arise. But the court held that this fact presented no "occasion for alarm," since—

"Criminal law, as well as civil, honors the maxim 'De minimis non curat lex' which has controlling application to the enforcement of [such] a statute."

It has been held that the value of 14,000 barrels of cement could not be considered de minimis merely because it constituted only 4 percent of the manufacturer's product.[13] On the other hand, it has been held that a $150 loss, resulting from a trustee's erroneous extension of credit, should be considered de minimis in view of the fact that the trustee supervised a vast amount of funds.[14]

C. Definiteness: The Lobbying Act would appear to be sufficiently definite. In the *Hocking Valley* case, supra, the Interstate Commerce Act was also attacked on the ground that it was "void for indefiniteness" because "the law leaves it to each jury to determine the scope of its operation, and makes possible that in the same state of facts one jury may find an offense and another nothing reprehensible, and therefore one engaging in practices susceptible [of being characterized as unlawful] * * * cannot know in advance whether he is violating the law."

But the court held that such a contention "overlooks the function of the court in an attempt to enforce the law criminally. It is for the court to first pass upon the application of the law to the facts which a prosecution offers against a defendant. The proper performance of this duty leaves to the jury no latitude for speculation on the question which is the court's alone."

D. Constitutionality: It can reasonably be asserted that the Lobbying Act is constitutional. But because it embraced a field which had not theretofore been the subject of Federal legislation, there are those who have looked on the act with suspicion. For some people, "unfamiliar" tends to be synonymous with "void for indefiniteness" and "unconstitutional." Until the newness had worn off, Workmen's Compensation statutes were held unconstitutional in many jurisdictions.

For many years, a large number of States have had statutes requiring registration by those attempting to influence legislation, and none of such statutes has ever been held unconstitutional. The Kentucky statute was held constitutional in the following language:

"The Bill of Rights declares it to be an inherent and inalienable right of all men to apply to those invested with the power of government for all proper purposes by petition, address, or remonstrance. There is no attempt in this law to restrict the legitimate exercise of that right. * * *

"To protect its members, and for its own information, the legislature undoubtedly had the right to require the registration of special interests and to regulate their activities." [15]

The Federal Corrupt Practices Act [16]—on which the Federal Regulation of Lobbying Act was patterned [17]—has been held constitutional.[18]

E. Income-tax exemption: An income-tax exemption is (by 26 U. S. C., sec. 101 (6)) granted to certain types of organizations, "no substantial part of the activities of which is carrying on propaganda, or otherwise attempting, to influence legislation." The mere act—of filing reports pursuant to the Lobbying Act—does not, per se, indicate that the activity of attempting to influence legislation is such a substantial part of such organization's activities as to deprive such organization of the tax exemption.

[14] *Wilson* v. *Kable* (177 Va. 668, 15 S. E. 2d 56 (1941)), eighth syllabus: "Under the de minimis doctrine that trustee who supervised vast amounts of funds for military school erroneously authorized extension of credit to instructor, resulting in loss of $150 of school funds, would not constitute a breach of trust which would authorize trustee's removal or liability against trustee for such loss."

[15] *Campbell* v. *Commonwealth* (229 Ky. 264, 271, 17 S. W. 2d 227, 230 (1929)).

UNIVERSITY OF MICHIGAN LIBRARIES

II. ORIGINS AND APPLICABILITY OF THE ACT

A. Origins and applicability in general [19]

Introductory: An inquiry into the origins of the Federal Regulation of Lobbying Act requires that attention be given to an adaptation of the Federal Corrupt Practices Act, which was introduced as H. R. 11223 (74th Cong.), February 17, 1936. The nine sections of H. R. 11223 were combined with a section adapted from S. 2512 (74th Cong.) to form H. R. 11663 (74th Cong.) introduced March 6, 1936. Two significantly different versions of H. R. 11663 came to a vote in the House of Representatives in the Seventy-fourth Congress: The original version of H. R. 11663 (hereinafter referred to as "narrow 11663") had narrow applicability provisions, while the amended version of H. R. 11663 (hereinafter referred to as "broad 11663") had broad applicability provisions. "Narrow 11663" was passed by the House (March 27, 1936), while "broad 11663" was defeated by the House (June 17, 1936) by a vote of more than three to one. But the Lobbying Act was patterned after "broad 11663" rather than "narrow 11663." A more detailed treatment is set forth below.

H. R. 11223, S. 2512, H. R. 11663: All nine sections of H. R. 11223 (introduced February 17, 1936) were carried virtually unchanged into H. R. 11663 (introduced March 6, 1936):

(a) Sections 1–6 of H. R. 11223 became sections 1–6 of H. R. 11663. (It was from these sections that secs. 302–307 of the Lobbying Act were derived.)

(b) Sections 7, 8, 9 of H. R. 11223 were carried into H. R. 11663 as sections 8, 9, 10, in order that the designation of section 7 in H. R. 11663 could be given to a section patterned after S. 2512 (which had been passed by the Senate April 28, 1935); thus, there was brought before the House a measure which did not altogether ignore the views of the Senate.[20] (It was from sec. 7 of H. R. 11663 that sec. 308 of the Lobbying Act was derived.)

The two versions of H. R. 11663: Although "narrow 11663" had passed the House on March 27, 1936, "broad 11663" which had been broadened by a conference committee [21] came to a vote and was defeated by more than three to one on June 17, 1936. The significant differences between "narrow 11663" and "broad 11633" were in sections 4 and 7, as follows:

(a) Section 4 of "narrow 11663" did not authorize predication of applicability on expenditures. In "broad 11663," section 4 was broadened to authorize predication of applicability on expenditures.

(b) Section 7 of "narrow 11663" was applicable only to those who "accept employment." In "broad 11663," section 7 was broadened so as to be applicable to those who "engage" themselves.

Difference in attitude: Seventy-fourth and Seventy-ninth Congresses: The Federal Regulation of Lobbying Act, passed by the Seventy-ninth Congress, would have been defeated in the House in the Seventy-fourth Congress. The Lobbying Act is patterned after "broad 11663" which, because of its broad coverage, had been defeated by the House in the Seventy-fourth Congress by a vote of more than three to one, scarcely more than 2 months after the House had passed "narrow 11663":

(a) Section 305 of the Lobbying Act follows section 4 of "broad 11663" in authorizing predication of applicability on expenditures. In section 4 of "narrow 11663," predication of applicability was limited to contributions.

(b) Section 308 of the Lobbying Act follows section 7 of "broad 11663" in being applicable to those who "engage" themselves, rather than those who "accept employment" (as in section 7 of "narrow 11663").

B. Origins and applicability of section 305 and section 307

"Expenditures" dropped. As stated above, sections 4 and 6 of "narrow 11663" had been taken from H. R. 11223 without even a change of section numbers. Section 4 had been adapted from section 305 of the Corrupt Practices Act,[22] which authorizes predication of applicability on "expenditures" as well as "contributions," but section 4 dropped "expenditures" as a category on which applicability could be predicated.[23] Thus, under section 4, predication of applicability was expressly authorized only on contributions received directly, which were to be used "in whole" for (or for the "sole purpose" of) influencing legislation. It was for that reason that section 6 was added—making explicit the applicability of section 4 to "Indirect," [24] "Multipurpose," [25] and "Other purposes" [26] contributions.[27]

"Expenditures" restored: Section 4 of "broad 11663" returned to the provisions of section 305 of the Corrupt Practices Act [28] in authorizing the predication of applicability on expenditures as well as on contributions, and those provisions were carried into section 305 of the Lobbying Act. And the provisions of the Lobbying Act were derived) could not be used to extend the range of the applicability provisions which precede them. Thus—even though a numbered paragraph in sec. 4 required the reporting of expenditures—applicability could not be predicated on expenditures, as long as the first sentence of sec. 4 did not contain the phrase "or expending any money." If, because of contributions received, sec. 4 became applicable to a person, then it was required that expenditures as well as contributions be reported.

[19] Derivation of form of Federal Regulation of Lobbying Act:

	Federal regulation of Lobbying Act	H. R. 11663 [a]		H. R. 11223	Federal Corrupt Practices Act
		"Broad"	"Narrow"		
Short title	Sec. 301				Sec. 301.
Definitions	Sec. 302abcde			Sec. 1abed	Sec. 302defg.
Records required	Sec. 303a (1–4) b.			Sec. 2 (1–4) (5).	Sec. 303b (1–4) c.
Recording contributions	Sec. 304			Sec. 3	Sec. 304.
Applicability provisions	Sec. 305a			Sec. 4	Sec. 305a.
Reporting requirements	(1–6)			(1–6)	(1–6).
Cumulative requirement	b			(7)	b.
Manner of filing	Sec. 306ab			Sec. 5bc	Sec. 308bc.
Amplifying applicability	Sec. 307			Sec. 6	
Requirements rephrased	Sec. 308	Sec. 7	Sec. 7 (from S. 2512).		
Oath required	Sec. 309	Sec. 9	[Sec. 5a]	[Sec. 5a]	[Sec. 308a].
Penalties	Sec. 310	Sec. 10	Sec. 8	Sec. 7	Sec. 314.
Separability clause [b]		Sec. 12	Sec. 9	Sec. 8	Sec. 317.
Excepts activities covered by Corrupt Practices Act.	Sec. 311	Sec. 13	Sec. 10	Sec. 9	

[a] Secs. 1–6 of H. R. 11663 were taken from Secs. 1–6 of H. R. 11223 without change in form.
[b] Sec. 1 (b) of Legislative Reorganization Act of 1946 (Aug. 2, 1946, ch. 753, 60 Stat. 812) is a separability clause applicable to all titles of that act.

[20] S. 2512 was introduced April 4, 1935, passed by the Senate April 28, 1935, and referred to the House Judiciary Committee June 5, 1935. H. R. 11223 was introduced Feb. 17, 1936. H. R. 11663 was introduced Mar. 6, 1936, and reported out by the House Judiciary Committee Mar. 19, 1936.

[21] Appointment of the conference committee had resulted from the action of the Senate in striking all after the enacting clause, substituting other language, and passing H. R. 11663 as so amended.

[22] Sec. 305 of the Corrupt Practices Act makes the requirements of paragraphs 1 through 6 applicable to a "political committee" which is defined by sec. 302 (c) of the Corrupt Practices Act to include "any * * * organization which accepts contributions or makes expenditures for the purpose of influencing or attempting to influence [etc.]."

[23] The six numbered paragraphs setting forth the reporting requirements of sec. 4 (from which the paragraphs of sec. 305 of

[24] "Indirect" contributions: In the case of receiving contributions indirectly, sec. 6 serves to give sec. 4 the same applicability as sec. 4 has in the case of direct receipt of contributions.

[25] "Multi-purpose" contributions: Just before "narrow 11663" was passed by the House, sec. 6 was amended by substituting the word "principally" for the words "in whole or in part." The result of the amendment was as follows: In the case of contributions—to be used principally to aid in influencing legislation but partly for other purposes—sec. 6 serves to give sec. 4 the same explicit applicability which sec. 4 has in the case of a contribution to be used wholly to aid in influencing legislation. Before the amendment: sec. 6 served to make sec. 4 applicable in the case of any contribution to be used partly to aid in influencing legislation and partly for other purposes.

[26] "Other purposes" contributions: In the case of persons whose principal purpose is to aid in influencing legislation, sec. 6 makes it possible for the applicability of sec. 4 to be predicated on the receipt of contributions which are allegedly received for "other purposes" than influencing legislation.

[27] The significant parts of secs. 4 and 6 of "narrow 11663" are quoted below. The great difference between sec. 4 and sec. 305 of the Lobbying Act is the inclusion of "expenditures" in sec. 305 as a category on which applicability can be predicated. There is no material difference between sec. 307 and sec. 6 as quoted below.

Sec. 4: "Every * * * person receiving any contributions * * * for the (purpose of influencing legislation) * * * shall file * * * a statement (etc.)."

Sec. 6: "The provisions * * * shall apply to any (person) * * * (except a political committee (etc.) * * *) * * * who * * * directly or indirectly * * * receive(s) money or other thing of value (1) to be used principally to aid, or (2) the principal purpose of which person is * * * to aid(,) in (influencing legislation) * * *."

Since alternatives "(1)" and "(2)" are separated by the disjunctive "or," they may be stated separately, as follows:

(1) "The provisions * * * shall apply to any (person) * * * who * * * directly or indirectly * * * receive(s) money or other thing of value to be used principally to aid * * * in (influencing legislation).

(2) "The provisions * * * shall apply to any (person) * * * who * * * directly or indirectly * * * receive(s) money or other thing of value(,) * * * the principal purpose of which person is * * * to aid in (influencing legislation."

In alternative "(2)" above, the word "is" appears to be an unfortunate usage—"being" would have been better.

[28] See note 22.

UNIVERSITY OF MICHIGAN LIBRARIES

of section 6 of "narrow 11663" were carried into "broad 11663" and thence into section 307 of the Lobbying Act; however, the Lobbying Act and "broad 11663" had no more need for such provisions than did the Corrupt Practices Act. Since section 4 of "broad 11663," section 305 of the Lobbying Act, and section 305 of the Corrupt Practices Act authorize predication of applicability on expenditures as well as on contributions—contributions (in the case of these measures)—are of no practical consequence in determining applicability: (1) The purpose of an expenditure is easier to establish; (2) expenditures are less subject to ambiguities.

Effect of headnote: As above stated, provisions carried from section 6 of H. R. 11223 into "narrow 11663" and "broad 11663" finally became section 307 of the Lobbying Act, with the headnote "To whom applicable." But section 305 (with the headnote "Statements to be filed with the Clerk of the House") contains the basic applicability provision, as follows: "Every person receiving any contributions or expending any money for the purposes designated * * * shall file a statement * * * [etc.]." The headnote of section 307 cannot alter the fact that the section itself merely makes explicit the applicability of section 305 to "multipurpose," "indirect," and "other purposes" contributions.[29] In *United States* v. *Sischo*,[30] Mr. Justice Holmes said, in an opinion for the Court, reversing judgment for defendant in a smuggling case:

"There is no canon against making explicit what is implied and adding a little emphasis to the endeavors to make the proposition broad."

Section 307 contains language extending and amplifying the applicability of section 305 rather than language of restriction or limitation.[31] In the case cited, supra, Mr. Justice Holmes said that there was no canon requiring that the words of a statute be interpreted restrictively when—

"The words on their face indicate rather an extension than a restriction * * *. It is a most unnatural way of saying that henceforth * * * [such statute] shall not include something that otherwise might have been included."

No ambiguity results from any headnote in the Lobbying Act, but—even if it did—"resort may not be had to a headnote to a section to create an ambiguity."[32]

[29] See notes 24 through 27.

[30] 262 U. S. 165, 168, 169.

[31] Observe how differently a restriction would read:

(1) A restriction could have been modeled on sec. 311: "The provisions of this title shall not apply to persons who do not have as their principal purpose, etc."

(2) A restriction could have been modeled on the parenthetical exception contained in sec. 307 itself: "The provisions of this title shall apply to any person (except persons who do not have as their principal purpose, etc.)."

(3) Still another method of imposing a restriction would have been as follows: "The provisions of this title shall apply only to those persons whose principal purpose, etc."

[32] "Whatever ambiguity there may be grows out of the language of the headnotes to the section. They might indicate that, at some time during the progress of the bill through the houses of the legislature, there was in the body of the section a provision extending the term for another year in case of default in giving notice. * * * A headnote is, in no proper sense, a title. In some sense it is an index. Plainly, where the language of the act itself is clear and unambiguous, resort may not be had to a headnote to a section to create an ambiguity, and thereby to furnish a reason for supplying an alleged omission." (*Trader* v. *Jester* (40 Del. 66, 1 A. 2d 609, 613 [1938]).)

"The general revenue bill of 1925 * * *, in fixing privilege taxes, contains the following:

"Mineral water dealers: Each person, firm, or corporation, selling either distilled water or water from springs or wells, or mineral water for drinking or other commercial purposses shall pay a tax as follows.'

* * * * *

"It is argued that the subtitle 'Mineral water dealers' indicates that it was not the intention of the legislature * * * to include one dealing in plain drinking water, containing no mineral or medicinal properties, and for this reason it is insisted complainant is not liable for this tax.

" 'Mineral water dealers' is, however, only a subtitle. It is not the caption of the act, and in no wise, therefore, restricts the scope of the act. The section of the act above set out clearly imposes the tax upon one engaged in the business of selling 'either distilled water or water from springs or well or mineral water,' thus clearly including such a business as that of complainant." (*Seven Springs Water Co.* v. *Kennedy* (156 Tenn. 1, 299 S. W. 792, 793 [1927]).)

C. Origins and applicability of section 308

Section 308 of the Lobbying Act was patterned after section 7 of broad 11663 rather than section 7 of narrow 11663. Section 308 requires the filing of reports by "any person who shall engage himself for pay or for any consideration for the purpose of attempting to influence legislation."[33] Section 308 may be considered applicable to organizations[34] as well as individuals and to employers as well as employees. The language of section 308 means that reports are required of any organization or individual which shall engage itself for pay or for any cause "for the purpose of attempting to influence * * * legislation." According to 14 Words and Phrases 592, [35] the judicial construction of "engage" is that: "It does not import that the person so employed must be in the employ of another." And, according to 3 Words and Phrases 563,[36] the phrase "for any consideration" is judicially construed to be synonymous with "any motive" or "for any cause."[37]

D. Concurrent applicability of sections 305 and 308

Upon analysis it will be found that the distinctions to be made between sections 305 and 308 are distinctions without a difference. The differences which exist are differences in phraseology rather than differences in substance—differences in form rather than differences in function.[38] In the

[33] See note 9.

[35] Stating the holding in *Carpenter* v. *Strickland* (20 S. C. 1, 5), as follows: "In General Statutes, chapter 2397, giving a mortgage lien to persons making advances to any person or persons who are 'employed' or about to engage in the cultivation of the soil, 'employed' is synonymous with the word 'engaged,' and includes those who are already engaged, as well as those about to engage, in the cultivation of the soil. It does not import that the person so employed must be in the employ of another. The statute does not authorize a mere employee to give a lien."

[36] Sixth syllabus: "Under Revised Penal Code, section 618, making it an offense to buy or receive in any manner upon 'any consideration,' property knowing that it' has been stolen, the gist of the offense is the buying or receiving with such knowledge, and an information is not bad for omitting to allege that the property was bought or received 'upon any consideration'; that phrase being synonymous with 'any motive' or 'for any cause.' " *State* v. *Pirkey* (118 NW 1042, 22 S. D. 550, 18 Ann. Cas. 192 (1908)).

[37] If this were a section applicable to employees only:

(1) It would have followed "Narrow 11663" instead of "Broad 11663," by using the expression "accept employment" instead of "engage himself." In debate on "Narrow 11663" the expression "accept employment" had been criticized because it did not cover those who—although "engaged" in lobbying—could not be said to have "accepted employment" in connection with lobbying (80 CONGRESSIONAL RECORD 4515, 4518).

(2) Instead of repeating the preposition "for," to make a second prepositional phrase ("for pay or for any consideration"), section 308 would have used a single phrase (for pay or any other consideration), in order that the rule of ejusdem generis could limit the word "consideration" to a contractual connotation.

[38] Comparison of secs. 305 and 308:

(1) Sec. 308 (but not sec. 305) requires identification of employers, while sec. 305 (but not sec. 308) requires identification of contributors of $500 or more. But the result is simply that persons having no employers to identify or contributors to identify will state in their reports that they have none. (See note 5.)

(2) In the matter of identifying recipients of expenditures, sec. 305 provides a $10 limitation while sec. 308 provides no express limitation. But under the maxim de minimis non curat lex, no express limitation is necessary in the case of a person receiving

case of requiring a report as to receipts and expenditures, it is doubtful that any meaningful distinction can be drawn between different categories of persons, regardless of how the statute is drafted. Receipts and expenditures will still be receipts and expenditures, whether the amounts are large or small, and whether reported by an employer or an employee. Since sections 305 and 308 have substantially the same requirements, it is practically as simple for the quarterly report to accomplish compliance with both sections as with a single section. Thus, the fact that sections 305 and 308 have concurrent applicability (in the sense that each covers the entire field) does not add to the reporting burden. It is true that section 308 requires a person to register by filing a preliminary report, but this (aside from identifying data) need only state the nature of the anticipated expenses, and (if for an employee) state what the reimbursement is to be for services and for expenses.[39]

III. CONGRESSIONAL DEBATE [40]

A. Debate on narrow 11663

Amendments considered: When "narrow 11603" was before the House in the Seventy-fourth Congress, consideration was given to two amendments which, for convenience, may be designated as the "$5 amendment" and the "'principally' amendment":

(a) "Five-dollar amendment": An amendment to section 4 was proposed, under which it would not be necessary to identify contributors of less than $5.[41] It was pointed out that section 4—requiring identification of all contributors without limitation as to amount—would place a very heavy burden on large organizations having hundreds of thousands of dues-paying members.[42] (It would be necessary to identify each dues-payer because section 6 of "narrow 11663", as taken from H. R. 11223, extended the applicability of section 4 to contributions made even in part for the purpose of attempting to influence legislation.)[43] But the $5 amendment was defeated.[44]

(b) "'Principally' amendment": After defeating the "$5 amendment," the House passed the "'principally' amendment."[45] This amendment substituted the word "principally" for the words "in whole or in part" in section 6.[46]

Effect of "'principally' amendment": Before adoption of the amendment, some concern was expressed, by Members of the House, as to the effect which "narrow 11663" would have on a large number of organizations.[47] But little criticism of "narrow 11663" was voiced after adoption of the amendment,[48] and the bill was passed by the House on March 27, 1936.[49] After all, "narrow 11663" did not authorize predication of applicability on expenditures—applicability could be predicated only on contributions. And, while the contributions could be partly for other purposes, it was necessary that they be principally to aid in influencing legislation (unless the principal purpose of the organization was to influence legislation). This meant a very narrow coverage.

B. Debate on "broad 11663"

Introductory. In part II–A, supra, entitled "Origins and Applicability in General" is a paragraph entitled "The Two Versions of H. R. 11663," in which it is pointed out that: (a) Section 4 of "narrow 11663" did not authorize predication of applicability on expenditures; whereas, in "broad 11663," section 4 was broadened to authorize predication of applicability on expenditures; (b) section 7 of "narrow 11663" was applicable only to those who "accept employment"; whereas, in "broad 11663," section 7 was broadened so as to be applicable to those who "engage" themselves.

In part III–A, supra, entitled "Debate on 'narrow 11663'" is a paragraph entitled "Effect of 'principally' amendment." That paragraph deals with the adoption by the House of an amendment to section 6, substituting the word "principally" for the words "in whole or in part." Adoption of this amendment may be considered an acknowledgment by the House that the words "principal purpose" (in sec. 6) did not effect an exemption for organization "not organized for the principal purpose of influencing legislation"; because—had such organizations been so exempt—questions as to the use of their receipts would have been irrelevant; i. e., whether their receipts were used "in whole," "in part," or "principally" for influencing legislation, such organizations would still have been exempt.

Proponents of "broad 11663." When "broad 11663" was before the House in the Seventy-fourth Congress, one of the three Members who spoke in favor of the bill said: "Someone has said this will not affect the utilities. That is exactly what it is intended to affect." He also said: "The American Federation of Labor is not affected * * * because [it] * * * is not organized for the principal purpose of affecting legislation."[50] Another of these three Members said: "* * * This bill does reach * * * the American Federation of Labor."[51]

Opponents of "broad 11663." Thirteen Members of the House spoke against "broad 11663." One of them—after referring to the American Federation of Labor, United States Chamber of Commerce, and National Association of Manufacturers—warned that: "In this debate it will be insisted that this legislation will not affect these organizations." He insisted that "broad 11663" was applicable to them and went on to say:

"Indeed, it does not end there. The law would be applicable to all farm organizations, all patriotic organizations, all women's clubs, all peace societies—in fact, to every group or organization which might, directly or indirectly, be interested in the passage or in preventing the passage of any given legislation. The Members of this body will realize the magnitude and far-reaching effect of any such proposition. * * *

* * * * *

"I think I speak for the Judiciary Committee when I say that no one doubted but that these various organizations would be included."[52]

The other 12 Members who spoke against "broad 11663" in the House indicated accord with the views above quoted.[53] The bill was defeated in the House by a vote of more than 3 to 1,[54] apparently because of its broad coverage.[55]

C. Debate on the Lobbying Act [56]

When the bill which became the Lobbying Act was considered in the House four Members spoke on the measure. The first discussed sections 307 and 308 but not section 305, and advocated passage of the measure.[57] The second and the third opposed the measure in language which is quoted, in part, below. And the fourth Member expressed accord with the views of the third.[58]

The second Member who spoke on the measure said:

"Mr. Chairman, with the centralization of Government which has grown up in the past number of years, it is almost necessary for organizations like the Grange and the Farm Bureau Federation to have their representatives here practically all the time * * *

"I am not in favor of corrupt lobbyists, yet * * * if you estop the people of this country from being able to come down here in decent form and under the Constitution petition this Congress you are doing a great disservice to this country."[59]

---

less than $10 during an entire calendar year—such an item is too unconsequential to require identification.

(3) Section 308 specifies both House and Senate as repositories for reports, while sec. 305 specifies only the House. But since secs. 305 and 308 have substantially the same requirements, it is practically as simple for the quarterly report to accomplish compliance with both sections as with a single section. Thus, for one section (sec. 308) to require the filing of such report with the Secretary of the Senate, has the same result in practice as if both sections required such filing, since secs. 305 and 308 have concurrent applicability. (See notes 10 and 64.)

(4) Section 305, but not sec. 308, requires that the report shall be cumulative for the calendar year. But this merely involves copying the totals from the preceding report into the current report and adding them to the figures for the current quarter.

(5) The instrument which is to be filed each quarter is termed a "statement" by sec. 305 while it is termed a "report" by sec. 308. But this is obviously a distinction without a difference.

(6) In the matter of reporting income, sec. 305 requires a report of contributions while sec. 308 requires a report of receipts. This is another distinction without a difference. (See note 3.)

[39] See notes 10 and 64.

[40] For certain aspects of the congressional debate which are not considered here, see Futor, An Analysis of the Federal Lobbying Act (1949), 10 Fed. B. J. 366 at 381.

[41] 80 CONGRESSIONAL RECORD, 4533.

[42] The history of the reporting requirement, as to identifying contributors, begins with the Corrupt Practices Act. Under that act, the requirement is limited in that it applies only in the case of contributors of $100 or more. But when H. R. 11223 was adapted from the act, the limitation was dropped, and the requirement was made applicable without limitation as to amount. This unlimited requirement was carried into "narrow 11663," and "broad 11663." But, under the Lobbying Act, the requirement is made to apply only in the case of contributors of $500 or more.

[43] See notes 25, 27.

[44] 80 CONGRESSIONAL RECORD, 4534.

[45] Id. at 4535.

[46] See notes 25, 27.

[47] 80 CONGRESSIONAL RECORD, 4516, 4519–4522, 4530–4534.

[48] Id. at 4535.

[49] Id. at 4541.

[50] Id. at 9751.

[51] Id. at 9748.

[52] Id. at 9746–9748.

[53] Id. at 9432–9434, 9743, 9747–9750.

[54] Id. at 9752.

[55] The following statement, made by a proponent of the measure, clearly explains why it has such broad coverage:

"We could not write a bill here and say that it shall apply to the utility companies, but that the bill shall not apply to the Townsend plan or the Coughlin plan or some other plan * * *. Are gentlemen prepared to say that we want a bill that will apply to the utilities and yet will not apply to somebody else who is doing the same kind of thing? * * *" (80 CONGRESSIONAL RECORD, 9751).

[56] As has been pointed out earlier, the Federal Regulation of Lobbying Act was patterned after "broad 11663"—the version which the House, in the 74th Cong., had defeated by a vote of more than 3 to 1, because of its broad coverage.

[57] 92 CONGRESSIONAL RECORD, 10088–10090.

[58] Id. at 10091.

[59] Id. at 10090.

The third Member who spoke on the measure said:

"Mr. Chairman, in my opinion, we are violating the Constitution. It is directly implied in the Constitution that we have no right to intimidate people * * * so that they cannot petition the Congress. What is this but intimidation? It is the same sort of curb you put on enemy agents during the war.

* * * * *

"How have the damaging bills that have come through this Congress heretofore been brought up? They have been brought here by a group of financiers in New York who see somebody down here in the bureaucracy and start these things like Bretton Woods, the British loan, and all of these other things that are unconstitutional. The bureaucracy sees all these CIO's, women's clubs, business groups, and so forth, and lines them up; then day after day we are bombarded with letters * * *

"What does this bill do? It says that if the man whose business is going to be taken by the OPA or the Bretton Woods agreement or the British loan or some of the rest of this iniquitous legislation hires a lawyer, the lawyer has to register exactly the same as an enemy agent registered during the war.

"Mr. Chairman, the people are going to soon rise up and stop this totalitarian way into which this Government has fallen recently." [60]

The following colloquy in the Senate is of particular interest because of the fact that Senator LaFollette was coauthor of the measure:

"Mr. HAWKES. Some of the finest organizations in the United States are somewhat concerned lest the provision against lobbying be constructed to apply to institutions such as the United States Chamber of Commerce, for instance. Does not the bill contain language to the effect 'if they are organized to do a business of lobbying principally'? Is not the word 'principally' used in the bill? And does that not mean something to the Senator?

"Mr. LA FOLLETTE. It will all depend on the type of activity that is carried on. I cannot give the Senator a blanket interpretation.

* * * * *

"Mr. TUNNELL. As I understand, there is no exemption of the chamber of commerce from the provisions of the measure.

"Mr. LA FOLLEITE. Nor any other organization." [61]

Also of interest is the following statement made in the Senate:

"Mr. MCMAHON. The Senator [MCCLELLAN] spoke of the CIO, the PAC, the National Association of Manufacturers, the Chamber of Commerce of the United States, and other organizations. I want the RECORD to show that personally I should like to have them all come under the provisions of this bill, together with 500 or more others that ought to come under it also." [62]

Thus, in the case of the measure which became the Lobbying Act, its broad coverage was considered by some Members of Congress as a reason for an affirmative vote and by others as a reason for opposition.

CONCLUSION

Whether the courts will sustain the Lobbying Act, and whether they will construe it broadly or construe it narrowly, remains to be seen. In the meantime, the cautious and conservative position would be to recognize that the Lobbying Act may receive a broad construction. Persons who act on the assumption that the Lobbying Act will be invalidated or construed narrowly, may of course be making a sound assumption—but that remains to be seen.

If the Federal Regulation of Lobbying Act be approached without preconceptions, and without antagonism toward its purposes—the act will be found to be reasonably simple and unambiguous. It would appear that support for this conclusion is found in the legislative history of the act, when carefully examined.[63] In falling short of perfection in draftsmanship, the Lobbying Act is not unique. Of the legislation which has been sustained by the courts, only a small part has been free of rhetorical deficiencies.

The Lobbying Act does not interfere in the least with activities engaged in for the purpose of influencing legislation. Such activities are, of course, of numerous categories and of varying degrees of importance. The most highly publicized activity is that of the professional lobbyist who undertakes to "buttonhole" Congressmen, but this is probably the least important category within the purview of the Lobbying Act. Of primary importance, on the other hand, is the activity which consists of encouraging members of an organization—or members of the general public—to write or speak to their Congressmen in behalf of a particular point of view.

When reports filed pursuant to the Lobbying Act: (1) Disclose that thousands of dollars have been expended in order to develop a "grass roots" pressure campaign and (2) Identify the persons who have contributed $500 or more to such campaign—then the Congress, and the public, can know that the campaign was something less than spontaneous. By causing information of this type to be made available, the act would appear to serve a worth-while purpose.

Appended to this article is a suggested reporting form which would accommodate all data required by sections 305 and 308 for either a preliminary or a quarterly report.[64]

[60] Id. at 10091.

[61] Id. at 10151-10152.

[62] Id. at 6551-6552.

[63] The Lobbying Act has been the subject of an article and of notes as follows: Zeller, the Federal Regulation of Lobbying Act (1948) 42 Am. Pol. Sci. Rev. 239-271; notes (1947) 56 Yale L. J. 304-332; (1947) 47 Col. L. Rev. 98-109; (1947) 15 Geo. Wash. L. Rev. 455-463. These are of some interest insofar as they discuss (1) the considerations which make some type of reporting requirements desirable and (2) State legislation relating to lobbying. However, their approach to the Lobbying Act leaves something to be desired. All of them attempt to use legislative history in construing the act, but they do not appear to have been thorough in their investigation. They make reference to H. R. 11663 and S. 2512 but are apparently unaware of the following: (1) That H. R. 11663 was a consolidation of two earlier bills: (a) sec. 7 was adapted from S. 2512; (b) secs. 4 and 6 (along with the other sections) were derived from H. R. 11223, which was an adaptation of the Corrupt Practices Act; (2) That, in adapting sec. 4 of H. R. 11223 from sec. 305 of the Corrupt Practices Act, "expenditures" (as a category on which applicability could be predicated) was dropped, and sec. 6 was therefore added, in order to extend applicability rather than to restrict or limit it; (3) that in "narrow 11663:" (a) sec. 4 did not authorize the predication of applicability on expenditures; (b) sec. 7 was limited to persons who accept employment; (4) that in "broad 11663;" (a) sec. 4 was broadened to authorize predication of applicability on expenditures; (b) sec. 7 was broadened to apply to persons who "engage" themselves; (5) that secs. 305 and 307 of the Lobbying Act were patterned after "broad 11663," which, because of its broad coverage, had been defeated by the House in the 74th Con. by a vote of more than 3 to 1, scarcely more than 2 months after the House had passed "narrow 11663." (See pt. II of this article.)

In the matter of congressional debate, they accept uncritically certain statements of dubious value, while neglecting statements which would seem to have more significance. (See pt. III of this article.)

[64] File 3 copies with the Clerk of the House of Representatives and file 3 copies with the Secretary of the Senate:

1. For each set of 3 copies execute the affidavit on 1 copy and type in the blanks in the affidavits on the other 2 copies.

2. This page (p. 1) is designed to supply identifying data; and page 2 (on the back of this page) deals with financial data.

3. Circle a letter or figure in the box at the right of the "Report" heading below:

(a) "Preliminary" report: To "register," circle the letter "P" and fill out page 1 only.

(b) "Quarterly" report: To indicate which one of the four calendar quarters is covered by this report, circle the appropriate figure. Fill out both page 1 and page 2 and as many additional pages as may be required. Such additional pages should be of plain paper, the size of this page. Preparation and filing in accordance with instructions will accomplish compliance with all quarterly reporting requirements of the act.

REPORT PURSUANT TO FEDERAL REGULATION OF LOBBYING ACT

Organization or individual filing: State name, business address, and nature of business:

Employer: State name, address, and nature of business. If there is no employer, write "none." (If the employee is paid by "A" to work in behalf of "B," list both "A" and "B" as employers.)

Legislative interests, and publications in connection therewith:

1. State approximately how long legislative interests are to continue. If legislative interests have terminated with the current quarter: Please explain, so that this Office will no longer expect to receive reports.

2. State the general legislative interests of the person filing and set forth the specific legislative interests by reciting: (a) Citations of statutes; (b) House and Senate numbers of bills; (c) short titles of such statutes and bills.

3. In the case of each publication which the person filing has issued or caused to be issued in connection with legislative interests, set forth: (a) description, (b) quantity published, (c) date of publication, (d) name of printer.

(Answer items 1, 2, and 3 in the space below. Attach additional pages if more space is needed.)

NOTE.—If this is a "preliminary" report: In addition to the other data required in the space above, state the nature of the anticipated expenses; and (if an employee) state what the reimbursement is to be for services and for expenses.

----------}ss:

Affidavit

The undersigned affiant, being duly sworn, says:

1. That he has examined the attached report, numbered consecutively from page 1 through page —, and the same is true, correct, and complete as he verily believes.

2. That he is ----------, of the above-named organization for whom such report is filed, and that he is authorized to make this affidavit for and on behalf of such

UNIVERSITY OF MICHIGAN LIBRARIES

person. [If the report is for an individual, strike out paragraph "2".]

[Print or type name below signature.]

(Signed)----------Affiant.

(Typed)

Subscribed and sworn to before me this ----day of----------, 19--.

(Official authorized to administer oaths.)

Receipts (including contributions and loans from which expenditures are made, or will be made, in connection with legislative interests)

Receipts (other than loans):

1. $------ Dues and assessments.
2. $------ Gifts of money.
3. $------ Printed or duplicated matter received as a gift.
4. $------ Receipts from sale of printed or duplicated matter.
5. $------ Received for services, i. e., salary, fee, per diem, etc.
6. $------ Other contributions received.
7. $------ Total for this quarter (Add items 1 through 6).
8. $------ Received during previous quarters of calendar year.
9. $------ Total from Jan. 1, through this quarter (add 7 and 8).

Loans received:

10. $------ Total now owed to others on account of loans.
11. $------ Borrowed from others during this quarter.
12. $------ Repaid to others during this quarter.

Contributors of $500 or more (from Jan. 1 through this quarter):

13. Have there been such contributors? Please answer "Yes" or "No":------.
14. In the case of each contributor whose contributions (including loans) during the "period" from Jan. 1 through the last day of this quarter, total $500 or more:

Attach hereto plain sheets of paper, approximately the size of this page; tabulate data under the headings "Amount" and "Name and address of contributor"; and indicate whether the last day of the period is Mar. 31, June 30, Sept. 30, or Dec. 31. Prepare such tabulation in accordance with the following example:

Amounts	*Name and address of contributor (period from Jan. 1 through ----------, 19--)*
$1,2500.00	John Doe, 1621 Blank Bldg., New York, N. Y.
1,785.00	The Roe Corporation, 2511 Doe Bldg., Chicago, Ill.
3,285.00	Total.

Expenditures (including loans) in connection with legislative interests

Expenditures (other than loans):

1. $------ Public relations and advertising services.
2. $------ Wages, salaries, fees, commissions (other than item 1).
3. $------ Gifts or contributions made during quarter.
4. $------ Printed or duplicated matter, including distribution cost.
5. $------ Office overhead (rent, supplies, utilities, etc.).
6. $------ Telephone and telegraph.
7. $------ Travel, food, lodging, and entertainment.
8. $------ All other expenditures.
9. $------ Total for this quarter (add 1 through 8).
10. $------ Expended during previous quarters of calendar year.
11. $------ Total from Jan. 1 through this quarter (add 9 and 10).

Loans made to others:

12. $------ Total now owed to person filing.
13. $------ Lent to others during this quarter.
14. $------ Repayments received during this quarter.
15. $------ If there is an employer, state what amount of the expenditures for this quarter has been or will be defrayed by such employer.
16. Recipients of expenditures: In the case of expenditures made during this quarter be, or on behalf of the person filing: Attach plain sheets of paper approximately the size of this page and tabulate data as to expenditures under the following headings: "Amount," "Date or dates," "Name and address of recipient," "Purpose." Prepare such tabulation in accordance with the following example:

Amounts	*Date or dates—Name and address of recipient—Purpose*
$1,750.00	7-11: Roe Printing Co., 3214 Blank Ave., St. Louis, Mo.—Printing and mailing circulars on the "Marshbanks bill."
2,400.00	7-15, 8-15, 9-15: Britten and Blaten, 3127 Gremlin Bldg., Washington, D. C.—Public relations service at $800 per month.
4,150.00	Total

Equal Rights Amendment

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Ohio State Journal of February 3, 1950:

SENATE ACTION ON EQUAL RIGHTS AMENDMENT DISAPPOINTS BACKERS, BUT THEY'LL FIGHT ON

(By Sarah Mills, State Journal women's editor)

Ohio's most ardent backers of the equal rights amendment to the Constitution are anything but happy about its fate in the Senate. But they're not despairing either.

Shocked and disappointed are the words Clara Snell Wolfe, 1841 Roxbury Road, chairman of the Ohio branch of the National Woman's Party, used yesterday to describe her group's reaction.

They were echoed by Ernestine Breisch Powell of Worthington, State second vice president, and Dr. Mary Alice Price, chairman of the Columbus chapter. Dr. Price is on the faculty of the bureau of educational research at Ohio State University.

The Columbus branch has a membership of about 125.

Passage of the proposed amendment was a triumph. It declares in part: "Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex."

But the rub comes in the Senate's approval of the Hayden rider which preserves female protective legislation now on the books.

"The days of Lady Bountiful and the poor working girl are over," Mrs. Powell, an attorney and mother of 3 children observed. "The women involved should be permitted to determine their own working conditions."

Contrary to some belief, outright equal rights would have no adverse bearing on such things as another's pensions and maternity legislation, she added.

"There's a difference between need legislation and sex legislation," Dr. Price observed.

The National Woman's Party was founded in 1913 to obtain by constitutional amendment, the right for women to vote. That won, since 1921 it has had as its goal enactment of the equal rights amendment, to remove "all remaining discriminations against women in the United States."

It has had the amendment introduced at every session of Congress since 1923. But not until 1950 could the necessary two-thirds vote be mustered in the Senate. The amendment has never been voted on in the House.

The task now, Mrs. Wolfe, an original member of the party said, is to defeat the "protectionists" forces when the amendment goes before the House. It is now in the hands of that body's Judiciary Committee.

"We just want the plain amendment, without riders submitted to the States," she declared.

Slight, soft-spoken Mrs. Wolfe, has been militantly concerned with women's rights for almost 40 years. The wife of A. B. Wolfe, retired Ohio State University professor, she's a one-time suffragist who went to jail for her convictions.

She entered the political arena in 1912 at the request of Judge Florence E. Allen of the United States circuit court of appeals at Cleveland. The jurist then was a student at Western Reserve University and Mrs. Wolfe was just out of Oberlin College.

They took to the soap boxes on street corners in a referendum campaign to give Ohio women the vote. Their cause was "snowed under." Undaunted, they moved into Wisconsin, with the same results.

By 1918, the suffragist strategy had changed, and Mrs. Wolfe was in Washington, picketing the White House. She landed in jail the day the pickets, under the leadership of famed Alice Paul, burned "President Wilson's words."

"That was during the First World War," Mrs. Wolfe recalled. "We were saving the world for democracy, but we didn't have it at home."

She was held in jail several hours then released. The courts later ruled the arrests illegal. By June 1920, that portion of the fight was over. Women had the vote.

"It took us 72 years to get it," Mrs. Wolfe said in her quiet way, "and the arguments against that were just as silly as those being offered today against equal rights."

United Europe Is Our Business

EXTENSION OF REMARKS
OF
HON. ANDREW JACOBS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. JACOBS. Mr. Speaker, the Indianapolis Star is a Republican newspaper published in my district. Since I am of opposite political faith I am not always in agreement with its views although I must acknowledge that it has always been very fair and generous with me personally.

The March 17 issue carried an editorial which I consider a particularly

enlightened discussion of that problem with which we are concerned today. Under unanimous consent, I include the editorial in the RECORD for the consideration of all the Members of this body:

UNITED EUROPE IS OUR BUSINESS

Two World Wars have convinced most Americans that they have a big stake in a free and peaceful western Europe. Otherwise Americans would not be willing to give many billions of dollars in European recovery aid. Nor would they be willing to commit themselves to go to war again in event of an attack on any Atlantic nation.

But many Americans don't fully appreciate today's need for a practical unification of European nations which can secure the peace and freedom for which American lives and wealth have been given in such abundance. Too many people still look on a union of the states of Europe as the business of Europeans but not of ours. But if a free and peaceful Europe is our business, so is a united Europe. Russian imperialism makes it increasingly improbable that the former can long exist without the latter.

On Wednesday three noted world figures came to Indianapolis to campaign for the growing movement for European unity. One was Paul Reynaud, former premier of France and a leading spirit in the Council of Europe. Another was Lord Layton, British economic authority. The third was Maj. Gen. William J. Donovan, who now is giving his time and talents to the chairmanship of the American Committee on United Europe, a private group dedicated to the support of the unity movement.

There are many ways Americans can help Europe to unite. General Donovan's committee is one way. Civic, educational and other groups can get behind the movement and help spread an understanding of it among American citizens. The Federal Government can help the most by putting pressure on European governments through the recovery program. Such pressure could force timid governments to rise above the ancient, petty interests which have always blocked the way to real European unity. United Europe is no longer a dream, but a practical opportunity. It also is a virtual necessity in securing the peace and freedom of Europeans and Americans alike. That makes all of us partners in the effort.

A Way for the World to Live Without the Cold War Becoming a Hot One

---

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. CASE of South Dakota. Mr. Speaker, in these days when so many people do not know which way to turn, when so many are tempted to say there is no way out but war—and in the same breath say that war will destroy victor and vanquished—it is refreshing to find an article by a thoughtful, respected observer of world affairs that offers a positive, constructive approach to the troubles that beset the world.

Mr. Walter Lippmann for many years has been one of the most consistently constructive writers on world affairs. In my opinion he has never made a more valuable contribution to the common welfare than in an article in the current number of the Atlantic Monthly, entitled "Break-Up of the Two-Power World." With his permission and the consent granted by the House notwithstanding its slight excess over the customary space, I place it in the RECORD at this point:

[From the Atlantic Monthly of April 1950]

BREAK-UP OF THE TWO-POWER WORLD

(By Walter Lippmann)

(EDITOR'S NOTE.—In late September, shortly after the announcement that the Russians had the atomic bomb, Walter Lippmann left Washington on an extended trip to western Germany, France, the Middle East, and South Asia. On his return he felt under the increasing necessity of redefining the Atlantic community in the face of present realities. This he has done in a series of talks, the first at the Institute of Aeronautical Sciences, again on the occasion of the Newton D. Baker Memorial Lecture in Cleveland, and still more recently at the American Council of Foreign Relations in Chicago. The article which follows is the development of his main points.)

It is my very good fortune to have worked under Newton D. Baker—very far under him, I hasten to add, and in a quite humble capacity, but yet near to him personally—in a time when he was facing grave and momentous decisions. I remember one hot evening in July 1917, when he called me into his office in the War Department, saying he had finished for that day, but would I stay a little longer and just listen to him while he put his feet up on the desk and talked out loud and tried to clear his mind.

He was deeply troubled and puzzled, he said, by something which he had never in all his public experience come face to face with before. He had lived in the conviction that any problem could and should be taken to the American people, and that after they had heard the whole story argued out publicly, they would come to the right decision.

THE CRISIS OF OUR DESTINY

But knowing, as Secretary of War, what I know about the power of Germany, the weakness of the Allies, and our own unpreparedness, he said, I don't know whether I dare to tell the people how badly the war is going that they are just beginning to take part in. If they were told the whole truth, if they knew all that I know, would the Germans not learn where to strike at our weakest points, and would not our people be so discouraged and confused that they would not do what will have to be done to prevent a disaster? And yet if our people do not know the whole truth, will they believe us when we ask for their sons and send them to the battlefields in Europe?

And if we fail in the war, will our people ever forgive us, and ought they ever to forgive us, when we did not trust them in the crisis of their destiny?

I wish Newton Baker were with us now. For the question that he raised that night in Washington, nearly 35 years ago, is with us now, is with anyone who undertakes to talk about the crisis—the indubitable and immense crisis—in which we and all the world are involved.

When we look at the Far East, at southeast Asia, at Germany, at the United Nations, and at the race of armaments in which we are engaged, the facts are grim.

But the raw facts will seem more desperate and more hopeless than they really are, only, I believe, if we interpret them and measure them in the light of the outdated theories, the doctrines, and the conceptions which were popular during the past 3 or 4 years. I am referring to the ideas, expectations, and plans which are based on the Truman doctrine and its corollary, the policy of the military containment of Russian communism.

FAILURE OF THE TRUMAN DOCTRINE

The mounting crisis in our foreign relations marks the failure of the Truman doctrine, and if we cling to the ideas of the Truman doctrine, the collapse of our influence in China will be followed by the collapse of our influence in the whole of Asia and in central Europe. But I believe that this menacing movement of events can be stopped if we are able to brace and nerve ourselves to reconsider and to revise our policy in the light of a fresh, objective analysis of what is actually happening.

Let me begin by naming six developments which are of critical significance.

The first is that the American monopoly of atomic weapons ended sooner than the State Department, the Pentagon, and the Congress and the public expected.

The second is that Mao Tse-tung has succeeded in capturing the leadership of the Chinese revolution in the whole of continental China.

The third is that in southern Asia the British Empire and the Dutch Empire have been dissolved and have been succeeded by the independent Asiatic states of India, Pakistan, and Indonesia.

The fourth is that in the rich colonial area of southeast Asia, in Indochina, Malaya, and Burma there are civil war and anarchy because the authority and power of the European empires have been undermined, but no native independent states capable of governing themselves have emerged.

The fifth is the secession of Marshal Tito from the Soviet orbit in eastern Europe and the tendency of Titoism to spread to Poland, Bulgaria, Hungary, and Czechoslovakia.

The sixth is the revival of Germany as a power in Europe.

All of these developments have come to a head within the past year. None of them was, of course, entirely unforeseen. Yet it is the combination of these events which has, I believe, created a radically new situation that will compel all the governments to reexamine their estimates of the cold war and their calculations and their policies.

I venture to suggest that the net effect of all these developments combined marks the beginning of the end of the idea that the world must, and that the world will, aline itself in two camps, the one directed from Moscow and the other from Washington. That idea has been at the root of Soviet policy, and also of American policy. It is the one idea which the Communist world and the non-Communist world agreed upon. Both have said it was a true prediction of what would happen.

The orthodox Communists regard this doctrine of the division of the world into two camps as the guarantee of a beautiful hope. They believe that if the world can be divided into two camps, the non-Communist camp will break up because it is not united by a common doctrine, because it is not ruled with an iron hand, and because it represents all stages of political development from advanced democracy to the most reactionary, corrupt feudal and imperial regimes.

The Western World, on the other hand, has regarded this division as an ugly necessity forced upon it by the unity of the Communist world, which compels it to organize in one grand coalition all the non-Communist states. In every doctrine of the Marxist-Leninist-Stalinist creed we have challenged the basic principles except in this one. We too have said that the world would be, could be, and had to be divided into two camps.

I believe the time has come when we have a right to ask ourselves whether the theory is in fact true.

We have a duty to ask ourselves whether in fact our minds have not become infiltrated and misled by the basic dogma of the very creed against which we think we are fighting. And I believe that if we examine the

UNIVERSITY OF MICHIGAN LIBRARIES

facts of the world as they are, rather than the Communist theory, if we look at what is really happening and what is most probably developing in Asia and in Europe, we shall find the strongest reasons for doubting whether mankind can be or will be organized into two and only two coalitions.

Even before the events of this past year the two coalitions were by no means complete and they were far from solid. We know to what lengths of suppression and terror and purging the Cominform has had to go in the satellite countries in order to keep them subordinated to the Kremlin. And we know from our own experience how complicated has been the task of achieving unity of action in western Europe under the Marshall plan and the North Atlantic Security Pact.

Everywhere on both sides of the iron curtain nationalist and separatist forces have interfered with the organization of the world into two great alliances.

II

If we look more closely at the six big developments which I named before, leaving aside for the moment what has happened in the field of atomic energy, I should like to point out that there is a common denominator in five of these developments—namely, the rebellion of Tito; the Chinese revolution; the independence of India, Pakistan, and Indonesia; the break down of authority in southeast Asia; and the revival of Germany. In each case one or both of the two coalitions has lost or is losing control of an important region. But in no case is it at all certain that the one coalition has won the region that the other has lost.

TITOISM AT WORK ELSEWHERE

Russia has lost control of Yugoslavia.

It by no means follows that Tito could or would aline himself wholly and reliably with the western powers. The tendency which we know as Titoism is manifestly at work in Poland, Hungary, Bulgaria, and Czechoslovakia. We know that from the purges conducted against Communists who have devoted their lives to the movement.

On the other hand, it would certainly be a delusion to suppose that Communists who rebel against the domination of the Kremlin have become intellectually and morally converted to the ideology of the western democracies.

There is strong evidence that a similar tendency is at work in Germany.

It manifests itself in the concessions which the Soviets are making to the east Germans in order to appease and to seduce the German nationalists inside the Christian Democratic Party, the Social Democratic Party, and the parties of the right. There is, on the other hand, growing evidence that even the west German Republic is more and more disinclined to accept the position of a docile and subordinate member of the western coalition.

GERMANS TO MAKE GERMAN POLICY

I think it is no exaggeration to say of Germany that with the establishment of the government at Bonn and its unmistakable growth in political and economic power we are in the process of relinquishing our control over the future of Germany.

I think no one can go to Germany today and continue to believe that Mr. McCloy and his colleagues, the British and French High Commissioners, have it in their power any longer to determine the future of Germany. They are in fact liquidating the power of the western allies over Germany, and are being drawn into negotiations about a series of demands made by the Germans.

No doubt the United States, Britain, and France still have a certain discretion as to the rate at which the Germans shall recover their sovereignty. But the time is already clearly in sight when the Germans will recover it and when the Germans will make German policy.

I shall not dwell at any length upon the developments in southern Asia, except to point to the well-known fact that there are seven new independent states in southern Asia, namely, Indonesia, Burma, Ceylon, India, Pakistan, the Philippines, and Israel. Of these the biggest and most influential is India.

As these states have achieved their national independence, they have declared that they will not enter into the military and political coalition of the Western Powers or of the Soviet Union.

NEHRU SPOKE PLAINLY

Pandit Nehru was quite explicit on that issue when he was in the United States, and I have no doubt myself that here he reflects the purpose of all the new national governments of Asia. They have decided, as this country did 150 years ago when it was new and weak, to avoid a policy of entangling alliances. There is little reason to think that anything but an overt military invasion of southern Asia by Soviet or Chinese Communist armies could alter their decision.

When we turn to the Far East there is, of course, the obvious fact that the Chinese government which we backed has been defeated. The victorious leaders of the Chinese civil war are Communists. They have declared that they are the allies of the Soviet Union. They have turned their backs on Washington. They have gone first to Moscow.

But it is by no means certain that the marriage of the two Communist revolutions is indissoluble. For many generations the imperial interests of Russia and the national and imperial interests of China have been in conflict all the way from the Sea of Japan to the Pamir Mountains along a borderland that extends 4,000 miles into the heart of Asia.

Moreover, over the larger part of that immense borderland the peoples on both sides of the political frontier are neither Russian nor Chinese but are peoples of various tribes and nationalities of Asia over whom both China and Russia assert power and influence.

While it is true that we have lost our power and, for the time being, most of our influence in China, it by no means follows that Russia has won control of China or has achieved an enduring alliance with China.

It is not wishful thinking, but common sense informed by historical experience, to say that if Russia finds it difficult to maintain its domination over small countries in the Balkans, there is no reason to jump to the conclusion that she can consolidate her dominion over this much vaster and more complicated region of the world.

Turning to Japan, it is clear, I think, that our position has been seriously weakened by what has happened in China. The main economic connections with Japan are on the mainland of Asia. There lie the most important sources of Japanese imports. There lie the principal markets of Japan. Nor can it be denied that the strategic security of Japan has been greatly affected by the fact that the whole mainland of east Asia—all the ports and airfields and the whole hinterland—is in Communist and anti-American hands.

III

I have left until the last the event which was announced by the President on September 23: that there had been an atomic explosion inside the Soviet Union.

This event marked the end of the short-lived American monopoly of atomic weapons.

Let us make the most favorable assumptions: Let us assume that we can make more bombs and bigger bombs than the Russians, that we can build faster planes with longer range, and that we can organize better defenses to detect, to warn, and to intercept.

Even on these dangerously optimistic assumptions no one can doubt, it seems to me, that the military situation has become radically different from what it was when we had the monopoly of atomic weapons. The difference will, I believe, be felt soonest in Germany and in Japan.

During the period of our monopoly there existed a military stalemate between the Red army and the American strategic air force armed with its atomic weapons. The one was a deterrent upon the other. The military defense of western Europe and of western Germany rested on our capacity to bombard the vital centers of eastern Europe and of Russia. The American atomic bomb pinned down the Red army. It acted as a military shield behind which western Europe could attempt to organize itself to revive its military defenses and to carry on its economic reconstruction.

On the other hand, the American monopoly of the atomic bomb, though sufficient for defensive purposes, was not sufficient for any policy which required direct military pressure upon the Soviet Union. The capacity of the Red army to occupy the vital centers of Germany and of Belgium and of France excluded from the consideration of any reasonable man the idea of preventive war or of a diplomacy which aimed to compel the Russians to accept western terms for the settlement of Europe.

CHANGED BALANCE OF POWER

The Soviet achievement of the atomic bomb, even if relative to us the Russians have only a few bombs, has changed the balance of military power. It has changed it most radically and critically, and first of all, in western Germany and Japan. The question now is no longer how they are to be defended against the Red army alone but how they are to be defended also against atomic bombardment.

Until a few months ago that question had not been faced. It did not enter into the calculations and the plans of the North American Security Pact, or of the American military-aid program.

It was believed until September that, while some day no doubt the Russians would achieve atomic weapons, that day was still in the future.

Therefore the question of how the countries adjacent to the Soviet Union were to be defended against atomic weapons was hypothetical and could be passed by.

But now it is an actual and urgent problem.

Both Germany and Japan are small countries containing highly concentrated industrial areas. The ultimate defenses against air attack—namely, dispersion and space—are not available to Germany and Japan.

Germany and Japan are in fact the ideal targets of atomic warfare.

Even if it is technologically possible to create an effective aerial defense against atomic bombardment, the difficulties of doing that are peculiarly great in western Germany and in Japan, and the cost would be, I believe, prohibitive.

We are compelled, therefore, to reexamine the strategic situation.

For the strategic formula on which we have operated from the proclamation of the Truman doctrine in the spring of 1947 to the signature of the Atlantic Pact in the spring of 1949 had as its major premise the American monopoly of the atomic bomb. Working on this premise, our chief military problem was to design and construct aircraft capable of penetrating the Soviet defenses in order to deliver the bomb.

But now we have the additional problem of creating defenses in a large number of countries which we have guaranteed, and in two countries, Germany and Japan, which we occupy and have disarmed—defenses that cannot be penetrated by the Soviet air force carrying atomic bombs and by the Soviet navy carrying atomic bombs.

Until recently there has been almost no public discussion of this problem in the United States. But it is being discussed anxiously abroad, and beneath the surface the reaction is profound.

The effects of the new strategic situation in the countries I have just visited are unmistakable to anyone who looks beneath the official appearance of things.

IV

In the exposed and vulnerable countries along the periphery of the Soviet Union the effect, I believe, has been to reinforce decisively their natural impulse to disassociate themselves from the two coalitions and to seek such security as they can find by recovering their independence from both.

For in this new strategic situation neither the U. S. S. R. nor the United States can offer the vulnerable countries any guaranty, or even any reasonable hope, of security against the fearful devastation of atomic warfare.

The Russians cannot offer that security to the Germans or the Japanese if they join the Soviet Union in an alliance, and we cannot offer those countries security if they join us in an alliance. These countries have neither the offensive power of retaliation nor the power of defense. They are caught between two lines of fire, and whichever side they turn to can offer them nothing but the prospect of devastation from the other side.

The Germans cannot once again become the allies of Russia, as they have so often in the past, because Russia cannot defend them and they cannot defend themselves against American air power. But by the same token western Germany cannot become the military ally of the west, as Field Marshal Montgomery and some of the French generals so fondly hope, because Britain and America cannot with certainty and effectiveness promise to defend western Germany against Russian aerial attack.

NO ONE WANTS TO BE BATTLEGROUND

The Germans are a highly intelligent people, especially in military matters, when they are not befuddled by demagogs like Hitler. They are confronted with a dilemma and they know it, and there is only one way out of it open to them which offers them any prospect—even if it is not a certain prospect—of security.

The Germans will take that way out because there is no other way out.

They will recognize that they lie between two armed coalitions, each attempting to win them over to it. They will exploit this middle position to recover their national independence by making demands and gaining concessions from both sides. They will by this method restore their unity. They will shake off the controls of the occupying powers. They will get rid of the military occupation. Then they will develop their middle position in the heart of Europe outside either alliance, and in between both alliances, to regain their power and influence in Europe.

This policy will reflect the realities of their military position and their own vital interests.

The Germans may call it a policy to neutralize Germany, or a policy of independence and isolation, or a policy of liberation, or conceivably a policy designed to make them equal members of a European federation of nations, which is not part of either the Russian or the American military system. But whatever the Germans choose to call their policy, the course they are most likely to take—unless there is a general collapse and a civil and international war—is similar to the course which more and more of the leading nations in the borderland all around the Soviet Union are also trying to take.

It is the policy of avoiding entangling alliances in a two-power world.

That is the course which India, Pakistan, and Indonesia have already decided to take.

It is the course which Tito in effect is trying to take.

It is the course which Austria is bound to take.

It is the course which every country in the Soviet orbit would take if it could disentangle itself from the grip of the Red army.

It is the course they will all be taking if the Germans succeed in putting an end to the occupation of Germany and, therefore, to the presence of the Red army on the Stettin-Trieste line.

The logic of the German situation is also, I believe, the logic of the Japanese. Because General MacArthur cannot guarantee Japan against atomic attack from the Asiatic mainland, the Japanese struggle to survive must take the form of a struggle to make Japan independent of both military systems.

V

This vast and complicated process, which is well begun but far from completed, is in fact the disintegration of the military alliances envisaged by those who have believed that the world could be organized into two military coalitions.

Can this process of disintegration be stopped and reversed?

I believe that in practice it will prove to be impossible for the United States to reverse this process in the countries immediately adjacent to the Soviet Union.

That is to say, it cannot any longer be the object of our policy to meet the Soviet expansion by organizing a military coalition in which western Germany, Japan, and China are to be, as we once conceived it, the principal outer bastions—in which the United States, Great Britain, and France would be the arsenal, the citadel, and the headquarters.

That was a conceivable arrangement in the days when General Clay appeared to be supreme in western Germany, when General MacArthur appeared to be supreme in Japan, and when Gen. Chiang Kai-shek was still the chief war lord of the greater part of China.

It was just conceivable then because the United States had the monopoly of atomic weapons and could strike the Soviet Union without the prospect that the Soviet Union could strike back at the United States or at Great Britain or at France.

It is not conceivable now.

My own view is, therefore, that the paramount object of our policy cannot be to contain Soviet expansion by organizing a global coalition. The paramount object of our policy from now on will have to be to frustrate and to disorganize and to disintegrate any Soviet attempt to form a global coalition.

OUR AIR POWER IS STRATEGIC

The critical areas in which such a policy must operate are Germany, eastern Europe, China, and Japan. We should prevent Germany, as she recovers, from making an alliance with Russia. That can be done. And the strategic air power we possess should be the perfect instrument of that policy.

It should be plain to the Germans, even without the necessity of our making it plainer than it obviously is, that if they ally themselves with Russia they become the first target in case of a war with Russia. But since, if they ally themselves with us, they will become the first target of the Russian attack, we cannot ask the Germans, and we must not expect the Germans, to ally themselves with us.

Therefore we should influence and encourage the Germans to do what so many Germans already want to do: namely, to identify German nationalism and German patriotism with German unity and with German independence.

We should help the Germans to neutralize themselves in order to end the military occupation and the partition.

We should clear our minds of the fallacy that neutrality is altogether obsolete because so many neutral countries from Belgium in 1914 to Denmark and Norway in 1940 have been unable to maintain their neutrality. The fact is that, while some countries could not pursue the neutrality that they desired, others did manage to achieve it. In Europe, Sweden, Switzerland, Ireland, Turkey, and Spain managed in the second war to remain nonbelligerent. And it will, I believe, be increasingly difficult to convince a growing number of Europeans that the risks of attempting neutrality and disentanglement are greater than the alternative.

We must not misunderstand or minimize how people feel who know themselves to be disarmed, who know they cannot be guaranteed against invasion or bombardment, when they are expected to commit themselves irretrievably to participation in war in which their allies and their enemies can offer them only the certainty of devastation.

They know as well as we do that there is no certainty in a policy of neutrality.

It may well be, they know, that they will be overrun, occupied, and destroyed. But on the other hand they know also that as members of either alliance they are certain to be fought over. As neutrals they might have a chance of staying out of the havoc.

I believe therefore that we cannot ignore these feelings; that we shall fail if we try to override them. We should regard every country around the Soviet Union—which seeks by diplomacy and by its own forces to preserve its independence—as a military asset in the defense of the free world, as one less liability against our overextended military and economic commitments.

WE MUST NOT DRIVE NATIONS INTO ALLIANCE WITH MOSCOW

Within the framework of this new policy we, the British, and the French, as the leading members of the Atlantic community, should support Titoism in eastern Europe by taking a firm and unequivocal stand, as in fact we have, not against communism as such, but against Russian imperialism and Russian aggression. But in encouraging Tito to remain independent of Moscow we should not ask or expect him to become our ally.

In China we should do what Secretary Acheson has indicated that he wishes to do. We should offer China what we have offered all Chinese Governments since the time of John Hay 50 years ago: our support, which the Chinese will eventually need, against dismemberment and imperialist aggression. They should be made to feel that they have an alternative to submitting to the demands of Moscow, that they can turn to Washington and London, that they are not imprisoned in the Soviet system, that they are not limited to the economic help which can be drawn from it, that when they feel they need support and seek it, the doors will not be slammed in their face and they will not be driven back into the arms of the Russians.

We should base our policy in Japan on a recognition of the vital interests of Japan. We should make it plain to the Japanese that we know as well as they do that they must trade with the Asiatic mainland, and that therefore they must be allowed to have diplomatic relations with their two Asiatic neighbors.

Japan cannot be expected to join our alliance because we cannot defend Japan against Soviet atomic attack; but we can prevent Japan from joining the Russian alliance because we have the power to attack Japan if she does.

UNIVERSITY OF MICHIGAN LIBRARIES

I am quite well aware that I cannot possibly have answered all questions and resolved all doubts. I do not know all the answers, nor have I resolved all my own doubts. I feel sure that the basic conception of our foreign policy will have to be reconsidered, and in important respects revised, in view of what is happening in Germany and in eastern Europe, in the Far East, and southern Asia, and in the field of atomic energy.

I think that our best course from now on is to work toward the general objective of disintegrating the Soviet coalition.

That would mean that we put our influence and power behind the general tendency toward national independence, toward military neutrality, and toward diplomatic disentanglement—a tendency which is manifest in almost all of Asia, and in much at least of central and eastern Europe. I believe that in the last analysis the matter reduces itself to this: that since we cannot encircle the Soviet Union by a military coalition, we should cultivate and exploit all the national forces, all the human impulses to escape from the havoc of war, in order to prevent the Soviet Union from forming its coalition and in order to disintegrate its military alliances in eastern Europe and those which it hopes to achieve in Asia.

WE ARE NOT A BIG LAND POWER

I believe we can never afford to forget—as we form our policy—the true nature and the essential limitations of our power in the world. We are a continental island, separated by the oceans from the great land mass of the Eurasian continent. Inside that great land mass we have and can develop great striking power exerted at long range. But our power to occupy, to fortify, and to hold secure large land areas on the other side of the two oceans is limited.

We are not and will never be a great land power on either continent.

We can base no policy on the assumption that we might be. Nor can we base any policy on the assumption that the heterogeneous peoples of Europe and of Asia can be united, consolidated, armed, and defended in one military system.

We cannot organize military coalitions inside the Eurasian continent which require the presence or the immediate availability of large American land forces.

The kind of naval and air power that we have and that we can exert will not support a policy which seeks to organize such a coalition. Our kind of power can be used, however, to support a policy which seeks to deter aggression by the Soviet Union by the threat of retaliation. Our power will support a policy which seeks to disorganize that coalition by encouraging the natural and almost universal human impulse, the national and personal search for an escape and for a refuge from the ravages of war.

In taking this new line, we may look back, recalling how the dream of one world was shattered, and then how the nightmare of a two-power world is breaking down. But now there is opening up the prospect of a world of many powers associated in the universal society of the United Nations, but not alined irretrievably and not committed to the monstrous heresy and fallacy which we have inadvertently adopted from Communist doctrinaires, that all mankind can be divided into two and only two camps.

Mr. Speaker, it was my very great privilege in the fall of 1947, as a member of the Select Committee on Foreign Aid to spend 2 days at the home of our then Ambassador to Czechoslovakia, Mr. Laurence Steinhardt, in Prague. Mr. Lippmann was with us at that time. I shall always recall some of the things those two outstanding men of our times said about the problems confronting us in the reconstruction of Europe and the rebuilding of faith in the world.

Today, the papers carry the word of the tragic death of Mr. Steinhardt in a plane crash near Ottawa, Canada, where he has been our Ambassador. We can ill afford to lose the experience, the knowledge, and the forthright skill of Laurence Steinhardt, in the diplomatic world. But in presenting this paper by Mr. Lippmann, I feel that I can safely say some of the thinking and insight of Laurence Steinhardt have been preserved for us.

Mr. Speaker, these are fateful days for the world; they are fateful days for the people, the common people of every land. May God grant us the wisdom to choose the right course for humanity's sake and the courage to carry out our part of the task.

ECA for a Third Year

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. ZABLOCKI. Mr. Speaker, in view of the fact that the very important consideration of the continuance of the European recovery program is now in progress, I believe it apropos and timely to insert an editorial appearing in the March 26 issue of the Milwaukee Journal entitled "ECA for a Third Year." The editorial adequately and thoroughly analyzes the Marshall-aid program and, in truth, is a résumé of that program and the arguments in favor of it being continued.

ECA FOR A THIRD YEAR

Measures authorizing the third year operation of the Marshall plan at a $3,100,000,000 level have won approval of House and Senate foreign affairs committees.

Attempts to slash the amount asked by Paul Hoffman, Marshall-plan chief, failed. They will undoubtedly be renewed in the appropriations committee and on floors of the two houses, but it seems evident that the final appropriation will be around this $3,100,000,000 mark. Of this, $150,000,000 is left over from this year's funds and would simply be reappropriated.

The 1949 Marshall plan spending totaled $5,695,000,000 and the spending in 1950 is estimated at $3,778,000,000. No estimates have yet been made on the need for 1952, last year of the ECA program, but it should be substantially less than in 1951.

Failure of Marshall-plan opponents to dent appropriations requests indicates the faith of Congress and of the American people in the Marshall program as one of the chief weapons in our campaign to secure peace and fight communism.

There can be no question about the almost phenomenal success of the ECA. In 2 years, it has helped Europe to build overall industrial production up to 20 percent above prewar levels, to curb inflation, stabilize prices, restore agricultural production, increase dollar earnings and bring intra-European trade almost to prewar levels. Thus the job of restoring western Europe as a stable economic and political entity is well started.

Two provisions in the House version of the ECA measure deserve some scrutiny. The first proposes that $1,000,000,000 of the 1951 aid be in American surplus farm products. This seems a plan of our agricultural politicians to dump on the Europeans a lot of farm products they may not want or need. Mr. Hoffman has said he would not want to be in "that kind of a strait-jacket" and his desires should be respected. The four major farm organizations have also opposed this amendment, pointing out wisely that it would only provide grist for Russian propaganda against the ECA.

The second proposal restricts $600,000,000 for financing of a European payments union. It says, in effect, that if the western European countries can't agree on such a union, then they will lose the $600,000,000. Western Europe needs such a union, in some form, as a major step toward unifying continental economy. Mr. Hoffman and the ECA organization are working toward it.

Their chances of success would seem better if they could depend on argument rather than clubbing tactics, even of a financial nature.

The Role of Labor as Seen by Philip Murray

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. MULTER. Mr. Speaker, the president of the CIO, Mr. Philip Murray, has just given us the benefit of his views on the role of labor in the world today, its quest for peace and freedom and its contributions to economic progress. He sets forth some interesting observations and conclusions which should be helpful toward a better understanding of labor's position and labor's aim at the present time.

Mr. Murray's article, What Union Labor Wants, appeared in the New Republic, March 27, 1950, as part of a series which that publication is currently running on certain aspects of western civilization at the halfway mark of the twentieth century. The article is as follows:

WHAT UNION LABOR WANTS

(By Philip Murray)

More than 200 reporters were in attendance at the convention of the Congress of Industrial Organizations in November 1949, and they telegraphed nearly a million words to their respective newspapers and magazines. Their presence, and the tremendous bulk of their journalistic endeavor, is proof—if proof is needed—of the widespread public interest in the policies and actions of organized labor, the CIO in particular.

In the press and on the radio the public is treated to a daily fare of speculation concerning both the short-term and long-range aims of our American trade unions. The attitude is expressed in the often voiced question: "What does labor really want?" The question carries with it a certain connotation of concern and alarm—as if to indicate that our unions and their leadership are hiding deep within their hearts a secret to which the public has no right of access. It is a question I have heard not only from

liberals who are warmly sympathetic to labor, but from conservatives who watch the progress of unionism with undisguised dismay.

Nevertheless, that interest in labor's goals and aspirations is natural, healthy, and historic.

Foster Rhea Dulles, in his excellent Labor in America—A History, gives us a constant reminder that labor's role in our society has been a matter of concern since the colonial period. While it may be no solace for workers encumbered with the restrictions of the Taft-Hartley Act, there is room for gratitude for our progress since 1630, when the Massachusetts General Court set a wage ceiling of two shillings a day and proclaimed as law a measure providing that "all workmen shall worke the whole day, alloweing convenient tyme for food and rest." There is a marked similarity between the look-with-horror advertisements which McGraw-Hill and other corporations have directed at organized labor, and Alexander Hamilton's complaint that incentives to engage in manufacturing are impracticable in the face of "scarcity of hands, dearness of labor, want of capital."

Clearly, the issues that today embroil us in disputes between labor and industry, or that engage the Members of Congress in extended debate, have deep roots in the history of our country. The issues are neither novel nor superficial. They involve each and every one of us, since our society is more closely interdependent than at any time since the first colonists established their little communities and went to work to create a new life in a new land.

The questions that were being put to the infant labor organizations of a century ago are still being asked to our unions today. And the answers, too, remain much the same. What labor really wants is to give its members, and the general public, a consistently rising standard of living in a democratic society which will protect the rights of each citizen while making possible his maximum contribution to the general good.

The history of labor in America—and particularly the history of labor since the birth of the CIO in 1935—offers ready proof that our unions have made a major contribution to the national well-being. I see no indication that labor's role, or labor's contribution to the general welfare, will diminish in the decades ahead.

The 1949 convention of the CIO was a step toward ensuring the continuance of labor's effective dedication to the development of our democratic society. The CIO, at that meeting in Cleveland, took drastic and necessary steps to eliminate Communist influence in the American labor movement. Some cartoonists, in the shorthand vocabulary of their craft, have sought to picture the CIO, prior to our 1949 convention, as a bewildered gentleman at the crossroads, uncertain whether to take the rocky road to communism or the more appealing path of democracy. Yet the CIO was never confronted with such a limited choice; never for a moment has the CIO been in doubt whether to maintain its independent status as a free trade-union or to place itself under the dominance of the Communist Party and its Kremlin policy makers. Rather, the CIO was faced with a condition that became more grave with the passing of each postwar year. We faced the practical alternative of either taking no policy position on major issues, in order to placate the handful of Communist-dominated union officials, or to adopt policies in which we sincerely believed, only to have our course of action sabotaged by this same obstructionist group.

In my report to the CIO convention at Cleveland, I commented that—

"The Communist program for American labor is a program of destruction. Couched in terms of pseudomilitancy, it invites defeat for labor, rupture of our organizations, failure of attainment of even our most modest goals. * * * The program of the left wing would enslave us to the aims and aspirations of a party whose interests are not those of American labor but are directed toward the establishment of a retrogressive dictatorship in our life. * * * We are committed to broadening of our democratic structure, not to its destruction. We are committed to orderly and constructive progress by labor in America; we are not and never will be committed to a policy that makes our movement the slave a dictatorial state apparatus."

That statement of position is in accord with the sentiments of millions of workers in this country who have read with increasing concern of the sacrifice of liberty and human dignity in the dictatorship nations or who, in the framework of their own experience, have seen efforts to paralyze the effectiveness of their own union organizations by cliques of financial totalitarians.

By eliminating the practical influence of the totalitarians, the CIO is freeing itself of a cumbersome dead weight. Freed of internal obstructionism based on adherence to a faulty ideology, the CIO has opened the way for accelerated organizational campaigns, for even stronger campaigns in behalf of civil rights, and for a political-action program of expanding dimensions. Let no one doubt that in casting off the influence of Communist puppets in a few unions, the CIO is destined to become more active and more successful in attaining its objectives.

Nevertheless, there have been expressions of concern by some liberal newspapers and magazines lest the decisive series of actions which the CIO took to rid itself of Communist obstructionism result in a diminution of labor's militancy, its efforts to improve civil liberties, its basic devotion to the democratic process. These are groundless fears. They spring, I think, from the erroneous belief that the Communists have a monopoly on the capacity to stir the heart or brain, or to activate the legs of the picket or the finger of the doorbell ringer. The Communists have energy, but they have no monopoly on energy. That was proved during the 1948 elections. The so-called left wing was completely energized over the candidacy of Henry Wallace—but millions of union members in both the CIO and AFL paid little attention to the misguided fanaticism of the Wallaceites.

In 1946, to cite another example, Communist groups in some of the northern cities energetically passed resolutions and staged parades against discrimination in Dixie at the time the CIO was launching its southern organizing drive—but it was a group of loyal, democratically minded CIO workers who were—and still are—carrying on the long, hard, often dangerous job of bringing unionism and attendant civil liberties to backward industrial areas of the Southern States.

A second overdrawn conclusion has been made since our convention: that in removing Communist influence, the CIO is acting to silence all internal differences of opinion. That is a most unlikely possibility. An organization whose leadership embraces such diverse personalities as Joe Curran, Jim Carey, Walter Reuther, Jack Potofsky—to name a very few of my associates—faces no foreseeable danger of hardening of its cerebral arteries. No organization the size of the CIO could try for long to smother the thinking of its constituents without complete paralysis and disintegration.

What the responsible CIO leaders have objected to during these past few years is not the statement of diverse or unpopular ideas, but the all-or-nothing series of demands through which a small minority of party liners sought to hamstring a great organization and render it impotent and ineffectual in relation to some of the great issues of our day—the European recovery program, the 1948 election, the achievement of a Fair Deal legislative program.

The CIO has put its own house in order through the actions of its 1949 convention. It is ready now, in a more effective way than at any other time in the recent past, to devote itself to the important problems that we as Americans and as workers must face.

What, then, is labor's program in terms of economic advancement, legislative activity, and political action? Obviously, millions of workers and their families are interested in improving their standard of living, of achieving security—not only from unemployment, but from the crisis of illness and accident and from the financial burdens that so tragically haunt the lives of millions of our older citizens. They are insisting upon a strengthened structure of civil rights and democratic liberties. They seek the abundant life which America can produce for all of us, and they are determined to use their unions and their Government to achieve it. They want an intelligent, constructive militance from their union; they want a government devoted wholeheartedly to a Fair Deal program that will act in the general public welfare; and they are interested in the creation of political-action mechanisms which will insure the election of legislative bodies capable of overcoming the stand-pat complexes of entrenched minorities.

There is, in truth, nothing new about such a program. The same plan was in the minds of the people in the early years of our Republic, when they insisted upon the inclusion of the Bill of Rights in the Constitution. It is a program of liberalism and instinctive desire for economic progress which has been handed down from one American generation to the next. Our problem, in a world of breath-taking scientific progress and life-taking dictatorship, is to shape that program into practical form for application to the needs of our citizens today.

Freedom and liberty are not abstractions to the man whose right to picket has been abridged by a Taft-Hartley injunction or whose right of assembly and speech has been repealed by the owner of a factory-controlled southern village.

To workers and their unions, whose legitimate struggles have constantly met with repression and hostility from employers and sections of the governmental structure, civil liberties are an immediate and pragmatic problem. Having seen the practical effects of the deprivation of those basic rights, they have little use for the highly theoretical "viewing with alarm" that emanates from corporation front offices and from corporation front organizations. American workers will pay scant attention to the views of economic reactionaries who hold that our labor organizations or our Government cannot embark on economic or welfare programs because such a course of action does not jibe with the writings of eighteenth-century British theorists. A union member requires no unusual economic insight to realize that $20,000,000,000 in corporation profits constitutes a shameless maladjustment in our economy. They know that mass unemployment is a needless waste of human resources and economic strength. The benefits of a TVA or the merits of eliminating sweatshop conditions can be appreciated without a Ph. D. in ecohomics.

There exists in our country a vast backlog of unfinished legislative business. It is spelled out both in President Truman's Fair Deal program and in the legislative program of organized labor. Indeed, our own CIO program lists 26 major points on which action is necessary and desirable as soon as possible. Since 1938 Congress has taken a leave of absence from social-welfare legislation. Perhaps, although it is by no means certain, the lapse was excusable during the war years. The fact remains that action is now long overdue.

UNIVERSITY OF MICHIGAN LIBRARIES

We must get ahead with the legislative job. The atrocious Taft-Hartley Act must be repealed. The minimum-wage law, though improved in 1949, still needs considerable broadening of its coverage. There can be no further delay in modernizing our obsolete social-security law; in getting to work on great public-power projects in the river valleys; in providing real protection against unemployment; in removing from our tax laws the loopholes which big business is using for a horde of nefarious fiscal practices; for putting sharper teeth into our antimonopoly statutes.

Congress must soon come to grips with the expensive and not particularly effective method by which the average American receives medical care. It must have the courage and the imagination to realize that our civil rights need strengthening.

There is no need to enumerate each item on the list of unfinished legislative business. The demand for enactment of this program lies in the hearts of our people—within and without the labor movement—and they have made clear their sentiments at the polls.

Labor's program promises no blueprint for utopia, and accordingly it is subject to criticism by the utopians. We in the labor movement are constantly being asked to appraise and endorse schemes that are guaranteed to end all human woes, or to provide easy answers to some of our outstanding problems. Many of the proposals that come to us have merit; many of them could be successfully managed if the American labor movement had even a small fraction of the financial resources of the great corporations; and almost all of them are offered in good faith by their proponents. But practical considerations rule out most of these proposals. And American workers do not want their unions to leap into the unknown with schemes that may sacrifice the solid gains of the past in the quest for future successes.

The Fair Deal program enunciated by President Truman in his 1949 state of the Union message and the legislative programs adopted by organized labor in recent years point the way toward attainable objectives. They are solidly based on our legislative history during both the Roosevelt and Truman administrations, and their enactment would produce a definite strengthening of our national levels of economic stability, civil rights, and social welfare.

The adoption of such a program—and I feel confident that it will be enacted within the foreseeable future—will solidify our Government's determination to provide at least minimum protection for the needs of our people. To many critics of forward-looking governmental policies, the concept of the "welfare state"—in fact, even the most primary elements of President Roosevelt's New Deal—has appeared as a form of dictatorial "statism" that would force every section of the population, organized labor included, to submit to the whim of an all-powerful government. But American workers have too much faith in the validity of their democratic institutions to accept uncritically any such type of horror propaganda.

Nevertheless, the expansion of governmental activity into many new fields will require, on the part of organized labor, a continuous reexamination of its own functions, and of its relations with government. There was a time when leaders of labor opposed any government move toward social insurance as a threat to the effective operation of labor unions. That attitude, though admittedly shortsighted, had an understandable background in the type of government that we tolerated during most of the first three decades of this century. Today, we can visualize far broader areas of cooperation between the labor movement and the Federal Government.

However favorable the administration we enjoy in Washington or in the State capitals, labor has no intention of surrendering its functions to Government. Nor does organized labor in this country intend to become a mechanism of Government by yielding its power to make decisions or policy to the State machinery. Looking about our world today, we are more than ever convinced of the correctness of our traditional policy of labor independence. The European labor movements are, of course, acting within the framework of their own traditions, and they are well serving the democratic needs of their own people. But our own labor tradition, which increasingly recognizes the need for effective political action, gives full value to the pioneering experimentation of the collective-bargaining process. I visualize organized labor as a great stimulant to governmental action, and in carrying out this process we help to retain the self-reliance of our people.

Thus, it seems clear to me that labor's economic activity has been primarily responsible for the recent increase in the Federal minimum wage. That legislative improvement was attributable directly to the wage increases that labor has won through the collective-bargaining process. Proposals for the modernization of the social-security structure languished for years until organized labor, in the course of negotiations with industry, began to emphasize its demands for contractual security provisions. In both these cases, the efforts of an independent labor movement provide effective, if indirect, stimulus to legislative action. I want to see organized labor in America keep this leverage.

Labor, it is obvious, can contribute most effectively to the welfare of its own membership and of the general public by acting in concert with an administration of liberal political attitudes. The Taft-Hartley Act confirmed a lesson that we in the CIO had realized many years before—that labor cannot concentrate its attention on collective-bargaining problems without regard to the rules under which collective bargaining functions. Taft-Hartley was the final proof that labor must, if only for self-preservation, take an active part in the political-action process. Our political successes have been considerable during the last decade and I feel confident that labor's political action is our best guaranty of continued liberal government.

Labor has helped the two-party system, which for a time had lost much of its meaning, by giving such concentrated attention to issues as to force most officeholders and candidates to declare their positions in terms of liberalism or conservatism. In the North, that process is far along; in the South, it still lags. But the steady union organizational progress in the Southern States will certainly produce a change, over the long run, in the attitudes of the men and women who serve in Southern legislatures and congressional delegations.

As labor's political influence grows, and the political parties respond to expressions of the people's will, the clamor for a third party is almost certain to diminish. Where the people cannot beat a reactionary candidate with one liberal opponent, I am not sanguine about their ability to defeat reaction with a divided opposition. And in those sections of the South where we are saddled with the equivalent of one-party rule, we must look not toward a third party but toward a second one. A militant program, such as the Democratic Party adopted in 1948, and a slate of candidates pledged to its enactment are our best guaranty of legislative progress. With labor more politically conscious than ever before, it is difficult to visualize the surrender of both major parties to the outright control of reactionary industrial and financial interests; and it is only in such an event that a third party could win public acceptance.

With labor at the crest of power and influence—and responsibility—in America, the way is open for long-range programs of social and economic reform. I have already mentioned the social-welfare program which labor regards as desirable and necessary. We must also come to grips with the problem of monopoly control of our Nation's industry and natural resources. The staggering accumulation of financial power accruing to the great corporations in recent years threatens a serious lack of balance in our national life. The Federal Trade Commission reports that in 13 major industries, three or fewer corporations maintain more than 60-percent control; three steel corporations own 49.2 percent of that industry's net capital assets and 58.9 percent of its steel-ingot capacity. Government statistics show that the rich are expanding their control over our national wealth and savings while millions of families live at submarginal levels.

More effective checks and balances over the distribution of wealth and economic power are in order, both for our own domestic welfare and for the preservation and strengthening of America's democratic influence throughout the world. Tremendous masses of privately controlled financial power can rock our Nation—and in fact our world—as effectively as a cannon rolling loose in a ship's hold. Unsocial investments, at home or overseas, can create stresses and tensions from which all of us will suffer. I believe firmly in free enterprise, but I also am firmly convinced that the business community has no license to act without responsibility for the public welfare.

These are problems of great dimensions, but they will certainly be solved within the framework of our capabilities as a democratic Nation. During a lifetime devoted to the labor movement, I have witnessed advances in the status of our workers and of the entire population which exceed the most optimistic forecasts of my youth. During these decades our social and economic institutions have become more complex, but we have progressed steadfastly toward the better life which is the aim of all men and women of good will. The intelligence, common sense and courage of the American people have carried them through two wars and a series of economic crises. Today, as we stand at the threshold of the atomic, electronic era, I remain optimistic that the qualities which have inspired labor and the Nation in the past will enable us to continue a role of world leadership in humanity's quest for peace, freedom and economic progress.

Hon. James A. Farley

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. CLEMENTE. Mr. Speaker, under unanimous consent, I include in the appendix of the RECORD an editorial entitled "The Brewing Boom," which appeared in Newsday, Hempstead, N. Y., on February 23, 1950, and an editorial entitled "It Looks Like Farley," which appeared in the Riverhead New York County Review, March 2, 1950.

My good friend, Jim Farley, has been one of the most outstanding members of the Democratic Party of the entire Nation. He has always been a friend of

Queens County, and, more particularly, a friend of the Democrats.

[From Newsday, Hempstead, N. Y., of Feb. 23, 1950]

THE BREWING BOOM

Particularly in Queens County and in upstate rural districts, a boom has begun to have former Postmaster General James A. Farley nominated as Democratic candidate for Governor of New York in the election next fall. The trend was first noticed when Farley got a rip-snorting warm reception from 2,400 party leaders at a dinner in New York last month. Franklin D. Roosevelt, Jr., was set to star that evening, but his star flickered. Genial Jim was the man most cordially received.

The Farley-for-governor boom makes sense. Here is a straight party man for the Democrats to promote, a superlative politician, an experienced administrator. Hopeful Junior has still to win his spurs. But Farley manipulated the first two of Pop Roosevelt's Presidential nominations and deserves more of the high-riding Democrats than a testimonial vote of gratitude. He would probably rate White House backing if he chose to run, for he supported Truman in 1948 when lesser New York Democrats had fled.

When Republican county chairmen meet in Albany next week they will be trying to figure out what Governor Dewey intends to do. If he chooses to run again, a Dewey-Farley race would be an interesting spectacle, one FDR, Sr., hoped to see in 1938. Whichever won, the State would be in safe hands for another gubernatorial term.

A master of politics, Farley is straightforward in telling the public how politics operates. "I am perfectly conscious," he once wrote, "that when political organizations begin thinking about jobs and nothing else, when they forget that the public business should come first, they have begun their own death chant without realizing it. * * * The protest of the public is the best way to discipline an organization against that sort of thing."

Come to think of it, Jim Farley is one of our favorite Democrats. We hope the Democratic leaders have the good sense to tap him for that nomination. This third man in current talkfest looms big.

[From the Riverhead (N. Y.) County Review of March 2, 1950]

IT LOOKS LIKE FARLEY

Although the gubernatorial campaign of 1950 is still a long ways off, it now looks as though James A. Farley sentiment is daily growing and as though nothing but a sharp reversal of Democratic opinion or Mr. Farley's personal refusal to run can head off his nomination as the Democratic candidate. The wind is blowing so definitely in Mr. Farley's direction, in fact, that Leo Egan, eminent political writer of the New York Times, dwelt upon the subject at considerable length in a recent issue of the Times.

This is gratifying to the County Review, for if it cannot be credited with launching the present Farley drive, it must, at least, be credited with being the first newspaper to go all-out in advocacy of his candidacy. In a first-page editorial of its issue of January 12, it came out unreservedly for the "Genial Jim," and gave its reasons for doing so. The response to that editorial has been pronounced and it has convinced us that countless New York State citizens were only waiting for someone to say what the County Review said.

If the subject has to be discussed on a purely political basis, it is our opinion that Mr. Farley, if picked as the Democratic candidate, would have more than a reasonable chance of victory at the polls. Our advocacy of him, however, is not based on his strength as a vote getter. We base it on more practical grounds.

Every taxpayer in the country must know by this time that indiscriminate spending is becoming the fixed rule of government. Those who by virtue of their position can reach into the public purse do so without reserve, always consoling themselves by the thought that "there is more where that comes from." Now and then, we discover some of the unwarranted leaks which prove costly to us, but not yet have we learned how much of our money is going down the drain without rhyme or reason.

One reason why this is so is that we feel politicians alone are to be trusted with our affairs. We get the politicians regularly but we seldom get real statesmanship and it is even rarer that we get good business management. We will never get away from this sort of thing until we start electing businessmen who will run our business as they would run their own business and who will spend our money with some such consideration as they would their own. "That is purely elementary," as Sherlock Holmes used to say to his friend, Dr. Watson.

Mr. Farley is a good businessman. He has proved that in some fairly big-sized jobs. If sent to Albany, it is certain that he would put the State's business on a solid, sane business foundation and teach those under him that the taxpayers' money is to be respected. Jim might not discuss money matters in such flamboyant phraseology as we often have handed out to us, but he can be counted upon to apply the rules of simple arithmetic and to reach the proper conclusion through the process of sane reasoning. Jim has a goodly amount of that good, old-fashioned gumption which has pretty much gone into the discard in recent years but which is just as valuable today as it ever was.

Jim Farley would make a good governor. He would cut red tape of the fantastic order down to a minimum. He would face any issue and face it speedily—with fewer round-table discussions and less time lost in squabbling over irrelevant phrases of the question.

As we said in our editorial January 12, Farley is our man. We think, after giving due thought to the matter, that the average man will make up his mind that Farley is also his man.

This Is Your Country

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Louis Bromfield:

THIS IS YOUR COUNTRY

(By Louis Bromfield)

Watching the country, it seems to me that the chances favoring the Republican Party are increasing apace, indeed more rapidly than the Republicans are taking advantage of the situation. Issue after issue is being made for them by the assertions and actions of the Truman-Boyle Democratic machine, while the Republican general staff and the congressional leaders in Washington go off into vague and grandiose statements of policy or on investigations of this or that which may or may not produce pay dirt and all too frequently backfire. Unless the Republicans can uncover some really serious cases of spying and Soviet sympathy, they are wasting time from a political point of view.

The Hiss case and the Coplon case both proved how much treachery was going on inside our Government during the long years of a Democratic administration and their exposures were immensely valuable to the Nation as a whole.

They also make excellent political capital especially, insofar as both trials revealed the indifference and carelessness of a desperate situation which President Truman airily referred to as "a red herring."

There was plenty of evidence as well that there were efforts made from within the administration to block or at least confuse the issues.

But the Communists as a whole have never been held in such contempt and their stock has never been so low as at the present time. They are only secondarily an issue.

The issues which can win the vote of the majority of honest American citizens are lower taxes, more jobs, lower living costs, and the cleaning up and reorganization of our Federal Government upon some plan which makes sense. Every day from farm-subsidy programs to the administration of veterans' funds, the issue becomes more obvious.

BECOMING A TIRED PEOPLE

The American people (the most vigorous people in the world) are becoming a tired people. They are living in a distracting and worried world, bad enough in itself, but the Truman administration brings them no confidence or relief from anxiety.

It merely operates from day to day on a crisis basis, constantly accentuating and playing for political advantage on all the fears already harassing the American people.

It harps upon the declining income of the farmer, upon the increasing unemployment, upon the impossibility of coming to any terms with Russia, upon the desperate need for a state-managed security in which the Government takes your money, spends it for you and adds to the expense many times through the burden of bureaucratic administration.

In no case whatever does the administration attempt to encourage or strengthen the natural optimism and vitality of the American people and their confidence in themselves and their system. It merely tries to sell the socialistic state so that no one need ever worry, or, presumably in the end, even work.

Meanwhile, every workingman labors approximately 47 days for the Government, every skilled workman works approximately 67 days. Professional people and people in small businesses work as much as 3 or 4 months a year for the Government.

Some of our ablest citizens, the ones whose brains and energy largely provide prosperity and jobs for the rest of us, work sometimes as much as 7 and 8 months a year merely to sustain in part a vast and increasing bureaucracy which constantly becomes more burdensome and expensive and constantly muddles up the biggest and worst-run business in the world—the United States Government.

HARP ON MORE TAXES

In the face of this, Mr. Truman and his machine keep repeating that we must have higher taxes, that it is impossible to make any cuts in expenditure.

He keeps repeating with the silly air of the ward politician, "Show me where any cuts can be made," and when perfectly obvious cuts are proposed by the Hoover Commission or by other men of unqualified ability and integrity, he and his friends pretend that they did not hear and go on increasing the number of Government employees for whom you and I have to pay more taxes every year.

It is like the craginess of Secretary Brannan in refusing ever to give any estimated figure of the billions which his solve-all farm plan would cost the average citizen in added taxes.

The Republicans might add that when you build a house you pay about 600 different taxes, that every time you take a ride in your car, you pay about one-fourth of the cost to

UNIVERSITY OF MICHIGAN LIBRARIES

Government in gasoline taxes, that you could afford that train trip or afford to send that telegram if Government were not taking a fat share in taxes which just makes the difference, that you could afford to go to the theater or the movies more often if the Government did not take 20 percent of what you pay directly out of your pocket in addition to a fat income tax.

The Republicans might also add that all of this makes your dollar buy less each year and causes the value of your Government bonds to decline sharply while, in time of great prosperity, Mr. Truman cannot balance his budget and wants constantly to borrow money or increase taxes.

The Republicans might ask "What happens when we hit hard times?" The Republicans might suggest a good long look at Britain where panacea plans are already in operation.

These are issues every man in the street understands and the Democrats have no defense whatever against them. They only say "We need more taxes and more money to hire more bureaucrats to make life more miserable for you." I suspect that after 20 years of it, government by crisis and improvisation is beginning to wear thin with the tired American people. They'd like to see some sensible action.

Government Gets Bigger, but Politics Keeps Up

EXTENSION OF REMARKS
OF
HON. ANDREW JACOBS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. JACOBS. Mr. Speaker, under unanimous consent I include in the RECORD an editorial from the March 23 issue of the Louisville Courier-Journal. Since it pertains to the appropriations bill soon to be considered, I am sure it will be of value to all Members.

GOVERNMENT GETS BIGGER, BUT POLITICS KEEPS UP

The constant efforts of Congress to cope with problems of Government in a world of many complications has brought forth a new wrinkle. It may be a sign of the times that are beginning to set in the human mind a fear of confusion. The appropriations bill just approved by the House committee wraps almost everything up in one massive package, around $29,000,000,000.

Previously there was a sheaf of separate bills for the departments, leading to interminable debates, log-rolling, and ragged, piecemeal adjustments. The new way sounds efficient, though one can hardly help asking how far streamlining and obstacle-jumping can go as a general proposition.

After this reflection one may turn to the bill itself. For all that it cuts a billion and a half dollars from the President's budget requests, it is still the administration bill in policy and purposes. It will still be the target for attacks on the floors of Congress, with Republicans oiling up their larynxes to win whatever virtue comes from economy preachments in an election year.

But the Democrat regulars have pretty well fortified the bill against radical operations. They have applied the cuts in the committee chamber, as if to get the jump on the inevitable. They take their stand on the proposition that they have done their best and that as the world goes today, anything more would be dangerous. Members of the opposition freely admit they will have plenty to say on that point.

You can just bet your life they will, and many a Democrat besides. They will be out in the open then, for all to hear. Sweet are the uses of economy, as a catchword as well as an intrinsic virtue. The Members with fire in their eyes insist that $1,500,000,000 isn't nearly enough to cut, and that they will fight to lop off $3,000,000,000 more, if it takes them right down to election day.

The amount is incidental, but the idea is the best in the world. We only wish we could resist the temptation to point out the catches in it. One of them is that this is 1950, when everybody in the House and one-third of the Senators will be running for reelection. It is never too soon for a candidate to start building a record to which to point with pride on the hustings. But he probably knows the score—let's say, last year's score. There was the same cry, bipartisan and furious. There was the promise to lay a meat ax to the budget. And there was, in the end, actually more money appropriated than even Mr. Truman had asked for.

The average economy shouter knows that the difficulty of saying no to appropriations is even greater in election year than ever. Let's take, for example, the announced plan of the committee members to cut the request of $834,000,000 for river-harbor-flood-control work down to $675,000,000. This is the local project, like floodwalls here and up and down the Ohio. Last year a diligent effort was made by honest economizers to cut this item from $751,000,000 to $450,000,000. As it came out of the works at last, it was even bigger than it had started. And nobody was running in 1949.

To be sure, the main consideration is far more serious than this one of the pork-barrel bill. It touches on the situation in the world, and the enormous obligations thrust upon America. But for this, there would be no debate at all about the need of economy, about the utter folly of running Government deficits in times of the highest prosperity. As it is, the principal wish of the American citizen is that when and if the cutting is done—and we don't doubt there are plenty of spots for it—it will be done with discrimination and with an eye on the facts of global life.

Statement Supporting the Habana Charter

EXTENSION OF REMARKS
OF
HON. ANDREW JACOBS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. JACOBS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT SUPPORTING THE HABANA CHARTER

Manufacturers of medicinal products have a large stake in the maintenance of a high level of export trade. They have a direct interest, therefore, in any practical program for eliminating the multitude of restrictive controls and barriers that restrain profitable trade, or make it burdensomely complicated, in many parts of the world. The Habana Charter provides such a program and also the means of carrying it out through the International Trade Organization. It is important to this industry, therefore, that Congress approve House Joint Resolution 236 and thereby enable the United States to give its full and active support to the ITO.

The export of drugs and pharmaceutical products has grown phenomenally since the war; few industries have shown such expansion. Whereas the normal prewar exports of the industry were only about $18,000,000 annually, today exports average $200,000,000. The exports of Eli Lilly & Co. have increased five times, thus contributing to the continuous high level of employment in Indianapolis and to the well-being of not only our employees but also the many professional people and tradesmen who furnish them with goods and services. All of them have a direct stake in the continuance of our export markets.

Because of the fact that the need for drugs is sufficiently great that even countries with a meager supply of dollars give drugs a high priority in allocating their foreign exchange, drug exports have held up well while American exports in general have declined considerably in the last 6 months. The relatively favored position of our industry, however, does not blind us to the fact that the welfare of United States exports as a whole is of real concern to us. The same factors that would expand world trade in general will help sustain our exports and the factors now restricting foreign trade are a threat to our own trade.

Exporters are increasingly distressed by the malignant growth of barriers and controls imposed on international trade since the war. If not checked these barriers will eventually force trade to such low levels that our own domestic prosperity will be adversely affected. Further loss of exports may well be accompanied by unemployment in important sectors of our economy and by the retrenchment of formerly profitable and tax-paying industries. As foreign aid under the ERP is reduced and eventually eliminated in 1952, the present downward trend in exports could snowball with disastrous results unless some active measures are taken to restore the fabric of world trade. Other countries need our export products and we need their business if we want to retain our economic health. The important thing is to provide a means for them to pay for our goods. This can only be done by increasing world trade and, more specifically, by stimulating multilateral trade.

I am in favor of the International Trade Organization because it is the best available means for attacking existing trade barriers and controls that prevent restoration of multilateral trade. It is important that the Habana Charter obtained the agreement of 54 nations; without an agreement of such scope there is no practical possibility of dealing with the problem. It is also important that the charter covers the entire range of trade barriers, from import quotas to cartels. It is important that these restrictions are dealt with in detail and cover the interests of all industries engaged in trade. For example, my industry is benefited by the requirement (art. 45 (a) (ii) and (iii)) that countries cannot use import restrictions under the guise of health regulations without showing legitimate cause. If this is done today we have no recourse. With the ITO we shall be able to register effective complaints and have our Government follow it with action if necessary.

Without such detail the charter would be loose and meaningless. It is also important that the ITO would provide a source of detailed information on existing and projected trade restrictions and trade statistics. Finally, it is important that a mechanism would be established which would permit trade disputes to be settled peacefully.

I am aware that there have been some sharp criticisms of the charter for the ITO. Some of these criticisms have a certain amount of justification. Certainly the charter does not constitute an ideal document from an American point of view. However, by the same token, it does not constitute an ideal document from the point

of view of many other countries which differ considerably from us in economic condition and thinking. To anyone who has a real stake in foreign trade, however, criticisms of the present charter must be examined in a practical light. Do the critics have anything better to offer? To the best of my observation, the answer is no. In fact, I have yet to hear one constructive suggestion on the part of opponents to the ITO. The interests of the United States and American foreign trade are not served by abstract debate which leads to no constructive results. We must deal in realities. We badly need an International Trade Organization, and only one practical charter for such an organization exists. We should approve it without delay if we hope to advance American interests in foreign trade.

FORREST TEEL,
President, Eli Lilly International Corp.

General Eisenhower Voices Warning Against Further Disarmament by This Country in Face of International Situation

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. EVINS. Mr. Speaker, a warning which is voiced by a person of preeminent qualifications to speak is one which should not be ignored and should be heeded as an expression of utmost authority.

General Eisenhower has recently voiced the grave warning to our country against the eventuality that we may fail to maintain our defense establishment at the level of security and in this connection I desire to have included with my remarks in the Appendix of the RECORD two editorials in comment on General Eisenhower's recent statement which have appeared in the Nashville Tennessean, of March 24, last, and the Nashville Banner, of the same date:

The editorials are as follows:

[From the Nashville Tennessean of March 24, 1950]

WE CAN'T AFFORD WEAKNESS

Gen. Dwight D. Eisenhower's warning that this country cannot go further in reducing its armed strength without the gravest kind of danger is justified by his accompanying statement that when even one power "builds and maintains a military machine beyond recognized needs of reasonable security, a war of aggression remains a constant threat to peaceful nations."

Although the former commander in chief of the Allies in Europe is a military man, he is not an advocate of militaristic diplomacy. On the contrary, he is one of the most effective spokesmen for peaceful understanding among nations.

We accept as genuine his concern lest the United States, having hastily demobilized most of its strength at the war's end, should reduce its armed strength to a point that would invite attack. He was one of the engineers of the current military program and he is alarmed lest economies guide the defense organization below the danger point.

It is an American ambition to lead the way to peace, but in seeking the goal it is necessary to keep in mind General Eisenhower's declaration that "America can do nothing unless she is strong."

[From the Nashville Banner of March 24, 1950]

EISENHOWER SAYS "DON'T DISARM"

General Eisenhower's warning against disarmament in the face of a Soviet threat which no intelligent nation can ignore, is the word of a man who knows the score. He speaks from no impulse of hysteria, and from no position of one who is uninformed.

As soldier and citizen, his opinion carries weight, and the Senate Military Affairs Committee properly has called him for an outline of his views—bearing as they do on security matters now before it.

To a great extent, America has disarmed. It has dismantled much of the defense machinery, has put much of its fleet in mothballs, disposed one way or another of much air strength, allowed supercarrier construction to be canceled, et cetera. The battle of the Pentagon was allowed to jeopardize the Navy. Now a program of heavier spending is being undertaken to make some repairs.

Of late, the State Department has stressed that the only persuasive influence which the Communists understand and respect is force, which is another way of saying that physical weakness invites attack; also that where this enemy is concerned, the convincing argument is superior strength. In the face of that fact, it is no time to be frittering away our substance, or demobilizing might.

As General Eisenhower observes, Russia knows the disarmament status and capitalizes on it. Nothing less than physical strength will deter Moscow, or compel her to come to taw on policies which could convert the cold war to a hot war.

Congress needs all the light it can get on the matters before it, having to do with the initial steps of preparedness, and Eisenhower can furnish some light. He isn't an amateur in the business of national defense. He isn't a warmonger. He is a soldier and citizen concerned for the security of the United States of America.

Verifying his statement, it certainly isn't a time to disarm when a hostile power is arming to its utmost with the precise objective of conquering by war if need be.

Partition of Ireland

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. O'BRIEN of Michigan. Mr. Speaker, the act of the English Parliament in detaching by its legislation six Counties of Ireland on the ground that they are pro-British has no more foundation in law or common sense than would be the act of the English Parliament in detaching the six States of the so-called New England States of the United States on the ground that they are pro-British.

In the ECA legislation the United States is providing huge sums with a view to breaking down customs and monetary barriers between the nations of western Europe and in the same bill we are providing funds to England whereby directly or indirectly England is enabled to maintain an artificial, unnecessary, and expensive customs barrier separating six Counties of Ireland from the rest of the Nation.

Ireland is our oldest friend. Ireland was our friend when England was our enemy. Our voice is raised loud in proclaiming that we are interested in freedom and justice all over the world and in raising economic standards all over the world; and that we must be so interested in order to frustrate world-wide communism. Ireland has not threatened to go Communist and participates but meagerly in Marshall plan aid. What she does ask us is that the United States, her friend, do not participate directly or indirectly in imposing on her the yoke of partition.

An Appeal for Peace

EXTENSION OF REMARKS
OF
HON. ANDREW JACOBS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. JACOBS. Mr. Speaker, under leave to extend my remarks, I offer for printing in the RECORD a letter received from Mr. Robert Gemmer, a minister of the gospel residing in my district. This letter was written to me after he had visited Hiroshima, and incorporated in it is a letter from the orphans of Hiroshima, appealing to the leaders of the world not to make of it another Hiroshima.

I realize that the accomplishment of an answer to their prayer is not so simple as these children might suppose, but the goal to be attained thereby is so precious that no effort should be spared in our endeavors to attain it.

The following is the English translation given us of the original text which was written in Japanese by the senior high girls of Hiroshima. The letter was sent to President Truman, Premier Stalin, and the United Nations. Each of the 600 girls in the school signed the letters personally as well as a fourth copy they planned to send to India, asking her to use India's influence as a neutral nation to bring the major powers together. Each of the girls and the 850 junior high girls also decided to write personally some world leader.

No adult or teacher met with the students. Classes waited. They took seriously our challenge to translate their prayers for peace into work for peace. Some of the girls told us about their meeting later:

"We decided to pray, and as we prayed something wonderful happened. We really felt God was helping us. All the girls whose parents had died in the bomb stood and prayed. We didn't want anyone else to have the experience we had.

"On the World Day of Prayer we bring to mind the horrible experience at the time of the atomic bomb, and we feel deeply the urgent need of a world peace for the sake of the welfare of all people.

"That day on which our dear fathers, mothers, brothers, and sisters, and friends were taken from us. On that day tens of thousands of people in Hiroshima lost their lives as victims of the atomic bomb, and the city, full of life until that morning, was

UNIVERSITY OF MICHIGAN LIBRARIES

burned to ashes in but a few seconds. And it was thought that never again would we be able to stand up. The grievous calls for help which came from under the fallen buildings lying within the devouring fire which had wrapped the completely destroyed city, are still calling us and pushing us into the road to peace.

"We do not want others to suffer this piteous tragedy which war has brought to us. No matter how science may prosper, man cannot make man. When we think how important each individual is, and of how lightly they were treated in the war, we firmly pray that such a thing will never happen again.

"But even if everyone had gone through the terrible experience, people are still preparing for war.

"The leaders of each country say that they will use weapons as a means to peace. But as long as weapons exist, we firmly believe that we cannot hope for true peace. We pray that the large sums used for armaments will be turned to render services for the happiness of mankind.

"We want you to listen to our prayers which we are shouting from the bottom of our hearts.

"We pray from the bottom of our hearts that you, the great leaders of Russia and America, who have the greatest strength, will take the leadership and work wholeheartedly for the purpose of world peace."

In further discussion that evening, one of the girls summed it up saying: "Today our school did something really good, and we're all so happy we can hardly stand it, but we still have to study and go to school, so we say: 'Please everyone do something too!' "

ROBERT GEMMER.

INDIANAPOLIS, IND.

Statehood for Alaska and Hawaii

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks I desire to include an editorial from the Okmulgee Daily Times, Okmulgee, Okla., of March 10 endorsing statehood for Alaska and Hawaii:

STATEHOOD FOR ALASKA AND HAWAII

The House of Representatives has passed bills providing for statehood for Alaska and Hawaii. It is up to the Senate now to say whether the forty-ninth and fiftieth States shall be added to the Union. President Truman is on record in favor of statehood for both.

We can think of no sound reason why they should not be admitted to the Union. Though the population of both is small—Alaska about 100,000 and Hawaii 530,000—it is our conviction the people of both can govern themselves better through state governments than the Federal government can through territorial administration.

There has been a lot of shameful exploitation of Alaska, much of it with the knowledge if not the actual connivance of Federal agencies. This probably could and would be stopped if the Alaskans were to find themselves in the position of governing themselves and being responsible for the conservation of their own resources.

Hawaii, if admitted to statehood, will be the first offshore State in the Union. Some consideration from a military standpoint has been given to that aspect of the situation; but it need not greatly concern us, because our responsibility for the protection of Hawaii is the same whether it is a Territory or State.

We hope the Senate will not dilly-dally with the statehood bills now that they have reached their present status after long years of fighting on the part of Alaska and Hawaii.

Toward Democracy

EXTENSION OF REMARKS
OF
HON. CHARLES R. HOWELL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. HOWELL. Mr. Speaker, under leave to extend by remarks in the RECORD, I want to include the speech which won the New Jersey State Oratorical Contest for high school students, conducted this year in Morristown, N. J. The speech was written and delivered by Wellington D. Kohl, a student at Central High School in Trenton. The speech itself is an outstanding achievement, and the boy who wrote and delivered it is truly representative of American tradition. An orphan, Wellington Kohl is a ward of the State of New Jersey. He earns his spending money by working after school, and is an honor student in his class. This young Negro boy is an outstanding American—I believe, with his teachers, that he shows strong promise of becoming one of our Nation's leaders. I am proud of the opportunity to present herewith the speech with which he won our State's oratorical contest for 1950:

TOWARD DEMOCRACY

(By Wellington D. Kohl)

I speak as an American Negro. I speak with pride, for my racial heritage is a worthy one. When the 13 colonies wrested their freedom from the hands of the British tyranny, free men of African descent laid down their lives along with their white comrades at Saratoga, at Monmouth, at Yorktown. Even in the dark days of slavery when the leaders of the South defied the Union, the wealth, the power on which their defiance relied, came from the toil of Negro men and women. And what of more recent years? What have we achieved since emancipation freed us from the profitless toil of slavery? In art, in literature, in science, in statesmanship our record is no cause for shame. I am proud to be of the same race as Marion Anderson, as James Weldon Johnson, as George Washington Carver, as Ralph J. Bunche.

So to the members of my race I say: Take pride in your racial heritage. Be too proud to ask or accept special consideration because yours is a race that has been grievously wronged in the past. Be too proud of your race to attribute any failures of your own to the fact that you belong to it. Devote your life to proving again what has already been proved in the past—that the American Negro can stand on his own feet, living valiantly in a way that adds to the glory of our country.

And now for my friends whose skin is white. There are two expressions I wish you would strike from your vocabularies and thinking. The first of these is the phrase "typical Negro." Who can be typical of a whole race? Just as you have, we have our cultured and our cruel, our virtuous and our vicious. I do not ask you to forget our race. I ask only that you judge us as individual members by the standards that apply to all Americans. The second expression to forget is "tolerance." I think it is a misnomer for what is really meant, but it is an offensive misnomer. Tolerance implies condescension. We do not tolerate our friends and equals. We like them or we dislike them—and active dislike is better than tolerance that says, "Make allowances. Not too much can be expected of him."

Then what can you do? All that we ask is that you go on doing what many of you have already been doing. Treat us as individual, responsible human beings. Judge each individual by what he is and by what he does. Respect the worthy. Censure the unworthy—but keep in mind the fact that our members include both.

And finally to my friends of both races. There is no sense in denying the existence of a racial problem. It is here. It is not so ugly and vicious as it once was, but it still exists, kept alive by irresponsible members of both races—members of whom both groups are properly ashamed. But it is diminishing. Great strides toward its elimination have been made, and they have been made not through conflict, but through cooperation. The disappearance of segregation in our public schools, the adoption of the fair employment practices law in New Jersey, the lessening of Jim Crowism everywhere—have not been the result of the efforts of one race. Fair-minded men and women of both races have worked together, have planned together to bring to all people the freedoms that are the rightful heritage of every American.

We of the Negro race are grateful to our white friends who have helped us to win these advances. Indeed, without their aid most of the progress would have been impossible, for we are in the minority. But their task is drawing to a close. Every step forward that we take adds to the share of the load that we of Negro ancestry must bear ourselves, for growth in freedom means growth in responsibility. And that is democracy—a society in which each individual can be measured not by what he is born with but by what he is—not by his race, his religion, his ancestry, but by himself. That is true democracy.

The Personal Equation

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "The Personal Equation," which appeared in today's Washington Post, March 28, 1950:

THE PERSONAL EQUATION

Reckless drivers like Senator MCCARTHY seem to forget that the people they knock about in their mad careenings are live, flesh-and-blood individuals. A reminder of this has come from Haldore Hanson, a State Department employee, one of the Senator's hapless victims. In a letter to Senator TYDINGS, he reported that neighbors near a farm he owns in Loudoun County, Va., have begun referring to him as a Communist and a Russian spy, and that a petition has been circulated calling his family undesirable and urging their expulsion from

the community. Much the same harassment was reported by Mrs. Esther Brunauer in testimony before the Tydings subcommittee yesterday. Neighborhood communities are liable to believe what they are told by a United States Senator—even when what they are told is unsupported by any evidence whatever.

Senator McCARTHY has not hitherto displayed a sensitivity that could lead one to expect him to show much concern about these collateral consequences of his recklessness. But there ought to be real concern on the part of his colleagues in the Senate. For it is on that body that the darkest shadow of the Senator's conduct falls. The American people, for all their anxiety about communism, have not lost their sense of fair play. It is still considered profoundly un-American to hit a man who has no means of hitting back. Senator McCARTHY has been using the immunity conferred on him by his membership in the Senate to hit men like Haldore Hanson who have no chance to return the blow. The spectacle is an unedifying one.

Light on Lobbying

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Washington Post of March 27, 1950, entitled "Light on Lobbying":

LIGHT ON LOBBYING

The House investigation into lobbying opens today with the promise of being a very enlightening inquiry. Representative BUCHANAN, chairman of the investigators, wants to know why only 500 of an estimated 1,500 lobbying groups have complied with the act of 1946 requiring the registration of lobbyists. The committee also has a keen eye open for any underhanded schemes to influence congressional legislation. Yet these are more or less side issues. What the committee is basically interested in, as we understand it, is probing to the bottom of the lobbying process. It insists on knowing not only how lobbyists work, but where they get their strength, how the ideas sponsored by lobbyists originate, and what is the effect of lobbying on representative government.

As the first witness the committee is calling Dr. Hadley Cantril, professor of psychology and director of the office of public opinion research at Princeton, who will discuss the factors that shape public opinion and thus influence the legislative process. The committee realizes that lobbying begins at the grass roots. Perhaps the most effective lobbying is done, not directly with Members of Congress, but with their constituents. This is true in the case of lobbyists in the Government service as well as those working for private interests. If an idea takes hold among a large number of people, it is usually not very difficult to get Congress to accept it.

From the committee's agenda it appears that it intends to make a scientific study of how public opinion is developed and finally reflected in legislation. This can be an immensely useful study; for, as we have often pointed out, lobbying is an essential part of the democratic process. It becomes vicious only when special interests—outside or inside the Government—bring undue pressure to bear upon the representatives of the people. Out of this proposed comprehensive survey should come not only a better understanding of lobbying but also clearer ideas as to the efficacy of the present law and how it can be improved.

The Man at the Top

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial titled "The Man at the Top," which appeared in today's Washington (D. C.) Post, March 28, 1950:

THE MAN AT THE TOP

So Senator McCARTHY's top Soviet spy in the United States—the man on whose case the Senator stands or falls—is Owen Lattimore, director of the Walter Hines Page School of International Relations at Johns Hopkins. An analysis of the file about him has now been shown the Tydings subcommittee. In addition, Mr. Lattimore is hurrying back home, presumably to demand a hearing, with the possibility, also, that he may prefer a slander suit against Senator McCARTHY. It is clear that his usefulness in his present work in Afghanistan has been impaired, if not undermined; he has been on a mission there for the United Nations.

Mr. Lattimore happens to be perhaps the leading American authority on Inner Asia. He has written a round dozen books on that huge arc of land stretching from the Yellow Sea through Manchuria, Mongolia, Sinkiang along to the northwestern frontier of India. For his work he has the esteem of literati on both sides of the Atlantic. If his volumes are merely fronts for Soviet Russia, hundreds of scholars will be rated as dunces, Johns Hopkins, the haven of sedition, and organizations throughout this country and most of the important newspapers carriers of propaganda. A further detail about Mr. Lattimore's work in inner Asia was provided in Mr. Drew Pearson's statement on Sunday that Mr. Lattimore had provided an asylum in Baltimore for two Mongol princes and the high priest of Mongolia who were in danger of their lives from the Russians. Guilt by association, indeed.

At times we have been at variance with some of Mr. Lattimore's conclusions. But whatever sections may be torn out of the context of his writings, whatever joining he has indulged in, we feel confident that he will be able to divest himself of the atrocious label that Mr. McCARTHY has pinned on him. The Russians are not so silly as Senator McCARTHY makes out. On analogy the top Soviet spy in this country would be somebody now occupying a seat near or with the mighty, someone who is a rabid anti-Communist engaged in keeping the animals stirred up. That, at any rate, is the sort of activity that would fall under the head of strategy of terror. As Mr. Edmond Taylor explained that strategy in the book by that name, the technique in France was to get the master minds in Nazi expansion in France to join anti-Nazi groups. In Japan there was the case of the Soviet spy, Sorge, who actually became the Emperor's counselor—perhaps the leading illustration of planting a spy in the least obvious place. The only safeguard against this kind of thing is to keep the national eye on the ball and to rely upon the FBI.

The Hickenlooper charges, says Dr. Frederick Seitz, in the latest issue of the Bulletin of the Atomic Scientists, have "probably done as much to impede the progress of that organization (the AEC) as could a number of well-placed Russian agents." As much could be said of the McCarthy charges. The fantastic nature of these charges is already clear in the record. Mr. Lattimore's name is being used to expose the State Department, but he has nothing to do with the State Department. Senator McCARTHY says that he still has a desk in the Department, yet nobody else seems to have seen it. Five years ago he was on the Department's pay roll as an expert attached to the Pauley reparation mission to Japan. Whether the selection was Mr. Pauley's or the State Department's is immaterial; his experience and his knowledge would entitle him to consideration on any mission of such a nature. Before his work on the Pauley mission Mr. Lattimore was in the Office of War Information and prior to that was adviser to Chiang Kai-shek on White House recommendation. The most conspicuous item in his record at Chungking was his opposition, in behalf of Chiang, to Secretary Hull's trial balloon for a limited accord with Japan in an effort to stave off hostilities. What this record has to do with the McCarthy charge is as much of a mystery as how Mr. Lattimore's extracurricular activities bear out that charge.

Facts in Colorado River Dispute Should Be Known

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. POULSON. Mr. Speaker, this editorial from the Los Angeles Daily News of March 24, offers a good deal of food for thought:

FACTS IN COLORADO RIVER DISPUTE SHOULD BE KNOWN

One reason why Congress has given California the worst of the deal in our dispute with Arizona over Colorado River water is that people in the States east of here have not been familiar enough with the facts.

Our natural tendency as a people is to favor the under dog. Arizona is smaller, less populous, and less wealthy than California. Hence, to millions of Americans, any argument between the two States would seem, in the absence of information, to be a fight between a pygmy and a giant.

This may be a commendable spirit as between individuals, but even then it is possible for small persons to be wrong and large persons to be right.

As far as Arizona is concerned there is a way to offset the feeling that California is wrong because it is large. That is to tell people the facts. When San Francisco was preparing for her 1915 Panama Pacific Exposition she sent emissaries to eastern legislatures to get them to adopt resolutions to hold exhibits at the exposition.

California could very well send emissaries to Midwestern and Eastern States to tell them the truth about the Colorado. One of the first and largest truths to be told is that California's size is an argument in her favor. Under riparian laws everywhere population, or the need of people for water, is what counts above everything else.

UNIVERSITY OF MICHIGAN LIBRARIES

Increasing Antitrust Penalties

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. CELLER. Mr. Speaker, H. R. 7827, a bill by Mr. WALTER, of Pennsylvania, proposes to increase the maximum criminal penalties which may be imposed under the Sherman Act from $5,000 to $50,000. Witness after witness appearing recently before the Subcommittee on Study of Monopoly Power has stressed the utter inadequacy and impotence of the present paltry penalty as a deterrent to some of the major violators of the antitrust laws. The great General Electric Co., for example, for six fines imposed in the last 12 years, paid a grand total of $30,000. No wonder the Department of Justice has concluded that a violation of the Sherman Act is frequently considered as a sound business risk. Under unanimous consent, I wish to place in the RECORD an excerpt from a report by the Department of Justice to a congressional committee, wherein it expressed this conclusion and emphasized the inadequacy of the present penalties under the antitrust laws.

Congress has noted in several instances the extremely small penalties that are imposed on individuals and corporations for a violation of the antitrust laws. In some respects the penalties are so low that violation is regarded by businessmen as a good business risk. The ineffectiveness of the small penalties to create a proper sense of responsibility in corporate officials is shown by a statement of an official of the Hartford-Empire Co.; in a memorandum written in 1925 regarding a future antitrust case against the illegal combination, he said (ex. 76, Hartford Empire Record, pp. 12573–12574):

"It may be well to consider here, also, what would be the result should any or all of these matters be upset by Government action, as follows:

"O'NEILL

"* * * Meanwhile the O'Neill organization and business as a going concern would have been irrevocably disposed of. We might be forced to put our O'Neill United States patents up for auction and sell them for a song and perhaps lose a few thousand dollars this way, but I cannot see that anything serious can happen in any event as to this transaction.

"FEDERAL

"Under similar circumstances, a dissolution here might be much more serious, depending upon the nature of the decree. It could hardly force us to give up any patents taken out in our name. We might conceivably be forced to dispose of patents practically taken out in the name of T. R. & B. and assigned to us. By the time, however, that such decree would become final, we would hope that the situation would be such that those Federal patents would not be worth much to anybody. We might lose whatever value we paid for them, but that would be all.

"Of course, the court might order that we transfer the entire Federal licensing business to some other party and turn over to that party the Federal patents. This, of course, would simply restore to a certain extent the existing situation and establish a competitor. It would have either one of two results—either that competitor would be in a reasonably strong position, in which case we could probably dispose of all these assets as a going concern for somewhere near what we paid for them and take our chances with competition, or by that time the situation would be such that it would be practically impossible to restore the old Federal competition even if it had all the Federal patents; in which case we wouldn't get much for the sale of these assets, but, on the other hand, the competition wouldn't be serious.

"Meantime, we would have gotten out our own patents; probably had the income from Federal licenses for several years; and very possibly also, as a result of the Federal and the other deals, we might have brought in Hazel-Atlas under license.

"I therefore do not see much danger of having any of these deals upset, as set forth. If they are upset, I still believe that by that time we will be in a better position even with such dissolution than we would be otherwise; and I see no danger whatscever of any criminal liability, because the cases are necessarily so doubtful in the matter of law that they could never get any jury to convict, and I doubt if any prosecuting officer would ever attempt any criminal action. Criminal action in cases of this sort so far has practically been nonexistent."

The TNEC recommended a sharp increase in penalties in criminal cases as well as civil cases so that fines, etc., would be more commensurate with the damage to the public interest done when a large industrial corporation violates the antitrust laws. One recommendation not made by TNEC which the committee may wish to consider is to provide for mandatory increased criminal penalties for repeated violations of the antitrust laws.

Lesson in Americanism

EXTENSION OF REMARKS
OF
HON. F. H. LICHTENWALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. LICHTENWALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am submitting an editorial which appeared in the Allentown (Pa.) Evening Chronicle, on March 10, 1950. There has been a wave of protest throughout the Nation against the tremendous waste and extravagance in the purchase of foodstuffs under the Government subsidy program. This has been particularly true in recent weeks in the case of potatoes, with the threat that many millions of bushels would be destroyed because Uncle Sam was to become the best customer of our farmers. Lehigh County, in the Eighth Congressional District of Pennsylvania, has thousands of acres cultivated for the growing of potatoes; in fact, on numerous occasions it has ranked No. 1 in Pennsylvania on the yield per acre and always has been one of the leading potato-growing counties in the State. However, I am very pleased and happy that the potato farmers in Lehigh County see fit to market their own products at a price less than that granted by the Government under the price-support program because of their desire to be independent of Government controls and regimentation. The editorial referred to is as follows:

IN THE WAKE OF THE NEWS

LESSON IN AMERICANISM

As refreshing as those breezes that are calendared for next month was one of this morning's headlines which read: "Lehigh County potato growers protest United States support program."

It is a declaration of independence that does eternal credit to our local farmers and serves notice to the administration in Washington that at least their votes are not to be bought by Government hand-outs.

They make it clear that Lehigh County growers have taken little, if any, part in piling up the huge potato surplus, millions of bushels of which are now being dumped, for which farmers elsewhere in the country have been paid more than $80,000,000 of the taxpayers' money.

In fact, they say the results of a price-support program that was supposed to help them out of their postwar marketing difficulties has destroyed that very market by imposing upon them an infiltration of out-of-State potatoes. They fear that by the end of the normal marketing season many of them will be out of business because of the Government's interference in the natural law of the land, the law of supply and demand.

Only 3 to 4 percent of the locally grown potatoes have been sold to the Government under its price-support program, most of the local growers having sold their crop through regular channels and at a lower price than support figures, rather than become dependent upon a nationalized control of their produce.

The Nation's welfare would be served immeasurably if this example of the kind of American independence that made this country great were followed by farmers in every section of the land.

St. Louis Banker Says Federal Deposit Insurance Corporation Restored Public Confidence in Nation's Banks and Bankers

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. PRICE. Mr. Speaker, I am in receipt of a very interesting letter from a St. Louis, Mo. banker which I think should be read by every Member of Congress. As a former chief national bank examiner at St. Louis from 1920 to 1930 and later as chairman of the Federal Reserve Bank of St. Louis, this man, Mr. John S. Wood, chairman of the board, Manchester Bank of St. Louis, certainly is in a position to speak with authority on banking matters.

Mr. Wood recites that from 1921 to 1933 he saw the number of commercial banks in the United States decrease from approximately 30,600 unit banks to fewer than 14,000 banks. He saw the loss of public confidence in both banks and bankers. It took the Federal Deposit Insurance Corporation to restore that confidence, Mr. Wood states in his letter.

Now, Mr. Wood warns it would be "gambling with fate to, in any degree, diminish the fund that enables the FDIC to promptly take care of the depositors of any insured bank that may get into an unsafe condition."

The letter which I received from Mr. Wood follows:

MANCHESTER BANK OF ST. LOUIS,
St. Louis, Mo., March 24, 1950.

Hon. MELVIN PRICE,
Member of Congress,
Washington, D. C.

DEAR MR. CONGRESSMAN: The leaflet, containing your statement to Congress relative to the record of the Federal Deposit Insurance Corporation in preventing any loss to a depositor in an insured bank during the past 6 years, has just come to my attention.

I congratulate you on making such a clear-cut presentation of this fine record of the FDIC. It is a sentiment of the management of this bank that there should be no reduction in the present rate of assessment.

I was chief national bank examiner at St. Louis from 1920 to 1930. During 1930 I became chairman of the Federal Reserve Bank of St. Louis, and, in that capacity, directed the operations of the examining department of the Federal Reserve Bank of St. Louis.

From 1921 to 1933, I saw the number of commercial banks in the United States decrease from approximately 30,600 unit banks to fewer than 14,000 banks. The public lost confidence both in banks and bankers. The FDIC restored public confidence both in banks and bankers. It is gambling with fate to, in any degree, diminish the fund that enables the FDIC to promptly take care of the depositors of any insured bank that may get into an unsafe condition.

I hope that your statement to Congress has as deeply impressed your fellow Members of Congress as it has impressed me.

Very truly yours,

JOHN S. WOOD,
Chairman of the Board.

The Price of Freedom

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an address delivered by Admiral Louis E. Denfeld, United States Navy, retired, former Chief of Naval Operations, on March 12, 1950, in South Boston, Mass., on the occasion of the one hundred and seventy-fourth celebration of the evacuation of Boston by the British:

THE PRICE OF FREEDOM

My friends and fellow countrymen, it is a great honor for me to meet here with you to celebrate an event of especial significance in the history of our Nation. Your presence, your great love of country moves me deeply, for so long as our citizens pay tribute to the past they will guarantee the future. In this era of world unrest, at this moment when all men of honorable intentions yearn for peace and yet have just cause to view tomorrow with apprehension, it is fitting that we look back to the days when we were struggling to become a nation. Even a glimpse of that period increases our spirits, renews our confidence and sheds light to guide our way ahead.

But as dark as our course in world affairs sometimes now seems, as futile as our national efforts for peace often appear, I still feel that the clouds hanging over us are not nearly as dismal as those endured by our forefathers.

This event that we mark each year—Evacuation Day—was not the end of the war for the embattled colonists—on the contrary, they still faced 5 years of bitter strife. But that victory in 1776 was of enormous portent. Out of it flowed increased determination, proof that our military leaders were competent, and assurance that our sacrifices would lead to final and complete victory.

Such an event is worthy of closer examination; let us, therefore, review briefly the circumstances which led up to and brought about Evacuation Day—March 17, 1776.

As a result of the Boston Tea Party, the British Crown denied Massachusetts Colony the right of self-government. And as if this were not punishment enough, 8,000 troops under General Howe held the city of Boston in bondage. A fleet of British ships manned by 2,000 men filled the harbor thus closing the port. Our people were cut off from the outside world and in this beleaguered state the colony was slowly strangling.

From the summer of 1775 until January of 1776, the economic choking of Boston and the surrounding area continued. It seemed to be only a matter of time until the colonists would be forced to surrender. This was the condition when General Washington took command in Cambridge on July 3, 1775. Because of lack of artillery, Washington could do little to relieve the situation until Colonel Knox arrived on January 18, 1776, with 55 pieces of artillery seized by Ethan Allen the previous May at Fort Ticonderoga.

The placing of the guns on Cobble Hill, Lechmere's Point, and Lamb's Dam, and the subsequent seizure and fortification of these heights by General Thomas and his 2,000 troops brought about General Howe's decision to evacuate Boston. I have omitted many of the details, heroic deeds, which contributed much to the freeing of our beloved city and State—but I have done so purposely.

The one detail that I do wish to impress upon you is the strong and steady courage displayed by our forefathers during those terrible months of siege. Had they lacked that courage, they would never have forced the invader to leave. Without that valor of heart and soul they could not have struggled on to survive Valley Forge. Courage of purpose sustained those patriots from Boston to Yorktown—and after the last battle was fought, courage emerged as the basic ingredient holding us together as an infant Nation.

Since that memorable day of March 17, 1776, we have faced many enemies and fought many wars. The events bringing about those conflicts have been varied—but fundamentally, the evil common to all has been tyranny.

Now we hear the rumble of trouble once again—but this time the specter of war rides two horses—tyranny and godlessness. This latter evil is at work in our land, being spread by individuals who would have us believe that our way of life has outlived its usefulness. They attack every institution that has helped to make America strong and a decent place in which to live. They deny every high motive written into our Constitution and Bill of Rights. They impugn our right to be a nation because under our system a man has religious as well as political freedom—neither of which are tolerated in the slightest degree by the ideology they teach.

We need have no physical fear of such people. The only real harm that can come to us will be of our own doing. We must never permit ourselves to be persuaded, under one guise or another, to willingly give up even one of the many liberties we have fought to preserve.

And when we leave here today, let us go forward with renewed faith and confidence. Let us also prove that the calm courage of our forefathers has not been diluted by the passing of years—rather let us show all mankind that we are the worthy heirs of our freedom, ready and capable of extending it for the generations to come.

The World's Largest Oasis

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. HOLIFIELD. Mr. Speaker, in the fall of 1923, a group of surveyors and engineers, led by the late William Mulholland, made a weary trek across the burning, empty desert of southern Nevada. Their goal was the Colorado River, a wild and treacherous stream that tore its way through immense canyons few people had ever seen.

There were no roads through the desert. Because of this the men had come out from Los Angeles by train to Las Vegas, Nev., and then had set out overland for the river.

The men were not gold prospectors, but they were looking for something that would bring untold riches to the cities and towns on the Pacific coast, 400 miles behind them. They were looking for a new source of water to meet the steadily increasing demands of southern California.

The water they wanted was there in the Colorado River, and specifically their mission was to find a route for an aqueduct that would carry that water over hundreds of miles of uninhabitable desert, over mountain ranges and high rock mesas to the people who needed it.

Doubtless few persons visiting southern California think of it as an oasis. It is unlikely that the easterner especially realizes that the luxuriant groves, vineyards and fields, the miles of homes, parks, gardens, factories, and mills between Los Angeles and San Diego stand on land that was once inhabited mainly by lizards and cactus. Southern California, from the Tehachapi Range to the Mexican border, is the world's largest oasis. More than that, it is a man-made oasis and its existence depends on a few comparatively small sources of water. A person familiar with great rivers of the Midwest, the East and South, would look upon any of southern California's main water supplies as a mere trickle. It is hardly conceivable to the traveler, seeing southern California's development for the first time, that the water which made it possible was imported for hundreds of miles.

The extent to which southern California depends on imported water can be realized when it is understood that a few well-placed bombs, atomic or old-fashioned, could bring all human activity to a grinding halt. Destruction of the Owens River and the Colorado River aqueducts, for instance, would place the lives of more than 6,000,000 persons in

UNIVERSITY OF MICHIGAN LIBRARIES

peril, and would result in an unimaginable exodus from the Pacific coast.

These aqueducts are the lifelines of southern California, and during the war, when victory depended so greatly on Pacific coast production of matériel and trained personnel, the United States took adequate precautions to see that these vital water supplies were not interrupted. Constantly, for hundreds of miles across the deserts to the east and northeast, they were patrolled by soldiers. Never was vigilance slackened, for a break in these lines would have threatened the great national defense plants with a shut-down, and would have forced the removal of hundreds of thousands of troops from desert-training areas.

As vital as these aqueducts were during the war period, they are no less vital to the immediate future of southern California. One of them, the thin line of concrete from the Colorado River, is the only means with which southern California can meet its ever-growing demands of the present, and the demands which may be expected to come.

Serious threats to this vital supply now exist. They are based on the demands of the State of Arizona in H. R. 934 and S. 75 for an immense portion of the Colorado River water which years ago was awarded to California by contracts with the Federal Government. The controversy now rages in Congress.

Los Angeles, although the metropolis of the Pacific coast, typifies the struggle southern California cities and towns have had in defeating their greatest enemy, a dry water hole.

In 1877, the year Engineer Mulholland arrived in Los Angeles, the city had a population of 9,000. Its water supply was an open ditch, and the ditch was also used for washing clothes, watering stock, and bathing.

The source of the water in the ditch was what is laughingly called the Los Angeles River, a rocky wash that was occasionally a flood, but mostly a dance floor for dust spouts. With what water could be diverted from the uncertain river into storage, and with water pumped from underground wells, the city managed to survive and to grow. By the turn of the century the handwriting on the water table was clearly visible. Upstream the city was taking all the water which came into the river, and downstream the city was taking all it could from underground. There was not any more to be taken upstream, and the wells were going dry. That was because the water which normally would have flowed into the underground reservoirs from the river was being used before it got there.

Meanwhile the population of Los Angeles had passed the hundred thousand mark, and there were no indications it would not grow even faster. The city fathers, if not the people, were alarmed. More water had to be secured.

Out into the desert went City Engineer Mulholland and his crew. It was in 1904 they reported an accessible and dependable source had been found on the eastern slope of the towering Sierra Nevada Mountains, about 250 miles from the city. The people of the city readily dug down for the necessary cash. By a vote of 10 to 1 they approved a $23,000,000 bond issue for purchase of a right-of-way and construction of the Owens River aqueduct. It was completed in 1913.

Los Angeles thought it had solved its water problem for years to come. Only a short period passed before the fallacy of this belief became clear.

The growth of Los Angeles continued with increasing speed. A dry cycle struck southern California, and the aqueduct flow fell below the danger point. Once more engineers understood the city would soon face another crisis, and they began to look around for another source of dependable water.

This time they looked even farther away, out across the hundreds of miles of desert to a river that ran unchecked through a little known land. They looked to the Colorado whose towering canyon walls mark the boundary between Arizona and California.

By this time virtually all the cities of southern California were facing problems akin to that of Los Angeles. They joined forces and they all looked eastward to the river of hope.

Out once more into the desert went Engineer Mulholland, but this time he was accompanied by colleagues from various sections of southern California. The plan to bring Colorado River water to the desperate coastal areas was a southern California plan, for it was clear that with an overdraft on all sources new water must be imported for the entire southern California metropolitan area, not only the city of Los Angeles.

The route for the Colorado River aqueduct was found. This, too, was to be a people's project, and once more the people opened their pocketbooks. They mortgaged their homes and lands with a bond issue, and construction was begun in the last week of 1932. The project cost was set at $220,000,000.

The work was started none too soon. In the district which the aqueduct would serve lived 2,000,000 persons. Many cities were scraping the bottom of their water barrel. Los Angeles could see the exhaustion of its water supplies, but no end to new population.

For 9 years thousands of men toiled in the burning California desert on the Colorado River aqueduct, and the first purified water was delivered through it in June 1941, only 5 months before Pearl Harbor.

What this comparatively small line of concrete has meant to the oasis of southern California has been suggested above in this story. What it means to the future of the world's largest oasis has not been as fully stated.

The Colorado River aqueduct is southern California's life insurance. It was completed just in time to avert serious situations in many cities and their surrounding areas. All future development in southern California depends on an uninterrupted flow of water through it. Water from other sources would not by any means meet present needs. Already many cities, such as San Diego, Santa Monica, and Long Beach, depend for more than half of their water supply on this aqueduct.

The Colorado River aqueduct was constructed, not only on a sound concrete base, but on what was believed to be a sound legal base. Under the Boulder Canyon Project Act the water stored by Hoover Dam can be used only under contracts made with the Federal Government. The Federal Government approved the aqueduct and signed contracts with the metropolitan water district to supply it, subject to the Colorado River compact, for the water which was to flow through the aqueduct in the years to come.

It was on that foundation, the contracts with the United States, that the people of southern California invested their money in the aqueduct. They had every reason to believe in the sanctity of contracts with their Government, every reason to believe these contracts would never be repudiated.

Now the people of southern California are not so sure. The State of Arizona says the Government never had the right to permit California to take so much water from the Colorado River. Now Arizona wants an enormous part of California's Colorado River water, and has asked Congress for it, to be used in a gigantic Arizona project.

California says let us take the whole problem before the United States Supreme Court for final settlement, but Arizona will not agree to that, except on condition that Congress first authorize a fantastic billion-dollar project for central Arizona. Arizona wants Congress to repudiate its contracts with California, and give Arizona the water.

The people of southern California have demonstrated their concern. The water Arizona wants is water which the world's largest oasis must have to survive. The Colorado River aqueduct is southern California's last waterhole. If it dries up, all progress and development abruptly stop, and disintegration and retrogression start.

That is why California is asking the defeat of S. 75 and H. R. 934.

Using Hoover as a Cat's-Paw

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include a very pertinent and timely observation by Willford I. King, nationally known and respected commentator. This article appeared in the biweekly news letter issued by the Committee for Constitutional Government:

USING HERBERT HOOVER AS A CAT'S-PAW

(By Willford I. King)

When fate brought Harry S. Truman to the White House, many felt a sort of pity for the naive little man from Missouri who was suddenly called upon to step into the shoes of the most adroit politician ever serving as

President of the United States. Largely forgotten was the fact that Truman had trained under Pendergast—a man who was no amateur in the game of politics. Hence, there was great surprise throughout the Nation when, on the evening of November 2, 1948, the returns showed that Truman had turned into victory an election which all the pollsters had predicted would be a walk-away for Governor Dewey. And, since that day, he has shown so much political astuteness that his erstwhile critics are beginning to wonder whether, as a politician, he is really inferior to the great Franklin Delano Roosevelt himself.

One example of his cleverness is the way in which he has used the FEPC issue to keep the Republicans and the Dixiecrats from forming an alliance against him—an alliance which, if consummated, might be a great menace to his future political career. Another example is his handling of the coal strike. He carefully avoided intervention until the fuel shortage became acute. He then used the threat of seizure as a whip to force the employers to grant most of the miners' demands. By refraining from seizure, he avoided open conflict with the mine owners; by settling the strike before most areas actually ran out of coal, he escaped calling down upon himself the dire wrath of the general public; and, by securing higher wage rates and more pension money for the coal miners, he intensified the loyalty of his most dependable group of supporters—the members of labor organizations.

But, for thoroughgoing political adroitness, his latest move probably eclipses any of his previous political maneuvers. He is actually arranging to use the prestige of Herbert Hoover to solidify the hold of Harry S. Truman upon the labor unions. Here is what is asked for in the message which he sent to Congress on March 13, 1950. It requests Congress to adopt 21 plans for reorganizing various agencies of the executive branch of Government, thus ostensibly merely carrying out the recommendations outlined in the monumental report of the Commission on Organization of the Executive Branch of Government—a report which was prepared under the direction of Herbert Hoover, and which has received almost universal acclaim for its unbiased and scholarly analyses and discussions of ways and means to secure greater efficiency and economy in governmental administration. All this seems highly laudable.

But, hidden away in the middle of the message is the seemingly innocuous plan No. 12, through which, according to President Truman, unified responsibility is once more established in the National Labor Relations Board by transferring to the Board and its chairman the functions of the general counsel, and by abolishing the statutory office of the general counsel. This plan will bring to an end the confusion which has resulted from the divided responsibility.

Evidently, by this explanation, the President hoped to lead Congress and the public to look upon this step as being merely a move to systematize the operations of a bureau.

In reality, however, the National Labor Relations Board has little resemblance to an administrative bureau. For all practical purposes, it is a court, the chief function of which is to adjudicate disputes between employers and employees. Under the Wagner Act, it really operated merely as an arm of the CIO. Following the Russian model, the functions of prosecutor and judge were combined, and, in most instances, regardless of the evidence, the case was decided in favor of the labor organization involved.

One of the main reasons for repealing the Wagner Act and adopting the Taft-Hartley law was to get rid of this un-American set-up. In the new statute, the functions of the prosecutor were separated from those of the court. As general counsel, Robert N. Denham, by his fair and unbiased enforcement of the law—neither employers nor employees being shown any favoritism—has gained the respect of all parties, not only for himself, but for the Taft-Hartley law as well. And now President Truman proposes to eliminate from the picture both Denham and his office and go back to the iniquitous system prevailing under the Wagner Act.

But the super-ironical twist to this scheme is that it is proposed under the guise of carrying out a mandate of the Commission headed by Herbert Hoover. And, to add insult to injury, under the general reorganization act passed by Congress, this plan will automatically go into effect unless it is specifically repudiated by a positive vote of at least one branch of Congress. Does a "doubting Thomas" still remain who is unwilling to concede that Harry S. Truman is a past master of political strategy?

If you are opposed to having the President usurp the constitutional powers of Congress in order to secure the financial support and votes of labor monopolists, tell your Congressman and Senator that section 12 of the President's message reorganizing the National Labor Relations Board should be voted down.

Reorganization Plan for Connecticut

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. PATTERSON. Mr. Speaker, on March 21 the Washington Post carried an editorial in unstinted praise of the reorganization plan for Connecticut. Its appraisal was based upon general rather than specific knowledge, and its eager, though illogical, advocacy of change for change's sake alone.

Many months were required for the commission to complete its survey which recommended sweeping changes in the form of Connecticut's State government. With "government by emergency" the vogue since January 1949, the Governor summoned the general assembly in special session slightly more than a week after the commission's final report was made public. Thus the legislators are asked to pass immediately upon extensive reforms, including a completely revised State constitution, without ample time for careful study and thought. This—though our citizens have managed their public affairs adequately under the present constitution for 130 years.

My knowledge of the proposed changes is sketchy because of my multitudinous duties here in Washington; but I fear that an acceptance of all the recommendations, based upon haste and possible political advantage, would do irreparable harm.

Many public-service groups have now realized the danger inherent in adoption of many of the proposals, and are performing their public duty by calling to the attention of the legislature imperfections which may well lead to partisan political control of many State functions which have hitherto been outside that sphere

The letters-to-the-editor column of the March 26 Washington Post contained the following pertinent comment on that score by Edgar Fuller of the National Council of Chief State School Officers:

REFORM IN CONNECTICUT

Your March 21 editorial comment that a little Hoover Commission is making a heroic effort to modernize Connecticut's State government is probably true in regard to a large part of Connecticut's State Constitution, but your indorsement is too sweeping. The commission would make the Governor a dictator. In some parts of the State government, the commission would go far enough toward totalitarianism to endanger democracy itself.

If the Connecticut commission has its way, the Governor will be given complete authority to appoint all department heads to serve at his pleasure and to fix their salaries at his discretion below a statutory maximum. He could veto the general assembly on any appropriation or any portion of any appropriation. He could transfer, consolidate, or abolish any State function or governmental organization by executive order, unless both senate and house affirmatively disapproved by a majority vote of their entire membership within 30 days of continuous session.

Connecticut's little Hoover Commission would strip the State board of education of its powers, abolish the trustees of the university, and place all public education directly under the Governor.

The commission's proposals do particular violence to the principle that a State agency for education must be organized and administered on a politically nonpartisan basis. It is impossible to teach effectively in a political atmosphere.

Similar principles of operation apply to the official agencies through which the people govern their system of education. Partisan politics has no place in local boards of education, where board members are as close to the people as any political officer. Neither does it have a proper function in the State board of education, for here is the State's quasi-judicial and rule-making source of professional decision. Only as the general assembly makes high general policy for the State system of public education along with all the other functions of State government should public education and our system of politics merge.

As a practical matter, no governor could give the time and attention required to perform the policy-making functions now performed by the State board of education, even if he should be qualified and inclined to do so. The commissioner of education would be forced to become an educational dictator, safe in his dictatorship as long as he remained in the good graces of the Governor.

We should keep the schools close to the people and at the same time free to operate on a professional basis and without partisan political interference. Our system of education in local comunities is a State system. Local board members are legally State officials locally selected. If the State agency for education is organized and conducted on a political basis with its potentially great powers of supervision over local schools the entire system will inevitably become political. It is a fundamental principle that the practical problem of policy development for education must be one for laymen selected on a nonpartisan basis rather than for either politicians or professional educators.

The same principles apply to the operation of teachers' colleges, vocational schools, the State department of education, and the university. The Governor cannot take the place of a lay State board of education in formu-

UNIVERSITY OF MICHIGAN LIBRARIES

lating policies and evaluating programs in these areas of State school administration, if for no other reason than the Governor's insecure tenure and his lack of personal time to develop educational policies. Experience in many States proves that a governor's bad record in education becomes evident too late to protect the schools and colleges.

If the little Hoover Commission in Connecticut has its way, partisan politics will interfere with the best aspects of the present administration of education, undermine both the State and local school systems, and reduce the quality of all the public schools and colleges of Connecticut.

EDGAR FULLER,
National Council of Chief State School Officers.
WASHINGTON.

Impartial Study of Steel Industry Asked

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. MACY. Mr. Speaker, under leave to extend my remarks, I wish to include a statement released by me for the press yesterday, as follows:

I am deeply disturbed by the recommendations and the implications contained in the report of the Joint Committee on the Economic Report. They sound like a blueprint for socialism, and are suspiciously close to the arguments advanced by the British Labor-Socialist Party in England in the late 1930's advocating the nationalization of industries. It is shocking to find that a philosophy so alien to the American system of free enterprise, the system that has made us the greatest Nation in the history of the world, has obtained so strong a foothold in the Halls of Congress. It is apparent from a study of this report that unless the American people assert themselves immediately, the days of reward for personal initiative and private enterprise will be lost beyond recall. Fortunately, there is still time to rebel against being made to walk the plank into the stagnant, enervating waters of socialism.

The viciousness of the report lies more in its portentousness than in its immediate recommendations. The thinly veiled plan of things to come is easily discernible. In the name of "free enterprise" the report seeks to lay the ground work for nationalized industry by instilling in the minds of the people a distrust and an antagonism toward what has come to be known as big business. Starting with the preconceived notion that the steel industry is an enemy of the people and of free enterprise, the report proceeds to set up a future program which, if the committee's most recent effort is any indication, will merely serve as a sounding board for advocates of the socialized state.

It is admitted in the report that the steel industry is the backbone of our economy. It is also generally conceded that the strength of this industry is one of our greatest bulwarks against aggression. Does it not, therefore, seem ridiculous that we should be continually hammering at its foundation and seeking to sap its vitality? No more effective way could be devised to undermine the faith of the people of this country in the American way of life then these irresponsible political investigations which spread seeds of hate in the mind of the public with the apparent sanction of the Congress. Investigations of this sort should be curbed immediately.

For more than a quarter of a century, we have been conducting periodic investigations of the steel industry. (Currently we have three separate investigating committees digging in this field at the same time.) The findings of some of these committees has been such as to raise a serious question as to their value. The report of the Joint Committee on the Economic Report is a glaring example of this. For one thing, it seeks to make it appear that, in condemning the December 1949 price rise in steel, its conclusions are based on investigation. However, as the minority report points out, the chairman of the committee had the temerity to announce his conclusions more than 5 weeks before the investigation began. Such predetermination might meet with approval in the satellite countries, but it does violence to our notions of justice. Parenthetically, I might add that such conduct does much to bring all congressional investigations into disrepute.

The committee's report characterizes the December 1949 price rise in steel as unwarranted. It also intimates that it constituted price gouging resulting from monopolistic practices, and was a studied act in derogation of the business and economic interests of the country. If this be true, then the policy of the steel industry has suffered a complete about-face during the past 12 months. Throughout 1948, the Committee to Investigate Questionable Trade Practices, of which I was chairman, conducted an intensive investigation of the "gray market" in steel. We did not limit ourselves to a 4-day public hearing as did the joint committee, but instead spent 12 months investigating the sales policies and practices of every major steel producer and most of the smaller steel producers in this country. And we double-checked our findings by tracing the steel through hundreds of distributors and warehousemen into the hands of the manufacturers.

The evidence disclosed that the major steel producers, those responsible for 90 percent of our steel production, were making an honest effort to prevent inflation by holding the price line in steel during the months of extreme shortages following World War II. There was no evidence that any attempt was made by the major steel producers to take advantage of the fact that steel was in short supply. I believe that this policy of the steel companies was perhaps the largest single factor in preventing runaway inflation during that period. I am not a champion of the steel industry, and I am not blind to its faults. But I do believe in being fair and giving credit where due.

The joint committee's report suggests that further study be made of the steel industry and to this extent at least I concur in its recommendations. Since competition is the very life-blood of our system of free enterprise, I believe it would be desirable to have a continuing check against monopolistic practices. But for any such study to command respect, it would have to be conducted on an impartial basis. Every step should be taken to eliminate the possibility that any charge of "political bias" could be legitimately leveled. I, therefore, propose to introduce a resolution calling for the establishment of a bipartisan commission to carry on this work and report its findings to the Congress from time to time. I feel that this is the best way to insure that the Congress will receive correct information for its guidance in regard to this basic industry.

I have no pride of authorship in such a resolution and will welcome any suggestion or will cooperate with anyone wishing to assist in the drafting. My only suggestion is that such action be taken without delay.

Here's a Business Poll Congress Might Ponder

EXTENSION OF REMARKS
OF
HON. ANDREW JACOBS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. JACOBS. Mr. Speaker, an editorial from the Louisville Courier-Journal for March 23, 1950, is so enlightening upon the subject now under debate that I desire to have it printed in the RECORD. I hope every Member of this body will read it:

HERE'S A BUSINESS POLL CONGRESS MIGHT PONDER

Europe must trade with us or go under. And trade is a two-way proposition. If the Europeans cannot sell in American markets, the only way they can be kept going is through outright American subsidy, whether we call it a gift or a loan, knowing in the case of the latter that it cannot be repaid until and unless the debtor does have greater access to our markets.

That simple but hard fact is acknowledged by expert economists and hard-headed businessmen alike. Businessmen in the ECA, for instance, calculate that the Marshall plan will have meant almost nothing unless the nations of western Europe are permitted to sell us an additional one and a half to two billion dollars worth of their goods and services each year. Priming the pump of European production, in other words, is a waste of time and money and false hope unless we are prepared to offer a market to some of that production. And since all but the blindest of us are aware that we desperately need a strong and stable and prosperous western Europe as our ally in a cold war that could go hot, many Americans consider opening our markets to increased competition of European goods a small sacrifice indeed for the cause of world peace and the certainty of stronger western defense against possible aggression.

There has been much evidence, however, that individual businessmen are willing to welcome increased foreign competition for the other man—but not for themselves. Tariffs are the wall that keeps out foreign goods. Every time a lowering of these protective tariffs is considered, Congress is deluged by lobbyists determined to keep their own particular market protected.

It is highly encouraging, therefore, to discover that many of the most practical businessmen in this country—purchasing executives—face the prospect of greater foreign competition with good cheer, and, more important, believe that we must run the risks involved in tariff reductions so that European nations can achieve greater dollar earnings in American trade and thereby spend more here for American goods.

This discovery was made by the magazine Purchasing in a Nation-wide poll of purchasing agents, and we hope every Congressman has a good look at its detailed findings before he accepts the stuck-pig arguments of a few protection-obsessed lobbyists as gospel for all business. Seventy percent of Purchasing's pollees said that "no harm would come to their companies' domestic sales by downward revision of present tariff rates," and a healthy 57 percent agreed that, in any case, "we must run the risks involved" in opening our markets to increased foreign competition.

No businessman is more vitally interested in the problem of supply and competition than the purchasing agent. That makes

some of these survey rejoinders well worth the attention of other businessmen. "Since when," asked one, "has American business really feared competition?" And one, quite aware that whether it actually feared competition or not, some segments of it had shown great tariff-law ingenuity in killing it, observed:

"Quite often protective tariffs subsidize inefficiency and lack of vision and initiative on the part of management (and labor). Welfare 'from the cradle to the grave' is to me the tariff as applied to the businessman."

There is a greater welfare involved now, and more and more Americans are coming to see it. More, too, are seeing the hard, common sense in the curt reaction of still another executive: "If we are going to send them money, let's let them work for it." And they can't do that if we wall out the products of their work.

The Budget

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mt. Vernon (Ohio) News:

IT'S THAT BIG

Budget requests made by President Truman were trimmed more than a billion dollars by the House Appropriations Committee which prepared an omnibus measure to finance various Federal agencies for the fiscal year beginning next July 1.

Despite the lopping of such a huge sum from the total of Mr. Truman's spending plan, however, the budget, if adopted by Congress without further reductions, will mean a deficit of more than $4,000,000,000 during that year.

That is striking evidence of the enormity of the spending program which Mr. Truman has outlined for the 12-month period.

Budget deficits are unavoidable in time of real emergencies, such as wars and great depressions. Spending in such times of stress cannot possibly be held within income without running danger of losses that would far exceed the amount of debt that is accumulated in combating such emergencies.

However, great budget deficits are indefensible when emergencies are not to be contended with and when income is high as a result of prosperous conditions. They are not only indefensible, they are dangerous.

Just about everybody in the country, outside of those in charge of the Government, realizes the danger contained in our fiscal policies.

But President Truman and his advisers who dictate the Government's spending policies take a strange view of financial policies.

They apparently see no danger in piling up deficit after deficit, each one raising the level of the national debt a few notches higher.

With Government revenues at an all-time high, some of the money rolling into the Government Treasury should be applied toward reduction of the debt, for sound financing policies call for reducing during lush times the debt accumulated during years when extraordinary situations are to be dealt with or Government revenues drop to low levels.

Such policies have been consistently ignored during the Truman administration.

In fact Mr. Truman is going into the records as the greatest spender in the history of the United States Government.

Total expenditures by the United States Government during the administrations of 32 Presidents, including the late President Roosevelt's first two terms, were $176,620,113,645.

In five years, the Truman administration has managed to disburse $191,081,394,191 of the people's money. Thus, under the Truman policies, the Federal Government has spent in 5 years about $15,000,000,000 more than was expended in all the previous years there was a United States of America.

But that does not tell the whole story.

Government spending would be much higher than it is if all of Mr. Truman's proposals were put into effect.

He has a long list of domestic projects, the cost of which has never been accurately estimated, but which would run many billions of dollars a year. And then there is his proposal that the American people assume the cost of raising the living standards of all countries in the globe.

If all these had been adopted our forty-odd-billion-dollar budgets we now have would look small in comparison with the amounts of money the taxpayers would be called upon to provide every year.

And the danger of this happening has not been dispelled by Congress' coolness toward most of the Truman projects.

If the administration should gain control of Congress at this year's elections, at least some of these tremendously costly ideas would be enacted into law, maybe all of them.

That puts it up to the people when they go to the polls next November. Only the election of a Congress dominated by sound men, who have sane ideas on Government spending can protect the public from extravagance that would out-rival anything in history.

Consecration of Most Rev. Christopher J. Weldon

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. FURCOLO. Mr. Speaker, it was a great pleasure for me to be a guest at an awe-inspiring service conducted in St. Patrick's Cathedral, New York City, last Friday, March 24, 1950, consecrating His Excellency Most Rev. Christopher J. Weldon, bishop of the diocese of Springfield, Mass. The bishop was installed in his new diocese this morning at St. Michael's Cathedral, Springfield, Mass., with the solemn service of the Catholic Church.

Bishop Weldon was born in New York City, September 6, 1905, the son of Patrick and Mary Dwyer Weldon. He attended Montreal College, Montreal, and St. Joseph's Seminary, Dunwoodie, N. Y., and was ordained September 21, 1939, by the late Patrick Cardinal Hayes. After ordination he took special studies in philosophy at the Catholic University of America, Washington, D. C. Between various parish assignments in the New York archdiocese, he taught from 1931 to 1935 at the Newman School, Lakewood, N. J. He was named a papal chamberlain with title of Very Reverend Monsignor, on October 29, 1947, and a Domestic Prelate in December 1948.

After 4 years' service as a Navy chaplain, he served as master of ceremonies to His Eminence Francis Cardinal Spellman, archbishop of New York, in 1946 and 1947. He has been executive director of Catholic Charities of the archdiocese since 1948.

The bishop will be the spiritual leader of 300,000 Catholics of the four western counties of Massachusetts. To this position he brings a demonstration of capacity for leadership and organization as a curate, an educator, a naval chaplain, and executive director of the Catholic charities of the archdiocese of New York.

In the name of the residents of the Second Congressional District, the entire area of which is included in Bishop Weldon's diocese, I address to the new bishop a sincere "ad multos annos."

The Abducted Greek Children

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. FURCOLO. Mr. Speaker, yesterday western Massachusetts, together with other sections of the country, commemorated Greek Independence Day and also took occasion to call the world's attention to the tragic plight of the 28,000 abducted children.

The demonstration in Springfield was an inspiring one and I know it has been helpful to the cause.

You all well know of my long interest in this matter so I do not intend to again speak on the subject at this time. But I wish to call your attention to the resolution that was unanimously adopted at the Springfield meeting. I urge you to give it your full support with as much spirit and courage and will to succeed as you would if your own children were among those who had been abducted. This is not a Greek problem—it is a problem for all of us because it is a matter of justice, decency, and humanity. I will read the resolution to you:

GREEK INDEPENDENCE DAY COMMITTEE RESOLUTION ON ABDUCTED CHILDREN

Whereas the abduction of approximately 28,000 children from their homes in Greece and their forcible detention in countries alien to their natures, customs, and birthright has profoundly shocked the civilized world; and

Whereas the countries of Yugoslavia, Bulgaria, Rumania, Poland, Hungary, Czechoslovakia, and the Soviet occupation zone in Germany have ignored unanimous resolutions adopted by the United Nations Assembly on November 27, 1948, and on November 17, 1949, and refused to cooperate in securing the release of these children and their return to the arms and hearts of their parents, and the comfort and security of their homes; and

Whereas forcible detention of these children and the attempted severance of all their ties of family, home, and country is tantamount to the horrible crime of geno-

UNIVERSITY OF MICHIGAN LIBRARIES

cide and an abominable crime against humanity: Now, therefore, be it

Resolved, That the United States is hereby respectfully memorialized to take appropriate steps and to enact such legislation and adopt such measures as may be necessary and expedient to bring to the attention of the afore-mentioned countries the feeling of the world-wide revulsion at this infamous crime and to demand the liberation of these children and their prompt repatriation; and it is further

Resolved, That copies of this resolution be transmitted to the President of the United States, the Secretary of State of the United States, the Secretary of the Senate, and the Clerk of the House of Representatives of the United States, and to each Member of Congress, and that the latter be urged to do all in their power to accomplish the purpose of this resolution.

The Late Honorable J. F. T. O'Connor

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by Secretary Snyder at unveiling of portrait of J. F. T. O'Connor, February 18, 1950:

It was my good fortune to have enjoyed the friendship of J. F. T. O'Connor and to have worked with him during the banking crisis of the 1930's when, as Comptroller of the Currency he was called upon to perform duties which had a profound effect upon the future of the American banking system.

Before coming to the Treasury Department as Comptroller on May 11, 1933, Mr. O'Connor had achieved prominence as a teacher, lecturer, legislator, and attorney. During 5 years in the office which today receives his portrait—years which amply tested his varied qualities—he met the grave challenges of the times with courage and intelligence.

People in the Treasury remember him best for the leadership he gave in expediting the termination of bank receiverships. In the realization that great hardship had been visited upon millions of individuals whose money was tied up in insolvent banks, Mr. O'Connor from the beginning of his services as Comptroller lent untiring energy and understanding to this major problem which came in the wake of the "banking holiday."

Through the application of time-saving procedures instituted by him, the liquidation of 1,417 banks which remained closed at the end of the "banking holiday" was carried out in record time. Some idea of the effectiveness of this program can be gleaned from the fact that by December 31, 1937, $1,600,000,000 of the $1,900,000,000 impounded in insolvent banks had been released.

As one of the original members of the Board of Directors of the Federal Deposit Insurance Corporation, Mr. O'Connor was active in the organization of this agency, particularly in helping to build up a force of competent examiners to inspect the accounts of thousands of banks before FDIC insurance could be effective.

The closing chapter of Mr. O'Connor's interesting life was written on the Federal bench, where the former Comptroller of the Currency served with characteristic distinction for the 9 years prior to his death last fall.

I believe it was Bacon who said that "the mould of a man's fortune is in his own hands." Thus measured, it may be truly said that "Jeffty" O'Connor made much of his life.

The Master Planners and Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, on Saturday last, March 25, I was privileged to address 150 members and guests of the Dane County Dental Society at Madison, Wisconsin's capital city.

With modesty, but with the hope that my remarks may contain information of usefulness to those who read them, I present the text of my address for insertion in the CONGRESSIONAL RECORD:

THE MASTER PLANNERS AND COMPULSORY HEALTH INSURANCE

Chairman Dr. Simley, members of the Dane County Dental Society, and guests, I am pleased to be able to meet with you here today. I cannot come to you as a member of your profession, but my position as a dentist's husband more closely approximates that of your wives who have accompanied you here.

If I were a minister, I suppose I should have a text, and if I were to quote a text it would be this: "America is being spent and planned into socialism."

If it was shocking for you to realize (and I hope it was) that our Federal Government went in the hole almost $2,000,000,000 in the last fiscal year ending June 30—a year of high prices, high employment, and high taxes—it should be more shocking to recall that the deficit for the current fiscal year will exceed $5,000,000,000 and that the President's proposed budget for the next fiscal year, beginning July 1, contemplates a deficit of a similar amount. By the end of the next fiscal year our Federal debt will have climbed to $265,000,000,000.

What attitude should we take toward this deficit policy—the immoral policy of passing on the financial responsibility of this generation to succeeding generations of Americans?

There are three current attitudes. One is simply to not worry about it—to consider deficit financing as the normal thing in these times. That is the attitude of the President, who so stated over a Nation-wide radio hookup. Evidently there are a large number of Members of Congress who agree with him. At least there are many who continue to vote for all the appropriations but refuse to consider the sources of revenue that are necessary to meet the deficits caused by those appropriations. There seem to be a number of them who feel that the best way for them to stay in office is to vote for all appropriations and against all taxes. Evidently that is a good way to be reelected, but it is a darn poor way to run the Government of the United States.

A second attitude is that we should meet the deficit by increasing taxes. Most leading economists agree, however, that this is a poor time to burden a rather unsettled economy with increased taxation. Chairman GEORGE, of the Senate Finance Committee, and Chairman DOUGHTON, of the House Ways and Means Committee maintained that attitude during 1949. Now, in 1950, attempts to increase the total Federal revenue are meeting with stiff opposition. For the most part, I think you will find that those who have been most zealous in the advocacy of increased taxation have been those who seek not to balance the budget by that means, but rather who see in the increased revenues the wherewithal for financing a large additional number of projects on which they would like to see the Federal Government embark.

The third attitude, and the one which sounds the most reasonable to me, is to reduce the spending so as to bring it in line with the level of income. Most people heartily approve of this verbally, but too few of them are willing to take the action which is necessary to conform to their words.

WHAT ABOUT THE HOOVER REPORT?

A common state of mind these days is to point to the reports of the Hoover Commission as the answer to the problem of duplication and waste and overspending, the answer to Federal deficits. Plainly speaking, the reports of the Hoover Commission will not solve our deficit dilemma for two reasons: First, they will not be put into effect in a wholehearted manner; and second, even if they were put into effect 100 percent our Government would still be operating at a deficit. The most optimistic estimate of saving under the Hoover Commission reports was from three to four billion dollars. Quite obviously, as important as this saving would be, it could not erase our existing rate of deficit. We could total up the salaries of all Federal employees and we would still come far from accounting for all of the Federal spending. After these salaries have been added up, and the foreign spending and the interest on the public debt, and the veterans' benefits have all been totaled, there still remains a large portion of the Federal budget that is unaccounted for. The answer is that large sums of money are being paid out to all sections of the country and to all classes of people in the forms of various grants, subsidies and Federal aid programs. By these means we have reversed the normal relationship of the levels of government. Their proper relationship, it seems to me, can be illustrated by a triangle, the broad base which represents our local units of government, the governmental units which are closest to the people, most responsible to the people, and can in most cases most effectively deal with their problems. As the triangle narrows from the broad base we reach the legitimate area of the operation of the State government. This area of problems includes those which cannot be adequately handled at the local levels. Then as we approach the apex we reach the legitimate area of the operation of the Federal Government in dealing with our domestic problems.

We have, however, completely reversed this traditional relationship. Under our current practices, the broad base of the triangle now represents the enveloping field of activities of the Federal Government. The triangle then narrows into the area of the State government with a closely confined area of local responsibility in the region adjacent to the apex. Our tax moneys are being poured in at the top of this inverted triangle, the largest portion taken by the Federal Government, and then what is left trickles down into the area of the State and local governments. Thus have the legitimate areas of taxation of the State and local governments been usurped. Thus has the Federal Government made it impossible for these units of Government to meet the responsibilities which are rightfully theirs. I think we can attribute no small portion of the general lack of, and the break-down of,

civic responsibility and civic morale to the fact that State and local governments have been placed in a completely dependent and subservient position with relation to the Government in Washington.

The greater the amount of Federal spending and Federal taxation, the more that local and State units of government are rendered impotent to perform their legitimate functions, the easier becomes the task of those in high places who are waging a persistent and relentless campaign to governmentalize the American people, to fit us all to a pattern so that we shall conform to the master plan. It is time that we begin to recognize who these people are and what they plan to do. It is fit and proper that we should be meeting here today, for we are fighting in the same conflict—a conflict with battle fronts extending from Washington, D. C., to Madison, Wis., to San Francisco, and back across the Nation again. You are in the front line of battle here. It is my high honor and it is my dedication to be in the front line of our common fight in Washington.

THREE BILLS EXPOSE THE PLAN

The picture in Washington today of the efforts of those planners to slip the noose of governmental controls over our heads is as sordid as it is dangerous to the future of this Nation. This effort can be exemplified, but is by no means limited to, three legislative proposals.

One is the proposed Economic Stability Act of 1949, H. R. 2756, better known as the Spence bill. The second is the proposed S. 1971, better known as the Brannan plan. The third, and the one with which you are most familiar, takes the form of S. 1679 and H. H. 4313, the Thomas-Pepper-Taylor-Humphrey-Dingell-Biemiller bills.

These three, while ostensibly separately sponsored and wrapped in separate legislative packages, are part and parcel of the same legislative program. They are brain children of the same group of planners who have ensnared the President and through him the Government of the United States—the Ewing-Keyserling-Brannan-Altmeyer cabal. Shrewd, scheming, ambitious, and not too scrupulous, these men are the brain trust of the Fair Deal. These are the men to whom, in his confusion in mid-1948, the President turned in desperation, and then, incredibly, Harry Truman, mouthing the words that they prepared for him, won the Presidency in his own right. This was a windfall which placed the Ewing cabal in the driver's seat. They are now playing the tune to which the Missouri pianist dances. Unfortunately for them, but fortunately for America, the Eighty-first Congress has balked at implementing their grand plans. There have been serious set-backs. None of the aforementioned big three of their legislative program has been or will be enacted into law by this Congress. The disappointment of the planners has been expressed by leaders of the Farmers Union which usually faithfully follows the Ewing-Brannan line. In their issue of March 3, National Farmers' Union in Washington said: "It became apparent this week that President Truman's Eighty-first Congress may be worse than the Eightieth in many respects. Observers here are calling this Congress the Eighty-worst."

SIMILAR MOANS IN MADISON

Similar wails of anguish have frequently come from the ivory towers of the local Ewing-Keyserling-Brannan-Altmeyer mouthpiece—and I don't mean the Wisconsin State Journal.

But what of the Eighty-second Congress? What if the American people permit themselves to be bought with their own money, let themselves be carried away by the promises of the planners? What if the majority of the Americans look only at that part of the Spence bill which promises "maximum production and supply," "improved distribution of essential materials and facilities," and "prevention of price movements which inflict serious hardships or impede economic stability"? What if they look only at the portion of the bill to implement the Brannan plan which says: "Stabilize farm income and farm prices"; and "provide an adequate, balanced, and orderly flow of agricultural commodities in commerce"?

What if in 1950 the people read only that portion of the Biemiller bill which promises: Adequate health services to all our people regardless of residence, race, creed, color, or economic status?

What if the Esaus of 1950 are captivated by the slogans: "A job for everyone," "High prices for farmers—low prices for consumers," "Free medical care"? What if they should select a Congress which gives ear to the planners' palaver and enacts the Ewing-Brannan-Keyserling-Altmeyer program for planned employment, planned farming, and planned medicine? The answer is as plain as the handwriting on the wall, or rather as plain as the printing on the paper.

SPENCE BILL DRAFTED BY BUREAUCRATS

First and briefly, let's take a look at the Spence bill, a copy of which I now hold, the proposed Economic Stability Act.

Mr. SPENCE, of Kentucky, is the elderly chairman of the House Banking and Currency Committee. He is a Fair Dealer but lacks the crusading zeal of the Ewing cabal. It is obvious that the bill was drafted and presented by the planners in a Federal agency.

Purely on his own motion, and under conditions of which he is the sole judge, the President would be empowered to (and remember these are peacetime powers):

1. Establish compulsory quotas for production.

2. Establish Federal programs to supplement private enterprise.

3. Construct and operate new plants or factories, open and operate new mines.

4. Regulate imports and exports.

5. Fix maximum prices.

6 Establish compulsory allocations and priorities of materials (this provision alone gives the power of life or death over every private enterprise in the Nation).

These powers are based on no emergency. They simply and brazenly provide the blueprint for a planned economy for industry—an economy to be absolutely controlled by the President and those to whom he delegates his powers in accordance with the terms of the bill. Obviously, a planned economy and a controlled economy are one and the same. They have to be. Which of the great planners would be satisfied to plan without the authority to compel adherence to it? How futile indeed would such a plan be.

STRAIT-JACKET FOR OUR FARMERS

The Spence strait-jacket plan for industry is paralleled by the Brannan strait-jacket plan for farming. This plan, evidently for lack of a sponsor, has never been introduced in legislative form in the House. Chairman THOMAS, of Oklahoma, of the Senate Agriculture and Forestry Committee is its sponsor in the Senate. It is the slickest and most fundamentally dishonest political scheme the planners have yet devised. In its full-blown form it spelled out the end of farm price supports. The farmer was simply to sell his produce in the open market at whatever price he could get. But he could continue to get farm-support prices since the Federal Government would step in to pay him the difference between his guaranteed price and his selling price. Thus everybody should be happy—the farmer to get high prices, the housewife to buy at low prices. How simple—it's a wonder someone didn't think of it before. As a matter of fact, someone did. It has been kicking around in the Department of Agriculture for about 10 years, since a fellow whose first name was Henry and whose last name I shall not mention, was Secretary of Agriculture. That in itself ought to be enough to put us and the farmers on guard.

BRANNAN DOESN'T KNOW COST

What about the poor people who make up that differential in price—the taxpayers, who include the consumers as well as the farmers? And what about the thousands of Government employees who will need to check on the millions of farmers and ascertain the payments due? What about the duplicate or triplicate copies of reports every farmer will need to make every time he sells a dozen eggs or a peck of potatoes? What about the army of inspectors who will decide whether a farmer keeps within the production unit quotas allotted? What would such a plan cost? No one, not even Mr. Brannan himself, will hazard a guess, and Mr. Brannan and his fellow planners apparently do not care.

The plan itself has undergone considerable change. It is almost impossible to know just what is in the so-called Brannan plan at this particular moment. The attempt to apply it generally to all agricultural products has long since been forgotten. The cotton, peanut, and tobacco growers will take their present 90 percent of parity—thank you, suh—and Mr. Brannan has bade them welcome. The 1,800 units of production limitation, heralded as giving the benefits to the so-called small farmer—that, too, has long since disappeared, which makes poppycock of the claim that this plan is to help the family-sized farmer.

If there is any farmer who is attracted by the glow of the current administration plan, I'd like to have him take a look at the ready-made form-fitting strait-jacket which Superschemer Brannan has prepared for him—15 solid printed pages of penalties contained in the Senate-introduced version of the Brannan plan.

SOCIALIZED HEALTH BILL NOT NEW

Today's third example of the efforts of the master planners is the one with which you of the medical and dental professions are most familiar—the Ewing-Altmeyer compulsory national health-insurance program. Like its country cousin from the Department of Agriculture, the Federal Security Administration's plan is not entirely new. The current Thomas-Pepper-Taylor-Humphreys-Dingell-Biemiller bills are simply revised and refined versions of proposals which Isadore Falk and Wilbur Cohen have been preparing at taxpayers' expense for several years. Never before, however, have they been able to get a President of the United States to make it a major political issue. Never before have the left-wing planners been so strong in the executive department of the Government. Perhaps it is because never before have they had as their spokesman and figurehead so shrewd a political manipulator as the former vice chairman of the Democratic Party who now serves as Federal Security Administrator.

In May of 1948 Ewing called the Second National Health Assembly. Some 800 representatives of the healing professions were invited to go to Washington for this conference. Ewing purported to be seeking advice and recommendations for his report on the Nation's health, which President Truman had in January requested him to make. Actually, the drafting was already well along, and Ewing's real purpose was to attempt to force a recommendation for his compulsory health-insurance scheme through the assembly. You see, the assembly had been disproportionately loaded with members of the two "front" organizations sponsored by the planners in the Federal Security Administration and their friends—the Committee for the Nation's Health and the Physicians' Forum. But the scheme miscarried. While the assembly approved the statement that

UNIVERSITY OF MICHIGAN LIBRARIES

the Americans are not receiving adequate care, that medical science has advanced beyond the present general application, and the economy can support more medical care, it did not approve of compulsory health insurance. But Oscar Ewing is not one to be bothered with such a set-back. His report, entitled "The Nation's Health—A Ten-Year Program," issued in September 1948, blithely ignored the health assembly and recommended a Government medicine program. This election-year campaign document of 1948 has become the bible of the advocates of Federal medicine.

EWING REPORT FILLED WITH ERRORS

As every physician, dentist, nurse, or hospital manager who has read the report knows, it is filled with misrepresentations and inconsistencies. The figures have obviously been cut to fit the cloth. They have already been too well exposed to require further attention.

It is rather interesting, if not amusing, to note that while in one place Mr. Ewing states, "The Government plan would ultimately cover everyone in every State," at another point he says, "Full freedom of choice should be left to doctors, hospitals, and other instrumentalities of health as to whether they will participate."

This is indeed in keeping with the planners' idea of a free choice—the choice of members of the health professions to stay outside and starve; the choice of the patients to pay dearly for medical services they do not use.

Knowing well that the American people are instinctively repelled by socialized medicine, the planners deny that their program amounts to that. They like to use the terms "prepaid medical care" and "national health insurance." Their smooth persuasion is: "Why, everything would be just the same as it is now; the only difference would be that the Government would pay the bill instead of the patient having to do so at the time the service is rendered."

I believe Senator TAFT answered that quite well when he said: "The fact is that this is not insurance. It is a plan for Government administration of all medical care, supported by tax on pay rolls. There is no difference between a pay-roll tax and any other tax. This can't be insurance if a man has no option except to pay for it."

Spokesmen for both the Committee for the Nation's Health and the Physicians' Forum have admitted that the fee-for-service method of payment could not be used. Dr. Ernest T. Boas, head of the Physicians' Forum, said: "Insurance guaranteeing complete medical coverage cannot be set up, except at a prohibitive cost, if the fee-for-service principle is retained."

MIGHT FOLLOW BRITISH COURSE

The other alternatives are putting members of the healing professions on a capitation or panel basis, such as now is frequently used in Great Britain, or on a straight-salary basis. Does that sound to you as if "everything would be the same as it is now"? You, as members of the medical and dental professions, and we, as your patients, know that things would not be the same. I do not doubt but what in dollars and cents you might be better off at least until after some Government official decided you should make less money, but you would live, just as the physicians, dentists, and nurses of today in Great Britain are living, in fear—fear for your professional positions, fear for the quality of the work being done, fear of what is to come. For my part, as a patient, I would not relish the prospect of competing with the inevitable malingerers and hypochondriacs for 3 minutes of the time of a harried, harassed, overworked, form-swamped, government practitioner. British patients are putting up with that today.

These are the obvious and immediate trappings of compulsory medicine, but the issue is more basic and fundamental. Allen O. Gruebbel, executive secretary of the Council on Dental Health of the American Dental Association summed up the case very well when he said: "A federalized system of health care would affect the life of every citizen of this country. It would affect his initiative and his sense of responsibility to himself, his family, his community and his government. It would affect the health service he would receive from his dentist, physician and nurse. It would affect the advancement of the health sciences. And finally, but by no means least, it would affect our social structure by greatly increasing the power of the Central Government.

"These are the risks that must be weighed carefully by every citizen who has a stake in the welfare of this and succeeding generations. These are the risks that form the core of the issue."

THEY WOULD SOCIALIZE AMERICA

A few minutes ago I expressed to you my belief that this program to fasten a system of compulsory health insurance on America is part of a master plan to concentrate vastly expanded powers of government in the hands of a tightly knit group of planners in Washington. To put it bluntly—the scheme is to socialize America. The American people must realize, they must wake up to the fact, that while each of these proposals is presented as if it were a single reform for the benefit of the American people, the proposals are all related. I have used three of them, the Spence plan, the Brannan plan, the Ewing plan as illustrations here today. I hope I have been able to demonstrate the common motive of these three. There is little doubt but that their sponsorship interlocks. I have not been able to find anyone who will admit the authorship of the Spence bill, but I do know that Ewing approves of the Brannan plan, and that Brannan sent a letter to the House Committee on Interstate and Foreign Commerce recommending the passage of the Dingell-Biemiller bill.

LEADERS ON DANE COUNTY FRONT

The Washington master planners have their satellites and cohorts on the Dane County front, where the leading advocates of the Brannan plan are the Farmers' Union, the CIO Council and those three Madison dirt farmers, Gaylord Nelson, Horace Wilkie and Miles McMillan. I would assume from other experiences with these related plans that you would also find them in the forefront of the fight for compulsory health insurance along with these three others:

1. Thomas R. Amlie, the former radical Congressman from Wisconsin's First District who appeared before the committee in support of the Biemiller bill, and now gives Madison as his place of residence.

2. Margaret Stein Frankel, who until recently was closely and actively associated in Washington with both the Physicians' Forum and the Committee for the Nation's Health—the leading front organizations of the planners for Federal medicine. I have learned that she has recently transferred her activities to Wisconsin and if I don't miss my guess she will be popping up in Madison soon.

3. Representative ANDREW J. BIEMILLER, the most active legislative sponsor of the Ewing-Altmeyer compulsory health plan. Representative BIEMILLER must be contended with on the Dane County front, as well as on the Washington front, because of his proximity, influence, and coworkers here.

JOIN IN FIGHT FOR FREEDOM

These plans and these people—these are the instruments which endanger the freedom and the effectiveness of your great professions, endanger the service to humanity which you can give, and endanger the freedom of the American people. But if you will join ranks with the businessmen and the workingmen who are fighting against the threat of the Spence plan and the farmers who are fighting to keep their freedom from the Brannan strait-jacket, the good fight can yet be won. The majority of Americans are not yet ready to capitulate to the master planners in Washington. They need only the assurance, just as you need it, that they do not fight on alone.

Close ranks, then, and march together with all men who fight for freedom on their own soil. Individual stimulating freedom or planned stagnating socialism? It's up to us—in Washington, in Dane County, in all America.

Central Arizona Project Would Give Millions Free to Hundreds of Landholders

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. POULSON. Mr. Speaker, nothing in reclamation history can equal the economic tragedy that is proposed in the plan of the central Arizona project, now awaiting action before the House Public Lands Committee.

All the spectacular financial schemes of the past fade into insignificance before this reclamation development proposed by the Bureau of Reclamation and State of Arizona.

One need not be a financial wizard to analyze the scheme of the central Arizona project. All that is needed is simple arithmetic.

First, let it be understood that the Arizona landholders who would benefit from the project would pay none of the irrigation construction costs. I repeat: None.

Yet, the Government would be spending at the rate of $1,280,000 per 160-acre farm. This would be a gift from the Nation's taxpayers. I repeat: A gift.

Now, Mr. Speaker, on page R–12 of the Bureau of Reclamation report on the project, this statement is to be found:

> The largest individual farm in terms of irrigated acreage averaged 10,430 acres under irrigation during the period 1940–44.

With even a dull pencil it may be easily figured that if the Government spends at the rate of $1,280,000 per 160-acre farm, it would spend at the rate of $83,440,000 for a 10,430-acre farm.

Perhaps I should repeat that latter figure: $83,440,000.

That would be a gift from the taxpayers of the Nation to one Arizona farmer.

Now, of course, Mr. Speaker, there are hundreds of farms containing more than 160 acres each in the project area. In one section of the project area alone, Pinal County, there are nearly 200 farms larger than 160 acres. In this section there is 1 farm of more than 6,800 acres; 1 of more than 5,800 acres; 1 of more than 4,200 acres; 6 of nearly 3,000 acres; 19 between 1,000 and 2,000 acres; 10 over 900 acres; 7 over 800 acres; 3 over

700 acres; 37 over 600 acres. These are merely example from one section of the proposed project area.

Under the project plan the Government would spend at the following rate for these farms:

Acres:	
6,800	$54,400,000
5,800	46,400,000
3,000	24,000,000
4,200	33,600,000
2,000	16,000,000
1,000	8,000,000

This is, indeed, incredible. There was never anything like it offered the Congress before, nor was there any such fantastic scheme I know of ever seriously proposed by a responsible Government agency.

The proof, however, that such a scheme is now being proposed to this Congress is easily demonstrated.

And here is the proof:

Cost of construction for irrigation features of the project would amount to $392,000,000. This would be paid for by consumers who buy electric power produced by the project. It is a hidden sales tax on public power to subsidize private landowners.

Interest during the construction period would amount to $98,000,000.

Interest during the repayment period would amount to $274,000,000.

Adding these two interest figures together brings a total of $372,000,000. This interest would be paid by the Nation's taxpayers.

Now, adding together the irrigation construction cost and the interest total we have $764,000,000.

But that is not all. The project bill authorizes the construction of an additional 80-mile tunnel and appurtenant works which would bring the total cost up to $1,799,000,000.

That is the amount the taxpayers and power users, almost entirely outside the State of Arizona, would pay.

The project farmers who would benefit would pay none of these costs. And let me repeat again the word "None."

There, Mr. Speaker, you have the uncontrovertible facts about the most fantastic project ever conceived—at no cost to the Arizona farmers, but as a gift from the great, generous American taxpayers in every other State of the Union.

Famed Smyrna Air Force Base Dedicated to Memory of Valiant Tennessee Airman

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. EVINS. Mr. Speaker, on Saturday, last, the famed Air Force Base at Smyrna, Tenn., located in Rutherford County, in the Fifth District, was the scene of impressive ceremonies marking the renaming of this military establishment in memory of Maj. Allan J. Sewart, Jr., gallant Tennessee boy, who was killed in action in an air engagement over the Solomon Islands in the Pacific theater of action in November 1942.

This was a most solemn and impressive occasion which assembled not only the family of this brave soldier and airman, but his many friends in Rutherford County and Tennessee and officials of the United States Air Force including the distinguished Assistant Secretary for Air, Hon. Harold Stuart. The name of Smyrna Air Force Base, one of the permanent installations of our military and defense establishment, is honored and famed. As Sewart Air Force Base, this establishment will carry on the same fine tradition of service which has characterized it in the past and be a fitting tribute to this brave and valiant young Tennessean who was lost in the performance of his duty to his country.

In this connection, Mr. Speaker, I desire to have included in my remarks in the Appendix of the RECORD two editorials—one from the Nashville Banner and another from the Nashville Tennessean of the issues of Sunday, March 26, last, marking this dedication ceremony and paying tribute to Major Sewart. Also, I should like to have included a copy of the excellent and appropriate address which was delivered on that occasion by Assistant Secretary of the Air Force Stuart.

The editorials and speech are as follows:

[From the Nashville Tennessean]

AIRMEN'S MEMORIAL

Sewart Air Force Base. In memory of Maj. Allan J. Sewart, Jr., United States Air Force, who was killed in action November 1942 in the Pacific theater of operations during World War II.

Thus has the memory of a heroic Nashville bomber pilot been perpetuated at the former Smyrna Air Force Base.

It is a fitting honor to this warrior who died while fighting against heavy odds in the early part of the war for which we were not adequately prepared.

But it was a graceful act for Assistant Secretary for Air Harold Stuart to remind us that in honoring this individual the Air Force and Nation were also paying tribute to all of the 63 airmen from Davidson and Rutherford Counties who were killed in the war. All of these were actuated by the same high motives, and all freely gave their lives for their country.

Major Sewart and his associates represent the spirit of the American fighting men, of whatever branch of service, and their valiant service reminds that the courage and the patriotism from which this country was born flames as brightly as ever.

The family of the man whose name has been so signally honored, the high officials and distinguished guests who attended the dedication ceremonies, but share the sentiment of pride and homage that exists in this county and region from which the heroes went forth to battle, thinking only in terms of victory for their homeland and its ideals.

[From the Nashville Banner]

SEWART AIR FORCE BASE

Allan J. Sewart, Jr., of Murfreesboro lost his life in the Solomon Islands while performing valiantly his duty to the United States of America. His name, chosen by the Air Force from a list of heroes, today was officially given to the Air Force base near Smyrna.

Major Sewart was no candidate for any such distinction when he set out on the mission which brought his death over Buin. He was doing a grim job which he and millions of fellow Americans had been called upon to do when their country was in peril. Others shared his fate, and—as his memory is honored at Smyrna today—the memories of other fallen heroes are honored likewise. His name stands for his comrades, too.

It is entirely fitting, and truly American, that the Air Force has established a policy of renaming its bases in honor of men who died in service. The people of the United States are grateful for men like Major Sewart. To them, the tragic consequences of war impart an abiding sorrow which accompanies pride and thankfulness, for Americans are people with individual hearts even in times of collective necessity.

Sewart Air Force Base it now is. The brilliant ceremonies conducted there today are in keeping with the obligations all of us have for Major Sewart and all of those other Americans—up and down the ranks—who brought us out of the worst of all struggles for national existence.

REMARKS BY HON. HAROLD STUART, ASSISTANT SECRETARY OF THE AIR FORCE, AT DEDICATION OF SEWART AIR FORCE BASE, TENNESSEE, SATURDAY, MARCH 25, 1950

Distinguished guests, officers, and men of Sewart Air Force Base, this is a day of great honor to Smyrna, to the State of Tennessee, to the United States Air Force, and to the Nation.

Today we gather in tribute to a man who died heroically on a far-flung battlefield of the air during World War II.

We gather to honor him. In truth, it is he who has honored us.

Maj. Allen J. Sewart, Jr., gave his life so that the American way of life might be preserved.

The freedom we now share in a world still shorn of freedom was achieved in mortal conflict, bitterly contested, bitterly won. Major Sewart was a representative and a symbol of the spirit and the courage and the heroism that made such victory possible.

We now take occasion to memorialize his contribution to his country—his full sacrifice in our behalf:

It is fitting that this Air Force installation at Smyrna—in the heart of his own great State—exists to perpetuate the memory of this valiant son of Tennessee. Sewart Air Force Base is well named—proudly named. I consider it a privilege to be with you today, as the representative of the United States Air Force, to participate in its dedication.

Your civic committee, which recommended the man for whom this base is named, summed up its task with the statement, and I quote from the committee's report: "This was a serious and sacred duty."

Allan Sewart was one of 63 Air Force men from Davidson and Rutherford Counties who made the supreme sacrifice in World War II.

As your committee stated, and I quote: "Each of them is entitled to the status of an American hero."

Allan Sewart represents all of these heroes. In the Air Force we know of him as the kind of man they would have chosen to represent them.

We can all take pride in the fact that the man in whose honor this base is named was awarded the Distinguished Service Cross, second highest decoration it is within the power of this Government to bestow.

As we now strive to maintain the peace—and with it the freedom gained in battle—it may be well for us to remember the manner in which Allan Sewart—and all these combat heroes—carried out their tasks of war.

UNIVERSITY OF MICHIGAN LIBRARIES

These men made no claim of being supermen. They faced the problems of war as average Americans, most of them with little concept of the huge task they would be called upon to perform, or of the far corners of the world in which they would be called upon to fight. In many instances, the odds were against them and they knew it. But they stood up to their obligations. They had missions to perform and they performed them.

To Allan Sewart a mission was a sacred trust. I spoke recently with an Air Force veteran who accompanied him on one of his many long and grueling bomber missions in the South Pacific. On this occasion the target was an enemy aircraft carrier, a rich target in this theater of operations. Our weak forces in the South Pacific during these early days of the war could bring only four Flying Fortresses to bear against this target. The carrier was well protected by enemy fighters. Two of our four bombers never returned from this mission. Allan Sewart approached the carrier at dangerously low altitude. He was reaching his maximum radius of action. But he flew on. He made the bombing run with enemy fighters all around him, firing bullets into his plane. The bomb run didn't satisfy him. He wanted to be sure of his bombing accuracy, so he circled and came back again over target—using up more gasoline and exposing his plane to more bullets. A crewman suggested they had taken about all the damage they could stand. But he flew on, over the target, until he had scored direct hits on the enemy vessel. His comment to his crew was crisp and to the point. "We didn't come this far to miss," he said.

Allan Sewart fought his war—our war—just that way.

It was a backyard war waged in the far reaches of the South Pacific, in support of the invasion of Guadalcanal and eventually from Guadalcanal itself. It was a hard, driving war, in which air crews were called upon to fly tiring and difficult missions day after day, with no rest because there were no replacements. Allan Stewart and his fellow crewmen had been assigned to hold the fort. It was a highly vulnerable fort, but it had to be held until our nation could mobilize and industrialize for war.

These were the first few months after Pearl Harbor. As a nation, we had been caught napping. The Eleventh Bombardment Group, in which Allan Sewart served as a squadron commander, was one of the few units we could pit against the enemy. And always the enemy was vastly superior in numbers and equipment—superior in everything except that quality which Allan Sewart and others with him possessed—the will to accomplish a mission.

Brigadier General Laverne G.—popularly known as "Blondy"—Saunders was in command of all heavy bombardment units in the South Pacific at the time. One of our great Air Force leaders, Blondy Saunders was at one time a football star and a football coach at West Point. Later in the war, he commanded B-29's in India, and lost his leg in an airplane accident there. In the South Pacific, General Saunders knew his subordinate commanders personally and well.

"Al Sewart," General Saunders said recently, "was the best commander I ever had."

In Air Force circles that is high tribute. And General Saunders added this—"Major Sewart had all the qualifications for a general officer."

General Saunders, who is now retired and living in Aberdeen, S. Dak., had hoped to be with us today. He has asked me to express his regret at being unable to attend this dedication.

A week before his death, Allan Sewart and other pilots of his bomber group were called in to the commander's tent to discuss a bombing mission they had just completed. Their claims of Japanese fighter planes destroyed on the mission added up to 30—before Allan Sewart was asked for his evaluation. Then they asked him about it. "Divide that 30 by 3," he replied. Allan Sewart looked life and death straight in the eye.

His death, during the mission which won for him the Distinguished Service Cross, came during one of the most vicious combat missions of the war. It is described in the official citation as follows, and I quote:

"Major Sewart, as flight leader of a formation of five heavy bombardment airplanes, proceeded on a mission to bomb enemy objectives near Buin, Solomons Islands. Reaching the target, Major Sewart's flight immediately launched a bombing run over enemy surface vessels of Kahili Airfield, choosing a stationary vessel as target. Due to mechanical difficulties, the bombs did not release and a second run was made through heavy antiaircraft fire and fighter opposition. On this run a number of 1,000-pound bombs were dropped on the cargo vessel from all airplanes of the flight except that of Major Sewart. In the face of continuous and close attack by approximately 18 enemy land-based and float-type fighters, Major Sewart did not turn away from the attack even though he could not release his bombs. Shortly following this action, Major Sewart lost his life and his copilot was mortally wounded during a frontal attack by an enemy fighter pilot."

Allan Sewart, as this citation testifies, never turned away from an attack—never turned away from his mission, from his responsibilities.

This ability to stand up to a mission and carry it through to completion despite all odds is a human resource which must be placed at the top of all our vast national resources. It cannot be built and it cannot be purchased at any price. It is born and bred into a man—into men like Allan Sewart.

Today, as we engage in a vital mission to maintain the peace—and it is a mission for each of us—the odds often appear to be overwhelming, the objective unattainable. But we must not—if only in their memory—ever turn back from our mission. It is our obligation to Allan Sewart and to the thousands of war dead who helped win the peace.

In Allan Sewart we find another lesson for the Nation. It is not an easy lesson to face, but we cannot escape it, nor should we try.

We asked Allan Sewart to hold the fort while we made ready our defenses, to do the job of 10—20—50 men while we as a Nation caught up with the world in military strength. He and his fellow fighters held that fort, but he paid the price, and as a Nation we paid the price. We feel the need of Allan Sewart's courage and leadership today.

In our search for peace we have twice, in our time, tried unpreparedness and found it wanting. In a world of new and terrible weapons which narrows the margin, perhaps eliminates altogether, the period for holding the fort—indeed, which for the first time in history, may bring the fortress into our own back yards—we canont afford to risk unpreparedness again.

This Air Force base we dedicate today in Allan Sewart's name—a vital training center for bomber pilots during the war—and today an equally vital center of troop-carrier operations—gives evidence that we intend to keep the peace with the strength and courage that it deserves.

To the mother and father of Allan Sewart, to his widow and daughter, who are with us today, the United States Air Force bows in humble tribute. We join the citizens of Smyrna and all of Tennessee in this proud salute. We dedicate Sewart Air Force Base as a living monument to the spirit and deeds of Maj. Allan J. Sewart, Jr.

Resolutions of the Indiana General Assembly

EXTENSION OF REMARKS
OF

HON. ANDREW JACOBS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. JACOBS. Mr. Speaker, the other day, during debate on the library extension bill, I stated that our 1947 Indiana General Assembly passed a resolution stating Indiana wanted no Federal funds.

I stated also that immediately following—in fact the very next resolution—the same general assembly, with the same Republican majority in membership, passed a resolution asking for Federal funds for flood control and soil conservation.

Now, since some folks thought I was mistaken, under unanimous consent, I include in the RECORD both resolutions, with reference to their pages in the official acts of the eighty-fifth general assembly:

ACTS, 1947, INDIANA, EIGHTY-FIFTH SESSION

CHAPTER 377

(H. Con. Res. 2, approved January 30, 1947)

Be it resolved by the house of representatives (the senate concurring), That Indiana needs no guardian and intends to have none. We Hoosiers—like the people of our sister States—were fooled for quite a spell with the magician's trick that a dollar taxed out of our pockets and sent to Washington, will be bigger when it comes back to us. We have taken a good look at said dollar. We find that it lost weight in its journey to Washington and back. The political brokerage of the bureaucrats has been deducted. We have decided that there is no such thing as Federal aid. We know that there is no wealth to tax that is not already within the boundaries of the 48 States.

So we propose henceforward to tax ourselves and take care of ourselves. We are fed up with subsidies, doles, and paternalism. We are no one's stepchild. We have grown up. We serve notice that we will resist Washington, D. C., adopting us.

Be it resolved by the House of Representatives of the General Assembly of the State of Indiana, the senate concurring: That we respectfully petition and urge Indiana's Congressmen and Senators to vote to fetch our county courthouse and city halls back from Pennsylvania Avenue. We want government to come home.

Resolved further, That we call upon the legislatures of our sister States and on good citizens everywhere who believe in the basic principles of Lincoln and Jefferson to join with us, and we with them to restore the American Republic and our 48 States to the foundations built by our fathers.

CHAPTER 378

(H. Con. Res. 3, approved March 1, 1947)

Concurrent resolution memorializing Congress to enact effective legislation providing for flood control and soil conservation in the Ohio River watershed area and tributaries thereto.

Whereas farming and grazing land of the State of Indiana is one of the basic assets of the State and the preservation of such land and the produce gained therefrom is necessary to protect and promote the health, safety, and general welfare of the people of the State and Nation; that the breaking of

natural grass, plant and forest cover has interfered with the natural factors of soil stabilization; that there has been an accelerated washing of sloping fields; that these processes of erosion facilitate dissipation of valuable top soil, causing exposure of less fertile and more erosive subsoil; and

Whereas the consequences of such soil erosion are: silting and sedimentation of stream channels, reservoirs, dams, ditches, and harbors; loss of soil and water which causes destruction of food and cover for wildlife; an increase in the speed and volume of rainfall run-off, causing severe and increasing floods, which bring suffering, disease, and death, impoverishment of families, damage to roads, highways, railways, buildings, and other property from floods; and losses in navigation, hydroelectric power, municipal water supply, and underground water reserve; and

Whereas similar conditions exist the entire length of the Ohio River from its source at the juncture point of the mighty Monongahela and Allegheny Rivers, all in defiance of the efforts and ingenuity of man to cope with nature run rampant and bent upon destruction of life, property, and resources as aforesaid: Therefore be it

Resolved by the House of Representatives of the General Assembly of the State of Indiana (the senate concurring)—

SECTION 1. That the Eighty-fifth General Assembly of the State of Indiana does hereby memorialize and petition the Congress of the United States to enact effective legislation for the control of floods and the prevention of soil erosion, to preserve natural resources, prevent impairment of dams and reservoirs, assist in maintaining the navigability of rivers, protect and promote the health, safety, and general welfare of the people, and to appropriate sufficient funds for the execution of such legislation.

SEC. 2. The principal clerk of this house is directed to forward copies of this resolution to the secretary of the United States Senate, to the Clerk of the National House of Representatives and to each United States Senator and Congressman from Indiana.

Speaker Rayburn Speaks Out

EXTENSION OF REMARKS
OF
HON. MONROE M. REDDEN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. REDDEN. Mr. Speaker, last Saturday night, March 25, you honored my district by speaking to the North Carolina Young Democratic Clubs at Asheville. The overflow audience of more than 2,000 people applauded you frequently, and it was common talk after the meeting that we had heard one of the greatest democratic speeches to be delivered in that section in many years.

Your speech was commented on editorially by the Asheville Citizen in Monday morning's issue of this week. I hope that this editorial may be read on a wide scale. It points up some of the thoughts which you so eloquently expressed.

The editorial follows:

SPEAKER RAYBURN SPEAKS OUT

Speaker SAM RAYBURN, 37 summers a Texas Congressman and Presiding Officer of the House of Representatives for more years than any man in history save Henry Clay, brought his eloquence and the wisdom of his long experience to an audience of western North Carolinians Saturday night.

A Speaker rarely speaks and never votes except in case of a tie. Tar Heel Young Democrats who heard Mr. RAYBURN Saturday, however, must have been impressed with the candor and logic of the Speaker as a platform debater. He put the case vigorously for the Democratic Party in the Nation and for democracy in the world. In the course of his address he made two telling points:

1. The indiscriminate practice of pinning the Communist label on innocent persons is both irresponsible and dangerous. In obvious reference to reckless JOE MCCARTHY, Speaker RAYBURN predicted that "in the long run that gentleman is going to get what those of his kind deserve."

2. A strong America is an America which must maintain leadership in world affairs through the Marshall plan and other foreign-aid programs. Mr. RAYBURN is a Woodrow Wilson Democrat, both in theory and practice. "I want to help keep the friends we've got in other parts of the world," he said.

SAM RAYBURN has been around Washington for more than a generation. He entered Congress on the March day in 1913 when President Wilson, perhaps glimpsing the war clouds, first took his oath of office and told Americans: "Men's hearts wait upon us; men's lives hang in the balance; men's hopes call upon us to say what we will do. Who shall live up to the great trust? Who dares fail to try?"

During these 37 years and during the distinguished period of his war service as Speaker, SAM RAYBURN measured up to the trust and never grew faint of heart.

He saw Woodrow Wilson die a prophet among men yet maligned for the daring of his vision. In the atmosphere of Washington, then, he puts little stock in label-pinning and name-calling. And out of devoted service to his country and to the cause of democracy, he has little patience with the isolationists and their clamor to turn the clock back on issues and men.

All of this was a strong breath of clear air in a region where there is cause to be proud of—and no cause to apologize for—the world leadership which the Democratic Party has maintained with the help of enlightened Republicans such as Senator VANDENBERG, to whom Mr. RAYBURN paid tribute.

It should help to focus our thoughts not on negative things but upon the positive values in national issues which are before the American democracy and the Democratic Party.

Broadcast of Hon. Francis J. Myers, of Pennsylvania, to the People of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a broadcast by me to the people of Pennsylvania, over the facilities of the American Broadcasting Co., Monday evening, March 27, 1950.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

I suppose that it's just about impossible for some people to believe that anyone who has spent a dozen years in Congress can lay aside temporarily his mantle of political-party affiliation and speak as just one more American addressing his fellow citizens.

But in the few minutes I have on the air this evening I'd like to attempt just that.

I am sure all of you know that America today enjoys the highest standard of living in the world—and what is more, the highest living standard in our history.

We have, during the past 17 years, risen from the pit of the worst depression we ever had. The American economy—in addition to underwriting our own gigantic military effort in World War II—turned out a significant part of the fighting equipment, food, clothing, and money needed by our wartime Allies to make victory possible.

And America has emerged as the only Nation which today is in a position to help the free nations bolster their economic foundations against the forces of Communist oppression that now threatens the peace.

Now, without any question, the achievement of world peace is the central issue of our time, and the problems which confront America in this year of 1950 differ in many important respects from those of the depression paralysis of the early thirties.

Where our task 17 years ago was to put people to work and get our economy back on its feet, we find today that our free-enterprise system is humming along with record-breaking production, big profits, and high levels of employment.

Our greatest energies in this postwar period have been directed at this issue of peace. The Communists have hurled a challenge at the democratic institutions of the world, and the democracies have answered the challenge in terms of affirmative measures which meet the Communist threat head-on. America has played a leading role both in the formation of the anti-Communist policies, and has, as well, underwritten in terms of billions of dollars the costs of these programs.

In recent weeks American foreign policy has been vigorously attacked on new fronts. In the first instance, the criticism comes not from the Communist Party, but has been hurled by a handful of public figures who charge that our State Department is infested with card-carrying Communists, and, furthermore, they infer that our American foreign policy has been shaped by those same communistically inclined people. It is interesting to note that shortly after the first of these attacks was made the Kremlin had something to say about our foreign policy. Mr. Stalin issued a blast at Secretary of State Acheson and the American State Department, charging them with drawing up a Fascist scheme to plunge everyone into a third world war in order to destroy communism.

In this broadcast I want to dig back into a little recent history. At the outset I want to make clear my firm belief that there are few Americans today who underestimate the task before us if world peace is to be attained under democratic forms of government. In this atomic age in which man, for the first time in his history, has devised a means of destroying civilization altogether, the stakes in the future are simply enormous. If the democracies are to win the cold war, there is a duty upon the people of the free world to make use of every bit of intelligence they possess, if we are to meet head-on the Communist challenge to freedom. Our policies must be designed clearheadedly by the best minds in the democratic world. We cannot afford to be stampeded by fear or hysteria. If

UNIVERSITY OF MICHIGAN LIBRARIES

division is stirred up among the democratic nations themselves, or if serious differences develop internally in the democracies, we will play squarely into the hands of the Communists.

There is no question at all about this. The Communists are pegging their success upon what they regard as the essential weakness of democracy. They are relying heavily upon economic collapse in the free nations—the economic collapse which the Communists have predicted for so long.

In the years which immediately followed World War II, the Russians fully expected to gain control of all of Europe because they believed the democracies too weak economically to get back on their feet in time to avert disaster.

The Communists have realized fully that social chaos and economic despair have turned more people over to dictatorship than have all the copies of all the Communist propaganda ever printed. The Russians realize full well that a man who sees his family hungry, and cold, and frightened may frequently be willing to sell his freedom to a dictator who rashly promises security in the future.

Democracies, in bending their efforts behind the Marshall plan, have come up with an affirmative answer to the chaos which threatened Europe 3 years ago. The best military minds we have in this country assure us that all of Europe would be under the domination of the Communists if it had not been for the inauguration of the Marshall plan in 1948. These same military experts tell us that our national defense budget for the coming year would be two or three times as large if Russia had the entire productive capacity of Europe at its disposal today. Said another way, this would mean that we would be called upon to spend $30,000,000,000 or $35,000,000,000 this year for national defense instead of $13,000,000,000.

Mr. Paul Hoffman, the Marshall plan Administrator, has estimated that we should spend $3,000,000,000 on European aid during the next year. In doing so, we are investing in a secure future for the people of Europe. This is just as important to us as it is to operate the FBI or to maintain our armed forces.

Mr. Hoffman knows the value of a dollar—and he knows the value of $3,000,000,000. The evidence submitted by Mr. Hoffman shows clearly that a reduction in Marshall plan funds would convert the European cooperation program into a dole instead of one to bring about recovery. If that were to happen, we would no longer be building the peace. We would simply be keeping the people of Europe on the charity list, incapable of going forward to economic self-sufficiency without the continuing need for American funds to keep them going.

Within the past few days the first shipments of American military aid have started to flow across the Atlantic to bolster the defenses of the European democracies, and thus make it possible to give real meaning to the North Atlantic Defense Pact, signed last year.

We have pending now in both Houses of Congress another program which takes an affirmative approach to the factors which cause war. President Truman's point 4 proposal is primarily intended to help economically backward nations build up their own standards of living in order to ward off the forces of communism which threaten them internally.

Altogether, our international programs will cost us close to $5,000,000,000 in the coming year. In addition to this, as I have already indicated, we will spend some $13,000,000,000 for our national defense. I would like to point out that a national defense budget, whether it costs us $13,000,000,000 or $35,000,000,000 a year, does absolutely nothing toward eliminating the causes of war. Military protection is police protection. But it does nothing at all to eradicate the economic conditions in which communism so quickly flourishes.

The Marshall plan has stopped the Communists cold in Europe. But the Marshall plan has not completed its work, and if we interrupt the miraculous progress it is now making, there is a grave likelihood that Europe would fall back into the same sort of peril which faced it only 2 years ago when the Communists were so busy exploiting the impending economic crisis.

As I've already said, American participation in world peace making is costing us billions of dollars a year. These costs, however, are small by comparison with the dollar costs of another war. I feel there are those who too often fail to see any relation between our foreign and domestic policies. It is, I think, instantly clear when we stop to think about it that another depression in America would cause our peace-making efforts to fail completely. Another depression would force us to abandon the Marshall plan, give up point 4, and our other programs to promote peace.

This is, of course, exactly what the Communists have predicted, and it is what they are expecting will happen.

If America is to bear the burden of affirmative peace making, our free enterprise economy must stay healthy, and continue to expand. It is true, as I said earlier, that American business today is in sounder shape than ever before in its history. Employment is still close to record levels, but there are more people unemployed because there are not enough new jobs being created to take care of our growing population. To meet our international responsibilities, we must make the fullest use possible of our economy by setting ever higher production records and by having ever larger numbers of people at work. We must continue our efforts here at home to assist our free enterprise economy in such an expansion, and we must go forward with this important work.

We have, in the past few years, accomplished a tremendous amount in blocking the expansion of communism. We, nonetheless, have ahead of us a huge task in continuing to shape policies which will assure our victory in the cold war. To do this, we must above all retain our confidence in ourselves and in our future. We must, as I said earlier, use every bit of intelligence we possess in drafting policies which will assure that victory. And it is equally important that these policies be carried out by people who are unswervingly loyal to America and the democratic way of life.

If we are to meet our responsibilities, every problem which faces us must be considered squarely on its merits. We cannot, in these crucial times, afford the luxury of cheap political partisanship which destroys our confidence in ourselves and in the people we have charged with the responsibility of administering our policies. There is a vast difference between criticism directed to the facts on the one hand, and criticism which has no support in fact whatsoever. This business of shooting from the hip irresponsibly, in complete disregard of personal reputations, in disregard of confidence in ourselves and our policies, could, if it got out of hand, immobilize our efforts to bring about world peace and destroy any hope that democracy can survive in the world.

As all of you know, charges of the gravest nature were leveled at the State Department a month and a half ago. It was flatly charged that 205 known card-carrying Communists were then at work in the Department of State. The charges have been altered a lot since that time—81 card-carrying Communists, 57 card-carrying Communists, or what have you.

A unanimous Senate moved at once to investigate. The charges at the outset looked like the smear campaigns which have cropped up in election years in the past, but the Senate, recognizing that the charges, if true, were serious, insisted on getting the facts, and ordered its Foreign Relations Committee to conduct an immediate investigation. You may be sure that the investigation will leave no stone unturned. If there are Communists or Communist sympathizers in the Department of State, they will be exposed.

The Senate investigating committee has been in almost continuous session for nearly 3 weeks, but as of this very hour the record does not contain one shred of evidence to prove or substantiate these political charges.

On the contrary, the evidence thus far is most reassuring. It demonstrates that we have every right to place confidence in the loyalty of those carrying out our foreign policy.

I am proud that our press and our people have not been stampeded into fear. The Nation-wide reaction seems simply to be that our vigilance must be maintained, just as we are doing at present, and that we must keep a cool head and a steady hand if our great stake in the future is to be attained.

In closing I repeat that I am proud of the mature fashion in which we, as a nation, are facing our world responsibilities. Charges of socialism in our program at home or of card-carrying Communists in our State Department must be decided on the facts, just as we are doing now. There is no place in this picture for irresponsible fear mongering. So long as we continue to insist upon the facts, to examine them clearheadedly and confidently, and guide our actions realistically, I have no fear for the future.

Address of Archie M. Cohen

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. YATES. Mr. Speaker, beloved among his fellow citizens in the city of Chicago because of his long-standing interest and active participation in the city's great communal activities is Archie H. Cohen. A distinguished lawyer, a master in chancery, a former referee in bankruptcy, for many years he has been a leader in the city's charitable and civic organizations. He has been a long-time member of the Republican Party in the State of Illinois, and has done much to bring credit upon his political organization because of his wisdom, his ability, and his refusal to be bound by adherence to sterile, hidebound conservatism. I would certainly describe him as a Republican with Democratic leanings.

Archie Cohen is a brilliant speaker. One of his great addresses was made during the American appreciation program sponsored by the Milwaukee B'nai B'rith conference on February 22, 1950, in Milwaukee, Wis., an address of particular significance because of its reference to four great chaplains of the last war.

On March 27, I introduced House Joint Resolution 443, a bill to commemorate the heroic acts of the four chaplains, Clark V. Poling, George L. Fox, John Patrick Washington, and Alexander D. Goode, in making the supreme sacrifice in order that their comrades in arms might live. My bill requests that February 3 of each year be designated as Dorchester Day in observance of their heroism on the Army transport *Dorchester*, which was torpedoed on that day.

I am incorporating House Joint Resolution 443 with my remarks and the address of Mr. Cohen. I believe they should be read together as significant contributions to our goal in seeking to achieve our great American democratic ideal of the brotherhood of man under the fatherhood of God.

House Joint Resolution 443

Joint resolution authorizing the President of the United States of America to proclaim February 3 of each year as Dorchester Day for the observance and commemoration of the deaths and the heroic acts of Chaplains Clark V. Poling, George L. Fox, John Patrick Washington, and Alexander D. Goode

Whereas on February 3, 1943, at 12:55 antemeridian, when the Army transport *Dorchester* sank following a torpedo attack, United States Army Chaplains Clark V. Poling, George L. Fox, John Patrick Washington, and Alexander D. Goode, symbolized both ministerial faithfulness and supreme human courage by giving their lives that others might live and doing so in such a way as to indicate the element of brotherhood common in their Protestant, Catholic, and Jewish faiths; and

Whereas this event symbolizes the courage and hope humanity can gain from a spirit of brotherhood among these creeds; and

Whereas no other single event has so moved men to think on the elements of unity in these three great traditions and creeds: Therefore be it

Resolved, That the President of the United States is authorized and directed to issue a proclamation calling upon officials of the Government to display the flag of the United States on all governmental buildings on the 3d day of February of each year, and inviting the people of the United States to observe the day in schools and churches, or other suitable places, with appropriate ceremonies in commemoration of the deaths and the heroic act of the four foregoing chaplains.

ADDRESS DELIVERED BY ARCHIE H. COHEN AT STEUBEN JUNIOR HIGH SCHOOL AUDITORIUM, MILWAUKEE, WIS., FEBRUARY 22, 1950, ON AMERICAN APPRECIATION PROGRAM SPONSORED BY THE MILWAUKEE B'NAI B'RITH CONFERENCE

To my way of thinking, America is more than an aggregation of 150,000,000 people. It symbolizes the hopes, the dreams, and the prayers of those who, by accident of birth, were born here and those who came here seeking a haven of refuge from political and religious oppression, to build unselfish lives that spell true brotherhood.

Unfortunately, bigotry and intolerance need no passports to come into this country. The jealous, petty, arrogant, mean, and little people of the world have always wondered at the American way of life. They fail to understand that, in America, laws are enacted to point a way by which men shall live, and not as the edicts, decrees, and manifestoes of the dictators by which men shall die.

Carved in the stone on the outside of the Supreme Court Building in our Nation's Capital are the words: "Equal justice under law," which assures justice to every citizen regardless of race, creed, or color. America has been made safe for differences by the Declaration of Independence. The Constitution of the United States of America guarantees to every citizen, life, liberty, and the pursuit of happiness. I hold these truths to be self-evident: that man was made to be happy; that happiness is attainable only through useful effort. You will find, as you look back upon life, that the moments that stand out are those moments when you have done something for somebody else without any hope of reward. I strongly feel that life is an opportunity given to us to learn how to live; that the world is a schoolroom, not a playground; that life is an education, not a holiday; that life is a measure to be filled, not a cup to be drained; that we come into this world without being asked and that we go without being considered; therefore, it behooves us to live useful, purposeful, and intelligent lives.

Surely you will agree with me that selfishness is a disease that should be labeled a crime. If we try to be in tune with the Infinite, we will strive to avoid wars that bring misery, destruction, heartaches, and untold sufferings to innocent men, women, and children, and create, as an aftermath, more serious problems than those that existed before men engaged in slaughter on the battlefields. We do not all look alike, act alike, talk alike, or think alike, but that is no reason for hating one another. The history of the progress of mankind clearly establishes the fact that nothing constructive has ever grown out of hatred. Bigotry and intolerance have no place under the cross of a cathedral, the spire of a church, or within the walls of a temple or synagogue. Any man who incites strife between different classes and different creeds is a menace to America and a disgrace to his faith.

The heart of America is sound. Its sense of justice is universal. You can trust it. You can appeal to it. But you must never betray it. I am not so much concerned with the insurrection of the ignorant as I am with the indifference of the intelligent. The real American, whether he be a Christian or a Jew, is he who brings comfort where before there was wretchedness, who feeds the hungry, who clothes the naked, who enlightens the ignorant, and who does justice, and by his words and actions inspires a love for God and for man. I cling to the belief that God is my friend and every man my brother.

No one can gainsay the fact that equality and freedom build human dignity in man and nation. We add to our moral strength when we concern ourselves with the preservation of all those values which make life worth living. As decent men and women, we must ever be vigilant to protect the civil and political immunities of every American regardless of his race, color, creed, and social or economic status. No sacrifice is too dear if only freedom prevails.

America must be intellectually immune to the virus of hate. Every person should realize that his highest good requires the observance of the commandment, "Thou shalt love thy neighbor as thyself."

We should constantly strive to make America so good that to be a private citizen in the United States will be greater than to be a king in any other nation.

By our devotion to American ideals, we emphasize that we live in deeds, not years; in thoughts, not breaths; in feelings, not in figures on a dial. We count time by heart throbs. We cling to the belief that he most lives who thinks most, feels the noblest, acts the best. The rights and privileges that we enjoy as American citizens must not be taken for granted. We must be mindful of the duties and responsibilities of citizenship and should remember that, next to God, is country, and next to religion is patriotism. The duty of patriotism is the duty of justice and of gratitude, and it is just as important to be patriotic in time of peace as in time of war. We should ever be loyal to the life and welfare of our Nation, strong in our love of, and devotion to, the institutions of America. Anyone trying to sow distrust and hatred in this blessed land is carrying out the mandate of the enemies of this country and is guilty of conduct that is most despicable and unworthy of a true American. Such bigoted individuals who loudly shout that America has failed them, have in truth failed America.

Thoughtful Americans must take to heart the indisputable fact that victories won on the battlefields are all in vain unless in peace we prevent the hatreds that start wars all over again. America's destiny is to point out to the world the force of an idea, rather than the idea of force, and to spread the idea of human dignity so that everywhere there will be strengthened the conviction in the minds of the leaders of the people throughout the world that human rights must be respected.

Ours is a land of peace and faith. This is a government of the people, not of kings, princes, or dictators. This is a country of citizens, not of military captains. Our leaders represent peace and religion. My fervent plea is that instead of ignorance, let there be truth; instead of weakness, let there be strength; instead of fear, let there be courage; instead of hatred, let there be love.

An event that took place during World War II stands out vividly in my memory. It occurred during the month of February 1943, on the U. S. troop ship *Dorchester* which was struck by a torpedo fired from a Nazi submarine in mid-Atlantic. The boys in uniform who were being transported to European shores to battle against the Nazis, were rushing about frantically seeking to procure life belts. The ship was listing heavily, doomed to a watery grave, when four Army chaplains—a priest, a rabbi, and two Protestant ministers—observing the frightened lads, took off their life belts and gave them to four soldiers. Then, placing their arms around one another's shoulders, they looked heavenward and prayed to Almighty God, each in his own way, as these Americans, representing the three great faiths, faced death together unafraid. From this true account of the last moments of these brave chaplains of the United States Army, can we not find inspiration and courage to face life together unafraid and in true brotherhood?

I urge that we strive to make this world as good a place for others as we would want it to be for ourselves. To me, America is all that the submerged races of the world wish to be and cannot. To me, America is the concrete realization of what the ages have hoped for and labored for. It is a definition. It is a creed. It is a challenge. God built a continent of glory and filled it with treasures untold. He carpeted it with soft rolling prairies and pillared it with thundering mountains. He studded it with soft flowing fountains and traced it with long winding streams. He graced it with deep shadowed forests and filled them with song. Then he called unto a thousand peoples and summoned the bravest among them. They came from the ends of the earth, each bearing a gift and a hope. The glory of adventure was in their eyes and the glory of hope within their souls, and out of the labor of man and the bounty of earth, out of the prayers of man and the hopes of the world, God fashioned a nation in love, blessed it with a purpose sublime, and called it America.

UNIVERSITY OF MICHIGAN LIBRARIES

Schism in the NLRB

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. LANHAM. Mr. Speaker, I read with a great deal of interest the editorial which appeared in the Washington Post on Sunday, March 26, entitled "Schism in the NLRB." I have been deeply concerned about the President's plan No. 12 to abolish the post of general counsel and to transfer his functions to the NLRB. I have been deeply concerned because I believe in the separation of the function of prosecution from the judicial function in all cases where it is practicable. And if functions of the NLRB were predominantly judicial and if the general counsel's duties were predominantly that of a prosecutor, I would oppose the President's plan No. 12.

However, I agree with the Post editorial that the schism by the Board and the counsel has created more problems than it has solved.

The editorial to which I refer is as follows:

SCHISM IN THE NLRB

No effective case has been made, in our opinion, against President Truman's reorganization plan to end the schism between the National Labor Relations Board and its general counsel. Certainly the President had authority to take this step. The NLRB was not exempted from the reorganization powers conditionally delegated to the President. Since this change was effected in one of a series of orders designed to improve the working machinery of the independent regulatory commissions, it would have been strange for the President to have exempted so obvious a defect as the separation of the NLRB counsel from the Board itself, has proved to be.

The NLRB was thus divided against itself in the Taft-Hartley Act in a laudable effort to separate the prosecuting and judging functions of that body. To many it seemed an experiment worth making. But in practice it has proved a failure because of the continued friction between General Counsel Denham and the Board. The Board members are now unanimous in saying that the division should not continue; for it has resulted in two NLRB policies instead of one and placed the Board in the anomalous position of having to rely upon an antagonistic counsel to carry its cases before the courts. In short, the schism has created more problems than it has solved.

Under the new plan the general counsel would be subject to supervision by the Board, while still exercising a large degree of independence in his prosecuting activities. Investigative and judging functions would not be entrusted to the same persons. This seems to us to satisfy the requirements of fairness if unbiased personnel is chosen. There is less argument today for keeping the prosecuting arm outside the Board than there was under the Wagner Act, when the Board's sole function was to foster the interests of labor and deal with unfair labor practices on the part of employers. Today it is concerned with unfair labor practices by both employers and unions. It must assume an impartial attitude if it is to serve its function properly. The same is true of the prosecuting arm. There seems to be a dangerous tendency on the part of some groups to regard the general counsel as partial to employers and the Board as favoring unions. Perhaps that is an inevitable consequence of the separation. In any event, the aim must be for high-minded and impartial service on the part of both, and we suspect that this can be most readily attained if the present invitation to friction is removed.

Principles of National Labor-Management Council on Foreign Trade Policy

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF PRINCIPLES ADOPTED BY THE NATIONAL LABOR-MANAGEMENT COUNCIL ON FOREIGN TRADE POLICY, MARCH 21, 1950

Lower wages than those prevailing in the United States create the principal competitive advantage enjoyed by foreign countries when they ship dutiable merchandise into our domestic market.

These lower wage rates often result in lower foreign costs and confer a price advantage upon the shipper to our shores, since his productivity is not generally so far below our own as to offset the lower wages. With the exception of a few products, such as automobiles, that are mass-produced by us, other countries are not very far behind us in productivity and are rapidly catching up in many lines because of the spread of mechanization.

In the meantime, however, and contrary to the theory of classical economists and free trade advocates, the competitive advantages of imported dutiable goods in our domestic market are not generally reducible to superiority of natural resources, soil, climate, or greater efficiency in the countries of origin. Unfortunately they are attributable in some cases to simple exploitation of labor.

Competitive goods that derive their cheapness from this source therefore enter higher-standard countries with a spurious economic advantage rather than a fair one.

Instead of spreading the economic benefits often attributed to trade, they undermine the living standards in the higher-standard importing countries. Only if the imports are economically complementary to production in the importing countries rather than competitive is the injury avoided.

In order to prevent the destruction of high labor standards and to maintain the possibility of reasonable business profits, a high-standard country is therefore fully justified in taking measures to prevent the economic erosion that may result from unimpeded importation of competitive, as distinguished from complementary, goods from lower-wage countries. Just as bad money drives out good money, goods produced at unfair wages tend to drive out of the market those produced at fair wages when the two are in open, unobstructed competition. Recognition of this fact led this country to adopt national minimum-wage legislation to prevent the destruction of labor standards from within its own borders.

Protective measures that are designed thus simply to place competitive foreign products on a fair competitive level in the market of a high-standard country cannot properly be described as trade barriers or obstacles to the flow of healthy trade. The United States is unique in the world of trade because all other countries operate on a lower wage standard. Nevertheless, approximately 60 percent of our imports are now free of duty, consisting largely of noncompetitive items and raw materials. The economic conditions of their production overseas cannot directly undermine our standards, and our consumers can enjoy the lower prices without hurting domestic production.

However, the claim of consumers to the enjoyment of lower prices on the 40-percent remainder of our imports, which are competitive goods, is not valid if the lower prices of the latter merely reflect lower wage levels abroad, since such a claim would be based on the destruction of our economic standards.

The postwar economic situation, characterized by an unprecedentedly high national debt, calls for the continuance of an unusually high annual national income, or one of well over $200,000,000,000. This requirement binds us, however unwillingly, to a high price level. The increase in statutory minimum wages by Congress and the maintenance of high support prices for farm products have put the stamp of governmental recognition on this view.

The interests not only of labor and management but also of the public, therefore, make it imperative that they seek reasonable safeguards against unfair and deflationary foreign competition. Their interests are mutual in maintaining high standards of employment, production, and wages, and in the prevention of action that would undermine such standards. Such reasonable safeguards will not materially reduce imports but would remove from the dutiable ones the threat to our employment that they would otherwise carry.

To avoid the maintenance or imposition of unsound, while assuring proper, measures of protection, the following principle should be honored:

Any legitimate industry in the United States that pays prevailing wages and that is able to market its products at prices returning a reasonable profit under fair competitive conditions and succeed in setting aside reserves for research and development is not only economically justified but is entitled to protection. The degree of protection should be roughly equal to the advantage of foreign producers in this market as a result of their lower labor standards, modified by relative productivity.

How Taxes Have Mounted

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. LeFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article mailed me by a constituent. When writing to me, this constituent states that this article tells more than she could write.

I hope the Members have the opportunity to read this article as it shows very clearly how taxes have increased, not only for the rich, but also for the not so rich. The Democrats will do well to take heed too for this article points out that the tax reduction put through by

the Eightieth Congress is being appreciated and the people have not forgotten which Congress made this possible.

The article follows:

HOW TAXES HAVE MOUNTED

EDITOR THE COURIER NEWS:

Every year at income-tax time, I recall what was told me in the 1930's when I expressed alarm at the greatly increased Government spending, viz, "What are you worrying about; only the rich will get soaked." How untrue that remark was is partially revealed by the comparison of pay-roll taxes which follows:

Yearly salary	1929	1950
$2,100 (married)	No tax	$147.50
$2,600 (married)	do	230.00
$3,600 (married)	do	389.00
$1,560 (single)	do	157.40

This comparison, unfortunately, illustrates only to a minor extent how the "not so rich" also are being soaked, since a much greater portion of taxes of people in the low-income bracket are, as FDR said "paid indirectly in the cost of things they buy."

These hidden taxes include corporate income taxes (increased from 11 to 38 percent), taxes paid by business on pay rolls, oils, transportation, telephone, telegraph, electricity, liquor, playing cards, tobacco, etc., excise taxes on autos, tires, tubes and parts, on electric, gas, and oil appliances, on light bulbs, refrigerators, gasoline, musical instruments, photographic materials, sporting goods, radios, etc., also luxury taxes on furs, jewelry, luggage, toilet preparations, admissions, etc.

I once estimated that a single woman earning $2,340 a year paid over $800 a year in taxes including Federal, State, city, and the above hidden taxes, and although it is about $100 less now, thanks to the reduction given by the previous Congress, it's still terrific.

Despite all the publicity given in newspapers regarding wasteful Government spending and inefficiency, and their effect on taxpayers' ever-increasing debt burden and high taxes, too many taxpayers are too busy having fun to take a few minutes time to write their Congressman telling them (1) to repeal all war taxes, (2) to balance our budget immediately, and (3) to stop wasting their money.

That is why Government spending, the cause of taxation and debt, has gone steadily from bad to worse.

O. PITSCHMAN.

Jacob Henry's Battle for Civil Rights

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. DINGELL. Mr. Speaker, I have been privileged to read a proof copy prepared by Philip Slomovitz, the distinguished editor of the Jewish News, and which appropriately enough is to appear in the Passover issue of March 31. The article is captioned "Jacob Henry's battle for civil rights."

JACOB HENRY'S BATTLE FOR CIVIL RIGHTS

(By Philip Slomovitz)

Israel's festival of freedom—the Passover—is a glorious occasion on which to recall important battles for justice on the American Continent. There are numerous instances of heroic efforts, dating back to colonial times, when high-minded Christians fought for the right of man to worship—or not to worship—as he pleased.

Thus far, the triumphs of Washington, Jefferson, Madison, and scores of others, who have succeeded in writing into our Constitution the basic principles of religious liberty, remain the pride and the cornerstone of our American heritage.

There are some lesser-known names whose contributions to the cause of justice and untrammeled freedom have helped build a strong foundation for this great Republic. Among them was Jacob Henry, who was elected to the North Carolina House of Commons in 1808, served for a year and upon his reelection in 1809 faced the challenge as to his right to hold office on religious grounds.

At that time the North Carolina constitution prohibited non-Protestants from holding civil offices. Henry, who was elected to the North Carolina State Legislature from Carteret County, became the center of a political issue. Many of the State's leaders came to his support and Roman Catholics, who were similarly affected by the law barring non-Protestants from holding civil positions, were on his side.

Henry won an overwhelming victory to retain his seat after delivering an address which has won such wide acclaim that it has been included in the famous collection, "The American Orator." Henry's triumph, however, was only partial. While he was permitted to retain his seat in the legislature, the discriminatory North Carolina clause remained on the State's statutes. It was interpreted to mean that legislative offices were not necessarily civil, that Catholics and Jews could participate in making laws although they were prohibited from interpreting and executing them.

After the Civil War, when Southern States began to liberalize their constitutions, North Carolina granted full religious liberty to all its constituents in 1868.

Jacob Henry was born in Philadelphia in 1776. His activities after his rise to fame in the battle for religious equality in 1809, when he delivered his great oration, the date and place of his death, are unknown. His name at birth was Jacob Gratz, and it is believed he was the brother of the Philadelphia merchant Michael Gratz. Jacob changed his last name to Henry when he moved to the South.

In his powerful book on the battle for liberty for all faiths, "Cornerstone of Religious Freedom in America" (Beacon Press), Joseph L. Blau reprints in full the famous oration by Henry and makes this interesting reference to Henry in a chapter on "The Affirmation of Civil Rights for Religious Minorities":

"North Carolina, whose constitution required its officials to accept the divine authority of the New Testament, but whose declaration of rights granted religious freedom, was faced with the necessity in 1809 of deciding between these two instruments.

"Jacob Henry, a Jew, was elected to the house of commons by the voters of Carteret County. It was, of course, impossible for Mr. Henry to affirm the divine authority of the New Testament. His right to his seat was, therefore, challenged. Mr. Henry was granted the privilege of speaking in defense of his right to retain the seat, and did so in a brief speech which was long considered one of the gems of American oratory. There has been some question raised as to his authorship of the speech; it is reported by one of the historians of North Carolina to have been written for him by Chief Justice Taylor, of the State supreme court. This attribution was solely on the basis of hearsay, and we are justified in attaching the name of Jacob Henry to this speech until trustworthy evidence of other authorship is furnished.

"The speech itself, though brief, is a ringing reiteration of the view that religion is a personal matter between the individual and his Maker, and that no one has the right to challenge or question this personal relation. As long as one does not hold religious opinions dangerous to the state, the state has no power to exclude him from any privilege or obligation of citizenship. The statement was clear-cut and incisive—and it is a pleasure to report that it was decisive. Mr. Henry was overwhelmingly granted the right to his seat in the commons, and some years later the constitutional provisions were changed."

In 1818, in the heat of debate over a similar issue in the Maryland Assembly, while discussing the so-called Jew bill which was aimed at the repeal of a test act that prevented Jews from entering the legal profession and public office, the Honorable H. M. Brackenridge spoke of Jacob Henry's speech as being "a part of our education as Americans to love and cherish the sentiments uttered by him."

The Maryland battle, which began in 1797, when the Baltimore Jew Solomon Etting first petitioned the Maryland House of Commons against the restrictions on Jews seeking office or entrance in the legal profession, the part played in it by Thomas Kennedy, "ardent Jeffersonian and a persistent fighter," Col. W. G. D. Worthington, and H. M. Brackenridge, form another glorious chapter in the struggle for religious freedom in this country. The "Jew bill" was adopted by the Maryland House of Delegates on the last day of the session, February 26, 1825, and was confirmed, as required by law, in the following session of the house, on January 5, 1826. Mr. Blau, whose book also contains the complete text of Mr. Brackenridge's historic address, comments that "the Jeffersonian principle was vindicated and sustained in Maryland just 6 months before the death of Jefferson himself."

Brackenridge's speech on the Maryland "Jew bill," delivered in 1819, has gone down in history with the greatest orations in defense of civil rights. Brackenridge had this to say on the question of tolerance:

"Sir, I abhor intolerance, whether it be political or religious; and yet, I can scarcely regard religious tolerance as a virtue. What has weak and erring man, a right to give permission to his fellow mortal, to offer his adorations to the Supreme Being, after his own manner? Did I not feel myself somehow restrained from pursuing this subject, I would endeavor to demonstrate, that the idea of such permission, or toleration, is not better than impiety. But I content myself, with calling your attention to what has been the effect, in this country, at least, of leaving religion to be taught from the pulpit, or to be instilled by early education."

Is this a Christian land? Brackenridge had something to say, also, on this score in his famous speech. To quote him again:

"But, we are told, that this is a Christian land, and that we are Christians. I rejoice to hear it, and I hope we will prove ourselves worthy of the name, by acting on this, and on every other occasion, with Christian spirit. But this is a Christian land. And let me inquire of the page of history, by what means it became so? Was it through the instrumentality of peace and good will to our fellow men? * * * No, sir, the soil we inhabit yields its fruit to the just and to the unjust; the sun which gives us life, sheds his glorious beams impartially on all. But the great majority of the dwellers of this land are Christians; therefore it is a Christian land. For the same reason, it might be a Catholic, Episcopal, or Presbyterian land. Our political compacts are not entered into as brethren of the Christian faith—but as men, as members of a civilized society. In looking back to our struggle for independence, I find that we engaged in that bloody conflict, for the rights of man, and not for the purpose of enforcing or defending any particular religious

UNIVERSITY OF MICHIGAN LIBRARIES

creed. If the accidental circumstance, of our being for the greater part Christians, could justify us in proscribing other religions, the same reason would justify any one of the sects of Christianity, in persecuting the rest. But, sir, all persecution for the sake of opinions, is tyranny—and the first speck of it that may appear, should be eradicated, as the commencement of a deadly gangrene, whose ultimate tendency, is, to convert the body politic, into a corrupt and putrid mass."

This is the stuff of which the ideals of freedom and democracy were made in this great land of liberty. We pause on the Passover Festival of Freedom to pay tribute to the molders of free expression and free living and thinking in our great land.

TEXT OF HENRY'S GREAT ORATION IN CAROLINA HOUSE OF DELEGATES IN 1809

I certainly, Mr. Speaker, know not the design of the Declaration of Rights made by the people of this State in the year 1776, if it was not to consecrate certain great and fundamental rights and principles which even the Constitution cannot impair; for the forty-fourth section of the latter instrument declares that the Declaration of Rights ought never to be violated, on any pretense whatever; if there is any apparent difference between the two instruments, they ought, if possible, to be reconciled; but if there is a final repugnance between them, the Declaration of Rights must be considered paramount; for I believe it is to the Constitution, as the Constitution is to law; it controls and directs it absolutely and conclusively. If, then, a belief in the Protestant religion is required by the Constitution, to qualify a man for a seat in this house, and such qualification is dispensed with by the Declaration of Rights, the provision of the Constitution must be altogether inoperative; as the language of the Bill of Rights is, "that all men have a natural and inalienable right to worship Almighty God according to the dictates of their own consciences." It is undoubtedly a natural right, and when it is declared to be an inalienable one by the people in their sovereign and original capacity, any attempt to alienate either by the Constitution or by law, must be vain and fruitless.

It is difficult to conceive how such a provision crept into the Constitution, unless it is from the difficulty the human mind feels in suddenly emancipating itself from fetters by which it has long been enchained: and how adverse it is to the feelings and manners of the people of the present day every gentleman may satisfy himself by glancing at the religious belief of the persons who fill the various offices in this State: there are Presbyterians, Lutherans, Calvinists, Mennonists, Baptists, Trinitarians, and Unitarians. But, as far as my observation extends, there are fewer Protestants, in the strict sense of the word, used by the Constitution, than of any other persuasion; for I suppose that they meant by it, the Protestant religion as established by the law in England.

For other persuasions we see houses of worship in almost every part of the State, but very few of the Protestant; so few, that indeed I fear that the people of this State would for some time remain unrepresented in this house, if that clause of the Constitution is supposed to be in force. So far from believing in the 39 articles, I will venture to assert that a majority of the people never have read them.

If a man should hold religious principles incompatible with the freedom and safety of the state, I do not hesitate to pronounce that he should be excluded from the public councils of the same; and I trust if I know myself, no one would be more ready to aid and assist than myself. But I should really be at a loss to specify any known religious principles which are thus dangerous.

It is surely a question between a man and his Maker, and requires more than human attributes to pronounce which of the numerous sects prevailing in the world is more acceptable to the Deity. If a man fulfills the duties of that religion, which his education or his conscience has pointed to him as the true one, no person, I hold, in this our land of liberty, has a right to arraign him at the bar of any inquisition; and the day, I trust, has long passed, when principles merely speculative were propagated by force; when the sincere and pious were made victims, and the light-minded bribed into hypocrites.

The purest homage man could render to the Almighty was the sacrifice of his passions and the performance of his duties. That the ruler of the universe would receive with equal benignity the various offers of man's adoration, if they proceeded from the heart. Governments only concern the actions and conduct of man, and not his speculative notions. Who among us feels himself so exalted above his fellows as to have a right to dictate to them any mode of belief? Will you bind the conscience in chains, and fasten conviction upon the mind in spite of the conclusions of reason and of those ties and habitudes which are blended with every pulsation of the heart? Are you prepared to plunge at once from the sublime heights of moral legislation into the dark and gloomy caverns of superstitious ignorance? Will you drive from your shores and from the shelter of your Constitution, all who do not lay their oblations on the same altar, observe the same ritual, and subscribe to the same dogmas? If so, which, among the various sects into which we are divided, shall be the favored one?

I should insult the understanding of this House to suppose it possible that they could ever assent to such absurdities; for all know that persecution in all its shapes and modifications, is contrary to the genius of our Government and the spirit of our laws, and that it can never produce any other effect than to render men hypocrites or martyrs.

When Charles V, Emperor of Germany, tired of the cares of government, resigned his crown to his son, he retired to a monastery, where he amused the evening of his life in regulating the movements of watches, endeavoring to make a number keep the same time; but, not being able to make any two go exactly alike, it led him to reflect upon the folly and crimes he had committed, in attempting the impossibility of making men think alike.

Nothing is more easily demonstrated than that the conduct alone is the subject of human laws, and that man ought to suffer civil disqualification for what he does, and not for what he thinks. The mind can receive laws only from Him, of whose divine essence it is a portion; He alone can punish disobedience; for who else can know its movements, or estimate their merits? The religion I profess, inculcates every duty which man owes to his fellow men; it enjoins upon its votaries the practice of every virtue, and the detestation of every vice; it teaches them to hope for the favor of heaven exactly in proportion as their lives have been directed by just, honorable, and beneficent maxims. This, then, gentlemen, is my creed—it was impressed upon my infant mind; it has been the director of my youth, the monitor of my manhood, and will, I trust, be the consolation of my old age. At any rate, Mr. Speaker, I am sure that you cannot see anything in this religion to deprive me of my seat in this House. So far as relates to my life and conduct, the examination of these I submit with cheerfulness to your candid and liberal construction. What may be the religion of him who made this objection against me, or whether he has any religion or not, I am unable to say. I have never considered it my duty to pry into the belief of other Members of this House. If their actions are upright and conduct just, the rest is for their own consideration, not for mine.

I do not seek to make converts to my faith, whatever it may be esteemed in the eyes of my officious friend, nor do I exclude any one from my esteem or friendship, because he and I differ in that respect. The same charity, therefore, it is not unreasonable to expect, will be extended to myself, because in all things that relate to the State and to the duties of civil life, I am bound by the same obligations with my fellow-citizens, nor does any man subscribe more sincerely than myself to the maxim, "whatever ye would that men should do unto you do ye so even unto them, for such is the law and the prophets."

Welfare State

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 29, 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject The Welfare State, delivered by me at the Harvard Law School Forum, Harvard University, Cambridge, Mass., on March 24, last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WELFARE STATE

Mr. Chairman, Mr. Dulles, and friends of the Harvard community, I appreciate the opportunity to be your guest this evening. I do consider it a privilege to be here. Harvard has a high reputation among those of us who hail from the University of Minnesota. I remember that one of my professors was accustomed to repeating in his class a statement by President Lowell, of Harvard. President Lowell, he used to say, claimed there was a great deal of knowledge at Harvard because the freshmen always brought a little bit in and the seniors seldom took any of it out.

The subject of our discussion this evening is the welfare state. Frankly, I am amused to find that it is still an issue. I recall reading not so very long ago that Gov. Thomas E. Dewey delivered a lecture at (if I may be so bold as to mention) Princeton University. The New York Herald Tribune in reporting that lecture, given under the auspices of the Woodrow Wilson School of Public and International Affairs, said, "The battle-frayed welfare-state issue of New York's 1949 Senate campaign was publicly jettisoned here tonight by Gov. Thomas E. Dewey, who said it must have been 'some very clumsy Republican' who tried to pin that label on the Truman administration." Governor Dewey went on to say, "The man who first used the phrase against our present Government did his cause no good, to put it mildly."

Nevertheless, the welfare state remains an issue, and defines clearly the distinction between the Fair Deal program and those who would oppose that program.

Former Supreme Court Justice Stone once advised a group of law students, "If you are strong on the facts but weak on the law, discuss the facts. If you are strong on the law but weak on the facts, discuss the law. If you are weak on the law and the facts, bang the table." These sharp observations of Justice Stone come to mind readily as I observe the Republican Party banging

the table and using the welfare-state slogan. I might also say that I consider the use of the slogan "socialism" by the Republican Party to be in the same category of ghost-haunting and irresponsible politics.

For many years now those of us who call ourselves liberals or New Dealers or Fair Dealers have been accused of trying to change our form of government and our form of society. Our critics say we are trying to create a welfare state or a Socialist state. In my opinion, the use of these slogans is an attempt to confuse the issues and to escape facing the issue. I hope this evening that our debate will raise the level of political discussion so that the issues rather than the slogans—so that the realities rather than the ghosts—are discussed.

I would not deny that there is some merit to the Republican claim that the Fair Deal program seeks the welfare state as an objective. The welfare state is a legitimate objective: one that is perfectly consistent with our traditions and with the current wishes of the American people. A state which is devoted to the welfare of its members, a state which looks upon man and his welfare as an end in itself, is one I support and urge you to support.

The United States began as a welfare state when its Constitution charged the Government with the responsibility of the general welfare of its people. In a sense this was one of the great differences between this new country which was born and the tired nations of Europe in the eighteenth century.

From that day until this day the history of the American development has been a history of providing greater welfare for its people.

As early as 1806 Thomas Jefferson as President of the United States asked Congress to approve a donation of lands for a National Establishment for Education. In a measure I think it is fair to characterize this step as one of the earliest forms of Government subsidy, since land was a clear financial asset. The use of land during that early period played an important role in developing the concept of Government subsidies. Our Government eventually granted 250,000,000 acres of land for various welfare purposes: for education; for wagon roads so that everyone, not only the rich, could travel easily; for canals and levees; for public buildings; for railroads.

Let us not forget too the significant role played by the Homestead Act of 1862 in developing our Nation and in bringing it to a position of power and responsibility in the world. For those who were not able to make an adequate living in the industrial areas of the East, Congress gave away vast areas of public lands to individual families. Today the Federal Government no longer gives land grants. The modern expression of that program, however, is legislation in behalf of unemployment insurance and social security. Today the method of payment is changed. But land or money, income-producing property or income, there is no change in principle.

To provide financial assistance for welfare programs has always been a part of America's tradition. Furthermore, I issue the challenge tonight that it is an American tradition which even the opponents of the welfare state want to preserve. The only question which remains an issue is the question of whose welfare.

As early as 1791 Secretary of the Treasury Alexander Hamilton—the symbol of conservatism—made a plea before the House of Representatives for Federal subsidies to manufacturers.

During the nineteenth century the United States Government gave to the railroads a total of 179,000,000 acres of land.

At this very moment the Reconstruction Finance Corporation and the Export-Import Bank assists private industry financially. I suggest that Mr. Guy Gabrielson, himself one of the leading exponents of reaction in America and spokesman for the Republican Party, is in favor of continuing that form of Government subsidy, since the Carthage Hydrocol Corp., which he heads, has received the total of more than $18,000,000 in loans from the Reconstruction Finance Corporation.

In this connection, I have one further observation to make. I am a member of the Senate Post Office and Civil Service Committee. In our committee is a bill to raise postal rates. The same magazine and newspaper publishers who daily attack the Fair Deal as a welfare state and oppose Government subsidies for the American people are daily in my office and before our committee, insisting the Government postal subsidy to their business be maintained. Last year the newspaper and magazine publishers of America received a subsidy upward of $200,000,000.

Many of these Government subsidies to business are desirable. But if they are desirable to help profits, they are desirable to help people.

Those of us who would advance proposals for welfare legislation do so because we are striving for a more perfect democracy in which the American people through their Government can build a constantly improving society.

Abraham Lincoln said in 1854, "The purpose of government is to do for the people what they cannot do for themselves, or cannot do so well for themselves." That is philosophy which the New Deal and the Fair Deal represent, and which I today represent.

What we strive for can best be put in the phrase "economic democracy." That phrase means a system which preserves the political fabric of democracy and the freedoms traditionally associated with it at the same time as it searches for increased economic freedoms.

A wise man once said, "Hungry stomachs do not make good political advisers." It is our objective to use the great wealth, the greater resources, and the great genius which is ours toward strengthening the establishment of a society free from economic insecurity.

We are moving into the second half of the Twentieth Century, a century which has seen America's productive strength grow beyond the dreams of even the most visionary of our national founders. Today we have the natural resources and the technical knowledge to open up a new vista. President Truman's recent messages to Congress have demonstrated the possibilities that are open to us. Merely by continuing our past rate of growth we can within 5 years increase in production 20 percent, which would mean increasing the average family income by about $1,000 a year. Within our grasp in the next 50 years we can treble today's standard of living which would mean average family incomes of $12,000 a year.

We have an opportunity for the first time in the world's history to establish a society in which every family can have a decent standard of living and in which luxury living will be available to an increasing number of our citizens. It can be a society in which all have enough without unduly limiting the rewards avalable for the more industrious and the more able.

Yet as these possibilities come to mind, there also comes to mind the increasing complexity of our society.

In the not too distant past opportunity was open to all. If a man was willing to make the effort he could have the richest land and the richest resources for the asking.

Today millions of families are dependent on jobs that may disappear tomorrow with no others available. Millions of families live on tiny worn out farms eking out a bare subsistence.

In this the land of plenty—in this the century of progress—we in America still have almost 10,000,000 families, or about one-quarter of our population, trying to get along on less than $2,000 a year.

Here is the crisis we face. Here is why we need a Fair Deal program, working toward an increasing welfare program, working toward greater economic democracy.

There are some who feel that the realization of the dream which is before our eyes cannot be achieved without sacrificing the free enterprise system—and they prefer the free enterprise system.

They are of little faith. I believe in the free enterprise system—I am not a Socialist. No other system could have made the progress we have made in the past 150 years. But the free enterprise system in America as we have seen it has always been one receiving encouragement, stimulation, and protection from Government activity—from Government welfare programs.

Let us not forget that the protective tariff, the darling of big business for so many years, was one of the most flagrant examples of Government interference in behalf of business.

The greatest threat to the free enterprise system in America is not social security, minimum wage, aid to education, rural electrical programs, and the like. The greatest threat to free enterprise in America is growing monopoly in America.

There are those who would have us believe that an unbalanced budget spells the end of free enterprise in America. That is nonsense. I am more concerned about the fact that the Federal Trade Commission recently reported to Congress another half a dozen industries which are dominated by four to six companies making a total of 19 highly concentrated industries out of 26 studied. I am more concerned that three companies control 95.3 percent of the tin cans and other tinware industry; that three companies control 92.1 percent of the linoleum industry; that another three companies control 88.5 percent of the copper smelting and refining industry. In this connection, Anaconda Copper alone controls almost half the capital assets of the whole industry and another quarter of the capital assets of the copper industry is controlled by Kennecott Copper Corp.

I am concerned about the future of the free-enterprise system when I learn from the Federal Trade Commission reports that 113 companies, all with assets of more than $100,000,000, own almost half of the manufacturing plant and equipment in the whole of our United States.

The free-enterprise system is in danger but the danger does not arise from welfare programs. The danger arises from the fact that from 1940 through 1948, according to the Federal Trade Commission, more than 2,450 formerly independent firms in the manufacturing and mining industries alone disappeared as a result of merger and acquisitions. The asset value of these firms amounted to about $5,200,000,000 or nearly 5 percent of the total asset value of our manufacturing corporations in America. Moreover, nearly one-third of the companies merged were absorbed by the very largest corporations, those with assets exceeding $50,000,000.

It is monopoly which threatens a free America. I do not consider unbalanced budgets to be desirable objectives. Unbalanced national budgets however are no indication of the basic health of the American economy. The Republicans would balance the budget but they would do so, I suggest, at the expense of unbalancing the American economy. I remember well the days of the balanced budget under Ogden Mills, Andrew Mellon, and Herbert Hoover, and I remember that those balanced budgets spelled unbalanced family life for millions of Americans. I am more concerned with balancing the daily lives of Americans and their families so that they have full employment; so that they can enjoy the fruits of their labor; so

UNIVERSITY OF MICHIGAN LIBRARIES

that they can participate in the good life which is possible in our society.

If the Republican Party should succeed in its program of opposition to social-welfare legislation, if it should succeed in its efforts to curtail Government expenditures at the expense of the middle- and low-income families of America, if it continues to advocate a favor-the-rich tax program such as the one it enacted when it was in power during the Eightieth Congress and which incidentally was primarily responsible for the unbalanced budget of the last 2 years—the Republican Party will be the threat to free enterprise in America.

I recall the prophetic vision of Theodore Roosevelt when he said, "If socialism ever comes to America the Republican Party will bring it."

I realize this sounds like a facetious statement to many but to me the only real safeguard for America, its freedoms and its economy, is a welfare program for America—a state which is concerned with real protection of free enterprise to the point of controlling monopoly, and a state which protects the American citizen from being governed by private corporations. We must have a government which wants to raise the standard of living for everyone not just increase the wealth of the industrialists and financiers. We must have recognition of a man's right to work at a living wage.

In the dark days of 1938 President Franklin Delano Roosevelt warned the American people. He said: "Democracy has disappeared in several other great nations, not because the people of those nations disliked democracy, but because they had grown tired of unemployment and insecurity. * * * In desperation they chose to sacrifice liberty in the hope of getting something to eat. We in America know that our democratic institutions can be preserved and made to work. But in order to preserve them we need * * * to prove that the practical operation of democratic government is equal to the task of protecting the security of the people."

Yes, this program and these principles which I state have international implications as well. America must prove to the peoples of the world that political democracy and political freedom is not synonomous, as the Communists would have them believe, with industrial anarchy, growing unemployment, and the monopoly state. American democracy must prove that political freedom and political democracy can bring about an economy which is a healthy economy—one which is concerned for the welfare of the people. In fact, political democracy and economic oligarchy are incompatible and there can be no lasting political freedoms so long as economic control is in the hands of the few and so long as economic security is missing in our society.

The philosophy of the welfare state which I have been asked to represent aims to satisfy at least five major objectives:

1. A comprehensive social-insurance program including insurance and provision against the hazards of old age, disability, unemployment, and costs of medical care.

2. Prevention or mitigation of unemployment through public works planning and monetary and fiscal policies.

3. Improvement of the standard of living through such programs as slum clearance and public housing and by providing better facilities and opportunities for education.

4. Limitations on the growth of powerful corporate enterprise with a view to protecting the interests of small business firms and less privileged elements within our society.

5. The extension and guaranty of political liberty and economic opportunity to all persons regardless of race, creed, or national origin.

This issue of welfare state brings a vision to my mind. This vision symbolizes the choice which the American people face. On the one hand are those who would judge America and its accomplishments in terms of balance sheets and accounting records. On the other hand are those who judge America by its concrete accomplishments and by the happiness of its people. Those who oppose the welfare state remind me of the frightened men toting up their balances while the American people continue to go forward, build dams and houses and electric and telephone lines.

In conclusion my friends I make a plea for a rational rather than an emotional approach to the problems of government. I make a plea that we respect the facts.

It is difficult for the American people to understand when Mr. Alfred P. Sloan, Jr., head of the board of General Motors, makes a statement on January 15, 1950: "In recent years economic incentive has been weakened by the ever-increasing take of Government. I fear the effect is beginning to be felt on the economy." And then for General Motors to announce that it had earned $600,000,000 profits in 1949—more than any other company has ever made in the history of American industry. I suggest this is not a rational approach to discussing political issues.

Since the war American big business according to the Federal Trade Commission has been making approximately 20 percent profit on its invested capital after taxes. This compares with about half that figure before the war.

If our political opponents wish to label the program we stand for as a welfare state—then let it be so. Call it what you will—one fact, however, stands out in bold relief. This program has raised the living standards of American people. It has given a modicum of security to all areas of our population. It has provided a floor on living standards. It is furnishing relief from the apprehensions and anxieties which lead men to surrender their freedom. It is providing minimum protection against the hazard of old age and unemployment. It will provide prevention from catastrophe of sickness and disease. It is giving decent shelter to more and more of our people. It is putting a floor under wages. It will provide Federal aid to education so as to give every boy and girl equal educational opportunities so that none will remain the slaves of ignorance.

These programs are strengthening the ring of freedom that centuries of struggle has drawn around western man.

These programs are providing the incentive and will set the example which will undermine totalitarianism wherever it may be.

Electrical Voting Conduits

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. BENNETT of Florida. Mr. Speaker, a resolution has been introduced which would provide for electrical conduits in the floor of the House. It would be a great disservice to future Congresses to fail to make provision that an electrical conduit system be installed when the House floor is reconstructed this summer.

I hope that action will be taken on one of the appropriate resolutions by the House Administration Committee, and that it will soon be reported to the floor.

The following is an editorial from the Richmond Times-Dispatch:

ELECTRICAL VOTING CONDUITS

During the first 2 months of the 1950 session of Congress, we are advised by Editorial Research Reports, 77 roll calls were taken in the House of Representatives. Each of them required at least 30 minutes—and the 38½ hours thus consumed is more than one-fourth of all the hours the House has been in session since January 3. This sorry record of wasted time and lost efficiency prompts us to suggest again that Congress drop one of its horse-and-buggy habits and install electrical voting machines. Every observer is aware that voting conditions in Congress are not exactly comparable to those in the Virginia General Assembly, but the advantages in electrical equipment more than outweigh any inconvenience that might be caused in changing a leisurely and expensive custom. At our own State Capital electrical equipment has become clearly indispensable. The mechanical roll calls, tabulating the vote of 100 men in a matter of seconds, provide permanent records that are fast, accurate, and easy to understand. Indiana's Representative JAMES E. NOLAND has sponsored a fresh resolution aimed at the installation of electric conduit when the House is further remodeled this summer. His resolution may not pass—congressional customs being the ironbound things they are—but surely it deserves wholehearted support from those who believe in conducting legislative business in a businesslike way.

Election of President and Vice President

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an extremely interesting letter by Mr. Charles H. Porter, who is professor of accounting, emeritus, Massachusetts Institute of Technology. Professor Porter in his letter clearly shows a defect in the Coudert proposal for counting electoral votes by districts, which is that it is impossible for a district not to be gerrymandered. Therefore the Lodge-Gossett amendment is the best way to effectuate electoral reform.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAKING EVERY VOTE COUNT—COUDERT ELECTORAL PROPOSAL CALLED RED HERRING TO DELAY REFORM; LODGE-GOSSETT PLAN PRAISED

To the New York Herald Tribune:

In the Herald Tribune of March 19 you printed a communication from Prof. Hugh A. Bone pointing out difficulties in fixing fair district boundaries if the Coudert proposal for presidential elections is adopted. I would go farther and maintain that fair district boundaries are impossible.

Consider a State where 55 percent of the voters are Democrats and 45 percent are Republicans. If the State were so districted that each district contained 55 percent Democrats and 45 percent Republicans, the entire electoral vote of the State would be counted for the Democratic candidate as at present. Whether the Republicans had 45

percent of the popular vote or only 5 percent would not be reflected in the electoral college vote.

Or if an all-wise and completely neutral individual could be found to gerrymander the districts so as to balance exactly the inequities on one side against inequities on the other side, he would also need to be a prophet, because the distribution of voters in 1952 will not duplicate the distribution of voters in 1948. The opinions of some voters change and a new generation of voters replaces those voters who have passed on. What any system of basing the electoral college vote on districts really does is to substitute 480 smaller inequities for the 48 larger inequities of the present system, the total inequity being of the same order of magnitude in either case. The counting of Republican votes in Texas for a Democratic candidate and of Democratic votes in Vermont for a Republican candidate is an inequity.

A fallacy in much of the argument about electoral systems is the assumption that the popular vote will be identical, regardless of the system. This is not the case. There are a substantial number of voters in Louisiana who would vote for a Republican candidate for President if they knew that the system made their votes effective but who do not trouble to vote for President under the present system. I have just spent a month in Louisiana and did not hear a single person say a good word for Truman.

Unless the President can be elected by a total popular vote, the Lodge-Gossett amendment is the only proposal which makes the ballot of every Republican and every Democrat effective.

By making every State a battleground, we would stimulate a greater and much needed interest in politics. The Coudert proposal is a red herring to postpone a vital reform.

CHARLES H. PORTER,
Professor of Accounting Emeritus of Massachusetts Institute of Technology.

TRYON, N. C., *March 21, 1950.*

Death of Dr. Francis T. Spaulding

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1950

Mr. LEHMAN. Mr. President, the people of the State of New York have been saddened by the untimely death of the State commissioner of education, Dr. Francis Trow Spaulding.

Under Dr. Spaulding's direction, the State of New York has pursued an unusually vigorous policy in education. Dr. Spaulding was particularly effective in improving the administration and curricula of our high schools. He was a man of high idealism and of complete integrity. It will be very difficult for any man adequately to fill his place.

I ask unanimous consent to have inserted in the RECORD an editorial which appeared on March 28 in the New York Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FRANCIS TROW SPAULDING

Dr. Spaulding took office less than 4 years ago as State commissioner of education. His death at the age of 53 deprives the State and the Nation of an able and useful leader. He had served the armed forces in an educational capacity in two world wars. Among the high posts he held was that of dean of the Graduate School of Education at Harvard. Many States benefited from his experience and writings. When he became commissioner on July 1, 1946, by unanimous election by the board of regents, he was already familiar with New York State's school system from earlier studies.

During Dr. Spaulding's tenure a general reorganization of the department of education was undertaken. New and higher minimum salaries for public school teachers were mandated by State law, the State University of New York was created, a more vigorous policy of informing the public on educational problems was initiated, and new emphasis was directed to improving the high school. The commissioner was an advocate of generous State financial aid to education, and on occasion came into conflict with other high officials on the extent of such aid. His decisions on several controversial issues reflected a policy of avoiding interference with local school authorities when possible. Confronted with the task of implementing legislative orders under the Feinberg antisubversive law, he issued a memorandum admirable in its concern for safeguarding the conscientious and the innocent.

Dr. Spaulding leaves a vacancy hard to fill. The area of jurisdiction is large and varied, the powers great. The commissioner must be an educator from the top drawer. He must also be a man of courage and highest integrity. The commissioner of education is always on the firing line, both from within and outside the school system.

Mr. Acheson's Ordeal

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Mr. Acheson's Ordeal," which was published in the London Times of yesterday. This editorial was the "leader," as the phrase goes. The London Times leader exercises vast influence throughout the Empire and the world. This editorial substantiates the misgivings recently expressed by Mr. Stimson, the distinguished former Secretary of War and Secretary of State, when he said that the current attacks upon our State Department are creating a feeling abroad which can only hamper the effective conduct of our foreign policy. The London Times observes that the attacks on Mr. Acheson have caused both bewilderment and alarm abroad and have weakened the foreign policy of the United States at a critical moment.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. ACHESON'S ORDEAL

The campaign in the American Congress and press against Mr. Acheson, the United States Secretary of State, has caused both bewilderment and alarm abroad. When Mr. Acheson was chosen to succeed Mr. Marshall the choice was felt to be singularly happy and likely not only to shed luster on the administration but also to provide international leadership of a high order. Mr. Acheson had been closely associated with the unfolding of a creative American foreign policy to meet the challenge presented by communism and the disruption caused by the war. In office he has demonstrated a notable capacity to illuminate the real issues in foreign affairs.

His second speech in California a fortnight ago, for example, made it clear that the United States was prepared at any time to enter into negotiations with the Russians, but insisted that fundamental and far-reaching changes in Russian policy must precede any agreement that would be worth the paper it was written on. It is Mr. Acheson's view that at present agreements are likely only in specific situations where sufficient strength can be mobilized by the democracies to command Russian respect.

Nothing could be farther than this from appeasing Russia. Yet in Congress, Senator WHERRY, the Republican floor leader, has presumed to call Mr. Acheson a "bad security risk" and his resignation is demanded by a number of Republicans on the ground that he is tolerant of Communist sympathizers in his Department. Senator MCCARTHY, a Wisconsin Republican, has not the official backing of his party for his wild and so far quite unproved charges that the presence of untrustworthy officials in the State Department accounts for recent American diplomatic defeats in the Far East. But his party has done nothing to restrain him and there is no doubt that if any single item in Senator MCCARTHY'S barrage of indictments should prove to have some substance, however small, it would be exploited to the full in the autumn elections. It has long been a favorite Republican thesis that the Democrats are "soft" toward communism. It is proof of Mr. Acheson's courage, if not his discretion, that he went out of his way after the conviction of Mr. Alger Hiss, a former State Department official, to announce that, while he abhorred the crime, he would not turn his back upon the man. Such open defiance of the Republican lightning had the effect of leaving Mr. Acheson in temporary political isolation. Unlike some of his predecessors, such as Mr. Hull and Mr. Byrnes, he had no political machine of his own; he has never been a member of the Senate. Democrats who normally would have rallied to his defense took refuge in silence, believing they could not afford to increase their political liabilities in an election year.

This is a critical week in Mr. Acheson's ordeal. The Republicans threaten a parade of anti-Acheson speakers. The President, himself engaged in a tussle with Senator MCCARTHY, has come to the defense of the Secretary of State, denying widespread rumors that he is to be replaced. Mr. Jessup, United States ambassador-at-large and himself accused of an "affinity for Communist causes," has counterattacked, charging Mr. MCCARTHY with a "shocking disregard for the public interest." Senator BENTON, newly appointed by Governor Bowles of Connecticut and a former colleague of Mr. Acheson, is the first Democrat bold enough to take his place by the side of the Secretary of State and the President.

The realization is growing that irresponsible partisan attacks weaken not only the State Department, but the foreign policy of the United States at a critical moment. Mr. Acheson's lack of a constructive policy for Asia, by which they mean his refusal to allow the United States to cling any longer to the sinking ship of Gen. Chiang Kai-shek, is the chief Republican grievance against him. Yet their attacks have robbed the Secretary of State of the time and energy that should have been available for urgent decisions on aid to southeast Asia and for mobilizing support for new approaches to Europe's problems.

UNIVERSITY OF MICHIGAN LIBRARIES

The first stage, to which Mr. Acheson's California speech was directed, is to convince the American public that there are no short cuts in the struggle between democracy and communism. Any illusions on this score sap the will to support the efforts already being made, through the Marshall plan and the Atlantic Pact, and make Congress and the public less inclined for fresh endeavors.

Congress, quite apart from the campaign against the State Department, is struggling to reduce the $5,000,000,000 deficit in the budget, and foreign spending is likely to feel the sharp edge of the pruning shears, for cuts here offend directly no domestic interest. Even the bill for technical assistance to underdeveloped countries is regarded as having doubtful prospects, modest though its scale is. The only increased spending that can be looked for is on defense. Here presidential economy has aroused congressional alarm. The fact-finding mission of Mr. Jessup to the Far East and other reviews of American policy provide the basis, however, for the limited economic and military assistance that Mr. Acheson forecast for the countries of southeast Asia, the details of which are likely to be made known this week. A plan for helping to close the dollar gap in the trading accounts of friends and allies is, as Mr. Webb, the Under Secretary of State, declared last week, probably the largest single contribution which the United States can make toward strengthening the free world. It is a hopeful sign that Senator VANDENBERG, whose illness has crippled the foreign-affairs leadership of the Senate, has suggested the creation of an unpartisan commission to consider solutions of this problem, much as the Harriman committee's investigations laid the foundations of the Marshall plan. As Mr. Webb noted, the difficulty is to stabilize world trade at a sufficiently high level. Recent reductions in the dollar gap are due to the decline in American exports as well as increases in imports; if this went on damage would be done, not only to recovery abroad, but to stability and employment in the United States.

In September there will be another opportunity for the President to use his powers to reduce tariffs further, on manufactured articles as well as raw materials. But the deliberate organization of a higher level of American imports is politically far more difficult than the passage of foreign-aid programs. There is room for expansion; imports now represent a much smaller proportion of the American gross national product than they did in 1929. Yet even the very moderate increases that have already taken place have brought bitter complaints in the watch and textile trades, not only from managements but from trade-unions as well. Neither of the political parties is free from this kind of pressure. It has even been tentatively suggested by both Mr. Acheson and Mr. Hoffman that industries badly affected by foreign competition, in the national interest, might be given Government assistance. This is the kind of proposal that might with advantage be entrusted to the commission which Senator VANDENBERG believes should study the new responsibilities of the world's greatest creditor Nation. With problems of such import and complexity in hand, it is matter for universal concern and disquiet that the conduct of American foreign affairs should be subjected to irresponsible political attacks.

Mr. BENTON. In addition and as a postscript, Mr. President, it is interesting to note that the London Communist Daily Worker of yesterday at the opposite end of the pole in reputability from the London Times, published the following comment:

Short of starting a third world war next week, it is difficult to see how Mr. Dean Acheson, the United States Secretary of State, could manifest more hostility to communism than he has done.

American Foreign Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the RECORD a telegram from George D. Stoddard, former commissioner of education of New York, now president of the University of Illinois, and chairman of the National Commission for the United Nations Educational, Scientific, and Cultural Organization. Dr. Stoddard is world famous as psychologist and educator. His courageous leadership and great contribution to UNESCO and to the United States National Commission for UNESCO are well known not only in this country, but throughout the world. He speaks with authority as well as wisdom on the need for immediate consideration by the Senate of the resolution which I and 12 other Senators submitted a week ago today.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

CHAMPAIGN, ILL., *March 27, 1950.*
Senator WILLIAM S. BENTON,
Senate Office Building:

Have now read in detail your proposed six-point resolution and supporting speech of March 22. Congratulations on your logical analysis, courage, and imagination. It restores to the American people what they have relied upon in all crisis from Revolutionary War onward, namely faith in the power of ideas, the power of ethical principles. Arms we must have but military preparedness alone is not enough. We need plans for banding together like-minded people in defense of freedom. We need action, programs based on such plans. Your resolution shows the way and the relative cost is small. This is the true answer to communism.

GEORGE D. STODDARD,
President, University of Illinois.

Death of Francis T. Spaulding

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Francis T. Spaulding," published in the New York Herald Tribune on Tuesday, March 28, 1950. In his untimely death the State of New York and the United States have lost a distinguished public servant, a great educator, and a great American.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FRANCIS T. SPAULDING

Francis T. Spaulding, State commissioner of education since 1946, was a career educator of marked attainments. His sudden death at age 53 is a serious loss to the State. New York's education system is intricate and many-faceted. The commissioner is the executive head, named to carry out policies laid down by the board of regents to guide all schools in the State from the elementary to university and adult education levels; he is also president of that vague entity, the University of the State of New York. Direction is exercised through the regents' powers to inspect and require reports, to conduct entrance examinations, to confer and evaluate degrees, and to incorporate educational institutions.

Before the State university was established, the regents administered upward of 30 teachers, and technical colleges. Dr. Spaulding himself served on the Young commission, which drew up the university plans, and had undertaken a reorganization of his department following the transfer of actual administration of these colleges to the university trustees. The department is called upon to interpret the State law in knotty personnel cases. It fell to the commissioner, as the executive of the board of regents, to make the regulations for carrying out the Feinberg law to deal with subversive teachers.

Dr. Spaulding, formerly dean of education at Harvard, served with distinction during the war as head of the Armed Forces Institute, organizing educational opportunities wherever United States military forces were stationed. He has fought for adequate appropriations for the schools and for construction to meet future needs. Commissioner Spaulding's expert knowledge of the complexities of New York's education system and his level-headedness in handling them will be hard to duplicate.

American Dairy Association Award to the Great Atlantic & Pacific Tea Co.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1950

Mr. WILEY. Mr. President, I was glad to note in the newspapers the news that the American Dairy Association representing 5,000,000 dairy farmers has presented its annual distinguished service award to the Great Atlantic & Pacific Tea Co. The news of this award supplements information which has come to me from many dairy leaders and organizations in Wisconsin, pointing out their excellent experiences with the A. & P. as a purchaser of a tremendous amount of wholesome, nutritious dairy products.

In these days when there is so much criticism in so many quarters against so many companies and groups, it is heart-warming to note evidence of praise and appreciation of notable contributions rendered.

The American Dairy Association is, of course, tremendously well represented in America's dairyland. Our Wisconsin Dairy Association has always been to the

fore whenever an issue was involved relating to the income, the welfare, of the 175,000 farms of the Badger State.

I ask unanimous consent that the text of a news release describing the dairy award to the A. & P. be printed in the RECORD.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

AMERICAN DAIRY ASSOCIATION SERVICE AWARD VOTED TO A. & P.—CONTRIBUTION TO BETTER LIVING WINS CITATION

CHICAGO, ILL., March 27.—The American Dairy Association, representing 5,000,000 dairy farmers, presented its annual distinguished service award to the Great Atlantic & Pacific Tea Co., here tonight.

The award, made at the eleventh annual ADA banquet at the Morrison Hotel, was voted to the 91-year-old food chain for "advancing the Nation toward an ever better standard of living." George W. Diehl, director of A. & P.'s national butter and cheese department, received the plaque on behalf of the company.

The citation was presented by Owen M. Richards, manager of the dairy association, who said the award was a means of recognizing the friends of the dairy industry who are joined with the dairy farmers in providing an ever-improving diet and nutrition for the American people.

The award read as follows:

"A. & P. food stores long since has proved its worthiness to the American people in making available good food and good service at low prices, with its operating efficiency a hallmark of the American way of initiative and enterprise.

"A. & P. food stores, in advancing the Nation toward an ever better standard of living, has always stressed the wider use of the good things of life, including the foods produced on the Nation's millions of dairy farms—the milk, butter, cheese, evaporated and dry milk—all the dairy products that are such good foods for a better life for all mankind.

"For these contributions to the welfare of the Nation and its dairy farmers, the American Dairy Association, with its membership in 41 States producing more than 90 percent of the Nation's milk supply, is happy and proud to present this distinguished service award for 1950 to A. & P. food stores," the citation concluded.

During the past year, A. & P. cooperated with the dairy farmers all over the country in finding a larger market for their products.

GI Educational and Training Program

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by a veteran from my district. There has been so much talk and publicity concerning abuses and rackets under the GI educational and training program that at times the great amount of good accomplished has been overshadowed and not fully appreciated. The veteran's letter expresses his gratitude for the benefits which he has received. The letter speaks for itself. It presents a picture in striking contrast to the one which is most frequently publicized. I desire to pass it on to my colleagues.

The letter follows:

CHIEF, EDUCATIONAL AND TRAINING,
VETERANS' ADMINISTRATION REGIONAL OFFICE,
Roanoke, Va.

DEAR SIR: With the hope that this letter might in some way facilitate the closing of my scholastic records at your office, it is with great pleasure that I inform you of the successful completion of my legal training at the T. C. Williams Law School of the University of Richmond. My course ended as of February 6, 1950, and on that date I was recommended for bachelor of laws degree to be given in June. Thus, I am no longer entitled to subsistence or tuition from the VA.

At this time I should like to express my thanks and appreciation to the VA and United States Government for the splendid educational opportunities which have been afforded me. But for the program your office administers, and the finest Government in the world, it would have been exceedingly difficult, if not impossible, for hopes to have become realized. A Government never owes its citizens for the services they render as such, and with this fact in mind, it is even now difficult to realize that one nation has seen fit to do so much for so many.

For your information if necessary, my company number is C-9421237. I remain

Respectfully,

WALLACE B. STOCKDON.

Wasteful Federal Construction Methods

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

CALIFORNIA FARM BUREAU FEDERATION,
Berkeley, Calif., March 27, 1950.

Hon. BEN JENSEN,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: There is enclosed a copy of a letter recently addressed to President Truman by Mr. Ray B. Wiser, president of the California Farm Bureau Federation, dealing with the wasteful construction methods of the Bureau of Reclamation. As you well know, this is not the only example of the senseless squandering propensities of this agency but I thought it would serve the public interest to record with you one more item of that nature. This is the reason I am bothering you about troubles in California when I know you probably have plenty of your own.

It is extremely galling to encounter such costly bureaucratic oppression in connection with a facility which in itself, from a public interest standpoint, can never serve any useful purpose and can only be a financial drain on the entire project and an unnecessary charge against the water users supposed to benefit from the project.

If there is any way you can help correct this situation you will be rendering a signal service not only to the Federal Treasury but also to the unfortunate victims of Bureau caprice and oppression directly involved in this complaint.

Very truly yours,

EDSON ABEL,
Assistant Director,
Public Utilities Department.

CALIFORNIA FARM BUREAU FEDERATION,
Berkeley, Calif., March 10, 1950.

Hon. HARRY S. TRUMAN,
President of the United States, White House, Washington, D. C.

DEAR MR. PRESIDENT: This letter is addressed to you on account of the urgency of the complaint which it presents. This complaint was filed with the Bureau of Reclamation officials of region II to no avail. A letter was addressed to Mr. Richard L. Boke, under date of February 7, 1950. He replied under date of February 9, 1950, to the effect that he hoped to "be able to give * * * a full reply within a few days." To date he has made no reply but on February 16, 1950, the Government filed a condemnation action covering the properties involved in this complaint. Perhaps this is the reply he had in mind. In any event, he has never replied. On February 20, 1950, a letter was received from Mr. Carl H. Kadie, Jr., district manager. It evaded the real issues which are the downright squandering and sheer waste of public moneys and arbitrary, unnecessary, and unwarranted oppression of citizens involved in the construction of high-voltage transmission lines on the west side of the Sacramento Valley in the Central Valley project.

A map is attached to give you a clear picture of what the Bureau of Reclamation proposes to do. In building the so-called west side transmission line of the Central Valley project, the Bureau has to construct a line between the two points marked with a red "X." Instead of going in a straight line as indicated by the broken line on the map and traversing what is mostly grazing land of little comparative value, it insists on taking an out-of-line route into intensively developed agricultural land.

The route which it insists on taking is shown on map and takes a right-angle jog at its upper end into good, irrigable land which it traverses for a little over 20 miles, passes into the hills for some 15 miles, and then debouches into intensively cultivated lands for the remainder of the distance. On the other hand, by selecting the direct route, it would shorten the over-all length of the line by 3 miles and would traverse for the most part only low, hilly grazing lands which are not now and never will be susceptible of intensive agriculture.

The map attached is a section of an official publication of the United States Department of Agriculture delineating the irrigated and unirrigated areas of California. The areas in lighter shades are unirrigated and here are mainly grazing lands. The areas of darker shade are irrigated and consequently more intensively developed. No adequate reason has been given by the Bureau of Reclamation for this unnecessary lengthening of the transmission line with its consequent and unnecessary invasion of highly developed agricultural lands.

The arbitrary action complained of is aggravated by the fact that actually the forcing of this right-of-way as proposed effectively takes out of production a much greater acreage than the Bureau of Reclamation has told anybody about. The land affected is peculiarly adapted to rice culture and is not much good for anything else. Economic rice culture, whether on 10-acre plots or large acreages, requires the use of airplanes for planting, fertilizing, and other cultural practices of a preharvest nature. Farmers not using airplanes are at a complete disadvantage which cannot be overcome.

The route selected by the Bureau of Reclamation parallels that of the Pacific Gas & Electric Co. high-voltage transmission lines 1,400 feet to the east. The areas between the two transmission lines cannot be served by airplanes because of the danger to the plane operators. This is the statement of plane operators customarily working in that area. As a result of this complication, instead of the 15 acres per mile which the Bureau estimates will be taken out of serv-

UNIVERSITY OF MICHIGAN LIBRARIES

ice, nearly 200 acres per mile is affected in that manner. The severance and loss-of-use damages on this route will be far in excess of any estimate made by the Bureau.

According to the estimates of the Bureau of Reclamation, the 12 miles or more of right-of-way in the more intensively developed section are to cost the Federal Treasury $50,000. This on the basis that 193.5 acres are to be taken. This is a gross underestimate, as that many acres per mile will be taken out of production and the value of the property interests to be taken in this one stretch will be more in the order of $500,000 rather than the mere $50,000 estimated by the Bureau.

As stated before, this matter was taken up with the Bureau of Reclamation officials here. They pretended to make a study of the direct route but we are quite skeptical of their good faith in the matter as we know that they had already advised the Department of Justice the route they had selected for condemnation purposes and had already let a contract for the steel towers to be used in constructing the line. In fact, they had advertised for these towers even before the authorization legislation had been approved by the Congress.

The over-all result of this arbitrary abuse of its powers by the Bureau is that the economy of a highly developed agricultural area is disrupted and the Federal Treasury is mulcted to the tune of over a half million dollars. This may be only peanuts in these lavish days but if it can be saved we submit it should.

We respectfully request that you have an investigation made of this profligate waste of Federal funds when the need for economy is so great. Such an investigation will convince you that the direct line route is the one which is most consistent with the public interest, and the one which the Bureau of Reclamation should be required to follow.

Very truly yours,

RAY B. WISER,
President.

MARCH 29, 1950.

Mr. EDSON ABEL,
Assistant Director,
California Farm Bureau Federation,
Berkeley, Calif.

DEAR MR. ABEL: I am pleased to acknowledge your letter of March 27 along with copy of Mr. Wiser's letter to President Truman.

I am sure you know that for several years Congress defeated the building of the west side line, because of the fact that this huge expenditure of the American peoples' tax dollars could by no stretch of the imagination be justified. However, Congress did make the initial appropriation for this line last year, since it was a part and parcel of the President's Federal socialized electric power program, which in due time is designed to take over all electric power in America, as has already been done in England.

I have decided to place your letter and this reply in the CONGRESSIONAL RECORD for all to read, in the hope that the American people and their Congress will awaken to the dangers before it is too late.

Sincerely yours,

BEN F. JENSEN.

Death of Laurence Steinhardt

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1950

Mr. LEHMAN. Mr. President, the Nation was shocked yesterday to learn of the tragic and untimely death of our Ambassador to Canada, Mr. Laurence Steinhardt.

For many years I was honored by Laurence Steinhardt's friendship. I knew him as a successful young lawyer and later as a highly respected and beloved member of the diplomatic corps. He served his country with great distinction in six top diplomatic posts. He brought to each one of them indefatigable effort, firmness, tact, and courage. His untimely passing is a great loss not only to his family and host of friends, but to the foreign service in which he served so long and so usefully.

Mr. President, I ask unanimous consent to insert in the RECORD editorials carried this morning in the New York Times and the New York Herald Tribune.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of March 29, 1950]

LAURENCE STEINHARDT

At 57, Laurence Steinhardt was the most widely experienced diplomat in the service of the American people. He had held no fewer than six top-ranking posts as Ambassador, and in all but the last of these he was confronted with special circumstances which were a test of his ability and good judgment. He was our representative in Sweden and then Peru when these nations were struggling to recover from an international depression which had dealt them particularly heavy blows. He was our Ambassador in Russia in the days when Molotov and Ribbentrop were negotiating secretly to divide the spoils of a European war. He was our Ambassador in Turkey when Soviet pressure was brought to bear on that country in the maneuver which led to the formulation of the Truman doctrine. He was our Ambassador to Czechoslovakia when Communist carpetbaggers took over control of that nation under the protection of Russian military power. Only in his last post, as Ambassador to Canada, did he find relief from particularly harassing problems and a task as pleasant as that of drawing still more firmly together the already close relations of two good neighbors.

This remarkably varied experience made Mr. Steinhardt one of the most valued members of the American diplomatic service. It gave him an opporunity to bring into full play his natural alertness, courage, and vigor. His tragic death yesterday in an accident along the well-traveled air road from Ottawa to Washington is a cause of deep sorrow to his many friends and a real loss to his country.

[From the New York Herald Tribune of March 29, 1950]

LAURENCE A. STEINHARDT

Laurence A. Steinhardt entered upon diplomacy after a successful career in the law, bringing with him a conviction that most differences can be settled by understanding and mediation. His time of service was cast amid great events, and the posts he held called him to places of utmost stress. Moscow, Ankara, and Prague tell by themselves a story of forces in delicate balance and issues of fateful import. In Russia before the last war Mr. Steinhardt saw and communicated to his Government the coming of the Hitler-Stalin pact; a year later he was able to advise of the complete reversal which was to bring Germany and Russia into deadly grapple. Turkey, his next post, was crucial in determining our prestige throughout the Near East; and Czechoslovakia, where Mr. Steinhardt went in 1945, was an ill-fated testing ground of democracy's ability to survive within the Communist orbit.

His most recent post was of a different kind. Our relations with Canada have moved in stable channels over the years, and Mr. Steinhardt's distinction and experience served as a witness to the importance we attach to Canada's friendship rather than as qualities necessary to the solution of vexing problems. His death, in an airplane accident in the midst of his duties, comes as a shock to the country he had represented with single-mindedness and skill.

Reduction in VA Hospitals

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of March 29, 1950:

SHARP VA PERSONNEL REDUCTIONS CALLED BLOW TO MEDICAL MORALE—SOME HOSPITAL BEDS MAY HAVE TO BE CLOSED AND BACKLOGS AT MENTAL CLINICS WILL INCREASE

(By George Beveridge)

Sharp personnel reductions are expected to cut seriously into the Veterans' Administration's vast medical program, and already have dealt "a terrific blow" to morale of medical leaders supporting it, the Star learned today.

About 7,800 jobs are slated to be lopped off the VA pay roll April 10.

More than 4,800 of them, including some doctors, nurses, and dentists, will be cut from the agency's often-praised medical service. In addition, it was reported:

1. VA officials knew 9 months ago they were exceeding medical personnel provided by the 1950 budget, but on instructions from Veterans' Administrator Gray did not cut jobs off.

2. In the cut-back next month, some hospital beds may have to be closed.

3. Backlogs of patients at mental hygiene clinics will increase, and some veterans may have to be routed to neuropsychiatric hospitals for treatment at increased expense.

The cuts, it was learned, have raised concern at VA over whether present standards of medical care can be maintained.

Asked about specific effects, Dr. Paul B. Magnuson, medical director, said medical divisions now are reviewing tentative cuts in terms of beds and patients. Preliminary estimates for the different divisions, he added, may be adjusted.

"It's hard to tell at this time just what the effect will be on the whole program," he said. "But it looks bad."

Dr. Magnuson said one of his greatest concerns is the terrible reaction coming in from the non-VA doctors who have helped develop the agency's medical training and treatment program throughout the country.

"There is the feeling among the medical profession," he declared, "that you can't trust the Government because there's no assurance of security or continuity of programs."

An official who asked that his name not be used said the abrupt cut-back announcement has the effect of shoving it down the profession's throat.

"This sort of squeeze," he added, "throws us out of balance with some of their projects."

He said the blow could have been eased last fall, if VA had dropped some medical workers and refused to replace most of those who left jobs later in the year. At that time, he said the medical department was about 3,000 personnel above its budget limits.

General Gray is reported to have told medical officials to keep employees if they were needed.

PLANNED TO AVOID FIRINGS

There were rumors last September of a sizable personnel cut, but VA officially announced its intention then to cut down on expenses without resorting to firings.

Officials stressed that Congress provided personnel they asked for this year, but that VA personnel requests had been trimmed sharply by the Budget Bureau.

Actually, they explained, they received more medical personnel than in fiscal 1949. But the additional workers were earmarked to staff new hospitals in VA's expansion program.

The April 10 cut of more than 4,800 medical personnel will save only about $2,500,000, it was reported. Because most workers have accrued annual leave, many will be carried on the rolls until the early part of May.

Present budget estimates for the year starting July 1, moreover, would not replace personnel lost by the 4,800 cut, officials said.

"Me-Tooism" Socialism Loses in England Just As It Lost in United States of America

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I am inserting an article which appeared in the Buffalo Evening News of March 3, 1950:

"ME-TOOISM" SOCIALISM LOSES IN ENGLAND JUST AS IT LOST IN UNITED STATES OF AMERICA

After sleeping on the subject a few nights, one gets a clearer understanding of the reasons for the defeat of the Conservatives or victory of the Socialists, however, you prefer it, in the British parliamentary election.

There were those who forecast the result before the votes were counted, based upon the me-too campaign of Winston Churchill and his running mates. Some of those who did so were unkind enough to make a comparison between the British election campaign and an earlier contest between Messrs. Truman and Dewey in which the result was most unexpected.

There still are lots of folks who say that in order to win a conservative victory, or at least win a victory that will call for a halt on the spending, deficits and other policies that are watering down the purchasing value of the United States dollar, you have to go along with most of what the New Deal-Fair Deal boys promise.

They proclaim this in spite of the concern felt in this country not only for security but for the value of the money in which we are paid for our day's labors and to buy our daily bread. They say it in spite of the fact that the women of America, like those of Australia and New Zealand, simply are waiting for a leader to tell them the plain and blunt truth about our political and economic fallacies, which mean that the Government buys potatoes for dollars and sells them back to the grower for cents, even while there is need in the land.

"What has all this to do with the British election?" you may be asking by this time, and it is just this: If Winston Churchill and his party leaders had followed the lesson taught by the Australian election, they would have stopped shilly-shallying. They would, in that admirable British term, have faced up to it, and told the naked truth rather than have attempted to buy the election with nice promises that nobody was going to be disturbed in his enjoyment of the pap which the Socialists had handed out at the expense of the solvency of what once was mighty Britannia.

This ceases to be theory; it readily can be documented. Early in January the News published a splendid series of articles on the reasons for the repudiation of the Socialist Governments in Australia and New Zealand. Written by Morley Cassidy, they left no doubt of the strategy employed by the opposition to the Socialists. His dispatch, appearing in the News January 16, told that there was money in every pocket; wages were high and everybody had a job, but the people were disturbed about the Socialist tendencies, and in fighting them, Mr. Cassidy said:

"Seldom has any party, anywhere, stated its purposes more clearly and with less mumbo-jumbo and 'bait' to unthinking voters, than the combined Liberal and Country Parties in the election just past.

"Every voter was told, in the firmest possible language, that a vote for the Liberty-Country Party ticket would be a vote for free enterprise against the Socialist state. * * *

"He would be voting for a firmer hand in dealing with unjustified strikes which have crippled Australian industry. * * * He would be voting finally to 'desocialize' much that has been done in the past 8 years—to fight side by side with the banks—imagine—in repealing the legislation aimed at creating a state banking monopoly; to restore competition between national and private air lines and shipping companies; to wipe out the government monopoly in FM broadcasting and television."

The closeness of the result in Britain suggests that Mr. Churchill, had he followed such a course based upon sound principle and statesmanlike leadership, might have won another victory instead, perchance, of snatching defeat out of the mouth of victory. Indeed, does not the decision of Prime Minister Attlee to call a halt on nationalization strongly indicate that the Conservatives could have won the election if they had boldly faced up to the issue? Mr. Churchill never lacked the courage to stand up to the Nazis, but somehow he lacked the sagacity to sense that the British people in this time of crisis might readily have responded to candor.

Neglected City Folk

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial titled "Neglected City Folk" which appeared in the Boston Sunday Post of March 26, 1950. This editorial points out that the great forgotten class in America is the middle-income families whose problems have been almost wholly overlooked. The editorial calls attention to the inconsistency of those Members of Congress who label as socialistic and inflationary a modest proposal in behalf of our city dwellers and at the same time advocate much more expensive programs for other groups of citizens.

NEGLECTED CITY FOLK

In closing debate on the bill that would have provided for low-interest FHA loans to cooperative middle-income groups seeking cheaper housing, Representative JOHN W. MCCORMACK put his finger on one of the greatest weaknesses of the Republican Party—failure to do anything for the city-dwelling middle-income group.

One paragraph of his speech in the Congress illuminates this neglect of the sound core of any political movement—the middle income—middle-class individual. He said: "When it comes to something for the middle class and the middle-income group in this country, when it comes to trying to put through a cooperative plan so that they can build little homes for themselves, then it is socialism—it is dangerous—then it is everything that is bad."

The measure under consideration contained no subsidy—even as the question of increasing the borrowing capacity of Commodity Credit Corporation by $2,000,000,000 impended. The difference was that the CCC measure was for farmers—and the cooperative-housing-loan measure was for city dwellers.

Plans for Southeast Asia

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New York Times of March 27, 1950, entitled "Plans for Southeast Asia":

PLANS FOR SOUTHEAST ASIA

With the appearance of roving Ambassador Jessup before congressional committees this week after his extensive Asiatic trip, we should have some concrete suggestions as to how our help can be effectively given to the threatened areas of southeast Asia. The Secretary of State has already declared that it will be our policy to furnish such assistance subject to the limitations of our ability and the ability of the recipients to profit by our aid. The framework of that limitation is large and there should be room for forthright and substantial action.

Dr. Jessup will certainly be expected to state, also, that this action should be prompt. The situation in some areas is critical and delay at this stage may mean the loss of the chance to do a job that needs doing. Fortunately, not all the plans have to wait for some master program in strategy. In the case of Burma, for example, the British commonwealths have already moved to put badly needed resources at the disposal of the hard-pressed government. It should be a relatively simple matter for the United States to associate itself with that action, either in adding to the amount to be given or in making it easier for the commonwealths to make their resources available.

UNIVERSITY OF MICHIGAN LIBRARIES

The United States has funds already appropriated that can be used for many purposes in the critical area. There is a large residue of the economic-aid funds. There is the President's discretionary fund. These can be put into action now. Moreover, there is legislation already before Congress, such as aid for Korea and further funds for the Philippines, that can be adopted speedily. Surveys are now being made that will make the beginning of the point 4 program easier and quicker as soon as it receives the green light—all the more reason why Congress should act affirmatively and speedily.

It is recognized that there is one grave danger to all of southeast Asia, but the ways of meeting it can and should be varied and flexible. Indochina, for example, needs military aid right now; it should be given and then backed up with a long-range program of assistance in the development of the economy of the country, the amelioration of living conditions, and the raising of standards. The Philippines need a prompt strengthening of their military position and a program of investment for profit and advancement. Indonesia needs further credit for the rehabilitation of production and trade, and we can support them. Some changes in our stock-piling program would have an instantly helpful effect in Malaya, and they should be studied at once.

Many persons in this country have been critical of our past policies because of their hesitation and overcaution. Likewise, many of our friends in Asia are timid and worried because of the fear that we will not act with our full forces and act in time. Those two factors in our present relative weakness can be overcome by bold and imaginative decisions. We can inspire confidence by regaining it ourselves. We do not have to wait for a Marshall plan for Asia or for a new federation, or for a defensive alliance.

The Hat Union

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, March 29, 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the New York Times on March 28 on the retirement of Mr. Max Zaritsky as president of the United Hatters, Cap, and Millinery Workers Union of the A. F. of L., and the nomination of Mr. Alex Rose to succeed Mr. Zaritsky.

My good friend, Max Zaritsky, has been an able and enlightened leader who not only won substantial gains for the members of his union, but who demonstrated a rare understanding of the economic and political complexities of the times.

His union has stood firm against reactionary forces of both the left and the right, and has long recognized that the interests of American labor and those of the American public are inseparable.

I am very happy to know that Mr. Zaritsky's post as president of the union will be filled by Mr. Alex Rose, whose talent and courage are so well known both in the labor movement and throughout the State of New York. I know that the fine tradition of the hatters' union will be preserved under the guidance and leadership of Mr. Rose.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HAT UNION

The rise of mammoth unions in the mass-production industries has taken the spotlight away from such long-established organizations as the United Hatters, Cap, and Millinery Workers International Union. There are single locals in the automobile and steel unions that have more members than all the hat locals put together. Even in the needle trades the United Hatters is dwarfed by its "big brothers," the International Ladies' Garment Workers Union and the Amalgamated Clothing Workers of America. But the salutary influence of the hat union on the American labor movement is not measured by its size. Here is an organization, once steeped in the traditions of revolutionary socialism, that was among the first to recognize that the welfare of its members depended on the well-being of the industry in which they worked. It fought off the encroachment of Communists and underworld elements. It stamped out jurisdictional strife in its industry. It tried unsuccessfully to ward off the split between the AFL and the CIO.

Max Zaritsky, who is about to retire from the union presidency on reaching the age of 65, was a principal architect of the enlightened policies that have made the hatters a force for good in the country's social and economic life. Alex Rose, who has been nominated by the union's executive board to succeed Mr. Zaritsky, has been equally conspicuous in his efforts to promote industrial peace. Mr. Rose is even better known to the public for his mobilization of labor's political forces in municipal, State, and national elections. He refused to continue in the American Labor Party when he and others of its founders were convinced that it had been captured by Communists. We have not always seen eye to eye with Mr. Rose in the candidates he has supported as a leader in the Liberal Party, but we respect him as a sincere American whose views are rooted in a recognition that labor is part of the community and must assume the responsibilities, as well as the benefits, that go with such a position.

Rural Electrification Program

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. CANNON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am including an address delivered by Hon. Claude R. Wickard, Administrator of the Rural Electrification Administration, at the annual meeting of the National Rural Cooperative Association, in Chicago, March 6, 1950.

In this connection, Mr. Speaker, may I add that Administrator Wickard is giving the department one of the ablest and most effective administrations in the history of the service.

His administration has been marked by strict adherence to the letter of the law in the interpretation of the statutory duties and functions of his agency and by exceptional service to the consuming public in whose behalf the agency operates.

He has established a record for efficiency which might well be taken as a model by both public and private executives.

Mr. Wickard's address follows:

TODAY'S CHALLENGE TO RURAL ELECTRIFICATION

It is a privilege and a pleasure to come again before your great convention to tell you of the accomplishments of the past year and to discuss with you plans for future years.

During the last year the REA program reached new and greater heights of accomplishments. Over a half million consumers were added to REA lines. The lines which were energized on REA systems last year would circle the earth seven times. During recent weeks the three millionth consumer received REA service. REA passed the $2,000,000,000 loan mark shortly after the first of this year. Today 83 percent of the farms in the country have central station electric service.

In my estimation, the REA program also reached a new height in popularity and acclaim during the last year. This occurred despite strong and concerted attacks by its enemies. Some of these attacks are as skillful as they are malicious. They are perpetrated by organizations which operate at every level. They lobby in Washington and in the halls of State legislatures. They talk and appeal to local business and civic groups. Their propaganda is carried by newspaper advertisements and radio commentators, endeavoring to leave the impression that the work you are doing is unethical, unfair, and even un-American.

I am glad to see a meeting of this kind held in a large city like Chicago, in order that city people and the metropolitan press may see at first hand the character and the earnestness of you people who are responsible for this program, which means so much to those who produce the food, the fiber, and—yes, the new blood—without all of which this great city could not exist.

It is not necessary for me to take the time of you people, who come from the rural areas, to tell you how much electricity means to your health, happiness, and prosperity. If the people in the cities would stop to think how deplorable it would be if they had to do without electric lights and electric power in their homes and offices and factories, and how chaotic it would be to have to do without essential things like running water and refrigeration, they might have a better idea of what electricity means to people in rural communities. City people don't know that you are receiving electric service through a program which is founded on the soundest of governmental theories, and which is being developed in keeping with the very best traditions of democracy, and within the framework of our private competitive enterprise system. It is of vital importance to the future of the program that the American people understand this fact.

The responsibility for getting this fact recognized and fully understood rests squarely on you, the electric co-op leaders in the Nation's rural communities. Unless you are convinced of it yourselves, you cannot provide the leadership needed to assure that this vast program will continue to develop along sound lines and with sincere adherence to the democratic process on which our Nation's greatness is based. If we fail to understand the REA pattern clearly, or if we fail to do our utmost to have the rural people understand it and make it work, the program will fail to achieve the full benefits it should hold for rural people and for the Nation as a whole. In fact, failure to get recognition and acceptance of the principles underlying the REA program might well mean the end of the program, something disastrous to the welfare of rural America and detrimental to the national welfare.

The relationship between the Government, as represented by REA, and the organizations of rural people which you represent, is founded upon a very sound governmental principle stated by Abraham Lincoln. Lincoln's theory of the function of government was that it should provide things which people cannot provide for themselves, but which are essential to their welfare and to the Nation's welfare.

As you know, after half a century of urban electric power development, about 90 percent of our farm families were still denied electric service by the commercial power industry. Only then did the Government step in to help rural people obtain this service through their own efforts by extending credit and by providing a minimum of technical assistance which they could not obtain in any other practical manner.

I want to emphasize that the financial aid was in the form of credit—not in the form of a dole or grant. Farm people believe in paying their debts and they are paying back their rural electrification loans in a most laudable manner. You leaders, beginning with little or no experience in electrification, have made a great financial success of an operation which the spokesmen for the commercial power companies said was sure to fail. Today, the percentage of delinquency on REA loans amounts to only four-tenths of 1 percent, the lowest in any recent year. You have now paid back into the Federal Government almost $225,000,000 in principal and interest. You have assumed the burdens of management and you have provided your own technical assistance in ever-increasing amounts. This is proven by the fact that despite the most rapid expansion of this great program since the end of World War II, the number of REA employees has increased only slightly. This is again proof of the fact that the Government is extending only the help which rural people cannot themselves provide.

There is a great deal of discussion today about how much public ownership is necessary or essential. I believe that Lincoln's theory on the function of government can be used very well as a test on this question. All of us must accept the fact that government ownership of some things is necessary and proper. In the early history of this country there was considerable difference of opinion as to whether the mail should be government or privately operated. I believe that everyone will agree that it was wise to adopt Benjamin Franklin's advice in this matter.

In early years many of the roads of this country were privately owned. I can well remember the old toll road which traversed my State of Indiana from one end to the other. I lived near that road, and I know how much better it was when the ownership was taken out of private hands.

I give these two examples to indicate that there is need of public ownership of some things which are essential to our national welfare. It is sound policy for the Government to own and operate those facilities which cannot be provided satisfactorily through private ownership and operation.

Let us take the development of our rivers. Private capital could never be expected to do the things that have been done in the Tennessee Valley, the Columbia Valley, and on the Colorado, Missouri, and rivers of the near Southwest, and the things that ought to be done on other great rivers, particularly on the St. Lawrence. It is too bad that big corporations have opposed, and are continuing to oppose these developments by the Federal Government which are so essential to our national welfare. I would like to remind the people of Chicago, Detroit, and other large industrial cities in this area, that their industrial future depends on the development of the St. Lawrence.

It is most vital that the development of these rivers by the Federal Government be for the benefit of the public. For instance, the electric power from these developments should be distributed widely, at low cost, and free from restrictions of monopoly. This does not mean that the Federal Government operation must go so far as the selling of power at retail. I believe the ideal arrangement, both from the standpoint of sound Government practice and public benefit is exemplified in the loans which REA has made during the last year to the privately owned free-enterprise REA cooperatives of this country to put in the facilities which will enable their patrons to receive full benefit from the power developed by the Federal Government on some of these great rivers. I refer to the generation and transmission loans which we have made to help REA co-ops get the full benefit of the preference which they have under the Flood Control Act of 1944 for the hydroelectric power that has been or will be developed from the multipurpose dams on the Missouri, on the Roanoke, on the Red, the Brazos, the Arkansas, the White, and other great rivers. No one can deny that REA cooperatives do have preference under the law. However, REA co-ops can't serve their members with preference. In other words, they have to use their preference to get the power.

Now, all these dams have two kinds of power. One is firm—the kind or the amount generated all the time. Another kind or amount, because of uneven stream flow, is available only a part of the time even though it may be most of the time. It is much cheaper. It is called secondary. If someone has a fuel plant whose power can be used when this secondary power is not available he can make this secondary power firm power. If the commercial power companies firm up the secondary power they get the benefit. If the cooperatives have the fuel plants, and the required transmission lines are available, they benefit. They are the ones under the law which should benefit. That is why we have been making loans for the necessary fuel plants and transmission lines.

The benefits which the REA members will receive through these generation and transmission loans mean that the cooperatives involved will have an assurance of more power delivered in a more reliable manner, and at a much lower cost. To put it in another way, these loans decide the difference between a full development and a limited development of the REA program in the territories involved. Those are the facts and you and I must do everything we can to see that the people are aware of them so they will not be misled by the power company representatives who make statements to the contrary.

Making this type of loan is in keeping with long-established REA policy. That policy was established during the first few months of REA by its first Administrator. It was discussed by Senator Norris on the floor of the Senate in the debate of the passage of the REA Act in 1936. It has been discussed many times in Congress since then. It is written in REA's book on policy, and I quote it:

"1. The Rural Electrification Administration will make loans to finance the initial construction of generation facilities and transmission facilities only under the following conditions:

(a) Where no adequate and dependable source of power is available in the area to meet the borrower's needs, or

(b) Where the rates offered by existing power sources would result in a higher cost of power to the borrowers than the cost from facilities financed by REA."

I want everyone to know that I will conscientiously follow this policy until it is changed by Congress. I believe this policy is sound, in that it is in keeping with Lincoln's theory of the proper function of the government. If commercial power companies can and will make available better sources of power at lower costs than can be obtained through the use of Government financing or generation and transmission facilities, I believe the REA cooperatives should obtain their power through the commercial power companies. Now, I recognize that there are times when we differ as to what may be better or cheaper. However, that does not mean that the policy is wrong.

I also want to make it plain that the loans we have made for the integration of REA-financed facilities with those of the facilities belonging to either private or public agencies is not at all new so far as REA is concerned. One of the first loans made for generation provided for the integration of REA generation facilities with those of the Bull Run Power Co. at Manassas, Va., in 1936. The same kind of integration is provided with commercial power companies in the loans made for the installation of facilities in North Dakota and Iowa. Several loans have been made which provide for integration of REA facilities with those of public agencies such as Bonneville and the Bureau of Reclamation. None of these loans has ever been made without their legality being approved by the Solicitor of the Department of Agriculture, and in appropriate cases by the Solicitor of the Department of the Interior. I am assured by the Agriculture solicitor's office that the loans are in keeping with the intent of Congress so far as that office is able to determine. In view of the law and the long-established REA policies, and the precedents which have been set over a period of years for integration of REA facilities with those of other power suppliers, it is difficult for me to see why there is such violent objection to the loans we have made recently for the integration of REA-financed facilities with those of public agencies such as the Southwest Power Administration and the Bureau of Reclamation. This is especially true when these very same loans, on the basis of the latest power company offers, mean an annual saving of over $3,000,000 to the members of the cooperatives involved. These loans make it possible to proceed immediately with our complete area coverage program in the areas involved on a self-liquidating loan basis. They mean the difference between uncertain service and satisfactory service. In fact, they assure greater benefits from REA service in every respect.

Speaking of savings, I know a great many of you people, who are not going to get your power directly from any of these loans, realize the amount of savings annually that is coming to your cooperative through the authority which REA has to make loans for generation and transmission. This authority has been most helpful to many of you in negotiating power contracts during recent months, which will mean an annual saving of another $200,500,000 or more. Thus it can be seen that the annual savings to which I just referred amount to over $5,500,000 a year. This is not taking into consideration the annual savings and benefits which accrue to other cooperatives which are benefiting directly or indirectly from REA's authority to make loans for generation and transmission, amounting to several more million dollars each year.

Perhaps you can see now why the commercial power companies of this country are so insistent upon restricting ECA's authority to make generation and transmission loans. I think you can take it for granted that if it were not for this authority the commercial power companies' wholesale rates would go up to all REA cooperatives as they have been going up to other consumers. This is especially apparent when we note the advances in wholesale power rates offered to REA cooperatives in New England and New York States, which are not in a position to install their own generation facilities.

UNIVERSITY OF MICHIGAN LIBRARIES

Now, I have taken this much of your time to describe what REA is doing in the making of loans for generation and transmission facilities in the hope that you may better know what your interests are and what action you should pursue to protect them.

In the beginning I made reference to the fact that the REA program was being conducted in accordance with the best traditions of free, private enterprise and democracy. There are many other facts which bear out my contention. My time will only permit me to briefly mention a few of those which I consider the most important.

One of them is the effort that you are making to give your members good, reliable service in the most efficient and economical manner. With but few exceptions I hear the highest compliments being paid to the kind of service REA cooperatives are giving to their members. Let us resolve that there will be even fewer exceptions in the years to come. This is easier now, when more plentiful supplies of power and materials are available than has been true in the past.

More attention must be given to the maintenance programs than we have had time to give during these recent years of rapid expansion of REA-financed facilities.

The cost of operation must be kept at a minimum and commensurate with good, reliable service. After all, REA cooperatives are established for service, and there are many sound reasons why REA cooperative service is and should be better than the service offered by any other type of supplier.

REA cooperatives have established an area coverage policy in rural areas which has never even been approached or challenged by any other type of supplier. I am happy that the REA cooperatives throughout the Nation are, with but a few exceptions, very earnestly trying to complete their area-coverage program as soon as possible. That kind of a program is in keeping with the true neighborly spirit. It is in keeping with the mandate of Congress. If cooperative officials fail to do everything possible to complete their area-coverage program they are betraying their trust to the public, to the Congress, and to their neighbors.

It is too bad that in many cases the policies and the tactics of commercial power companies are making it impossible for rural people in their service areas to receive central station electric service without exorbitant, and sometimes prohibitory, costs. We have many letters in our files from rural people who are in this situation and I am indeed sorry that it is impossible for us to do anything for them. Their helplessness in this situation makes me even more anxious that every REA cooperative in this country faithfully carries out its area-coverage program.

I realize that some cooperatives may be fearful that the feasibility requirements of the law interfere with area coverage. If you have that fear, tell us about it. I believe we can prove to you, without exception, that you can keep your projects feasible and at the same time see that everyone in your service area receives the benefit from this great program.

It is sometimes pretty hard to make people see that REA cooperatives are member-owned and member-controlled. I sometimes hear it said that when these cooperatives will have paid their debts the facilities will then belong to the members. It should be emphasized that the co-ops' facilities belong to their members from the day they are installed. People own their farms or their homes even though they have not fully paid for them.

One of the best ways to drive home this fact is for your organization to adopt the capital credits plan and notify each member just how much credit is being given him for the paying off of the debt to the Federal Government. I see more reasons all the time why some such plan should be adopted by every cooperative and I hope that those of you who have not adopted this plan will give it your early and earnest consideration.

It is hard for REA co-op members to realize, if they are not given full information and full freedom of expression, that they are in full ownership and control of their own cooperative. Everything about the REA program, whether it be in Washington or in your cooperative office, must be open to the closest examination and scrutiny. We must account for our every effort and expenditure. If anyone has doubts, let him be given full opportunity to ascertain the facts.

As you are all aware, my organization has been under congressional studies and investigations. In some cases complaints and investigations have been made concerning the conduct of the affairs of REA cooperatives. I am sure that you, like we in REA, do not object to anyone's making a study of our operations or offering constructive suggestions as to how we may be more effective or more efficient in carrying out our responsibilities. If there is anything which in any way seems to be unethical or not in keeping with the public interest, we want it eliminated as soon as possible.

It is very important that everyone realizes that REA co-ops are organized to function in keeping with democratic principles. This means, among other things, keeping members informed about every phase of the REA program and encouraging them to fully participate in the affairs of the cooperative. Such things as favoritism, proxy voting, and candidate slates are not conducive to democracy or confidence in the cooperative. News letters, reports, and well-attended and open annual meetings are in keeping with democratic processes.

About 4 months ago the organization which I head was given the responsibility of helping rural people obtain another essential service—telephones—which service had been denied them partially or wholly in many areas of our country. We have been doing all we can to expedite the development of this program. Above all, we want to see it developed in accordance with sound principles.

There are many inherent difficulties in the development of this program which we do not have in the rural electrification program. To us in REA it is more apparent all the time that your help is essential if this program is to be of maximum benefit to rural people. I am glad to know that we are going to have a panel for discussion of the telephone program later in this meeting, and I will not take any more of your time now to talk about it.

In conclusion, I wish to emphasize that the leaders in these programs must endeavor at all times to discharge their responsibilities in keeping with sound policies and procedures, in keeping with the best traditions of our great Nation. This is very important to the welfare of rural people. It is even more important to demonstrate that citizens and their Government can work together effectively for the benefit of the people; that democracy, in action, provides opportunity, security, and freedom for all its citizens—things that are as precious as life itself.

Let's Remember the Sea Gulls

EXTENSION OF REMARKS

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. JENISON. Mr. Speaker, even the world of nature has fallen victim to the lure of the "something for nothing" state, and with the same unfortunate results. I am indebted to a former mayor of my home city of Paris, Ill., now wintering in Florida, for a particularly effective editorial on this issue I believe will be of interest to all Members of Congress. Mr. E. P. Huston, now living at Fort Lauderdale, has called my attention to the editorial, Let's Remember the Sea Gulls, published in the Fort Lauderdale Daily News. In modern parable form, it points up the situation in a revealing manner. Under permission granted to extend my remarks, I am including it in the RECORD. It follows:

LET'S REMEMBER THE SEA GULLS

We wonder if there isn't something of a moral for the American people in the story of what is happening to the sea gulls up in St. Augustine now that the shrimp fleet has left that area for Key West.

It seems the sea gulls up that way have forgotten how to catch fish for themselves. For many years they have been depending for their food on the scraps and waste thrown overboard from the shrimping fleet. It was a sort of super welfare state for the birds, and the free dinners made it unnecessary for the gulls to depend on their own talents to secure food.

But suddenly the shrimp fleet went away. New and more productive fishing grounds were located off Key West and the shrimp boats deserted St. Augustine.

The sea gulls haven't been able to adjust themselves to the new situation. According to an INS report, the reefs and the shores around St. Augustine are lined with long, silent rows of gulls with their dark eyes turned prayerfully out to sea—waiting for the shrimp fleet and the free meals that won't return.

Nature has played the sea gulls a dirty trick. As generation after generation of gulls learned to depend on the shrimp fleet instead of their own resources to obtain food, parent gulls apparently forgot to teach their little ones their age-old methods of catching fish. So today the gulls are starving. They are no different in physical make-up than the sea gulls of Fort Lauderdale. But whereas our gulls can exist through their own efforts, the gulls of St. Augustine are starving by the hundreds because their welfare state suddenly disappeared and with it went their ability to fend for themselves.

The people of St. Augustine are trying desperately to save the gulls that are left. A city-wide effort is being made to round up table scraps and movie popcorn to tide the birds over until they can once more learn to feed themselves.

But naturalists aren't too sure what will happen. They are puzzled over the apparent complete loss of the sea gulls' natural fishing instincts. Some believe the cycle will be completed without the gulls ever recovering their natural fishing ability.

It's a strange paradox that Nature thus gives us. Here we have some of the most independent creatures of the universe, who were given marvelous talents to take care of themselves, victimized because they succumbed to the something-for-nothing lure. They became dependent on unnatural conditions to such an extent that parents apparently forgot to teach their offspring how to get along otherwise. Now with the free food gone, the offspring of these indolent parents are paying the penalty.

We wonder if people aren't a great deal like the sea gulls of St. Augustine. We wonder how many Americans have swallowed the idea of the welfare state to the point where they think it is no longer necessary to teach their offspring that the day of Government hand-outs and security for all may

sometime draw to a close. And we wonder then how many Americans may be left like the gulls—puzzled and bewildered because their sustenance has disappeared and they have no resources of their own to fall back on.

Americans don't have to look far to see the sea gull story translated over into human behavior. We have in England a living example of a something-for-nothing theory gobbled up by the people. Like the sea gulls of St. Augustine, the people of Great Britain have accepted unnatural conditions as a substitute for depending upon themselves. The English Government is the shrimp fleet which provides the people of Britain with food, clothing, and shelter. As long as this Government is firm and strong and as long as there are shrimp (meaning taxes) enough to keep it in business, the people will be safe.

But let the shrimp be exhausted, as is now happening, then the Government must seek new beds. It must of necessity, move on and leave in its wake a mass of miserable people totally unaccustomed to using their own God-given talents and resources to exist.

There is the moral in the story of the sea gulls of St. Augustine. It's a pungent moral and one that every voting American should well consider. Nature has a way of exacting a heavy toll from those who look upon her gifts as unnecessary. As a nation, we here in America have been singularly blessed with a tremendous capacity for using our skills and our ingenuity to ever improve our way of living. But we have earned our keep by wresting it out of the ground, the sea and the air, through the exercise of our own talents.

We will keep those talents only by continuing to use them. The minute we cast them aside as no longer necessary we will forfeit them as surely as the sea gulls of St. Augustine forfeited their talent to provide themselves with food.

Let's not be that foolish. Let's remember what happened to the sea gulls whenever we are tempted by the Washington "shrimpers" to leave our own board and dine at the Government scrap table of false security.

Old dame nature is a wise though sometimes cruel teacher. She might have used the sea gulls of St. Augustine as a red flag of warning to the American people. Let's heed it while we still have time.

Conservation Month in Ohio

EXTENSION OF REMARKS
OF
HON. THOMAS H. BURKE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. BURKE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proclamation of the Governor of Ohio:

STATE OF OHIO,
OFFICE OF THE GOVERNOR,
Columbus.

PROCLAMATION—CONSERVATION MONTH, CONSERVATION WEEK, AND ARBOR DAY, APRIL 14, 1950

Whereas the citizens of the State of Ohio must continue to recognize the importance of the conservation and restoration of our natural resources of soil, water, forests, minerals, and wildlife; and

Whereas the people of Ohio must depend year after year upon the rich heritage of fertile topsoil, unlimited deposits of minerals, vast acres of forests, unlimited sources of usable water and an abundance of wildlife and the recreational facilities provided by these resources; and

Whereas these natural resources with which Ohio is so richly endowed cannot fail to meet the demands of progressive people in industry, business, agriculture, and labor; and

Whereas the annual observance of Conservation Month tends to remind our citizens of the importance of these resources in preserving our principles of free enterprise and democracy through a program of conservation education in our schools and community activities sponsored jointly by the State department of education and the department of natural resources in cooperation with other State and community agencies and organizations;

Now, therefore, I, Frank J. Lausche, Governor of the State of Ohio, do hereby proclaim and designate the week of April 10 through April 14, 1950, as Conservation Week in the schools of Ohio, and Friday, April 14 as Arbor and Bird Day, and ask a general observance by all the citizens of the State of the entire month of April as Conservation Month.

In testimony whereof, I have hereunto subscribed my name and caused the great seal of the State of Ohio to be affixed at Columbus, this 8th day of March, 1950.

FRANK J. LAUSCHE, *Governor.*

A Thin White Line Through the Desert

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. HOLIFIELD. Mr. Speaker, gazing with squinted eyes across the vast distances of the California desert, many west-bound travelers have caught sight of what appears to be a thin white line threaded through barren red hills and across burning yellow flats.

"What's that?" they ask. "Look, it goes right through that mountain."

Perhaps another day passes before the full answer is known. Then the travelers have reached the luxuriant coastal plain of southern California—the groves of the valleys, the towns and cities that spread their streets and highways for miles along the Pacific shore.

The newcomers learn then the significance of the thin white line they glimpsed in the desert. It is the Colorado River aqueduct, the longest domestic water-supply line in the Nation. It is the life line of the world's largest oasis, unromantically called the Metropolitan Water District of Southern California.

Yet, there is romance in the aqueduct, in the story of its building and in the life and progress and security it makes possible. Today this life line is seriously threatened by H. R. 934 and S. 75, bills introduced by Arizona to take away the aqueduct water.

The clear, pure water it brings from a remote land goes into millions of kitchens and bathtubs. It gives sustenance to the little backyard garden and the country estate. It bubbles from corner drinking fountains, and it puts out fires. It feeds steel mills and breweries, automobile plants and pie factories, oil refineries and soda fountains. It made possible the great national defense plants and military and naval establishments that made southern California a fountainhead of production during the war. A vast, empty hot area was needed for the training of troops for the vital campaigns in Africa and Europe. The area was found in the southern California desert, and making possible its use was the thin line of concrete that might be tapped for the necessary millions of gallons of good water. There was no water there before the aqueduct was built, and there is no other water there today.

It was in the early twenties that the coastal area of southern California, which included the swiftly growing cities of Los Angeles, Long Beach and San Diego, became sharply aware that a large and dependable supply of additional water would soon be necessary. For instance, Los Angeles, already a city and port of major importance, twice before had weathered a similar crisis. First, the meager supplies of local water, including rainfall and underground supplies, had been carefully conserved and developed. When it was realized that these sources would soon be inadequate, Los Angeles had gone more than 200 miles northeast into the Owens Valley, bought land and water, and at great expense brought it to the city's homes and industries. Only a few years went by before it was seen that another new source of water must be secured to meet the ever-increasing demands.

Engineers looked far eastward to a comparatively skinny river that boiled and tore its wild way through the great canyons that mark California's eastern boundary—the Colorado, known to the Spanish explorers, the Forty-Niners and the emigrants that conquered the West as a treacherous, mad river of death.

But to the people of southern California in the twenties the Colorado was seen in an entirely different guise. It was a river of life.

Now other cities and areas joined with Los Angeles to bring the Colorado's life-giving water, upon which all future development and progress depended, some 400 miles across uninhabitable deserts and mountain ranges. This was a project of the people. They mortgaged their homes and farms to underwrite the bonds that would make construction of the aqueduct possible.

The Colorado River aqueduct costs approximately $220,000,000. When engineers first began to survey its route from the river to the coast, there were about a million persons living in the district it was to serve. Actual construction took about 10 years, and when the first scientificially purified Colorado River water was delivered to Pasadena in 1941, there were more than 2,250,000 people in the aqueduct service area.

Many times it has been recorded what has happened in California since the war started in Europe in 1939. The greatest migration in American history has moved over the roads to the Pacific coast in that period.

Today in the area served by the thin white line of concrete live more than 3,500,000 persons. The migration has not halted. The southern California oasis is still the mecca of thousands of other Americans each month.

UNIVERSITY OF MICHIGAN LIBRARIES

In all, the population of the southern California coastal plain, a narrow strip less than 200 miles long and a quarter that distance in width, has passed the 5,000,000 mark.

What of the future? Will there be another water crisis like those of the past?

Not only hydrological engineers are asking these questions. The people of southern California are asking them, and with good reason.

The Colorado River is southern California's last waterhole. This is not a new realization. It was fully recognized when the plans for the aqueduct were drawn, and due to this foresight the aqueduct was built, not for the present, but for the future.

Before the people could be asked to invest millions of dollars, the builders of the aqueduct; that is, the local governments sponsoring the projects, had to make certain that water was assured for years to come. No one, no government body or group, can simply take what water they need out of an interstate stream. The basin of the Colorado River contains parts of seven immense States, and these States must share the water under an agreement approved by the Congress. This is the Colorado River compact, and since the waters are stored by Hoover Dam, Congress, before building that dam, directed that no one should use these stored waters except under contracts made with the United States.

The aqueduct builders of California, therefore, got their water under contracts with the Federal Government. Under the law, the Secretary of the Interior is empowered to make such contracts.

This was done, and the metropolitan water district of southern California received a legal right to take 1,212,000 acre-feet of water from the Colorado River, and distribute this water through its aqueduct to the cities and towns of the coastal plain. The then Secretary of the Interior, Ray Lyman Wilbur, signed the contracts for the United States Government.

Then, why are the people of southern California concerned about their future water supply? They have contracts with the Federal Government for their aqueduct water, and certainly these contracts will always be honored. Certainly the Government would not repudiate these contracts, and leave the aqueduct standing empty, a monument to broken faith, as the desert sands sift into its canals and tunnels.

Nevertheless, the people of southern California, as stated by their government officials, have reason for concern. Powerful forces in Arizona want the water upon which California's progress and security depend and are seeking congressional authorization to take it for an immense Arizona project. They claim the Federal Government had no right to give so much Colorado River water to California.

The battle rages in Congress. California says the controversy is one for the United States Supreme Court to settle.

Meanwhile, the thin white line continues to bring the water to the cities and towns of southern California. Many of them, such as the urban centers of San Diego, Long Beach, Pasadena, and Santa Monica, depend for their existence on this lifeline that is woven for hundreds of miles through the California deserts. Many other smaller cities receive half or more of the water they use through the aqueduct's single vein. All future growth in the great city of Los Angeles must depend upon this single source of water.

For no area as large and as thickly populated in the world depends so much on a thin line of concrete for the water that makes life possible. And the new travelers to southern California, seeing the thread of the Colorado River aqueduct stitched through the burning red mountains and barren valleys of the desert, must likewise look to it for their own security, and that of their children, if they would live in southern California.

That is why California is asking that Senate bill 75 and House bill 934 be defeated.

Statement by Broughton Lamberth on Pending Social-Security Legislation

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1950

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on pending Federal social-security legislation made to the Committee on Finance, United States Senate on January 23, 1950, by Broughton Lamberth, commissioner, Alabama State Department of Public Welfare:

I come before this committee today as Commissioner of Public Welfare for the State of Alabama. Although I have been in this position only a few months, my interest in social security and human well-being is deep-rooted. From 1947 until my appointment as commissioner last November, I was vice chairman of the Alabama State Board of Public Welfare, of which the Governor is chairman. My appointment as commissioner was made by the State board of public welfare. During the last two sessions of the Alabama Legislature I represented two counties in the Alabama State Senate. In that legislative body it was my privilege and responsibility to serve as chairman of the Standing Committee on Public Welfare and Correctional Institutions and also as chairman of the legislative interim committee which reviewed welfare problems throughout our State of Alabama for a period of 2 months.

I should like to say, too, that one of my first requests as commissioner was to ask that I be heard before this committee if and when hearings should be conducted on amendments to the Social Security Act. We do not now have any real security in Alabama for our needy people. We think that more security could be provided if there were changes in the Federal social-security law. That is why I am here today. I want to confine my remarks, however, to those areas of greatest need and to those aspects of the present and proposed legislation which I think are most important for Alabama.

All of you well know that Alabama is a farming State. Our farm population of 47 percent in 1940 was more than twice the figure—23 percent—for the Nation as a whole. We are also a State where per capita income payments over a period of years have been among the lowest for the Nation. Our 1948 average of $891 was far under the $1,410 national average. In fact, payments are less in only three States than they are in Alabama. The States are South Carolina, Arkansas, and Mississippi. This means that most of our people farm and that they have very little in our world's goods. They do not make enough to save for a rainy day or for old age or for any long period when they are unable to work. The result is that we have today in Alabama a large number of farmers who have grown old and, through no fault of their own, must face the present and the future without security.

Therefore, the first thing I would like to talk about to this committee is our Alabama farmers who have grown old and can no longer make a crop. For most of them their only recourse is old-age assistance. In 1935 under the original Social Security Act they were excluded from the benefits of old-age and survivors insurance. They still are excluded. Yet, when they come to the welfare department and ask for old-age assistance, even though they are eligible under the law, they cannot receive enough for a decent living. Our old-age payments are a little more than $20 a month on the average for the State as a whole. Even where two members of a family might qualify, two payments at $20 each would not mean security.

You may ask why Alabama cannot pay more. Briefly, there appear to be two reasons. We have larger and larger numbers of needy old people and correspondingly smaller numbers within the population who can earn and pay taxes. Not only do we have an increasing number of old people, but we are a State with an unusually high proportion of children. This, obviously, narrows considerably the number within the total population who are in their working years. Thus, it throws our whole economy out of balance. And, in the light of our continuous low per capita income, a large percentage of the people who get old are needy when their working days are over. It all sounds very well to say that people should practice thrift and lay something aside each year. I certainly agree—when there is something to save. Alabama had an average per capita income of $154 in 1933. This had risen to $242 by 1939, to $644 by 1943, and to $891 by 1948. Could you live decently on $154 or even on $891? And yet this was an average figure—many Alabamians never had that much. They not only had nothing to save—they had too little to eat. That is, both young and old.

It is consequently easy to understand why we have a high old-age assistance recipient rate—456 per 1,000 as compared with 231 for the Nation. Our rate of applications for aid also continues to be high as there is less and less demand for unskilled and older workers. Right now, too, I would like to make one point clear. Alabama has one of the most restrictive old-age programs in the Nation. We have this high recipient rate in the face of a $480 income-limitation clause written into our Old-Age Assistance Act. In other words, no one can qualify for aid by State law in Alabama who has income amounting to as much as $40 a month. By administrative regulation, we also have added to this a property limitation. Ownership of real property with a net value of $2,000 excludes a person from assistance. Thus, you can see that when persons qualify for aid under the Alabama Old-Age Assistance Act and present State regulations, they are needy by anybody's definition.

When some States are easily securing sufficient money to pay old people $40 and $50 and even $75 a month, we in Alabama are

having a hard time getting up the $5 it takes to match Federal money for a $20 old-age payment. Yet, not only do we keep on having a high rate of applications for aid, but we also find about three-fourths of the applicants eligible to receive a check. We do not know where the money is coming from to grant them aid. But they need it, and old-age assistance is their honorable and just right.

You are now considering H. R. 6000 to amend the Federal Social Security Act. The formula this bill includes for increasing Federal grants-in-aid for old-age assistance and other assistance programs is of vital concern to States like Alabama. As our welfare budget now stands, this formula would enable us to increase average old-age payments by about $5. We still could not pay anything like the $45 national average or the $75 average paid in Colorado, but we would like for people not to suffer because they live in Alabama and grow old there. We think that the Mills formula is an immediate answer to the problem of getting more Federal money quickly into the low-income States where assistance payments are also low. Nevertheless, we would hope that at some future date a formula can be devised that would allocate Federal funds to States on the basis of relative need and fiscal ability. This principle has been applied in relation to funds for the school-lunch program and hospital construction and might well be considered in regard to grants-in-aid for assistance to those unfortunate people who need it.

Also, in the light of these facts, I hope you will give consideration to developing a plan for providing old-age and survivors insurance benefits for farmers. Our people want the kind of security that comes to them without a means test. They want a monthly check when they are too old to work and they want to pay in to get that check while they work. They do not earn enough to pay for an individual annuity plan. But they could contribute to old-age and survivors insurance. And they want an opportunity to do so. Farmers are frequenting old-age and survivors insurance offices throughout Alabama with the query, "Why can't I qualify?"

Of course, I realize that changes in the law today still would not take care of the thousands of needy people we already have with us. That's why I want to see the public-assistance provisions of the Social Security Act changed so that we can help those already too old to work now. But I hope the insurance can be extended to farmers with a clause to provide coverage at an early date for many of those who are now approaching the time in life when they can no longer earn a living.

It is not within my province to suggest administrative procedures for farm coverage. It is my understanding, however, that the Social Security Administration has developed what appears to be a feasible plan. I would hope that this committee would examine those proposals and give favorable consideration to incorporating them into the social-security amendments.

In considering extension of coverage of old-age and survivors insurance, I hope you will also bear in mind that many farmers work off and on in covered employment. In this way they may contribute to old-age and survivors insurance yet never achieve coverage. Estimates of the number so affected throughout the country have been fixed at 31 percent of farm operators and 38 percent of farm workers. For example, there are farm laborers who work in sawmills and textile mills during part of every year. There are farmers who worked in industry during the war years. Their contributions to old-age and survivors insurance are actually a loss to them. Also, our farmers help pay for the cost of old-age and survivors insurance in much of the goods they buy. For example, an employer rightly considers his contribution for employees as a cost of operation. He is going to get that cost back in the price of the product he sells. So, while technically the farmer and his tenant might not contribute, actually they do. Is it fair to exclude them from the program and its benefits?

H. R. 6000 extends coverage to many workers not now included. It also makes benefit provisions more adequate. These proposals I would support insofar as they go. Alabama's coverage under H. R. 6000, however, would be no more extensive than present national coverage of 60 percent of employed persons. The original Social Security Act anticipated that old-age insurance would carry the major load, supplemented by old-age assistance for a smaller number of people who did not or could not earn benefits during their working years. Unfortunately, the reverse has proved true. Alabama has less than 19,000 aged old-age and survivors insurance beneficiaries now and over 77,000 recipients of old-age assistance. Only a small proportion—less than 2 percent—receive a small old-age and survivors insurance benefit supplemented by old-age assistance.

Old-age assistance has had to carry the load for two primary reasons: too few people have been covered, and benefits have not been related to living costs. Average payments in Alabama over the past several years illustrate what I mean. There has been relatively no rise in average old-age and survivors insurance payments—they still range close to $15 a month in Alabama.

While old-age assistance has not kept up with changing prices, payments are more than double what they used to be. Policies in regard to determination of need have kept up with living costs—but funds have been the limiting factor. Likewise, old-age and survivors insurance maximums have held rigid while ceilings have been raised on assistance payments.

Thus, I would hope that this committee would support amendments which would implement the social-insurance program and make it possible for the majority of our people to reach old age secure in the knowledge that they would have an income for the rest of their days. And by income I do not mean an assistance check based on a means test. I refer to a benefit check earned by individual contributions.

I have already said that while insurance needs to be extended there must be provision for the needy now. We are especialy troubled in Alabama over one group whose sufferings are acute and for whom almost no provision is made. I am talking about a group we call the totally and permanently handicapped. We have in Alabama nearly 8,000 individuals who are too young for old-age assistance and too old for aid to dependent children. They are not blind, yet their handicaps are so great that they cannot work now and can have no hope of ever becoming self-supporting in the future. We have very limited State and local money even for matching Federal funds in the social-security categories. We have still less for this group who are wholly dependent on money from the State and its political subdivisions. Average payments today for aid to the handicapped in Alabama are about $13 a month, yet most of these people need nursing care, special diets, medical attention, and other special provisions which are related to long-time illness. Their needs are far from met on $13 a month.

I would hope, therefore, that this committee would consider favorably the provisions in H. R. 6000 for setting up a new category of assistance—aid to the permanently and totally disabled. We at least could increase our payments to about the level paid for aid to the blind and old-age assistance if this category were set up.

Because time is limited, I will not go into the other aspects of H. R. 6000 or other areas of social security where changes might well be made. In Alabama we have long limited public-assistance payments to the unemployable. We see no prospect for changing this. Our State, nevertheless, has done fairly well by its people. Welfare appropriations have increased materially since the department was set up. Expenditures from State funds in the 1948–49 fiscal year were about four times the amount spent in 1936–37 from this source. Despite Federal grants-in-aid, however, funds have never been sufficient to meet need. There has been no real security even for old people, the children, and the disabled who have been eligible for aid from the agency.

In spite of limited money, however, we have provided child welfare services and social services in an attempt to prevent dependency. Such services predate the assistance program in Alabama, where we have long recognized that prevention is as much a welfare job as relief. We knew that as we could provide social service, we often could help a person to help himself. Furthermore, we have long been aware of the effects of one program for human betterment upon another. Thus, we recognize clearly that the whole Social Security Act is important, that all the programs it provides are necessary. We believe in legislation to safeguard maternal and child health, for instance, as much as we do proposals for increasing grants for aid to dependent children. I would, therefore, like to indicate here my support for the over-all social-security legislation.

I do not want this committee to consider my interests narrow although I have confined my remarks chiefly to the need for old-age insurance for farmers and for increases in Federal grants-in-aid for assistance payments. These are merely the points that need greatest emphasis if the welfare of Alabama's people is to be improved because most of Alabama's needy people are old and most of them have lived on farms. We now issue more than 100,000 assistance payments monthly in behalf of more than 150,000 persons in Alabama. One reason for this large volume is the small number of old-age and surivivors insurance beneficiaries in the State, presently about 37,000. It is clear that low coverage and inadequate benefits have contributed to dependency. I think we recognize together that the welfare of each child and each old person is important to the welfare of us all. I would urge you to consider this as you consider revising social-security legislation.

The Real Work of Congress

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Passaic (N. J.) Herald-News:

THE REAL WORK OF CONGRESS

The CONGRESSIONAL RECORD is a journal of the proceedings and debates of the Eighty-first Congress, printed in Washington every night after adjournment and delivered to Members each morning at the Senate and House Office Buildings.

The RECORD for Thursday, March 23 reached Passaic by mail on Saturday morning. It devoted 124 pages to a stenographic report of everything said and done on Senate and House floors and 38 pages to an Appendix containing the undelivered speeches of

UNIVERSITY OF MICHIGAN LIBRARIES

Members, which Congress had neither time nor the wish to hear.

What happens on the floor and what the RECORD reports each day represents only a small part of the work of Congress. Members get an enormous amount of mail which requires personal attention. Visitors from home must be welcomed. Requests for help are many, such as straightening out GI Joe's difficulties with the Veterans' Bureau and seeing the immigration people about Uncle Herman, who's sweating it out in Frankfurt.

It is in the morning hours, when neither house is in session, and sometimes in the afternoon that Members get the real work of Congress done—in committee. Ray Tucker's Washington column describes today how the Appropriations Committee has been whittling down items in the administration's big bill for 1950 Government spending, a bill which accounts for the income and excise taxes you pay. Republicans have the sharper knives, naturally, but many Members of Mr. Truman's party, who are in the majority on all committees, join in the paring process.

Contrary to popular belief, Congressmen aren't pompous people who spend all their time making speeches. Some are brilliant, others dull. Sensible and conscientious men far outnumber the demagogues, especially in the lower house. Those who are on the job earn their pay. Except those who were well off before election to Congress, few die rich.

Ownership of Lands and Resources Beneath Navigable Waters

EXTENSION OF REMARKS
OF
HON. WILLIAM L. PFEIFFER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under leave to extend my remarks, I include a concurrent resolution adopted by the Senate and Assembly of the State of New York, memorializing Congress to confirm ownership in the States of lands and resources within and beneath navigable waters within the boundaries of the respective States:

Concurrent resolution of the senate and assembly, memorializing Congress to confirm ownership in the States of lands and resources within and beneath navigable waters within the boundaries of the respective States

Whereas since its inception, the State of New York, a free and independent sovereignty and one of the original 13 States, has claimed and exercised ownership, dominion, and jurisdiction over the lands under the ocean seaward for a distance of 3 miles and the lands under all tidal and navigable waters within its boundaries; and

Whereas the State's title to these lands, in common with all unappropriated lands, was and is based upon the sovereign character of the people of the State of New York as successors to the sovereign rights of the Crown of England; and

Whereas, as sovereign, the people of the State of New York own approximately 5,600 square miles of submerged lands in the Atlantic Ocean, and in New York Harbor, Long Island Sound, the Hudson River, and the Mohawk River, including vital stretches of the State barge canal, the Niagara River, the St. Lawrence River, the Great Lakes, and other inland streams and waters, and

Whereas all of the private improvements on the New York side of New York Harbor, with the exception of the lower end of Manhattan Island and others elsewhere, have been built on what was formerly State-owned lands, and all these improvements were built and have been enjoyed by their owners in reliance upon their source of title in the State of New York, and no disquieting claims against that source should be made, no matter how baseless or trivial, by any agency of the United States Government, and

Whereas, as a result of these improvements, there has been an incalculable increase in assessed valuation of these lands, upon which municipalities and the State rely as a basis of taxation and great revenue, and

Whereas the title of the people of the State of New York to these lands and the title of those holding the lands by grant from the people of the State of New York has been upheld by numerous decisions of the New York courts and the Supreme Court of the United States, as well as by the assertion and actions of the Federal Government, its various departments and divisions: Now, therefore, be it

Resolved (*if the senate concur*), That the Legislature of the State of New York favors continued State ownership and control, subject only to the Federal powers over navigation, interstate commerce, and national defense, of lands and resources within and beneath navigable waters within the boundaries of the respective States, and requests Congress to pass suitable legislation to that end; and be it further

Resolved (*if the senate concur*), That the Members of the Congress are hereby requested to give their active support to legislation which would recognize and confirm State ownership of such property; and be it further

Resolved (*if the senate concur*), That the Members of the Congress are hereby requested to give their active opposition to all pending and proposed measures which would create Federal ownership or control of lands, fish, or other resources beneath navigable waters within State boundaries; and be it further

Resolved (*if the senate concur*), That copies of this resolution be sent to the President of the United States, the Secretary of the Senate of the United States, the Clerk of the House of Representatives of the United States and to each Member of the Congress of the United States.

In senate, February 28, 1950. Concurred in without amendment.

By order of the senate:
WILLIAM S. KING,
Secretary.

By order of the assembly:
ANSLEY B. BORKOWSKI,
Clerk.

The Late Ellis A. Gimbel

EXTENSION OF REMARKS
OF
HON. WILLIAM T. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. GRANAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Philadelphia Evening Bulletin of March 18, 1950, upon the passing of a distinguished citizen of Philadelphia, a great merchant and outstanding philanthropist, Mr. Ellis A. Gimbel. This eulogy is as follows:

ELLIS A. GIMBEL

Few distinguished citizens of Philadelphia have known and loved so many of their neighbors as Ellis A. Gimbel. Not alone by his many benefactions, but by personal greeting and his genuine interest in others he made a host of them his friends.

Many were customers of an outstanding American merchant, a pioneer in modern storekeeping and salesmanship, but they knew him better as a kindly gentleman, sensitive and thoughtful and something of a philosopher, who might well have made himself a public figure if his career had carried him no farther than the keeping of a country store.

In the latter part of his life, alert and vigorous beyond his years, he made it a faithful custom to greet all gatherings held within his great business establishment, which he made an important center of his city's social and cultural life. Two thoughts were always included in his messages.

Simply and earnestly he spoke of his country, almost in the phrases of a prayer of gratitude. Simply and sincerely he said, "God bless you," to his friends. He left warmth and the true spirit of fellowship with his guests, as he has left to Philadelphia the gracious memory of a loving and lovable man.

Blind Men on Parade

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial titled "Blind Men on Parade," which appeared in the Washington Evening Star on March 28, 1950:

BLIND MEN ON PARADE

Senator BRIDGES, of New Hampshire, has said that a number of Republican Senators are going after Secretary Acheson. This will take the form of a series of public attacks, and the parade, he says, will begin this week.

The New Hampshire Senator has not named those who will march in his parade. Perhaps it does not matter, for the marchers, whatever their names, will be easily recognized as the blind following the blind.

These Republicans do not see that in going after Mr. Acheson they are tearing down the foundations of our national security. There is no doubt that they see a political issue from which it may be possible to torture some partisan advantage. But they cannot or will not see the larger picture; they do not understand that the hopes of freemen everywhere are linked inseparably to the prestige of the United States, and that they can chip away at that prestige only at the price of crippling this country's capacity for leadership in the decisive struggle now under way throughout the world.

If they cannot see this, it is not for lack of evidence. Here in Washington, the capital of the free world, a woman is loosely accused, without proof, of disloyalty. And she is immediately assailed in her home with anonymous phone calls, with threats, and with demands that she move out of the neighborhood or be carried out in a box. If it has come to this in our own city, what are we to expect in other parts of the world? How can we suppose that our friends in other

lands, constantly exposed as they are to a substantial threat of Communist aggression, will be able to sift the real from the unreal, to know where the line should be drawn in our performance between truth and shabby political fiction? Can we blame them—will Senator BRIDGES and his followers be able to disclaim responsibility—if in the end our friends abroad should conclude that the men in charge of our foreign relations are, at best, incompetents; at worst, Communist sympathizers, and that it is not safe to follow their lead?

There are some Republicans who will not be found marching in Senator BRIDGES' parade. Senator VANDENBERG will not be there. Nor will Henry L. Stimson, one of the party's distinguished elder statesmen, who has served his country well both as Secretary of State and as Secretary of War. It is not likely that Senators KNOWLAND and SMITH will be among the marchers. Another who will not be there is Representative NIXON, who had a big part in turning up the facts in the Alger Hiss case.

These men, and there are others like them in the Republican Party, do not believe that Mr. Acheson is infallible. In their various ways they have differed with him—strongly on some issues: But they realize that one of the surest ways to bring on another war is for the Republican Party to lapse into a role of negative opposition, a role in which partisan advantage has a higher priority than the security of the Nation.

The hope is that the number of this company will grow, that more Republicans will stand up and say that they refuse to join Senator BRIDGES' parade. This will not come about if the President and other ranking Democrats fail to do their share. But if Mr. Truman and his aides will refrain from cheap politics in the forthcoming campaign speeches, and if a few more prominent Republicans will assemble under the standard which has been raised by Senator VANDENBERG and his associates, the parade of the blind may yet turn out to be an unimpressive spectacle.

Port Security

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of March 29, 1950:

PORT SECURITY

Although Congress has been unusually attentive to most matters of military defense, the security of American seaports—a responsibility of the Coast Guard—has received short shrift. Adequate patrolling of harbors and piers and inspection of vessels in wartime would require a great expansion in the Coast Guard's 22,000-man force. Yet the Coast Guard Reserve, which would be the nucleus for such expansion, has received no funds for training.

Actually the denial probably is due more to the anomalous status of the Coast Guard than to any deliberate effort to deprive it of funds. In wartime the Coast Guard becomes a part of the Navy, but in peacetime it is under the Treasury. Thus the $4,100,000 for Reserve training recommended in the President's 1951 budget came under the jurisdiction of the Treasury-Post Office Subcommittee of the House Appropriations Committee. But since the full committee had laid down a rule against new appropriations, the funds were knocked out of the omnibus bill. Similar misfortunes befell the request in the 1949 and 1950 budgets, though last year the Senate did pass a $3,500,000 deficiency appropriation which was eliminated in conference.

Whatever the reasons for the oversight, it is apparent that here is a defect in defense which must be remedied. Both Defense Secretary Johnson and the Chief of Naval Operations, Admiral Sherman, have attested to the need. An adequately trained Coast Guard would be imperative in an atomic war, when an innocent-appearing freighter might blow up a harbor and a city.

Propaganda and the Facts

EXTENSION OF REMARKS
OF
HON. WINGATE H. LUCAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. LUCAS. Mr. Speaker, as a member of the Committee on Education and Labor of the House, I am, of course, interested in good labor relations throughout the country. Since coming to Congress I have been reading reports about the Di Giorgio Farms in California, and allegations regarding treatment of agricultural labor there.

It is gratifying, therefore, to get the whole truth about this situation in the report of the subcommittee of the Committee on Education and Labor, and I want to commend the Congressmen who prepared the statement, based on personal observation at the Di Giorgio Farms.

I take pleasure in inserting in the RECORD with these remarks an editorial from the San Francisco Chronicle of March 15 upon this subject. It should be of interest to every Member.

The editorial follows:

PROPAGANDA AND THE FACTS

The findings of a congressional subcommittee as to the merits of the strike against the Di Giorgio Farms in Kern County should prove of interest and concern to American labor generally.

Di Giorgio has under cultivation some 11,000 acres of farm land, nearly all of which the corporation has converted, by scientific methods, from barren wasteland. The farms employ about 1,200 permanent workers, which rises to 2,500 in harvest time.

Two and a half years ago the National Farm Labor Union undertook to organize the workers. When the corporation refused to recognize the union as exclusive bargaining agent, a picket line was set up and the long strike got under way.

There ensued a campaign of propaganda by the union leaders purporting to show that working conditions at the farms were pitifully substandard; that living conditions were frightful; that the management exploited its workers at every opportunity. Climax of the campaign was the production of a film, Poverty in the Valley of Plenty, which undertook to give substance to these accusations.

The House subcommittee, after an extensive, first-hand investigation, has now found that the charges made by the union were almost wholly unsupported. It found the corporation's wage levels are, if not the highest, at least as high as any in the area. It found that housing conditions at Di Giorgio Farms are at least as good as any to be found on similar property in agriculture. And as to the motion picture, which was shown widely throughout the country, it had this to say:

"The National Farm Labor Union film, Poverty in the Valley of Plenty, insofar as it purports to represent conditions existing on Di Giorgio Farms is a shocking collection of falsehoods, almost wholly unrelieved by any regard whatever for the truth and the facts. The subcommittee believes that responsible labor leaders will join with it in decrying the attempt of the National Farm Labor Union's organizers to win their case by dishonest presentation. The cause of organized labor is not aided when one group of union organizers are willing to besmirch the public reputation of labor as a whole in order to advance their own interests."

We would go one step further.

Regardless of whether the local leadership of the National Farm Labor Union was Communist-inspired—and there is no evidence that it was—the fact remains that the tactics employed by the union in this instance are tried and true Communist tactics. The reckless attachment to expediency—the philosophy that the end justifies any means—is the very essence of Communist dogma and in utter violation of the American doctrines of integrity, sincerity, and fair play.

We do not question the right of unions to campaign for organization of workers. But that right by no means embraces the right of vilification, of distortion, and misrepresentation of facts. And as to the union's demand for legislation to correct the abuses of corporation farmers and their lobbies, the union's own tactics have rendered its position ridiculous. The inescapable conclusion arising from the subcommittee's report is that such laws as now exist curtailing the right of labor leaders to achieve their ends by coercion and misrepresentation have found precise justification in the Di Giorgio strike.

Cities and Atomic Defense

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Newark (N. J.) Star-Ledger of March 19, 1950:

CITIES AND ATOMIC DEFENSE

Mayor Fletcher Bowron, of Los Angeles, complains before a congressional committee that the cities of the United States have no idea of what they should do to protect their people in the event of atomic warfare. All other mayors, we believe, will agree with his complaint.

The cities, as a matter of fact, are virtually incapable of planning atomic defense by themselves. If we consider the position of Newark, Jersey City, or any other of our New Jersey cities, it is readily apparent that a regional agency is needed to coordinate atomic defense.

These cities are, in the light of present conditions, nothing more than fragments of the real communities created by modern

UNIVERSITY OF MICHIGAN LIBRARIES

transportation. The prospect of atomic warfare serves only to magnify the need for regional civic organization.

The effects of an atomic bomb would radiate around the point of the strike in ever widening circles, with the heaviest degree of destruction in the center and a gradual lessening of severity toward the outer limits. Even the smallest circle of destruction, that of the most intense degree, would embrace more than the map of Newark or of any other of the New Jersey cities.

It is obviously true, therefore, that the cities do not know what to do and cannot possibly know what to do unless they are embraced in regional units of a size sufficient to encompass commuting areas and the destructive range of the atomic bomb.

Vocational Education for Veterans

EXTENSION OF REMARKS
OF
HON. ROBERT L. RAMSAY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. RAMSAY. Mr. Speaker, under leave to revise and extend my remarks, I include therein a letter received by me from the Honorable Andrew V. Ruckman, director of veterans education and training, State of West Virginia, relative to operation of the Servicemen's Readjustment Act in connection with vocational education.

STATE OF WEST VIRGINIA,
DEPARTMENT OF EDUCATION,
Charleston, March 23, 1950.

Hon. ROBERT L. RAMSAY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN RAMSAY: My attention has been directed to a chart appearing in the Report on Education and Training under the Servicemen's Readjustment Act, as amended, from the Administrator of Veterans Affairs, pertaining to the percent of profit vocational and trade schools which were established subsequent to the Servicemen's Readjustment Act. This chart shows West Virginia to be one of two States in the Union with 100 percent of its profit vocational and trade schools established subsequent to enactment of the Servicemen's Readjustment Act.

What the chart fails to explain is that only six profit vocational and trade schools have been approved in the entire State of West Virginia since the GI bill became law, an extremely low figure when compared with some other States. Approval for most of the six schools was granted by this office at the behest of the Veterans' Administration. Typical of the pressure applied by the Veterans' Administration for the establishment of private trade schools in West Virginia is the following copy of a letter written to this office by an official of the Veterans' Administration in Huntington:

"VETERANS' ADMINISTRATION,
"REGIONAL OFFICE,
"Huntington, W. Va., April 3, 1947.

"Mr. H. L. DUNCAN,
"Director of Veterans' Education,
"State Department of Education,
"Charleston, W. Va.

"DEAR Mr. DUNCAN: In reply to your letter of March 31, 1947, concerning the Martin School of Watchmaking, Clarksburg, W. Va., it is noted that you state they have no school, equipment or students. This office was advised by the school through our field officer that they were ready to begin operations. However, the Veterans' Administration in accordance with paragraph 14, Veterans' Administration Instruction No. 2, title II, Public Law 346, Seventy-eighth Congress, may not permit enrollment of any veterans in an institution unless the institution has the prior approval of the State Approving Agency.

"Therefore when you consider the fact that this school is being established at the request of the Veterans' Administration to furnish training in watchmaking to a number of veterans, who are unable to enroll elsewhere due to a lack of facilities, it is desired that this school, if they meet the State's requirements in regard to facilities, be approved to start their course of training prior to the enrollment of any students.

"It is requested that you have your field representative in that area contact Mr. J. S. Lunsford, at the Veterans' Administration contact office, Clarksburg, W. Va., at your earliest convenience, in order that this facility may be established without further delay if at all possible.

"Very truly yours."

The name of the writer of the above letter has been left blank by this office because he is now connected with the Veterans' Administration in Washington and we have no desire to cause him embarrassment.

Relations with the Veterans' Administration in West Virginia have generally been harmonious, and we have worked together to prevent abuses under the GI bill. We are making this explanation, however, because we feel that the chart mentioned above gives an erroneous impression of the approval agency in this State. We believe that West Virginia has done a better than adequate job of restraining fly-by-night schools in West Virginia and that you have no apologies to make for the manner in which the GI bill of rights has been administered.

One of the weaknesses in the present bill is the fact that while the approval agency is charged with the responsibility of approving institutions for the education and training of veterans, no funds have been provided for the supervision of such institutions once they are approved. In our opinion, legislation now pending before Congress, which would provide the States with funds to enable them to perform the required services, should be enacted.

Yours very truly,
ANDREW V. RUCKMAN,
Director of Veterans' Education and Training.

Hon. John S. Wood, Chairman of the Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. COLMER. Mr. Speaker, the overwhelming vote here March 23 for the necessary funds to continue the invaluable work of the Committee on Un-American Activities is a vote of confidence in that committee and its work. It is more than that, it is a vote of confidence in, and appreciation of, its able chairman, the gentleman from Georgia, Congressman JOHN S. WOOD.

Mr. Speaker, ever since I returned from a 2 months' study of European conditions, as chairman of the Post War Economic Policy and Planning Committee, some 5 years ago, I have stressed upon the Congress and the country that the real danger of communism was not in the danger of a shooting war with Russia, but rather the danger of infiltration by Communists in this country. I still adhere to that assertion. The Committee on Un-American Activities has rendered an invaluable service in alerting public opinion in this country to that danger.

Under the able leadership of Chairman WOOD this committee is continuing that great service to this country. Congressman WOOD enjoys the confidence and respect, not only of his fellow committee members both Democrats and Republicans, but of the Members on both sides of the aisle generally. Therefore, Mr. Speaker, it is with genuine appreciation that I add my humble words of commendation, not only to the committee, but to its distinguished and able chairman. More power to you, Chairman WOOD, and your colleagues on the committee.

United States Did Not Turn Its Back Upon the Rest of the World

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1950

Mr. REED of New York. Mr. Speaker, those readers of the public press who believe in fair play, even in the field of politics, are under obligations to Mr. Constantine Brown, the noted international writer, for revealing the unjust, inaccurate, partisan statement made by the President of the United States in his recent letter to Chairman KEE of the House Foreign Affairs Committee that:

The United States turned its back upon the rest of the world after the First World War.

Under consent heretofore granted, I am inserting an article by Mr. Constantine Brown that appeared in the Evening Star under date of March 28, 1950, in which he presents the facts clearly and conclusively that the United States Government did not turn its back upon the rest of the world after the First World War.

The article follows:

THIS CHANGING WORLD—FACTS SHOW UNITED STATES DID NOT TURN BACK ON REST OF WORLD AS TRUMAN REMARKS.

(By Constantine Brown)

Whoever drafted President Truman's letter to Chairman KEE of the House Foreign Affairs Committee, warning the American people that any slicing of Marshall-plan appropriations by Congress would create the risk of a new world war, slipped badly in his facts about what this country did for Europe between World Wars I and II.

"The United States turned its back upon the rest of the world after the First World War," the President's letter stated. "Some

20 years later we found that we had to fight another war."

The facts contradict this assertion. Soon after the end of World War I we invited the major European nations, together with Japan and China, to a conference in Washington and as a result of that conference two treaties were concluded dealing with China and the political situation in the Pacific.

FEAR OF JAPAN CREATED

The Washington conference grew out of the fear that Japan might try to expand territorially by aggression, and the limited international parley initiated by the United States was supposed to establish peace in the Pacific.

While it is true that we did not join the League of Nations and made a separate peace with Germany at the conclusion of World War I, it is equally true that at no time during the 21 years of truce did the United States relax its efforts to maintain world peace and did what it could to help its wartime associates.

American private capital flowed into Europe throughout that period. Two prominent Americans, Charles G. Dawes and Owen D. Young, headed committees which were named to settle the German reparations question when it became obvious that the Germans could not live up to the economic provisions of the treaty of Versailles. Both men took part in this work with the tacit approval of the American Government.

NEARLY $2,000,000,000 LOST

Between 1921 and 1924 American money poured into Germany. It was a speculative investment for American money lenders and the speculators lost nearly $2,000,000,000. This investment in Germany cost American capitalists no more than UNRRA cost American taxpayers after World War II and the results were about the same. The difference was that loans to Germany hurt only those who could afford to get hurt while UNRRA hit the pocketbooks of all American taxpayers.

When in the spring of 1925 the French Government, headed by Edouard Herriot, came to the verge of bankruptcy and the French treasury was unable to meet its current obligations, New York banks came to the rescue and advanced the Bank of France $500,000,000. It was a strictly commercial transaction—with the approval of the State Department—and the money was repaid after Raymond Poincare succeeded Herriot and devalued the franc.

In 1931, when the European financial structure showed signs of collapse after the French had bankrupted the Austrian and German banks, the United States intervened immediately and President Hoover obtained a moratorium on all war-debt payments.

REFUSAL TO PAY ACCEPTED

The effect of the moratorium was negligible, it is true, because France delayed too long in accepting, but it is not correct to say that America "turned its back" on Europe in those days of stress. Finally we settled the war debts of our associates, incurred both before we entered the war and afterwards, at 10 cents on the dollar. All of them—except Finland—reneged on payment of even this small sum. We philosophically accepted their refusal to pay.

In the political field, although we did not become a member of the League of Nations, the American Government initiated and sponsored more than a dozen disarmament conferences. They all failed because the nations of Europe refused to accept honest and genuine disarmament at a time when Russia was still a weak military power and Hitler had not yet taken over in Germany.

When the British began to worry about our naval potential we met with them, the Japanese, the French and the Italians in London in 1931 and agreed to naval parity with Great Britain in the hope that such a commitment might smooth the path to peace.

PARIS PACT SIGNED IN 1928

Finally, it was on the initiative of the American Government in 1928 that the Paris conference was held and concluded the pact which was to outlaw war forever as an instrument of national policy. The Kellogg-Brian Pact—also known as the Pact of Paris—was signed at Versailles in August 1928 by all the civilized nations.

On the basis of the solemn pledges contained in that pact we further reduced our armed forces, while the others increased theirs. When the Japanese invaded Manchuria in September 1931, we brought the matter before the League of Nations in an effort to prevent growing military aggression. The League did nothing effective, merely deciding to investigate the matter on the spot. But we earnestly endeavored to collaborate with the world powers, at least to attempt to prevent the actual beginning of World War II.

This is the record of American cooperation with the rest of the world. The facts disproved President Truman's statement that "the United States turned its back upon the rest of the world after the First World War."

Congress Running Out of Old-Style Orators

EXTENSION OF REMARKS

OF

HON. CHESTER A. CHESNEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks, I have requested permission to insert in the Appendix the following article from the March 27, 1950 issue of the Chicago Daily News written by Paul R. Leach, entitled "Congress Running Out of Old-Style Orators." I believe every Member will be greatly interested in reading this article.

CONGRESS RUNNING OUT OF OLD-STYLE ORATORS—CRISES OF DAY RULE OUT POINTLESS SPELLBINDING

(By Paul R. Leach)

WASHINGTON.—They're disappearing from Congress, more's the pity—the old-style, free-wheeling, self-starting, welkin-ringing orators.

Time was when a man would run all the way to the Capitol to hear Jim Reed, of Missouri, tie into Jim "Ham" Lewis, of Illinois, in the Senate; or to see Borah, of Idaho, shake his flowing locks. Or somewhat further back, John Sharp Williams, of Mississippi.

What they talked about did not matter; how they said it was what counted. And Congress was packed with their like.

Today you can number on the fingers of one hand the Senate's spellbinders—Republican VANDENBERG, of Michigan, Democrat PEPPER, of Florida; Republican MILLIKIN, of Colorado, especially if he's in a story-telling mood; the brash young Democrat HUMPHREY, of Minnesota, and Democrat PAUL DOUGLAS, of Illinois, when he gets worked up.

You can't overlook ALBEN BARKLEY, of Kentucky, but he has been silenced by the Vice Presidency. You have to hear him outside.

In the memory of House old-timers, Uncle Joe Cannon, of Illinois, with his dry stogie; shaggy, deep-eyed Finley Gray, of Indiana, and debonair Nick Longworth, of Ohio, best lived up to the traditions of Clay and Calhoun. There were many more like them 20 years ago.

As in the Senate, they're now few on the House side. FRANK KEEFE, Republican, Wisconsin, does the home-and-mother theme well, and GENE COX, Democrat, Georgia, has an old-style, appealing way about him.

JOHN RANKIN, Democrat, Mississippi, is the best fire-and-brimstone haranguer while JOHN TABER, Republican, New York, is tops when it comes to telling the Truman administration on spending.

The real champion in the House today for all-around, long-or-short-range Fourth of July type of public speaking is DEWEY SHORT, Republican, Missouri. He can and does talk on almost any subject—without having a written manuscript before him.

Why are the old-style flowery orators disappearing?

For one reason, since the depression began, we've had a crisis every other day about something or other. In the days of Tom Marshall's 5-cent "seegars" big issues were few, and political infighting was a national pastime.

Today our Congressmen must be hard-headed, factual to the point. They are more like tired corporation lawyers arguing a case in court.

Because they have so much to do in committees and on the floor, most of their long speeches, read without gestures, are prepared by executive assistants, something the old-timers never heard of.

The campaigning microphone that they've had to learn to use, with precisely timed radio speeches, has slowed them down, too. Maybe television will bring back some of the fireworks.

They're interesting, but they don't raise the hair on the back of your head as the old masters did.

There was, for instance, some years ago, the famous oration by Senator Henry Fountain Ashurst of Arizona. He had been called to account for changing his mind. After a moment's reflection, Ashurst delivered a half-hour talk on "The Virtues of Inconsistency." It was a classic.

Jim Reed and Jim Lewis, both self-starters in oratory, tangled one day on the Senate floor back in the 1920's. Reed flayed Lewis in one of his bitterest speeches, but when he finished Lewis flabbergasted him with this:

"I always enjoy an encounter with my esteemed colleague from Missouri, but when I draw my trusty blade against his saber I always tip it with a rose."

Many Members have fought with the man in the White House, whether they were of the same party or not. One of these epic rows occurred only 6 years ago. ALBEN BARKLEY was the speaker.

He was then Democratic leader. President Roosevelt had vetoed a tax bill with the words, "it is not a tax bill, but a tax relief bill providing relief not for the needy but for the greedy."

BARKLEY not only had sponsored the bill, but had steered it through the Senate.

"That statement," he said on the floor, "is a calculated, deliberate assault upon the legislative integrity of every Member of Congress. Other Members may do as they please, but as for me, I do not propose to take this unjustifiable assault lying down."

He tore into F. D. R. for 15 minutes, and never repeated a word. He wound up by announcing that the next morning he would present his resignation as majority leader to the Democratic caucus.

Both Houses overrode Roosevelt's veto, and BARKLEY's resignation was hooted down.

UNIVERSITY OF MICHIGAN LIBRARIES

Real-Estate Lobby Again an Election Issue

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. O'HARA of Illinois. Mr. Speaker, from the heavy correspondence which is reaching me it is clear that a deep wave of resentment is sweeping the country in the wake of the defeat of the administration's bill to bring decent housing within the reach of the large segment of our population in the so-called middle income bracket.

The bill which was defeated by the mortgage bankers and the real-estate lobby would have reduced the monthly shelter cost from $90 a month to $64 a month on a $8,000 home.

It was opposed by the real-estate lobby because it would have ended the housing shortage. A housing shortage is meat and gravy to the real-estate lobby.

It was opposed by the mortgage bankers because it cut into interest profits even though all that it did in that line was to give the buyers of homes the same 3-percent interest rate on home mortgage loans as the farmers enjoy in their CCC price-support loans.

The real-estate lobby and the mortgage bankers now face the impossible job of defending before the people of America in November of this year the action of their friends in the Congress in depriving one-third of the families of our country—those with incomes of from $2,000 to $4,600 a year—of even an honest opportunity of finding decent homes within their financial ability to buy.

The political repercussions to the victory last week of the real-estate lobby and the mortgage bankers are discussed in an article by Thomas L. Stokes in the Washington Evening Star of March 27, 1950, which I am including in my remarks. The article follows:

AGAIN THE WHISTLE STOP—TRUMAN VERSUS CONGRESS TO BE ISSUE IN PRESIDENT'S CROSS-COUNTRY TOUR

(By Thomas L. Stokes)

President Truman undoubtedly hoped to swing some votes and perhaps eke out a slim victory when he sent a telegram to the House last week urging adoption of the loans to cooperatives in the housing bill which subsequently was defeated.

But he had another and long-range objective, as was clearly revealed in the detailed and rather specific case he presented on behalf of this provision which, he argued, is the only way people in $2,000 to $4,000 income brackets can get decent homes. He was making a record for the congressional election campaign. His party floor leader, Representative MCCORMACK, Democrat, of Massachusetts, frankly told the House this would be an election issue.

SAME ISSUE AGAIN

One can almost hear Harry Truman at one after another not-to-be-forgotten whistle stop on his forthcoming May cross-country tour and that which is to follow in the fall: "There was a bill in Congress to give you folks decent homes. And what happened? The Senate cut out a provision that would help you. Then it went over to the House. And I thought that body might show some sense. But to make sure I sent them a telegram asking them to put that provision back in to help you folks. What did they do? They beat it, too. Just remember that. They'll all be out here asking you to send them back to Congress. Just look up the record on your Representative. Don't let him fool you. That's all I ask you to do. You can do the rest."

Toot toot. Off to the next stop.

The issue again, as in 1948, will be Truman versus Congress.

With, of course, a difference which may not make much difference in the end. The difference is that it was a Republican Congress against which he railed in 1948. The Eighty-first Congress is a Democratic Congress, organized and run by the Democratic Party at least nominally, and its failures would normally be charged to the Democratic Party, and Mr. Truman would be charged with failure of leadership.

HARD TO MAKE IT STICK

He will undoubtely be so charged, but it will be harder than it once was to make it stick, even though it is an element of his own party that has defeated or held back social-welfare measures in which so many voters are interested and about which the President will pitch the domestic phase of the congressional campaign.

On such issues, the votes of southern conservative Democrats have been decisive by being thrown in with Republicans in that now familiar coalition which, on such issues, controls Congress and has become in effect, the second major party time after time.

Millions of voters interested in social-welfare measures, particularly well-organized labor and progressive groups, have become educated to the attitudes and the continuous repeat performances of this coalition and have ceased to identify the southern Democrats with President Truman, or blame him for this blockade. They identify the President with what might be called the Truman Democratic Party.

He has helped along this educational process himself by seeking to divorce himself from the southern conservatives of Dixiecrat tendencies. Practically, as a matter of political preservation, he is seeking to offset its defection, which cost him four States in 1948, by forming a new alliance of labor, so influential in urban voting, and Midwest farmers. Such a loose alliance was responsible for his 1948 victory.

This he will promote in his whistle-stop campaigns this spring and fall, immediately to elect, if possible, for progressive Democrats outside the South to offset southern conservatives in Congress, and beyond that, to strengthen this farm-labor alinement for the 1952 Presidential contest.

Point 4 Nonsense

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the March 27 issue of the Shamokin News-Dispatch, Shamokin, Pa.:

POINT 4 NONSENSE

Just when a cut in foreign spending appeared as a likely aid to balancing the national budget in 1952, along comes a new scheme, point 4. The bureaucrats and superidealists are at it again. Heaven help the poor American taxpayer.

What are the merits of this new plan to pour American billions out abroad? Its advocates say it is designed to aid backward nations by showing them American know-how and technical skills. That will increase world markets and world trade, and thus the United States will benefit, runs the argument. The idea is a good economic theory, but economics do not hew to set patterns because of wars and the human element in governments. We might build up all sorts of trade areas and be cut off from them ourselves by restrictive trade barriers, quotas, and other means.

Another thought on this subject is worthwhile. While we are going about demonstrating our technical skills to the tune of billions of American dollars in undeveloped areas of the world, what are our own underdeveloped areas supposed to do? We have plenty of undeveloped areas in the United States. And it's high time somebody pulled the idealists down from their soft chairs and pointed that out to them. Charity might well begin at home in this case.

We could spend billions developing our country, its potentials, education, skill, power projects, and industries. We still have a long way to go in the United States. The Government now doesn't even have money to build post offices and hospitals where they are badly needed. Yet we are talking about a point 4 program for the world—its undeveloped areas.

The American people must not be led down the sucker route on this issue. They must learn the facts in time. Talk about it, meet about it, and tell your politicians about it.

Taxation of Cooperatives

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following open letter to the Honorable Charles F. Brannan, Secretary of Agriculture; also Mr. Raymond Moley's article entitled "Taxing Co-ops," which appeared in the Monday, March 27, 1950, issue of the Chicago Journal of Commerce:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 22, 1950.

AN OPEN LETTER

Hon. CHARLES F. BRANNAN,
Secretary of Agriculture,
Department of Agriculture,
Washington, D. C.

MY DEAR MR. SECRETARY: I have read with much interest the statement opposing taxation of cooperatives which you submitted to the House Ways and Means Committee on March 3. The committee is now holding executive sessions, seeking particularly to determine what excise taxes should be reduced, what loopholes in the present law should be closed, and how much additional revenue would derive from the taxation of certain tax-exempts. Since your stated opinions are at considerable variance with

those expressed by the general counsel of the American Farm Bureau Federation and other recent witnesses before the committee, I should greatly appreciate an explanation of certain points that you made in your statement. I am sure that other members of the committee, as well as myself, would be grateful to you for whatever further help you might give us in this matter.

I would like you to clear up the following points:

1. You say that the real objective of those who propose "a change in the tax status of cooperatives" is "to destroy cooperatives." Taking such specific examples as the Cooperative Grange-League-Federation Exchange of Ithaca, N. Y., the Consumers' Cooperative Association of Kansas City, Mo. and the California & Hawaii Sugar Refining Co. of San Francisco, will you demonstrate by actual computation of the corporation tax on all earnings in 1949, including patronage dividends, how payment of tax at the regular corporate tax of 38 percent would destroy these cooperative corporations. (I have included CCA because its published earnings in 1949 amounted to only $86,334, though it had earned $8,320,206 in 1948.)

2. You quote co-op theory that patronage dividends are not taxable to the cooperative corporation because they belong to farmer members who have been underpaid for products marketed or who have overpaid for supplies or service. Will you take one practical case, say the sale of grain by a Minnesota farmer through the Farmers Union Grain Terminal Association, of St. Paul, and explain how profits made by the cooperative corporation in such extraneous operations as lending money, storing grain, or speculating in the commodity markets can legally or morally be deemed an adjustment of an underpayment for the farmer's wheat? How would you have solved the problem faced by the Indian Farm Bureau Cooperatives, about 1947, when $1,000,000 untaxed capital gain was made in selling a group of oil wells? Would you divide such a profit among members and call it the refund of their overpayment for feed or fertilizer?

3. You speak of cooperatives as "an effective force for combating monopolies." But I am sure you remember the case, here in Washington a couple of years ago, in which a judge of the district court dismissed prosecution of the Maryland-Virginia Milk Producers Cooperative for price fixing and other monopolistic practices when the co-op attorney quoted the Capper-Volstead Act and said "Elimination of competition is a perfect legal right of a cooperative and the very end and purpose of a cooperative. It is our right to become a monopoly." Do you consider a co-op monopoly an effective force to combat other monopolies? Would you support an amendment to the Capper-Volstead Act, such as I introduced in the present Congress, to give the Attorney General, instead of the Secretary of Agriculture, the power to prosecute cooperative monopolies such as now exist in the marketing of oranges, lemons, cranberries, walnuts, avocados, and other products?

4. Corporation taxes in 1949 amounted to about $11,000,000,000, which contributed to the Department of Agriculture's appropriation of nearly three-quarters of a billion dollars. In line with your quotation from the Treasury's document apparently granting regular corporations permission to avoid income taxes by adopting the cooperative method of distributing earnings to customers, would you recommend the adoption of this method of operation, knowing that it might seriously reduce the Government's revenue and result in heavy curtailment of your Department's activities?

5. British city consumer cooperatives are known to own farms where they produce livestock, vegetables, fruits, and so forth, for low-price sale to city workers. The growing movement of labor-owned consumer co-ops in the United States is reported to have similar ideas for the future. Inspiration for all this is the cooperative tax escape. Would it be advantageous for the farmer, do you think, to hold on to the cooperative tax subsidy at the cost of provoking new competition by labor-owned farms?

6. On page 1 of your filed statement you say that taxation of the cooperatives "would result in only a little additional revenue." On page 4 you say that taxation might "detrimentally affect the financial structure of many farmer cooperatives." Will you justify those two statements, and tell me, please, if the amount of money involved would be so insignificant, why do you object so strenuously to the cooperatives paying their share of the high cost of government?

The committee is engaged this week in a study of loopholes. Your answers to the above questions will therefore be especially valuable at this time.

Thanking you in advance for any clarification you may make that will help our committee in its attempt to spread the tax load equitably, I remain

Yours sincerely,

N. M. MASON,
Member of Congress.

[From the Chinese Journal of Commerce of March 27, 1950]

MOLEY—TAXING CO-OPS

Like many other good words appropriated by socialistic-minded politicians, "cooperative" covers a multitude of sins. Congress seems to have finally killed the President's scheme to bribe middle-income people with what is called cooperative housing.

This proposal will serve to illustrate the basic difference between a policy in which Government takes measures to prevent any individual or group from falling below a minimum subsistence level and a policy of Government hand-outs to all classes, irrespective of proven means and need. The latter is called by the British Labor Party fair shares. It really means equal shares. And it is socialism, no matter what fine verbal plumage it may wear.

In this instance, it was a shrewdly calculated political move to induce support for the Fair Deal by offering housing to what might be called our middle classes on terms that would not only have expanded the bureaucracy and raised the burden of Government expense, but would have added new thousands to those dependent on Government aid. The coalition in Congress saw the nature and purpose of this measure and killed it.

It will not be so easy to penetrate the defenses of another form of vested interest which is hidden in the fine word "cooperative." For many big businesses in competition with taxpaying private enterprises enjoy immunity from the obligation to support the Government from which they receive unmeasured services and benefits.

Secretary of Agriculture Brannan, who is rapidly achieving the distinction of being the most socialistic of all important members of the Truman family, presented on March 3 a plea to the Ways and Means Committee against the taxation of cooperatives. Congressman NOAH MASON has offered a powerful reply in a letter to the Secretary.

After disposing of the Secretary's argument that fair taxation would destroy cooperatives, the Congressman moved to the very heart of the argument for a fair measure of taxation on operations that are extraneous to the original purpose of cooperatives.

Since Brannan claimed exemption for farmers on the ground that they have been underpaid for their products and have overpaid for supplies or service, MASON cited in reply the case of a Minnesota co-op which made large profits in such operations as lending money, storing grain, and speculating in the commodity markets. He also cited the case of an Indiana co-op which has an untaxed capital gain of $1,000,000 from the sale of a group of oil wells.

As is often the case in Secretary Brannan's methods of argument, he succeeded in this case in contradicting himself. On the one hand he declared that taxing co-ops would result in only a little additional revenue, and on the other that taxation would destroy these lusty children of privilege.

This suggests the Secretary's claim that on the one hand his farm plan would not cost more than present farm supports, and that on the other his proposed subsidies would bring new prosperity to the farmer and lower the cost of living to the consumer.

Brannan cannot have it both ways, and neither can the co-op.

Black Diamonds

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. VAN ZANDT. Mr. Speaker, those of us who live in the bituminous coal fields of Pennsylvania are much concerned about the future of the soft-coal industry.

Much has been said and will be said as to the remedy necessary to stabilize the industry and which must include new uses for soft coal.

Mr. Herman Reifsnyder, editor of the Altoona Mirror, Altoona, Pa., located in my congressional district, had the following to say on the subject:

BLACK DIAMONDS

At the turn of the century if you were to have suggested to grandma a new stove replacing her wood- or coal-burning kitchen range by a stove whose fuel gas was piped clear across the Nation from Texas, she undoubtedly would have believed her offspring a little "teched." At least too far ahead of the times.

Now, what for years has been a commonplace in transmission of gas as fuel, not to mention the flood of oil, a relatively short period in the past was regarded as fantastic, impossible.

At present we are talking about a trip to the moon, a vacation on Venus via space ships. We hear, too, quite a lot about flying saucers, little men from Mars. Does that sound ridiculous? Don't answer that one just now. Better wait a little while.

And so it goes. But let's take a little time out to enter the realm of fantasy, if you will, and consider something that, while it may sound a little farfetched, may have in it real possibilities and at a not too distant future.

In casting about for development of new industry to bolster a sagging economy, it might be well to consider revitalizing an old industry which has been hard hit by competition, by work stoppages, by antiquated methods of production, and by lack of modern methods of marketing its products.

Altoona is within one of the greatest soft-coal fields. Other fuels, largely the class called laborless fuels, are rapidly displacing coal, so much so that mine owners are beginning to wonder a little nervously about the future. That future takes in Altoona.

Recently a central Pennsylvania coal-mining company called attention to some very pertinent facts that are spelling doom to the coal trade. Coal is a sleeping giant; it is being rocked to sleep by oil and gas, chiefly. Once it gets awake and its power is handled

UNIVERSITY OF MICHIGAN LIBRARIES

on a competitive basis with oil and gas, there will be a lot of coalmen much happier than they are today. And yet, there will be plenty of room for all three, gas, oil, and coal.

Sometimes one waxes enthusiastic about the wonders of modern development in machinery and utilities that make daily life a bit easier on the physical side. But perhaps the greatest wonder is that people have had to wait so long for our present-day improvements in many categories.

Since the days of Benjamin Franklin and his improved stove, little real progress is noted in the use of coal as a fuel. You still have ashes and all that goes with a coal burner. There are many types of central heating plants on the market, too—many of them complex gadgets and costly—employing coal.

Wouldn't it be like a dream to have push-button heating? It need not be a mammoth job to switch over from coal-burning heat equipment to heat units employing electricity. It could be very simple, if it were made that way.

To come right to the point: Why handle soft coal half a dozen times in its travel from mine to consumer? Why not convert the coal to electrical energy right in the coal field and transmit the power by less expensive and antiquated methods to do the same heating job? Coal also could be converted into gas or oil and similarly transported to where it will be used.

Wholesale use of electrical energy for heating would not need to be prohibitive in price. Maybe in the long run it would be cheaper than the present methods of employing coal. Keep in mind that electricity, somewhat like gas and oil, can be distributed over fairly long distances to an untapped market of customers.

What about the thousands of people in the countryside who still rely on wood for heating because their soft coal as the present time costs them $18 to $22 a ton in some localities? Wouldn't these thousands of customers provide a great market for coal once turned into a product like electricity, gas, or oil and piped to them?

A ton of coal contains a certain number of British thermal units, measurement of heat. A kilowatt of electricity has a certain heat value. At current electrical rates home heating hereabouts would be fantastic, but a good conversion job for a waiting market would handle the price angle at the proper time. It should not cost near so much to transfer the heat in a ton of coal over a certain distance, as it costs to transport the coal and then extract its heat energy.

Changeover into such a radical new utilization of coal naturally would not be overnight. It would cause, indeed, disruptions in other lines of business. That always happens as business and commerce evolve new methods.

Take China as an example. As much as we look upon railroads as great factor in civilization's progress, the introduction of railroads in China threw countless thousands of men out of work who had depended on the old methods of transport to make a living. The result was many turned to banditry to survive. The same thing happens in countries more advanced than China, but the "banditry" is more subtle and refined; no less effective in the long run.

There are some electrically heated homes now, but for full utilization of coal use of this type of heat would have to be expanded a lot. We use electricity to heat hen houses, why not our own houses? Nothing could be cleaner and safer. There is always the inherent danger of being asphyxiated by coal gas; there is danger of fire, and sometimes even having your home blown up. There are, of course, dangers connected with other fuels, too. But electric power would seem to be the acme of safety and convenience bar none.

Consider one other phase of home heating that would tie in very closely with the use of electricity. Take the ordinary five- or seven-room house. The central heating plant keeps each of those rooms warm (theoretically at least) 24 hours of the day. If, during the night one used but two rooms, why waste heat on the other three or five rooms; reduce it and save fuel. Also, in daytime, if only one or two rooms are used, why heat all the rest? It could be perfectly simple to push a switch and reduce heat in various parts of the home if electricity were used.

When something new strikes the market there are usually a lot of gadgets that are worthless and expensive. That goes for a transformation from customary heating methods to home heating by electricity. It might be made a very simple transformation whether one employed hot-air heat, hot water, or steam. It certainly could be a more compact heating unit and also the necessary size wire to carry your heat energy need not cost what pipe sells for at present.

There are already on the market many models of small room electric heaters. Some are good, some not so good. There are even steam radiators, of portable type, employing an electric element. A British firm has been turning out a radiator filled with oil instead of water—nothing to freeze up if you decided to turn the current off in the dead of winter.

These instances just mentioned point to the fact that there is an evolutionary process toward quicker, cleaner, safer home heating. But how long will it take to go the whole way? How long will it take to turn the black diamond field into a modern market for transmission of its worth to the cities and the countryside where it will be used in almost unlimited quantities?

This might all be, as was said, a little farfetched, but at the same time those who are apt to scoff at such schemes better keep in mind that someday, somebody is likely to come along with a heating scheme that will knock out once and for all not only coal but gas and oil as well.

Unquestionably if the dream of home heating by electricity were to come true there still will be for many years to come industrial uses for coal, for gas and oil. But it seems there is a great market for coal if it were transformed into a modern laborless product.

It is a question whether householders convert from coal to gas and oil heat because of so-called work stoppages. Rather they act because of the convenience involved, even though it may cost a little more. In some cases it costs less. However, installation costs are pretty high, costing many hundreds of dollars, a cost that certainly could not be jutified in a transformation to electrical heat.

It may be that the afore-mentioned scheme is going a little too far, but if the coal business cannot find a market for its products, it may eventually find itself in the same category as the canal boat, the stage coach, hoop skirts and many other things we read about nowadays in history books.

Alaska and Hawaii Statehood

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I would like to include the following editorial from the March 23 issue of the Minneapolis Morning Tribune which answers so cogently the indefensible argument made to the admission of Alaska and Hawaii into the Union as the forty-ninth and fiftieth States that these two areas should not have equal representation in the Senate along with the present 48 States:

THE STATES ARE EQUAL

Senators resisting admission of Hawaii and Alaska as States have been using some pretty feeble arguments. Take the one about disproportionate representation the forty-ninth and fiftieth States would have in Congress. It goes like this: Why let Alaska's 100,000 people and Hawaii's 530,000 have as many Senate votes as New York with a population of more than 13,000,000?

Surely those who ask this question realize that it is entirely beside the point.

Senate representation never was intended to be in proportion to population. The upper House was created to preserve the identity of the Original Thirteen States. Some critics hold regional representation responsible for the Senate's tendency to parochialism. This may be true, but it is unreasonable to blame Hawaii and Alaska. As Delegate JOSEPH R. FARRINGTON, of Hawaii, has said, neither Hawaii nor Alaska asked for two Senators. That is determined by the form of government under which we live.

As a matter of fact, 1? 404,224 people living in 18 States in 1940 could outvote New York's 13,478,142 in the Senate by 36 to 2. On the other hand, New York now has 45 Representatives, or 10 percent of the membership of the lower House of Congress.

If it is bad for each State to have two Senate votes, the thing to do is amend the Constitution. Why discriminate against Hawaii and Alaska when 35 other States have already been admitted to the Union with all the rights and privileges of the Original Thirteen?

The United States grew to its present geographical proportions under a wise colonial expansion policy laid down in the Northwest Ordinance of 1787. That policy provided that whenever a Territory could boast a population of at least 60,000 people it could be considered for statehood on a basis of equality under the Constitution.

Aside from Texas, which came in as an independent republic; Maine and West Virginia, which were separated from other States; and Vermont and Kentucky, admitted without previous Territorial status, all other new States were accepted on terms inspired by the ordinance.

Frank Buck

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. FISHER. Mr. Speaker, millions of people in America and around the world were saddened by the announcement on last Saturday of the death of Frank Buck. The "bring 'em back alive" animal authority thrilled multiplied millions by his jungle exploits, his magazine stories, his radio and screen appearances, his lectures, and his devotion to the great outdoors.

Frank Buck, whose name is known in nearly every household in this country,

began his career as a big game hunter back in 1911 when he made his first trip to South America—the first of a series in search of rare animals and reptiles that built his "bring 'em back alive" reputation.

From the time he was 18 years old, Buck roamed the earth, making repeated expeditions into the wilds of Malaya, India, Borneo, New Guinea, Siam, and Africa—to mention but a few. He loved his work, risked his life many times, and in his quiet, unassuming and modest way liked to recount his experiences in danger spots of distant lands where the average person would not dare go and would probably not return alive if he did. Buck possessed the finer qualities admired so much by Americans—courage, character, energy, ambition, and an insatiable love for adventure.

I have known Frank Buck many years, and like so many others, enjoyed the warmth of his friendship, his pleasing personality and his interesting conversation. He lived in my home town of San Angelo, Tex., where he often went to rest and visit with his family and friends between his journeys into the world's darkest spots. He belonged to Texas, to America, and he was a citizen of the whole world. His inspiration and influence will be felt for generations.

Frank Buck left his mark and has turned in his hunting togs. In Singapore, in Cape Town, in Borneo, in those far-away places, as well as at home, folks are mourning the passing of this great and distinguished American. I am honored to be privileged to pay this tribute to his memory.

Job Shortage Causes Worry

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of March 27, 1950:

JOB SHORTAGE CAUSES WORRY; MANY IDLE EXHAUST BENEFITS—OFFICIALS FIND WORK OPPORTUNITIES ARE NOT INCREASING ENOUGH TO CARE FOR THOSE AT YOUTH AND AGE ENDS OF SCALE

(By A. H. Raskin)

One hundred and sixty thousand New Yorkers have drawn all the State unemployment insurance checks they are eligible to receive in the present "benefit year." Two million workers in various parts of the country exhausted their insurance rights last year and 800,000 of these wound up the year still out of work. Massachusetts and Rhode Island are looking to the Federal Government to bail out their depleted job-insurance funds. One-fifth of Oregon's labor force is on the insurance rolls.

These are symptoms of a national unemployment situation that is giving increasing concern to Federal, State and municipal officials in all sections. The Census Bureau reported 4,684,000 idle workers in mid-February out of a total civilian work force of 61,637,000. This meant that 1 worker in every 14 was without work at a time when demand for steel, automobiles and many other products was at near-record levels.

Officials do not expect any dramatic worsening in the unemployment picture. On the contrary, they expect a modest improvement in the next month or two. What worries them most is the evidence that employment opportunities are not increasing fast enough to provide jobs for those at both ends of the age scale—the young and the old.

They are afraid that the unemployment statistics will not show what is happening in sufficiently graphic form to produce any national will to do something about the problem. The March census report may show a slight rise in unemployment as a hangover from the coal strike, but most Government economists expect a considerable improvement in April and May.

SCHOOLS TO ADD TO LISTS

Jobless lists will go up again in June as schools and colleges throw hundreds of thousands of new recruits into the job market. But by the end of the year, the unemployment total will be no higher and perhaps somewhat lower than the February figure, according to Federal forecasts.

Another factor likely to stir complacency about the volume of unemployment is that job-insurance payments, which set a record high in January, will probably taper off as older workers use up their benefit rights and disappear from the insurance rolls. Workers looking for their first job do not show up on the rolls at all because they have built up no eligibility credits.

When unemployment lasts long enough, relief rolls start to soar but there is usually a considerable time lag between exhaustion of insurance rights and application for relief on the basis of need. As a result, officials foresee a period in which most indicators will point to a downturn in joblessness without any real improvement in the basic situation.

With a congressional election coming up in November, the administration is not disposed to put too much accent on the extent of idleness and the permanent character of the problem it presents. That is why economists in closest touch with the situation feel the economy is suffering a particularly pernicious form of unemployment.

When business is on the skids and wholesale lay-offs are being made, every one is concerned. Demands for action come from all sides. When unemployment piles up slowly through the failure of the economy to absorb the increased labor force that comes with a growing population and a longer life expectancy, the pressure for action is much less insistent.

EXPANSION OF ECONOMY URGED

Leon H. Keyserling, acting chairman of President Truman's Council of Economic Advisers, warned a Chicago audience earlier this month that the number of jobless workers might rise to 10,000,000 or 12,000,000 4 years hence unless ways were found to expand our economy sufficiently to provide new jobs.

All economists stress that they have little worry over the prospect of any abrupt collapse in our present employment situation. New applications for unemployment insurance, the most sensitive barometer the Government has of idleness due to lay-offs, dropped from a weekly average of 378,100 in January to 290,100 last month.

In New York State the volume of new and continued claims for insurance reached a high level of 507,937 in the week ended January 13. In the week ended March 17 the figure was down to 418,451. However, part of the decline was accounted for by the elimination of workers who had drawn all the benefits for which they were eligible. Nearly 7,000 workers a week fall into this category.

Under the law a worker may receive not more than 26 weekly checks in the 12-month period from June of one year to June of the next. This means that none of the 160,000 New Yorkers who have exhausted their benefit rights for this year may apply for benefits again until next June. Those who had some work in 1949 will be eligible for additional payments at that time if they are still out of work.

However, many of the workers who have been dropped this year will have no benefits to look forward to next year. A substantial percentage lost their jobs in the industrial slump of 1948 and have not worked since.

GROUP OVER 45 HARD HIT

Persons over the age of 45 make up a large part of the group that is using up its benefits without being able to find new jobs, according to samplings made by State officials. Older workers are finding it increasingly difficult to obtain placements. This applies not only to those 65 and over, for whom old-age assistance and industrial pension plans are available, but also to those 20 years younger. Two-thirds of the men who exhausted their benefit rights in December were in the over-45 group.

Federal officials report that the situation for aging workers is the same in most parts of the country. When they have jobs, they usually are among the most valued workers. But when they lose their jobs, they are almost impossible to place. The spread of industrial pension systems and the attendant increase in premiums an employer must assume when he hires an older worker have aggravated this problem in many industries, officials say.

Consideration is being given in Washington to the formulation of special employment programs for the young and the old. Officials feel special attention is needed for those trying unsuccessfully to break into the job market for the first time and also for those trying to hold onto opportunities for useful employment after industry has labeled them too old.

EARLY LEGISLATION UNLIKELY

Administration thinking on programs has not advanced to a point that makes it appear anything will be sent to Congress this session. It is recognized that public works or construction programs would be of little value, especially in meeting the needs of the aged. It is also recognized that made-work programs would meet wide opposition in and out of Congress unless they met a clear-cut public need.

All Government experts agree that the unemployment insurance program does not represent a basic answer to the kind of unemployment the country now has. The insurance program is calculated to meet the first impact of uhemployment but not to carry a worker for a period of more than 26 weeks. It helps bolster purchasing power in period of large-scale lay-offs but other devices are necessary to bring new jobs into being.

Co-op Housing Defeat May Be Campaign Issue—Democrats See in It an Appeal to Many Voters in Middle-Income Groups

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. DOLLINGER. Mr. Speaker, under unanimous consent, I am inserting in the Appendix of the RECORD the following article which appeared in the New York Times of March 26, 1950, writ-

UNIVERSITY OF MICHIGAN LIBRARIES

ten by Clayton Knowles, entitled "Co-op Housing Defeat May Be Campaign Issue":

CO-OP HOUSING DEFEAT MAY BE CAMPAIGN ISSUE—DEMOCRATS SEE IN IT AN APPEAL TO MANY VOTERS IN MIDDLE-INCOME GROUPS

(By Clayton Knowles)

WASHINGTON, March 25.—The one fresh proposal for attacking the national housing shortage died, and a political issue was born last week, when the House administered the coup de grace to the Administration's program for cooperative home building.

This program was designed specifically to meet the needs of the middle-income third of the Nation. In this bracket are the families in smaller communities earning between $2,450 and $4,000 and those in the big cities making between $3,100 and $4,800 a year. Eight million families fall in this category.

These 8,000,000 families, who cast about 15,000,000 votes, come election day, would have been eligible for 40- to 50 year, 3- to 3¼-percent loans for home building, if the program had cleared Congress. With its defeat, the best Government-facilitated financing they can get is 4½ percent, under Federal Housing Administration programs, or 4 percent GI loans, if they happen to be veterans.

DEMOCRATS' ADVANTAGE

Out of such situations campaign issues are born, and the Democrats seeking to retain control of Congress this fall can be counted upon to make political capital out of the defeat of this program, which was engineered by the Republican Party.

Representative JOHN W. MCCORMACK, Democratic leader of the House, left no doubt of his party's intentions when, trying to crack the almost solid Republican opposition to the administration bill, he warned of inevitable political repercussions.

"You may fool the public today but not next November," he cried. "This is going to be a live issue—an issue which I hope will be used advantageously next fall."

LOANS FOR CONSTRUCTION

This program, incorporated in an omnibus housing bill authorizing a $4,100,000,000 Federal commitment for other forms of assistance to private building, would have set up a new corporation empowered to sell Government-guaranteed debentures on the open market. From the proceeds of these sales, the corporation would have made loans to cooperatives and other nonprofit organizations for home construction.

The administration was certain that the program would take hold and make a substantial dent in the housing shortage. President Truman thought so much of it that he sent a special message from Key West to the House urging that it be passed.

The administration's concern over the fate of the co-op feature of the housing bill, however, had a broader basis than the Nation's housing needs alone. It dealt with the important part a high rate of home construction played in national prosperity.

An unprecedented number of new housing units—1,000,000—were built in the United States last year. It is estimated that the country needs that much new construction each year just to stay abreast of the housing demands created by new families and obsolescence.

Against this background testimony gathered during long congressional hearings indicated that construction in 1950 would not exceed 900,000. This is not only too little to avoid losing ground in housing accommodations, but also—and more importantly, according to high administration spokesmen—dangerous to the Nation's economy.

Should actual construction in 1950 fall below this estimate to, say 800,000 units, economists to whom the administration pays heed believe a recession might ensue, the equal, perhaps, of the recession of 1937.

Sixteen-Percent-More-Wheat Bread Sweeping Kansas Like Wildfire

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. HOPE. Mr. Speaker, a few days ago Members of the House and Senate had an opportunity to try out a new bread recently developed in Kansas which uses 16 percent more wheat than the loaf put out by the ordinary baker. Many Members of the House have told me how much they enjoyed the flavor and taste of this new bread and have expressed the hope that it might be made available here in Washington.

In that connection I submit for inclusion in the RECORD an article from a recent issue of the Hutchinson (Kans.) News-Herald which tells of the tremendous demand for this new bread on the part of Kansas people.

The bread which was served in the House and Senate restaurants last week was baked in the bakery of J. S. Dillon Sons, which organization operates a large number of food stores in the State of Kansas. As a part of this extension I desire to submit the formula which was used by the Dillon bakery in making this new bread and also the old formula which was supplanted by the new. This formula is available to any bakery anywhere and in view of the marvelous reception which has been given this bread wherever placed on sale, it is believed that bakeries everywhere will want to use this new formula.

The matter referred to follows:

TASTE OF NEW LOAF SELLS IT

A new kind of wildfire is sweeping Kansas.

This time it is the 16-percent-more-wheat bread, the brainchild of Kinsley wheat farmer Morris Coover and later developed and produced by J. S. Dillon and C. O. Mammel bakeries in Hutchinson.

"We are working overtime to keep stores supplied with the new 'farm' bread," said Fred Beeman, head of Dillon's bakery.

"We have had to put on an extra bread shift and will have to enlarge the entire baking set-up if orders continue at the present rate," said Lee Scott, Mammel's bakery chief.

Neither the bakers or the store managers can explain the unexpected rush of customers for the new-type bread. At first they thought it might be a momentary fad but instead of leveling off or decreasing, the orders continue to climb.

"My store managers have only one thing to say these days," said Scott, "and that is a plea for more bread."

Orders for the new bread at the Dillon's bakery for next Saturday alone top by 1,000 loaves the entire output of bread by the bakery for last week.

Stores in the Dillon's organization which formerly ordered 100 to 150 loaves on Saturday are now ordering 800 to 1,000 loaves of the new-type bread, Beeman said.

Scott said the enriched bread is outselling any other type which has ever been sold over a Mammel's counter.

Beeman believes the better taste of the new bread accounts for the unbelievable sales.

In addition to containing 16 percent more flour, the Dillon bread has a high milk content. "It sounds corny but it does taste like the bread which mother used to make," said Beeman.

Dillon store managers are equally sold on the new bread.

Dale Jaye, Fifth and Adams: "The store has run out of Farm bread several times during the day but customers wait until a truck can arrive with more of the new bread rather than take some of the older type."

Al Puls, B and Main: "We have had to reorder the new bread several times a day."

John Graham, Great Bend: "Bread sales over the week end were four times normal. We sold 2,600 loaves which equals the normal week-end sales of all bread."

Scott said one of Mammel's managers carries a loaf of the bread around with him during the day and offers each customer a slice. He said Mammel managers complain that they cannot keep enough new bread on their counters.

The factor which makes the new bread better for toast is that it's less elastic and spongy than the older type bread, said Beeman. As toast, it breaks easier than the old formula.

Because of the new quality, customers will now have to use something beside the squeeze test in buying bread, said Beeman.

Formerly a customer went into the store and pinched loaves of bread until one was found which squeezed the easiest. The belief was that the fresh bread was softer. To make a loaf which would squeeze, bakers had to give up some good eating qualities.

The new type is more substantial and will not give as easily when pinched, so customers will have to buy on a taste test, said Beeman.

Beeman said he has been told by persons who never ate bread before that the new type bread has converted them into eaters of bakery bread.

The new type bread has to cost more money because it costs more to produce, said Beeman. Extra material in each loaf costs an additional 1 cent and 10 percent more baking time, said Beeman.

The wheat farmers who, through the Western Kansas Development Association, were the first to get into the more-wheat-in-bread movement are all in favor of the new bread.

Beeman has received many letters from wheat farmers.

C. M. Patmon, Hoxman, wrote: "Thanks from a wheat farmer. Your bread is a step in the right direction."

An example of how the wheat farmers feel was shown by a man who walked into a bank here Thursday.

"What kind of bread do you eat now," he asked the teller?

"That new type bread," was the answer.

"It is a good thing," the farmer replied.

"This is one time the farmers have an opportunity to put something good over and we will see now how the city folks stand behind us."

DILLON'S FARM BREAD

Dillon's Farm bread was developed by the following procedure:

Original formula of Dillon's enriched bread:

White flour, 100 pounds.
Water, 63 pounds.
Yeast, 2 pounds.
Salt, 2 pounds.
Powdered skim milk, 6 pounds.
Sugar, 5 pounds.
Shortening, 4 pounds.
Yeast food, 8 ounces.
Mycoban enrichment tablet, 3 ounces.

New formula on Dillon's Farm bread:

One hundred percent fine-ground whole wheat flour, 6 pounds.
White flour, 110 pounds.
Water, 63 pounds.
Yeast, 2 pounds 5 ounces

Salt, 2 pounds 6 ounces.
Powdered skim milk, 6 pounds.
Sugar, 5 pounds.
Shortening, 4 pounds.
Yeast food, none.
Mycoban enrichment table, 2 ounces.

You will note that we have added 16 percent more flour—6 pounds whole wheat fine ground, and 10 pounds white flour. The moisture or absorption then drops from 63 percent of the flour to about 54 percent.

This makes a more solid loaf, a more nutritious loaf for two reasons: First, there is more of the outer part of the wheat berry and, also, there is more flour in the bread.

You will note we have a bread with a high content of milk solids. This also makes the loaf more nutritious.

Mycoban is a product of du Pont. It prevents mold.

The baker can run either the straight dough or sponge method, using about his normal methods, varying if necessary to fit his shop conditions.

Canadian Wheat Purchases Under ECA Program

EXTENSION OF REMARKS
OF

HON. JOHN KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement issued by the Economic Cooperation Administration in September 1949 in regard to the purchase of Canadian wheat by Great Britain under the ECA program. This statement should serve to answer the many questions asked on the floor of the House during the debate in reference to this matter. Also in connection with the same subject, I include copies of letters exchanged at that time between the Honorable Charles F. Brannan, Secretary of Agriculture, and the Honorable Paul G Hoffman, Administrator of the Economic Cooperation Administration, which letters were attached to and a part of the statement above-mentioned. They follow:

WASHINGTON, September 15, 1949.—The Economic Cooperation Administration agreed today to permit Great Britain to use ECA funds to purchase $175,000,000 worth of Canadian wheat in an effort to alleviate the critical drain on British gold-and-dollar holdings.

The agreement came after consultations between ECA Administrator Paul G. Hoffman and Secretary of Agriculture Charles F. Brannan on the British dollar crisis and the effect of the proposed action on the agricultural economy of the United States.

The Secretary said he believed Mr. Hoffman's proposed action was fully warranted. He has issued the following statement:

"The effect of ECA's decision will be beneficial to United States farmers as a whole, including wheat producers, because it will increase our foreign markets for a number of agricultural products and help to maintain a traditional pattern of international trade with England, Canada, and other countries which has been beneficial and can continue to be beneficial to farmers of this country.

"To wheat farmers it should mean as large, if not a larger market for exportable wheat this year. What ECA has done is help England pay for wheat which they had contracted to take from Canada during the last year of the 4-year British-Canadian wheat pact. However, England has agreed to buy $30,000,000 of wheat (about 15,000,000 bushels) from the United States which had not been previously planned. This has been made possible by the relief to British dollar resources resulting from Administrator Hoffman's action.

"Under the international wheat agreement, Canada has an export quota of about 200,000,000 bushels of wheat. Any sales under the British-Canadian contract count on that quota. If the British were to shift purchases from Canada to the United States this would entitle Canada to claim other outlets under the wheat agreement which we expect and prefer to fulfill.

"Due to the relief being granted by ECA, the United Kingdom will also buy $8,000,000 to $10,000,000 worth of United States perishable surplus agricultural commodities that had not been planned. These purchases will help relieve our growing surplus of these commodities.

"Finally, Canada will reexamine restrictions on import of fruits and vegetables with the view of giving relief where possible from restrictions that are especially burdensome to United States producers.

"In the final analysis, the action taken by Administrator Hoffman, which I believe was fully warranted under the circumstances, will enhance our export marketing not only for the American wheat farmer but for the entire agricultural economy."

Since March 1949, ECA has not financed the purchase of wheat from any source other than the United States. As a result, Great Britain has been spending its free dollar reserves to meet the deficit in its Canadian accounts, a substantial element of which consists of Canadian wheat.

The ECA action permits Marshall-plan financing for a little more than half of the $309,000,000 worth of wheat which Great Britain will purchase from Canada during the current fiscal year under British-Canadian wheat buying programs.

Greater flexibility in the use of Marshall-plan dollars by Great Britain was one of seven measures adopted during the Anglo-American-Canadian monetary conference to relieve the British dollar crisis.

In addition to authorizing the use of ECA funds to pay for part of the United Kingdom's Canadian wheat purchases, ECA also agreed to finance certain "vessel disbursements" by the United Kingdom which were heretofore ineligible for ECA payment. The "vessel disbursements" are for bunker fuel purchases which require payment in dollars and port and harbor expenses which can be documented. They amount to about $30,000,000.

ECA said it is exploring the possibility of making other nonagricultural commodities and services, which are causing a drain on Britain's dollar reserves, eligible for ECA financing. ECA emphasized that while the agreements broaden the use of Marshall-plan dollars they do not increase the amount of dollar aid for the United Kingdom.

Administrator Hoffman and Secretary Brannan, in an exchange of letters concerning the proposal to finance a portion of the British purchases of Canadian wheat, agreed on the importance of checking the drain on British dollar holdings.

"Recently, there has been a very severe drain on United Kingdom gold and dollar reserves," Mr. Hoffman said. "This drain, if not halted, would quite certainly vitiate the progress toward economic rehabilitation and recovery which the United Kingdom has made and remove all prospects of achieving the objectives of the Foreign Assistance Act, not only in the United Kingdom but in all probability in the other countries participating in the European recovery program."

Secretary Brannan, in reply to Hoffman, said the interest of his Department centers about the effect of the proposed action on the agricultural economy of the United States.

"We believe, as stated in your letter, that the financing by ECA of a portion of the wheat moving under the United Kingdom-Canada agreement will not diminish the over-all exports of United States wheat but may even result in a slight increase, and, in view of the other measures which you point out will be taken, the proposed action will facilitate an increase of United States exports of other agricultural commodities to Canada and the United Kingdom," Mr. Brannan said. "The Department's statutory responsibility in this matter is to determine whether our supply of wheat is in excess of domestic requirements. The determination that such a surplus exists presents a situation for the consideration by you of your discretionary authority under the Foreign Assistance Act. The combination of the circumstances recited in your letter and in this response we believe fully warrants the action which you propose to take in facilitating the purchase by the United Kingdom of Canadian wheat."

Mr. Hoffman said that as a part of the general arrangements the United Kingdom has agreed to purchase directly from the United States about $30,000,000 worth of United States wheat. In addition, the United Kingdom has agreed to purchase $8,000,000 to $10,000,000 worth of perishable surplus agricultural commodities in the United States.

During the discussions leading to the decision to finance with ECA funds a portion of the United Kingdom purchases of Canadian wheat, the Canadian Government reaffirmed its policy to keep under constant review its restrictions on the import into Canada of United States fruits and vegetables. It is understood that in the process special consideration will be given to those instances where such restrictions are especially burdensome to United States producers.

ECONOMIC COOPERATION ADMINISTRATION,
Washington, D. C., September 13, 1949

Hon. CHARLES F. BRANNAN,
Secretary of Agriculture,
Washington, D. C.

DEAR MR. SECRETARY: As you know, one of the measures proposed by the United Kingdom during the three-power financial conferences was the financing with Economic Cooperation Administration grant funds of the British requirements for wheat from Canada.

The facts, with which you are familiar, are these:

The United Kingdom is the traditional and normal outlet for the major portion of wheat exported by Canada. Three years ago these countries entered into an agreement under which the United Kingdom was to purchase 140,000,000 to 160,000,000 bushels of wheat annually from Canada. The quantity of wheat involved for 1949–50, the final year covered by the agreement, is 140,000,000 bushels at an agreed price of $2 a bushel, in store Fort William. The total dollar f. a. s. cost of the wheat involved for 1949–50 amounts to $309,000,000.

You have on several occasions advised us that wheat is a surplus agricultural commodity under the provisions of section 112 (d) of the Foreign Assistance Act of 1948, and it is my understanding that this condition still prevails. Effective with deliveries after the first calendar quarter of 1949, the

UNIVERSITY OF MICHIGAN LIBRARIES

ECA discontinued authorizing the use of its funds for the purchase of Canadian wheat, and as a consequence, the United Kingdom has been using its free dollar reserves to meet the deficit in its Canadian accounts, a substantial element of which consists of Canadian wheat.

Recently, there has been a very severe drain on United Kingdom gold and dollar reserves. This drain, if not halted, would quite certainly vitiate the progress toward economic rehabilitation and recovery which the United Kingdom has made and remove all prospects of achieving the objectives of the Foreign Assistance Act, not only in the United Kingdom but in all probability in the other countries participating in the European recovery program. It is, therefore, a vital necessity to take all steps possible to end the drain on British gold and dollar reserves.

In an effort to avoid this grave contingency and to extend such help as is within our power, we propose, under the provisions of the Foreign Assistance Act, to agree in part to the British proposal and authorize the use of $175,000,000 of ECA grant funds to finance a portion of this year's purchases of Canadian wheat by the United Kingdom. Aside from the vital importance of such action to European recovery, we believe that the proposed action is also in the interests of agricultural producers in this country in that it will not result in any over-all decrease in United States wheat exports and will facilitate additional exports of other agricultural commodities, both to Canada and the United Kingdom.

As part of the general arrangements under which it is proposed that ECA funds be used to finance part of the United Kingdom purchases of Canadian wheat, the United Kingdom has agreed to purchase directly from the United States some $30,000,000 worth of United States wheat. Consequently, net exports of United States wheat may be slightly larger as a result of the proposed action. Furthermore, the United Kingdom has agreed to purchase $8,000,000 to $10,000,000 worth of perishable surplus agricultural commodities in the United States. Without the contribution which the financing of $175,000,000 worth of Canadian wheat will make to the British dollar position, it would be difficult if not impossible, for the United Kingdom to purchase these commodities.

The Canadian Government reaffirmed its policy to keep under constant review its restrictions on the import into Canada of fruits and vegetables from the United States. It is my understanding that in reviewing these restrictions the Canadian Government will give special consideration to those instances where the import restrictions are especially burdensome to United States producers.

In view of the above considerations, it will be appreciated if you would advise us whether you have any objection to the proposed ECA financing of the purchase by the United Kingdom of $175,000,000 worth of Canadian wheat during the current fiscal year.

Sincerely yours,

PAUL G. HOFFMAN,
Administrator.

DEPARTMENT OF AGRICULTURE,
Washington, D. C., September 14, 1949.

Hon. PAUL G. HOFFMAN,
Administrator, Economic Cooperation Administration,
Washington, D. C.

DEAR MR. HOFFMAN: This is in reference to your letter of September 13, 1949, in which you discuss the proposal that the Economic Cooperation Administration authorize the use of $175,000,000 of grant funds to finance purchases of approximately 80,000,000 bushels of wheat by the United Kingdom from Canada during the year 1949–50.

You are correct in your understanding that wheat at this time is surplus to our domestic requirements and, therefore, is a surplus agricultural commodity under the provisions of section 112 (d) of the Foreign Assistance Act. Your letter, however, sets forth the disruptive effect upon the economic recovery of the participating nations that would flow from a failure to adopt the proposal. You propose, therefore, to exercise your authority under the act to arrange for the financing referred to above, and you request our comments on the proposed action.

We are, of course, familiar with the importance of the proposal to the furtherance of European recovery; however, the interest of this Department naturally centers about the effect of the proposed action on the agricultural economy of this country.

As you state, Great Britain is a traditional outlet for much of Canada's wheat and is under agreement with Canada covering purchases of 140,000,000 to 160,000,000 bushels annually. The failure by the United Kingdom to take the 80,000,000 bushels from Canada would result in a very large Canadian excess. Canada would, of necessity, be forced to use every means at its command, including price reductions, to dispose of these stocks in other markets, which would be largely those now supplied in whole or in part by the United States. Moreover, as an exporting country under the International Wheat Agreement, Canada, like the United States, is assured of a market for its guaranteed sales of wheat. These purchases by the United Kingdom would be chargeable to the guaranteed sales of the exporting country. If the United States were to sell any part of this quantity of wheat under question to the United Kingdom, Canada would, therefore, have the right to sell a similar quantity to other importing countries under the International Wheat Agreement. Many of these other countries are our traditional markets which we desire to retain.

Thus, the only net result of a switch from Canada to the United States of any sizable portion of the United Kingdom requirements for wheat would be a compensating shift of Canadian exports to markets which the United States would otherwise supply. There would, in consequence, be no net advantage to American wheat producers.

We believe, as stated in your letter, that the financing by ECA of a portion of the wheat moving under the United Kingdom-Canada agreement will not diminish the over-all exports of United States wheat but may even result in a slight increase, and, in view of the other measures which you point out will be taken, the proposed action will facilitate an increase of United States exports of other agricultural commodities to Canada and the United Kingdom. It is observed also that, as part of the general arrangements, the United Kingdom has agreed to purchase directly from the United States some $30,000,000 worth of our wheat and also to purchase from the United States from $8,000,000 to $10,000,000 worth of perishable agricultural commodities.

The Department's statutory responsibility in this matter is to determine whether our supply of wheat is in excess of domestic requirements. The determination that such a surplus exists presents a situation for the consideration by you of your discretionary authority under the Foreign Assistance Act. The combination of the circumstances recited in your letter and in this response we believe fully warrants the action which you propose to take in facilitating the purchase by the United Kingdom of Canadian wheat.

Sincerely yours,

CHARLES F. BRANNAN,
Secretary.

Fifth Annual Report of the Harrison Soil Conservation District

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include the Fifth Anual Report of the Harrison County (Ohio) Soil Conservation District. My farm is located in this county, and I am a cooperator in this district, which is doing a good job in one of the most important phases of farm life, that of soil conservation. I am proud to be a member of this soil-conservation district and hope that I can do my part to promote its ideals and objectives.

The report follows:

FIFTH ANNUAL REPORT, HARRISON SOIL CONSERVATION DISTRICT, FOR THE YEAR ENDING DECEMBER 31, 1949

Progress has been made in the Harrison district during 1949. On the part of the farmer there is a better understanding of the purpose and program of the district. Technical progress is evidenced by the location of several closely knit neighborhood groups.

The beginning of 1949 found the Harrison district in the low point of the cycle. The district was organized in 1945. Don Hover at the request of the board of supervisors, was assigned to the district as farm planner. Don was familiar with the district, having worked in the CCC camp. Don took up where he had left off when called for military duty and succeeded in developing plans for 66 farms in 1946. Harry Bell reported as assistant farm planner in June. January 1, 1947, Hover was promoted to district conservationist and Bell assumed the duties of farm planner. During 1947, 45 farm plans were developed. In February 1948, Bell resigned to accept a scholarship in the graduate school of Rutgers University. In April 1948, John Foisley was assigned to the district as farm planner. The combination of circumstances which left the district without a farm planner for a few months during lay-out season and then with a planner who knew no one in the district resulted in greatly reduced interest in soil conservation. The board was not successful in reviving that interest at least until the new farm planner had won the confidence of the farmers of the district. Accordingly for 1949 the assistance of an aide was requested only part time.

Some of the details of the achievements for 1949 are presented in the appendix of this report in table form.

The year 1950 opens with much brighter prospects. Mr. Feisley has made very creditable progress in winning the confidence of the people of the district. I trust this process has been speeded up by the activities of the various members of the board as well as those of the board.

The board is very much encouraged with the progress in neighborhood group planning. The principles back of neighborhood activities seem sound. Neighbors do work together and enjoy it. A degree of success had been achieved in working with neighbor groups in previous years. During the past year a dozen groups were located and the spokesman for each identified. One group completed the planning process and appeared

UNIVERSITY OF MICHIGAN LIBRARIES

before the board for approval of their farm plan. The remarks made by various members of the group were sufficient to convince one of the advantage of neighborhood activities in complete farm-conservation planning.

The educational activities of the past year include field days, tours, and participating in State plowing match, in addition to the usual press articles and radio broadcasts.

A field day on the Jewett School farm in April provided a demonstration of trash-mulch seeding. Dr. H. L. Dorst, of the experiment station, was present to supervise the work and answer questions. The late V. G. Applegate, extension agent; Elias Lewis, vocational agriculture instructor at Jewett; and John Feisley planned the program for the day. Approximately 5 acres of broomsedge land was thoroughly disked, limed, fertilized, and seeded. Reverend Rothel donated the use of equipment and the Hanna Limestone Co. the limestone. The vocational agriculture boys demonstrated the methods of tree planting. Seventy people attended.

A result demonstration tour, including the Jewett School farm, was held in August. The program was planned by the newly appointed county agent, Larry Sarbaugh, and John Feisley. Dr. H. L. Borst represented the Extension Service; Mark White, fish management agent, seined the two ponds on the farm to demonstrate the method and discussed the balance between fish species which give the best results in farm ponds.

Dr. Borst discussed the method used in making the trash-mulch seeding. The seeding has succeeded beyond expectation. The tour included the Taylor Addy farm. Lunch was eaten at the Pleasant Valley Church near the Addy farm. The ladies of the church furnished coffee and served ice cream furnished by Mr. Addy and the district. Through the cooperation of the neighbors, wagons were furnished for touring the farm. Trash-mulch seeding, renovated pastures, and dense alfalfa meadows were noted. Forest Dean, of the Extension Service, called attention to forestry practices as observed in the farm woods. The 75 farmers in attendance seemed to be sold on the idea of soil conservation.

In June the district was represented at the Belmont County experiment farm field day. The entire farm is operated under a complete soil-conservation plan for a grassland farm.

Harrison district was represented at the State plowing match by four tour leaders and many others who took advantage of the program.

The second air tour for the district was held October 16 and 17. It was made possible through the management of the local airport. A course was chartered over the western part of the district and included 12 marked farms, 3 of which belong to district supervisors. Forty-four pupils and twenty-eight farmers were briefed and flew the course.

The first tree farms in the district were dedicated November 22. The Donald Baker farm of Jewett was dedicated as No. 93 in the State. The Charles Standiford farm of Freeport as No. 94. Tree and multiflora rose planting were demonstrated by the vocational agriculture boys of the respective schools. Power-saw demonstrations were by Rothel and Sinclair.

The annual meeting was one of the high lights of the year and did much to develop a favorable attitude toward the district. This event held at Asbury Chapel was attended by 120. A fish dinner was the feature of the occasion. The idea of a fish dinner was obtained by one of the present members of the board at the district supervisors' 1948 school, sponsored by the Mississippi Valley Association, and had much to do with the enthusiasm which went into the meeting. T. C. Kennard, State conservationist, was the main speaker of the evening. Glenn Rockwell, of the Belmont district, showed slides and explained the trip to Litchfield Park, Ariz., as winner of the Goodyear contest. Clarence McKnight presented several novelty musical numbers on a set of bottles.

Through the cooperation of the county bankers' association, Elias Lewis, vocational agriculture teacher of the Jewett and the Scio Schools, was sent to the conservation laboratory at Leesville for the summer term. He reported to the board of supervisors and showed pictures illustrating the work of the course. The report was also given before various other groups and thus helped to bring the conservation message to more people.

The Harrison district recognizes the advantage of united effort and has worked with other districts in numerous ways in addition to those mentioned above. The district was represented at the annual meeting of the State federation. One of the members of the board served on the federation strip-mine law committee. Another member served part of the year as member of the State federation executive committee. The district was well represented at the annual work group district supervisors' meeting. Dues to the State federation and national association were paid.

The board wishes to express gratitude for the contribution which the late V. G. Applegate made during his long service as county extension agent. He met an accidental death during the year while carrying out the duties of his office. He played an important part in the organization of the district and assisted in getting the conservation program under way.

The board welcomes Lawrence Sarbaugh as county extension agent, and appreciates his cooperation in pushing forward the soil-conservation program. His contributions are indispensable.

The board takes pleasure in acknowledging the contribution which many others have made toward the soil-conservation program. Among those are the schools, including vocational and veteran instructors, churches, the Farm Bureau councils, granges, chambers of commerce, other Federal agencies, the airport, the bankers, and other businessmen, all who contributed to the promotion of the soil-conservation program by mentioning soil conservation in their advertising or by talking soil conservation. Special mention must be made of the press and radio. Both are very effective in promoting the program.

The experience of the past 2 years has demonstrated beyond doubt (if there were any) the vital part which the trained personnel and the efficient organization of the Soil Conservation Service are making toward the soil-conservation movement. The district takes this occasion to express gratitude for that cooperation.

As we start the new year, 1950, the district board earnestly solicits the continued cooperation of every individual and of every group and agency who are in position to help promote this program. It is a task that challenges the united effort of all of us. The values at stake involve the welfare not only of our own families and our descendants but of our Nation as well.

Achievements, 1949

Contour strip cropping (acres)	662
Trash mulch seeding (acres)	62
Wildlife area planted (acres)	24
Thinning of woodland (acres)	8
Tree planting (acres)	40.5
Farm ponds (each)	1
Diversion terraces (mile)	0.2
Prevention of grazing damage (acres)	229
Multiflora rose planted	4,500
Neighborhood groups located	12
Number of families	155
Applications received	53
Acres	6,619
Complete conservation plans developed	26
Acres	3,516
Active conservation plans at present	143
Acres	21,334

The board of supervisors of the Harrison Soil Conservation District are Raymond Galbraith, chairman, Tippecanoe, Ohio; Emerson Mizer, vice chairman, Cadiz, Ohio; J. R. Blackwell, secretary-treasurer, Cadiz, Ohio; John Bardall, Freeport, Ohio, M. W. McKlveen, Scio, Ohio, members.

Paradox: Unemployment During Good Times

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. SADLAK. Mr. Speaker, among the many and complex problems that confront a Nation none is more distasteful than the subject of unemployment. The word in itself is a veritable storehouse of meaning. The tie-in of words like poverty, hunger, despondency, and economic break-down, to cite a few, is immediately recognizable. Is it any wonder that the mention of unemployment causes a feeling of dejection and prompts a reaction of fear? Since it is a recurring problem, a tough nut to crack, that cannot be ignored or set aside in favor of a less challenging one, it is, by all means, the fortitudinous thing to do to look the matter squarely in the eye whenever it rears its ugly head.

However, there are many searching questions to be tossed at the contention that unemployment ranks are increasing the while the Nation is supposedly enjoying good times. Closer examination of the facts are surely desirable in so paradoxical a situation. Who is right and who is wrong? Are we already embarked upon discomforting days of depression or are we actually wallowing in prosperity?

Concern over this somewhat confusing state of affairs is indicated from two sources to which I should like to invite attention by including, under permission to extend my remarks, a paragraph from Labor's Monthly Survey of March 1950, published by the American Federation of Labor, and a special report which is the result of extensive research by United States News and World Report under date of March 31, 1950, entitled "Needed By '55: 12,000,000 Jobs":

[From Labor's Monthly Survey, American Federation of Labor, for March 1950]

CHECK UNEMPLOYMENT NOW

Unemployment, creeping slowly upward, has reached proportions which call for action. Thus far in 1950, 2,000,000 more workers have been unemployed than in the corresponding months of 1947 and 1948. The number of areas reporting 12 percent or more of their

labor force out of work has risen from 39 in December 1949 to 43 in January 1950. In more than half the other important industrial centers from 7 to 12 percent of the labor force are unemployed; only a small part of this unemployment is seasonal. These reports are disturbing because there is at present no prospect that business activity will increase enough in 1950 to restore "full employment." Meanwhile, new workers coming into the labor force increase the number out of work.

[From U. S. News and World Report of March 31, 1950]

NEEDED BY 1955: 12,000,000 JOBS—GROWING LABOR FORCE OFFSETS BUSINESS RISE

Despite good times, nearly 5,000,000 are out of work and the number is growing. Unemployment is beginning to look permanent.

Trouble is growth of the labor force. Jobs cannot open up fast enough to keep abreast, at present business levels.

How to meet the future is the problem. Public works, earlier and bigger pensions, shorter work week, all are suggested remedies.

Five years from now, unless business activity rises steadily from the present high level, there may be 12,000,000 unemployed in this country. If business should fail to hold as high as it is now, the number of unemployed will go above the 12,000,000 mark.

The returning problem of unemployment may be here to stay. It is coming back because of two main factors: (1) the steady flow of new workers into the ranks of job seekers, and (2) the year-by-year gain in man-hour output as industry's huge postwar investment in new and more efficient plant and equipment pays off.

The resulting problem, essentially, is this:

Out of jobs and seeking jobs today are about 4,700,000 individuals. That is about 1,500,000 more than the number of unemployed a year ago. Number of unemployed will shrink seasonally in the period just ahead, but will be greater a year from now unless the general level of business activity rises.

New workers will add 2,900,000 people to the labor force in the years 1950 through 1954. That is the net increase to be expected after allowing for older workers who will drop out of the labor force. The rise in labor force in this year alone will approach 700,000.

Jobs to be affected by more efficient use of labor total about 4,400,000 from 1950 through 1954. That assumes an annual increase of 2 to 2.5 percent in man-hour output—a gain that is in line with normal experience. Rising hourly wage rates add to pressure on management to find ways to reduce the use of labor.

Added up, as the chart on page 39 shows, the prospect is 4,700,000 unemployed now, plus 2,900,000 to be added to the labor force, plus 4,400,000 to be displaced by improved efficiency—a total of 12,000,000. This number will be unable to find jobs in 1954 if business activity fails to rise above the present level and if efficiency in use of labor increases at the normal rate.

The 5-year solution to the problem of growing unemployment, if there is to be one, is this:

Total employment will have to climb from the present 57,000,000 civilian jobs to 67,000,000 jobs, if unemployment is to be held below 3,000,000.

Business activity—total spending, called gross product—will have to expand from the present level of $260,000,000,000 a year to $300,000,000,000 in 1954 to provide the needed additional jobs.

This is the total amount that will have to be spent for goods and services to keep the population fully employed. The $300,000,000,000 figure assumes that prices will stay where they are today. In that figure are the total outlays of consumers, home builders, business investors in plant and equipment, and Government spending at all levels, Federal, State, and local.

This need for expansion is beginning to worry officials even now. Recent increases in unemployment are not due to a slackening of business activity but to a growth in the labor force. The number of people wanting jobs is increasing faster than the economy is expanding to provide those jobs. At the same time, output per hour is starting to rise again.

The experience of the last year shows what is happening. Total output today is almost as large as it was a year ago. Total civilian employment also is almost as large. The labor force, however, is larger by almost 1,500,000. Result is that unemployment increased by the amount that the labor force increased. At 4,700,000, unemployment is at a postwar high.

If this trend continues, unemployment will exceed 5,000,000 within a year. And unemployment at above 5,000,000 is recognized as a political problem.

Actually, there are only two developments that can prevent a rise in unemployment. Either private industry must expand, providing more jobs in factories, in construction, in trade and services, or the Government must move in.

Business expansion at the rate necessary to provide full employment appears to be a difficult task. High employment in all past periods has been sparked by a high level of investment in plant and equipment and in construction. At present, investment in new plant is falling off, although orders for new equipment recently have increased. The construction industry has been in a boom for 2 years and is headed for a third year of boom in 1950. It seems unlikely that this industry will expand much more.

Most other industries appear to be able to produce as much as people want. The automobile industry expects to meet most of the demand for new cars by the end of this year. There appears to be no urgent demand to expand output of such things as refrigerators, household appliances, or other hard goods. The soft-goods industries already have been producing surpluses. The steel industry apparently is able to satisfy all customers and the coal industry is plagued with too much capacity.

Moderate expansion can be expected through population growth and family growth. The population is likely to increase by 7,000,000 by 1954 and the number of families probably will grow by about 4,000,000. That will add to the demand for the products of industry, but even with the probable growth ahead, the increase in job seekers may readily outpace the expansion. Any recession in business activity would result in rapid expansion in the number of unemployed.

To provide employment for ten to twelve million more workers by 1955—to reach a $300,000,000,000 output by that time—means that private business investment must continue at a higher rate than in 1949. That expansion also must be steady. In past periods, business expansion never has been steadily upward, its rise has been marked by periodic spurts and setbacks.

However, if private business expansion fails to check the rise in unemployment, political pressure will grow for a Government program to accomplish the same result. In fact, agitation for Government action can be expected if unemployment exceeds 5,000,000 by this time next year.

The outline of a Government program already is beginning to take shape in official planning.

Public-works expansion is under study now. The Federal Government is aiding States and cities with public-works planning. On the shelf are Federal projects for river-valley developments, public-power expansion, and land reclamation. President Truman's proposal for a New England power program is an example. New England is one of the areas hardest hit by current unemployment.

The experience of the New Deal suggests, however, that public works cannot provide the complete answer to the employment problem. It is unlikely that Mr. Truman's Fair Deal will be content with public works alone.

Higher old-age pensions are being offered as one way to draw older workers out of the labor force to make way for newcomers. Experience suggests, however, that, as jobs become harder to find, persons with jobs are reluctant to give them up. Union contracts, moreover, usually stress seniority that gives older workers a first claim on the jobs that are available.

A shorter workweek is another suggestion that is stirring in Government and union circles as a solution for unemployment. Agitation for a 30-hour week was intense in the early days of the New Deal, and a 40-hour week finally was established through the wage-and-hour law. A shorter workweek could be established by an amendment to the present law. That law already has been amended to push the minimum wage to 75 cents an hour.

Reduction of the standard workweek from 40 to 35 hours would mean a cut-back of one-eighth in total hours of labor for one worker. Applied to a working force of 40,000,000, a 35-hour week would mean an additional 5,000,000 jobs to produce the same volume of output. The appeal of such a device could become important in a period of rising unemployment.

At present, proposals for treating unemployment are still in the discussion stage. The official hope is that the rising trend will be reversed in the months ahead and the problem may solve itself. But, if unemployment is higher a year from now, proposals for a shorter workweek promise to become a political issue.

Mr. Voorhees Resigns

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Sunday, March 26, 1950, which pays a deserving tribute to a distinguished Brooklynite who will shortly leave Government service:

MR. VOORHEES RESIGNS

A large part of the American people will share the particular reluctance with which President Truman accepted the resignation of Tracy S. Voorhees as Under Secretary of the Army. The loss of so diligent a public servant at this time will be deeply felt. It is additionally grievous, since it comes upon the heels of the resignation of the Army Secretary, Gordon Gray. Thus, at one time, our defense establishment loses two of its top-ranking civilians and two of its most competent and conscientious officials.

The public, nevertheless, will be sympathetic toward the reasons that have prompted the resignation of Mr. Voorhees. His service has been long and strenuous. It has

had a wide variety of ramifications that have entailed grave responsibilities. His letter to the President mentioned the "intensity and continuity" of these, noting that they seemed "inherent and inescapable." There is modesty as well as truth in that last statement. Those responsibilities were inescapable as far as Mr. Voorhees was concerned because of his own appraisal of the gravity of the tasks with which this country was faced and his determination to meet that gravity with the most earnest and ceaseless endeavor. If now he pleads guilty to some degree of fatigue he has every right to do so. If he can get some degree of rest he has most richly earned it.

This case again brings up the difficulty of finding enough men of high enough caliber to meet the complex demands of our constantly increasing affairs. Those men whose civilian training and experience have given them the capacity for first-class public service can undertake that service only at very great sacrifices. Those sacrifices are not merely monetary. They are the sacrifices entailed in accepting work that demands almost inexhaustible energy and virtually limitless patience. The man in high office must be able, not merely to do a competent job, but to endure a multiplicity of little frictions and frustrations that cannot help but have, in time, an eroding effect.

The replacement of a man such as Mr. Voorhees, therefore, is not easy. It is not merely his technical shoes that have to be filled. What must be found is another competent person equally willing to give his services, his strength, his personality, over and above the call of duty.

Death of a Congressman

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. ALLEN of Illinois. Mr. Speaker, under permission to extend my remarks, I include an editorial from the Evanston Review, Evanston, Ill., in connection with the death of our beloved colleague, the Honorable Ralph E. Church:

DEATH OF A CONGRESSMAN

The sudden death this week of Congressman Ralph E. Church struck home closely to a vast number of Evanstonians and other residents of this area. Almost continuously since 1918 he had served the interests of the north shore in legislative halls, State and National. He had become almost an institution—a tradition.

From the standpoint of personal attention to the needs and perplexities of his constituents he was close to being the ideal representative. His campaigns for office were invariably conducted on a personal basis. He consistently refused to rely to any great extent on party organization support and insisted on meeting the voters of his district man to man.

In the National Capital, amid the intricacies of Government machinery, he was in a very true sense the personal friend and representative of his constituents. No reasonable request for information, advice or active assistance was ever refused. He never became too important to listen to the plea of the humblest citizen, and hundreds in this city and this district will testify to his helpful personal assistance, at times when dealing with a complex bureaucracy has grown most difficult for the private citizen.

Although his loyalty to his party's welfare never wavered, Mr. Church could not be classed correctly as an organization man. He was an independent within the ranks and as often as not won elections despite organization opposition. Even in the hottest debates, his personal honesty and rectitude were never questioned.

Naturally, many differed with Mr. Church's views, but the fact that he was returned again and again to Congress even in years when his party met severe national defeat, is eloquent testimony that he faithfully represented the political and social philosophy of this large district.

His zeal in the public interest was the cause of his fatal heart attack.

Uncle Sam's Untapped Tax Millions

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Reader's Digest of April 1950:

UNCLE SAM'S UNTAPPED TAX MILLIONS

(Condensed from the American magazine)

(By NOAH M. MASON, Member of the House of Representatives, Ways and Means Committee)

Administration leaders today are frantically searching for new ways to raise revenue. I maintain we can raise at least $1,000,000,000 in new revenue merely by plugging the loopholes in our present tax laws that permit United States businesses to hide behind tax-exempt fronts. And we can raise this revenue without adding a single cent to the bill of the regular taxpayers.

Our tax laws, as now written, exempt charitable, educational, and religious organizations, cooperatives, labor unions, and many others. When these exemptions were granted, many years ago, our lawmakers did not dream that they would be used to shield vast corporate, profit-making enterprises. But that is precisely what has happened. By various means—all perfectly legal—thousands of organizations are escaping the normal 38-percent tax on their business profits, forcing numberless conscientious taxpaying businessmen to the wall and shrinking the pool of taxable United States wealth.

Here are the five devices widely used to escape taxes:

THE CHARITY TRUST DEVICE

There are many conscientious trusts and foundations dedicated to public service. But thousands have sprung up in recent years that are little more than pawns in the game of outsmarting the tax collector. The Russell Sage Foundation, a conscientious organization, has made a study of some of the newcomers. Its report states: "A disturbing number of such 'foundations' appear to have no headquarters other than the office of a law firm, to be modest to the point of complete silence about any program for social or public welfare, and indeed to be making no present contributions of any sort from their accumulated and accumulating wealth."

The fabulous 95,000-acre Montana wheat ranch of Tom Campbell, America's largest wheat farmer, has been sold to a "charitable" trust in Omaha for $2,000,000. Its earnings, which have been subject to a 38-percent tax, now go tax-free. Mr. Campbell continues to manage his ranch at a handsome income.

An enterprising young Omaha lawyer named Gordon Diesing bought the ranch of behalf of the United States Wheat Corp., which Diesing set up last April "exclusively for charitable purposes." This corporation's profits, after paying Diesing's salary, expenses, etc., go to another charitable corporation, the Sacred Heart Foundation Fund, which is capitalized at $10.

Mr. Diesing is listed as its president, secretary, treasurer, chairman of the trustees, general counsel, and resident agent. In effect, his second corporation, capitalized at $10, bought control of a $2,000,000 ranch. Evidently not much money changed hands.

Mr. Diesing also has bought for $4,800,000 the 35,000 acres of cotton land in the San Joaquin Valley run by California's cotton king, Russell Giffen. For this he set up another "charitable, nonprofit corporation," which he heads. Giffen remains as manager.

A significant aspect of these deals is that the two ranches in the past year have drawn almost $5,000,000 in United States Government farm loans. Thus, in effect, the United States Government guarantees that they make a profit, while not being able to tax those profits.

Then there are the six tax-exempt "charitable" trusts set up by President Royal Little and his aides in the $60,000,000 Textron Corp. To these trusts was given title to much of the Textron empire. A Senate subcommittee which investigated this set-up reported: "Many millions of dollars have been received by the trusts and but an infinitesimal portion thereof has been paid to the beneficiaries. * * * It is clear that [Textron] has made wide use of so-called charitable trusts as a means of providing risk capital to itself. * * * These trusts have never paid a cent of income tax."

THE EDUCATIONAL DEVICE

Our founding fathers decided, properly, that education should not be burdened with taxes. But they had no notion that universities would go into business in direct competition with taxpaying companies, as several dozen have done.

The University of Michigan now owns Willow Run airport. Wittenberg College in Springfield, Ohio, has purchased a $200,000 supermarket. Girard College, Philadelphia, through a trustee foundation, operates coal mines. Oberlin College owns 5-and-10-cent stores. Washington University in St. Louis has money invested in 51 business buildings, a railroad freight station and a switching yard. The University of Louisville is in the horse-racing business. A tax-free foundation which will have the university as a beneficiary has bought the famous Churchill Downs track, the profits of which no longer will be taxable.

Yale University (through a subsidiary called Connecticut Boola, Inc.) recently bought a new $4,5000,000 department-store building which R. H. Macy & Co. had built for itself in San Francisco. Then Yale leased the building back to Macy's for 31 years, at an average annual rental of $240,000. This sale-and-lease-back procedure is today fairly common. Both sides win: the business firm involved gets cash for expansion; the educational institution gets a tax-free real-estate investment. The United States Treasury, of course, loses.

The C. F. Mueller Co., macaroni manufacturer, sold out to a nonprofit foundation acting in behalf of New York University. New York University and its affiliated foundations own and operate, in addition to the macaroni factory, a $3,000,000 pistonring factory in Missouri, a $3,300,000 pottery factory and a vast $35,000,000 leather-goods company. A spokesman for the university has admitted that these four companies would have to pay $1,500,000 in United States taxes each year if they were not under the university's protective wing.

UNIVERSITY OF MICHIGAN LIBRARIES

THE RELIGIOUS DEVICE

Churches are taking millions of dollars' worth of property off the tax rolls with their investments. Father Divine has bought a large hotel in Newark, N. J., giving it tax-free status. It is estimated that Milwaukee is losing $2,500,000 a year in real-estate taxes because churches and fraternal organizations have become such large property owners. Methodist officials are disturbed over the untaxed profits some of their churches are making on properties which have such nonreligious tenants as taverns and pool halls. Samuel Cardinal Stritch, of Chicago, denied permission to the Catholic order that sought to purchase real estate in Lake County near the city; one factor in his decision was that the county already was seriously burdened by tax-exempt properties.

It is my belief that churches should be taxed on all profits from nonreligious enterprises. The Mormon Church engages in a great variety of commercial businesses, yet has always insisted on paying its full share of taxes on profits.

THE COOPERATIVE DEVICE

Co-ops were given their privileged tax-exempt status in 1916, when they were merely small groups of neighboring farmers trying to get a better return on their crops. The Federal tax then was only 1 percent. Today, however, the tax concession is 38 percent, and many co-ops are monster corporations performing multi-million-dollar transactions in fierce competition with taxpaying businessmen.

A spectacular example is the California & Hawaii Sugar Refining Co., which operates the biggest sugar refinery in the world at Crockett, Calif. Dominated by businessmen who also operate plantations, department stores, etc., in Hawaii, C. & H. makes millions of dollars in profits but hasn't paid a Federal income tax since 1927. In that year it became a farmers' cooperative, simply by changing its corporate structure. It remained, however, a corporation, with many of the same stockholders.

Independent oil jobbers in the Midwest have had a desperate time surviving in the face of a great upsurge of tax-free co-ops, which are buying up hundreds of millions of dollars' worth of oil wells, pipe lines, and refineries. One single co-op owns 805 wells.

Co-ops run vast machine-assembly factories, chemical plants, phosphate mines. They handle 75 percent of the Nation's fluid milk, operate vast feed mills, and the biggest grain elevators in America.

One of the so-called farmer co-ops is the California Fruit Growers Exchange, which did a $300,000,000 business last year. It markets the famous Sunkist orange and 85 percent of America's lemons. One of its subsidiaries, the Fruit Growers Supply Co., in 1944 bought the entire lumbering town of Westwood, Calif., for $11,000,000. The purchase included lumber mills, veneer mills, box factories, and valuable timber.

There are today at least a dozen co-ops that would have to pay the Treasury an average of a million dollars each per year if they were taxed on the same basis as their competitors. Yet they escape most taxes because they claim to be nonprofit. When co-ops split a melon at the end of a year they say they are handing out a "rebate" or a "refund" or a "final payment due."

The labor union device. When tax exemption was granted to labor unions, I'm sure the lawmakers did not anticipate that unions would branch out into commercial enterprises having no relation to union needs. In many cities unions receive rentals on store and office buildings they own, and pay no tax on the income. In LaSalle, Ill., a local union is even in the saloon-renting business.

Our biggest unions are planning to operate giant co-op supermarkets in union towns throughout America, in competition with taxpaying grocers. CIO's United Automobile Workers already has a dozen co-op stores in the Detroit area, selling groceries, appliances, clothing, etc. Their announced aim is to capture 50 percent of all local retail trade.

Some small progress is being made in getting tax-exempt organizations to pay their fair share of taxes. The Treasury Department has finally forced a showdown with the Mueller macaroni firm, contending that there is nothing "charitable, scientific, literary or educational" in noodle making, even though the profits go to New York University. The issue is now in the courts. Also, a few States are taking action. Indiana, for example, has a law taxing business income of all churches, colleges, foundations, co-ops, etc. The law has produced no noticeable hardship. And—partly because of public outcry—a few farm co-ops are now voluntarily paying some taxes.

Isolated State laws and voluntary acts, however, are not enough. What is needed is an overhauling of our national tax laws to eliminate tax inequalities. Such a change would not in the least hinder schools, churches, unions and charitable institutions in their primary functions. It would, however, cut the props out from under most of the legal tax dodging by commercial profit makers.

The Wilder Dam

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. PLUMLEY. Mr. Speaker, by request, I am inserting in the RECORD, as an extension of remarks, a letter from Senator GEORGE D. AIKEN to Gov. Harold J. Arthur, of Vermont, concerning a resolution on the Senate Calendar relative to the Wilder Dam and a letter from Governor Arthur in reply thereto.

The letters follow:

JANUARY 23, 1950.

Hon. HAROLD J. ARTHUR,
Governor of Vermont,
Montpelier, Vt.

DEAR HAROLD: As you know, the landowners in Newbury have made a settlement with the power company. There is on the Senate Calendar, however, a resolution which would require the Federal Power Commission to reopen the Wilder Dam case. This resolution failed to pass the Senate last fall only because unanimous consent was required and one Member of the Senate objected.

I have, however, had communications urging the Congress to pass this resolution in order that the State might take an appeal to the courts if the Federal Power Commission is required to reopen the matter.

There is no question in my mind but what the land which would be rendered unusable by reason of raising the dam to the 385-foot level instead of the 380-foot level is of much more value for agricultural purposes than for power production. An annual output of only 13 to 14,000,000 kilowatt-hours of electricity is involved as compared with a large acreage of class I meadowland.

Before urging the adoption of this resolution by the Congress, however, I should know whether the State of Vermont intends to appeal the FPC decision, if there is an opportunity to do so. As the final determination rests with you, I would like to know your decision. If you desire to go ahead with the appeal, I will do all I can to get the resolution through the Congress. There is still an opportunity to save the land for the State even though the landowners have made a settlement with the power company.

With best regards,

Sincerely,

GEORGE D. AIKEN.

MARCH 11, 1950.

The Honorable GEORGE D. AIKEN,
United States Senate,
Washington, D. C.

DEAR GEORGE: I have your letter of January 23 advising me of the present status of the Wilder Dam resolution and also advising me that you have had communications urging passage of the resolution "in order that the State might take an appeal to the courts if the Federal Power Commission is required to reopen the matter." You ask if the State of Vermont intends to appeal the Federal Power Commission decision, if there is an opportunity to do so.

Your letter and your question seem to assume that the decision in the reopened case would be the same as when the case was reopened before at the request of the State and further hearing had and brief filed by the State. That decision was rendered October 31, 1946, and there was no appeal to the courts by the State or anyone else. I append to this letter a brief synopsis of the whole Wilder Dam history in order that you may have it before you. I also append a copy of the opinion of Attorney General Clifton G. Parker.

I have carefully reviewed the history of the Wilder Dam case and have read the decisions of the Vermont Public Service Commission, the Federal Power Commission, the claims of the parties and much of the important evidence on both sides, as well as the decision of the Vermont Supreme Court in the matter, and the United States Supreme Court decisions which under existing Federal statutes place the control of the use of water of the Connecticut River exclusively in the Federal Government. I have consulted with Attorney General Clifton Parker and with Senator Walter B. Renfrew, Judge Frank N. Brock, Representative William J. Taisey, Vermont farm leaders, and other interested parties.

I have constantly tried to promote the best interests of the Vermont farmer because the prosperity of the whole State is closely related to that of our great agricultural community. My illustrious predecessors as governors have opposed all unwarranted infringements upon our farm land whether the infringements were for power dam or other purposes. I heartily approve the actions taken by them. You have done all that you could to prevent such infringements. You are aware of my sympathies toward the cause espoused by the landowners involved. You may recall that I appeared before the Senate Agriculture Committee as master of the State Grange in regard to the Wilder redevelopment on which that committee, at your instigation, conducted extensive hearings.

I find that there has been great exaggeration of the damage to tillable farm land to be anticipated from the proposed redevelopment. For instance, Joint Resolution No. 26, adopted by the General Assembly in 1945, set forth in the preamble that the license of the Federal Power Commission for the redevelopment of Wilder "will result in flooding or otherwise rendering useless for agricultural purposes over 8,000 acres of fertile valley land in the 40-mile area extending north along the river from Wilder to Wells River, Vt."

The commission appointed by authority of this resolution and which was headed by our good friend, Stanley G. Judd (now commissioner of agriculture), reported, however, that the land in Vermont to be permanently flooded would not be over 540 acres. No classification of the land was stated. At

the trial before the public service commission the undisputed evidence was that the dam at elevation 385 feet would flood in Vermont 538 acres of land—classified as river bank, 220 acres; nontillable meadow land, 129 acres; and tillable land, 189 acres. If we add to this 189 acres that will be flooded all of the 224 acres of tillable land in the area between elevations 385 feet and 390 feet and which will not be flooded but will be somewhat damaged, though still usable to some extent for agriculture, we have only 413 acres of tillable land to be flooded or damaged by Wilder. There seems to be no evidence available to show anything more than minor damage on a very small acreage above elevation 390 feet. This figure is far from the 8,000 acres we were first told about.

From a legal standpoint, I am forced to the conclusion that the State of Vermont is not in position to hope to overturn the decision of the Federal Power Commission by which it granted its license for a redevelopment of Wilder to elevation 385 feet. The Federal Power Commission at the request of the State reopened the case in 1946 and permitted the State to present any evidence it desired and which was available in opposition to the redevelopment. To present evidence covering the same ground again would be very unusual.

It must be borne in mind that the situation has now changed materially. Every Vermont land owner affected by the proposed raising of the water level has sold to the power company the flowage rights desired. In other words, their damages have been paid and the power company owns the rights in all land affected in Vermont by the proposed dam and if we should seek to prevent the company from using its own property, we must stand on very strong ground. My discussions with Senator Renfrew and other interested individuals indicate that no new favorable evidence is available.

Moreover, the power company, in compliance with the order of the Federal Power Commission, has raised the money for the redevelopment and has been engaged for a long time in the construction of the proposed new dam and plant. This morning when I drove past the site, the construction appeared to be well advanced toward the final stages when a large additional amount of badly needed electric power can be supplied from there. I am informed that next October is the date scheduled for putting the completed plant into operation. We are fully aware of the great need for more and cheaper electricity in Vermont, especially for agricultural purposes.

It seems to me, therefore, that the State of Vermont should not proceed further in opposition to the Wilder redevelopment. The legal phases are res judicata. The damage claims of our people have been settled and paid.

To seek a reversal of the Wilder redevelopment order under existing conditions would be asking something contrary to all rules of equity and fair dealing. We would be asking that these landowners or former landowners be permitted to keep both their land and the money they have received for it or for damages to it.

Moreover, the millions of dollars spent by the power company toward carrying out the order of the Federal Power Commission to supply the much-needed electric power would be lost and the new dam at Wilder would stand as a memorial that people cannot safely rely upon the unappealed-from actions of State and Federal authorities. Whether or not we believe the decisions were right, we cannot afford thus to weaken faith in Vermont and Vermont ideals of justice and fair dealing.

I am confident that when appraised of all of the facts, the people will support these same conclusions.

With kindest personal regards and assuring you of our confidence in your continued interests in behalf of the State of Vermont, I am,

Cordially and respectfully yours,
HAROLD J. ARTHUR,
Governor.

The People's Dilemma

EXTENSION OF REMARKS
OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks, I include excerpts from three addresses prepared by me for delivery in Vermont; one at Barre, Vt., to the Vermont Dairymen's Association on the occasion of their annual banquet on February 10, 1950; one at Montpelier, to the Women's Republican Club on the occasion of their Lincoln Day dinner on February 13, 1950; and one at St. Albans, to the St. Albans Chamber of Commerce on the occasion of their annual dinner on February 14, 1950:

ADDRESS TO THE VERMONT DAIRYMEN'S ASSOCIATION, BARRE, VT.

I speak nonpartisanly tonight, my friends, to tell Vermonters—

1. That the administration is very much alarmed at the fall of farm-price averages below parity.

2. That the Brannan plan is considered by a present majority of the Members of Congress as both dangerous and altogether socialistic.

3. That the public debt presently is $257,000,000,000—billions, I said, and will be $264,000,000,000 by June next year.

4. That we will have a $5,000,000,000 deficit looking toward next year.

5. That the end is not in sight but those who realize what is going on appreciate the fact that the spending program must stop now.

6. That millions of people share the illusion that Government can, by passing laws, accomplish results which are beyond the powers of any government to accomplish.

7. That President Truman believes this illusion as evidenced by the fact his message to Congress proposed high expenditures, high taxes, and continuing to spend more than the Treasury takes in. Each and all of these are a threat to freedom. Spending means high taxes; high taxes deprive the citizens of freedom to undertake to decide how to use their earnings; that lowers everybody's scale of living; deficit spending reduces the value of the dollar.

8. That the Brannan plan, the proposals for Federal housing, the continuation of rent control, the Federal power projects, all also are threats to freedom. When the Government becomes able to tell us, the people, who can buy electric power, how much, and from whom, it will be able to control the location of the industry, say where you and I may work and live, and what we may produce; that is intolerable to Vermonters.

9. That Federal aid, as such, always invades the rights and reduces the responsibilities of the States as it limits the opportunity of the people.

10. That we common folks have an inalienable right to manage our own lives; to spend our own money we earn as we see fit, subject only to paying our debts and our just share of the cost of a wise and frugal government, with noninterference with the rights of our neighbors, or by the Federal Government.

11. That we realize the door opener to socialism is Federal aid for services which citizens could and can as well or better perform for themselves, for which, in the long run, they themselves must pay.

12. We agree with the statement once made by one of Vermont's most distinguished sons, one Calvin Coolidge, while President, to the effect that no complicated scheme of relief, no plan for Government fixing of prices, no resort to the Public Treasury, will be of any permanent value in establishing agriculture.

13. That social security, as such, comprehensive in nature, rests with the individual, in the ultimate and as the source, who, in the long run, will have to pay all the bills and who, therefore should know just where every cent he pays in taxes goes, or has some idea in order to secure to and for him the social security he seeks and of right should have.

14. That the proposals advanced by the administration for the great extension of the Social Security System embracing compulsory health insurance; permanent and temporary disability benefits; a broadening of Federal participation in public assistance; etc. etc., ultimately will have to be paid for by the people. They should not be fooled by the promises and a confident attitude not warranted by unstable conditions of the world in which we live, which gives no security guaranty either of safety of of sustenance today.

ADDRESS TO THE WOMEN'S REPUBLICAN CLUB OF VERMONT AT MONTPELIER, VT.

Abraham Lincoln might not like it, but I have a sneaky notion he would not object to my saying that up to now I have almost consistently voted for such contribution financially to our friends across the seas as they have been able to satisfy the powers that be that they should have. Frankly, I am through with such generous attempts to give away our liberty and to bankrupt America and incidentally and indirectly to impose heavier and heavier burdens on the taxpayers of the United States.

If that be treason, make the most of it.

I am at last satisfied it has not only been a costly but a tragic and fantastic venture, as well as a mistake for our leadership to undertake to impose on or to sustain American democracy in sections of the world where I feel and am satisfied conditions not only do not justify such an attempt, but demand an entirely different form of government.

Until and unless some of these people show evidence of a purpose and of an intent to save themselves by going to work and to stop living off us taxpayers, I shall be very cautious concerning my vote of interference with their internal policies backed by the hard-earned American dollars of hard-working citizens.

It has been well said, and I have come to agree that it is stupid, as a matter of policy, as well as morally wrong for us to fight abroad by way of dollars for the support and establishment of a democracy in any section of the world where the economy of that particular section will not itself promote and support the democracy we know.

For us, democracy is a natural, as well as the greatest of all political ideals. To them it means a source of supply of dollars.

We should not let our misguided enthusiasm for democracy destroy it here by bankrupting it.

Charity begins at home.

Those who undertook to save against old age by buying bonds and insurance for beneficiaries as of and prior to 1933 are confronted by the fact that the dollar, which cost them 100 cents they said is worth but 43 cents to-

UNIVERSITY OF MICHIGAN LIBRARIES

day. Those in power are responsible against our protest for the situation which obtains and can neither evade nor avoid.

In 1934 they devalued the dollar by act of Congress. They cheapened the dollar by reducing its value in gold by 41 percent.

They increased the Nation's money supply with printing-press money—and gave us what Gov. Al Smith called the baloney dollar.

They quadrupled the number of bureaucrats and increased the cost of government for nonmilitary purposes from $4,000,000,000 in 1932 to $19,000,000,000 in 1946 and the end is not yet.

They planned high prices, forced up wages, and caused the never-ending race between wages and prices.

They taxed industry to the point that new plants cannot be built nor old ones enlarged. So goods are in short supply.

They deliberately adopted policies which discourage work, curtail production, and destroy savings.

Business taxes are so high that one-third of our food bill consists of taxes. When we pay 15 cents for a can of beans we pay 10 cents for the beans and 5 cents for taxes—taxes paid by the farmer, canner, wholesaler, and retailer, but passed on to us because this tax cost must be added to the price we pay.

Food which cost you $1 in 1933 now costs $2.63. This is the price we now pay for 16 years of incompetent, irresponsible New Deal government, which its supporters are attempting to revive as a Fair Deal for a welfare state.

Unless the people of Vermont and of the United States wake up they may say farewell to the State, as such.

Your insurance and savings protection has decreased from the 100-cent dollar of 1933 to the 38-cent dollar of today. Think that over, and weep and vote as you should.

While I have talked in dollars, as you count those 38-cent dollars for which you paid 100 cents in sweat and blood and tears, which bear the slogan "In God We Trust," ask yourselves the question—How long will God help those who will not help themselves?

ADDRESS TO THE ST. ALBANS CHAMBER OF COMMERCE, ST. ALBANS, VT.

In the first place, because of some things said in your county lately, I would like to pay my respects to our Governor. I have known Harold Arthur before and ever since he was a page in the Vermont Legislature. Just don't let anybody tell you or try to fool you into thinking that anybody is going to boss this man Arthur, or that he is going to be Governor by indirect control.

As a boy and as a man, he has demonstrated that he has the independent qualifications of which real governors are made. I speak as one who has known governors for 50 years, good and bad. If you ask me, he has the stuff.

Now let's get to something national.

First, the orgy of national spending must stop. How many times have I said it? What ever has been done about it? Nothing. We are almost out of soap. I am voting as I talk to save the money of the taxpayers for them.

We are getting bankrupt. The time has come when we must limit our contributions to others measured by what is going to happen to us. Charity begins at home. It will have to do so pretty soon, God save us, or we will all be on the Franklin County poor farm, if there is any such place now. I know there used to be such a place. I always thought that if worst came to worst, I could always take up my residence in Franklin County and get a living off you folks at that refuge. Incidentally, I remember hearing about it as it once was.

Now, seriously, and while this issue of the spending of the taxpayers' money is not to be dodged, yet the most dangerous enemy which confronts us in Vermont and Nationwide is the American counterpart of the British Fabian Socialist. If you don't know what I mean, you had better find out before it is too late. These Fabians (they love to be called that) deny they are Socialists. They operate behind a mask which they call national planning or some other name equally as repulsive to you and me, as they ask for power controls, and hundreds of other things which, on their face, are attractive but from the top down lead us into a mire and the quicksands of socialism, from which we can never wade.

These folks have led the countries overseas, to whom we are contributing our hard-earned dollars, down the dark road which has led England, at least, and others, to their doom. God save us from them. We must save ourselves.

Had it not been for the rugged individualism of the Vermonters who represented their several towns in the State of Vermont in the legislature for the State of Vermont of late years, they would have made more progress toward socializing the State of Vermont than they already have made, which is too much. You know—these folks have a soft and soapy way of undertaking to "show" those who think this is a good country in which to live so long as they can live off it, that if the plan which they offer is adopted or could be adopted, the State of Vermont would engage in flood control, in navigation control, and in the manufacture and distribution of electrical power and energy; we would have a power control board; we would have about every weapon necessary for their undertaking to destroy individual enterprise and to turn everything over to the socialized State. We would tell the farmers what to plant and how much.

These folks should be stopped in their tracks now.

You and I and all the American people face the hard fact that though we won the war, we have not won the peace. We should not permit these socialistic Americans to dictate our policy.

Basic American principles are threatened by the program which they offer for a planned economy. It includes price and wage control and rationing, socialized medicine and regional authorities, etc., ad infinitum, ad nauseum, all of which proposals are wholly out of accord with the true wishes of workers and farmers and businessmen of Vermont and the Nation.

Capital Must Reflect Ideals

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks I include an editorial from the Martins Ferry (Ohio) Times Leader, one of the leading newspapers in my congressional district.

This editorial appeared on Monday, March 27, and I think it is one of the shortest and most effective arguments for home rule that I have yet read.

The editorial follows:

CAPITAL MUST REFLECT IDEALS

Of all the burdens saddled upon Congress, acting as a city council for Washington seems the silliest. Long hours are devoted to details of municipal government that are admittedly tiresome to most of the lawmakers involved.

Actually no one likes the arrangement. Washington's residents want to govern themselves just as do citizens everywhere else.

Both major parties went on record in their 1948 platforms as favoring home rule for the Capital.

Despite all this, action on home rule legislation is stymied in Congress.

Why has the home-rule proposal been blocked when so many appear to favor it?

The answer is simple. Between a fourth and a third of the Capital's population is Negro. Some people say that to enfranchise Washington voters will mean giving this minority more than its proportionate strength at the polls.

There can be no defense of such a viewpoint in this country.

Certainly Washington is the last place democratic America should wish to see barriers raised against use of the voting privilege.

The fact is Washington is a Capital first and a border city second. As the Nation's Capital it must reflect in daily practice the country's loftiest ideals.

How can a city symbolize democracy if it doesn't live it?

Cooperation in the Development of Public Power

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, March 29, 1950

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a notable address delivered by the Secretary of the Interior, Hon. Oscar L. Chapman, at the annual convention of the National Rural Electric Cooperative Association, in Chicago, Ill., March 7, 1950. Secretary Chapman spoke on the subject Cooperation in the Development of Public Power.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COOPERATION IN THE DEVELOPMENT OF PUBLIC POWER

I want to express my great appreciation for the invitation extended to me to participate in this annual convention of the National Rural Electric Cooperative Association.

A review of your magnificent efforts in the name of the people, and of your achievements, would convince any observer that this meeting is an example of democracy at work. You have come from all sections of the country, and you represent the labors of men and women who have moved with determination and intelligence to create a better way of living for themselves and their fellow-citizens.

It is particularly gratifying to be here today, because the work of the Department of the Interior has both a direct and an indirect bearing on problems which confront many of your member organizations. The Department is now operating and marketing the largest aggregate of hydroelectric capacity in the world, under policies which make it inevitable that there must be many points of contact between us.

You may rest assured of the wholehearted cooperation of the Department of the Interior, through its various power agencies, in efforts to work out our mutual problems. We are partners in a common cause.

I am deeply interested in the progress of rural electrification cooperatives. The bringing of electricity into the farm homes of America has been one of the outstanding accomplishments of the first half of the twentieth century. In 1935, when the Rural Electrification Administration was established, only 11 percent of our farms had electric current. By the middle of 1949, almost 80 percent of these farms had been electrified, and the program is continuing to grow.

I am certain that the rural people of America will never forget that the 840,000 miles of lines energized in the last 12 years have come into being because of the vision and energetic action of two great Presidents, Franklin D. Roosevelt and Harry S. Truman.

President Roosevelt believed that the benefits to be derived through the proper development of our resources should not be turned over to individuals or corporations for their own financial enrichment, and that they should rightly go to the people themselves as the owners of these resources.

President Truman continues to maintain the leadership of this great movement to safeguard and develop our natural resources for the benefit of all the people, rather than for a privileged few. His courageous and determined stand has won Nation-wide approval. And he realizes with a strong conviction what the development of these resources means to the people of this country, and to the increasing strength of our national economy.

The cause of rural electrification is being well served, and its support by the present administration will continue.

As the second half of the twentieth century approaches, we are a growing and thriving Nation. The evidences of our prosperity are all about us, and our country experiences a sense of internal well-being.

We are moving forward today to make our economy even stronger and to plan an even greater security for the people of America. Only recently the President outlined the objectives we should set for ourselves. He told us that our present national income of $225,000,000,000 can be increased greatly, that we can soon achieve a national output of $300,000,000,000, and that family income during the second half of this century can reach a level three times that we now know.

The prodigious effort and the steady production needed to achieve such a goal is obvious to all of us. And along with the human energy we shall devote to this effort, we shall have to develop and utilize most wisely, and with great efficiency, the natural resources which belong to us as a people and which promise to serve our needs well.

Your organization knows, and the Department of the Interior is well aware, that the importance of power in our expanding economy cannot be overestimated. It has become an essential to farm and city, and it is, in fact, the lifeblood of our Nation.

The generation of electrical energy is now at an all-time peak, but its production by all agencies, public and private, cannot keep abreast of demands. Fortunately for our country, we have been blessed with vast natural resources which can be developed to make available to us a tremendous amount of electrical power.

It is particularly important that we recognize the national need for low-cost electricity, for here is a key to thriving farms and industries. It is precisely this low-cost power which the development of our water resources is making possible and will continue to produce. The reclamation programs in the West and the power developments in the Tennessee Valley and the Southwest are demonstrating that power can be made available to satisfy national demands, and that power can be produced at lowered costs.

It is here and elsewhere that the interests of people served by rural electric cooperatives tie in closely with the efforts now being made, and to be made in the future, to harness the water in our rivers. Recognizing this very close relationship, I want to talk briefly about some of the things we have accomplished by working together, and of some of the problems still to be solved.

As you know, the Congress long ago laid down the policy that public bodies and cooperatives shall have preference in the distribution of power from Federal plants in order that its advantages may be as widespread as possible. This advantage for consumers, as the objective of national policy, has not always been simple of accomplishment. After power is generated, there remains the problem of delivering it to the public agency, the cooperative, and the consumer.

In many cases, this has meant that the building of power projects, made possible after long and strenuous effort by the people, has been but the first step in the delivery of low-cost power to homes, farms, and cities. The transmission of this power is all-important, and it has been the subject of much conflicting debate, and of frequently bitter conflict. Even today, those who would deny the right of the people to own and manage their resources continue to exert pressures aimed to prevent your Government from transmitting power to you over lines you build.

The right of the people to transmit their power to the places where it is needed has been established in our national policy, but the unending and vigilant cooperation of all of us will continue to be needed to safeguard this right.

In the meantime, the Department of the Interior is moving ahead at a record rate in setting up facilities for the trunk-line transmission of energy from power plants now operating or under construction. At the same time, it is making numerous cooperative arrangements with rural electric groups to insure to them power distribution at low rates as rapidly as possible.

The power policy of the Department of the Interior, based on several acts of Congress, is aimed at the accomplishment of certain specific objectives, and I want to repeat them at this point. Federal dams shall include, where feasible, facilities for generating electrical energy. Preference in power sales shall be given to public agencies and cooperatives. Power disposal shall be for the particular benefit of domestic and rural consumers. Power shall be sold at the lowest possible rates consistent with sound business principles. Disposal shall be such as to encourage widespread use, and to prevent monopolization.

The Bureau of Reclamation, the Bonneville Power Administration, and the Southwestern Power Administration are all vitally concerned with rural electrification, and are working closely with many of your component cooperatives in furthering this power policy. This same vital concern will characterize, I am sure, other power agencies which may be established in the future.

Here are some examples of our cooperative relationship: The Kerr-Anaconda and the Havre-Shelby lines in Montana, the west side lines in California, and the Flatiron-Brighton line in Colorado have all been approved after considerable controversy. The Havre-Shelby line is particularly significant and illustrative of the objective I have been discussing.

Although Fort Peck power has been available since 1944 for marketing by the Department of the Interior, only limited transmission facilities have ebeen available for wheeling this power to some cooperatives. Other cooperatives were starved out or received the small amounts that were offered from other sources. The Havre-Shelby line was fought bitterly every step of the way, but, with last year's authorization the poles are going up, the wire is being strung, and we are well on our way to serving four cooperatives in the Havre-Shelby area.

We have been successful also in removing the restriction on installation of generating units at the Canyon Ferry power plant in Montana. As the matter now stands, the Bureau of Reclamation can install and operate its own generating units instead of providing space for the installation of units by a private utility for its exclusive benefit from this public construction.

These two examples of our efforts to serve cooperatives in Montana are not unique, and have been mentioned to indicate the direction of our efforts to work closely with your member groups. There are many other examples.

The Southwestern Power Administration has recently entered into contracts with four generation and transmission cooperatives within the area it serves. These contracts provide that the Southwestern Power Administration will lease and operate high-voltage transmission lines constructed by the cooperatives, that it will purchase the entire output of steam generating plants they construct, and that it will supply the entire power requirements of the cooperatives at substantially reduced rates.

Such contracts as these will be mutually beneficial to the Government and the cooperatives. The steam power from cooperative plants will firm up the Government's hydroelectric power. The entire facilities of the Government will be made available to the cooperatives, which will give them a more dependable lower-cost power supply. Finally, the cost of generation in the cooperative plants will be reduced by higher load-factor operation as a result of the contracts.

Results like these are but another indication of the interrelationship of rural electric cooperatives and the federally constructed projects already at work in this country. This mutual interdependency will increase as we strive to satisfy more of our national power needs.

The speed and the completeness we shall achieve in this effort to feed electric energy to the Nation will be determined by the clarity with which we envision our common goal and by the support we continue to secure from the people. If the programs of the Department of the Interior and the Rural Electrification Administration are to be maintained in all their strength and potentiality, the work of such public-spirited organizations as your own will be very much needed.

It is through such organizations that the Administration and the Congress find support in combating those forces which would subordinate public power to their own personal profit. If we continue to work together toward our mutually understood objectives, we shall be able to achieve great progress for the welfare of the Nation's people.

What are the things we can accomplish in the future?

During the 17 years in which I have been with the Department of the Interior, I have seen 98 percent of the present 3,000,000 kilowatts of hydroelectric capacity installed on western rivers and streams. Our 6-year program for the Bureau of Reclamation alone has for its objective nearly doubling this capacity of public plants, and we have planned the installation of 2,300,000 additional kilowatts.

To this amount will be added 650,000 kilowatts of installed capacity in plants under construction by the Corps of Engineers, which will be marketed by our Bureau of Reclamation. Approximately 500,000 more

kilowatts will be brought into the Columbia Valley by the Engineers, to be marketed by the department through the Bonneville Power Administration. About 500,000 kilowatts will be marketed by the Southwestern Power Administration.

But even these figures are dwarfed by the ultimate possible production from the hydroelectric development of our water resources The Federal Power Commission has estimated this potential at 77,000,000 kilowatts. With our country living in peace, and with our economy expanding, we should certainly be able to install 25,000,000 kilowatts of capacity within the next 15 years.

The thought of such an achievement ought to stir the imagination of all of us who are concerned with the electrifying of rural America. With REA lines tied into such a system, worries about the extent of the next fuel bill for individual plants, or about keeping the current flowing if the fuel supply is not available, will be a matter of much less significance. At the same time, the problems of fluctuating rates will be solved, and your cooperatives can move forward with a sense of security now too often lacking.

Our scientists speak occasionally of the possibility that the rays of the sun may some day be put to work. But right now the water which is deposited on our high mountains is being captured and put to work as it falls away to the sea, and it is the one great source of power we have which does not expend some of our valuable natural resources.

By constructing great storage reservoirs, we are able to regulate the flow of a river and ensure a water supply for power, and for irrigation in dry seasons, through holding back water near its source and by preventing floods as rain comes too heavily.

The benefits other than power production which come from our vast reclamation projects may, at first glance, lack immediate interest to rural electric cooperatives who are your members. But I urge you to study them closely for your objectives are closely related to their purposes.

The building of dams was begun for the purpose of irrigating arid areas. The public-power program got its start in 1905 as a very incidental phase of reclamation when a 1,000-kilowatt generator was constructed on an irrigation project in Arizona. Since that time, the Federal reclamation program has brought irrigation water to more than 5,000,000 acres of arid western land.

For each of the last 4 years, the gross crop production from this federally irrigated acreage has totaled more than a half-billion dollars. Those of you from the Western States know what your land would be like today without irrigation.

It is from these projects to water our dry land, by the building of dams and reservoirs, that our great hydroelectric production has sprung. The separate benefits of irrigation, or flood control, or power production are valuable to the Nation in themselves. Taken together, they constitute an integrated program of water-resources utilization, multipurpose in nature, from which there will continue to flow profits to our economy large in their potentialities for the people's enrichment.

At the present time, of course, the area served by these projects for which the Department of the Interior is responsible lies within the Western States. I am glad to report that a sizable share of the additional kilowatt capacity the Government is already developing will be in an area which we all have recognized as needing special emphasis. This is the great Missouri River Basin where the Department of the Interior and the Department of the Army are pushing forward with the greatest program of river development in the history of mankind. And in the development of our great river basins, I am aware of and cannot overlook the other values that must be safeguarded.

The Congress determined in 1944 that something should be done about bringing the Missouri under control. Since the end of the war, we have been making great strides in this program, which will permit the development of an estimated 2,500,000 kilowatts of installed power capacity, the irrigation of some 5,000,000 acres of land now subject to the hazards of uncertain weather, and the achievement of other multiple benefits of modern resource development.

Power production and transmission are being firmly and carefully related to the physical and financial structure of this program. The initial power plant will be placed in operation during this summer at Kortes Dam on the North Platte River in Wyoming. Additional capacity will be added rapidly with the completion of two dams on the Missouri in 1954.

There has been an unprecedented demand for the initial block of power, and applications for it have far exceeded available capacity. We have many reasons to believe that the needs of cooperatives within a 150-mile radius of these big dams will be cared for. In order to avoid needless duplication of transmission lines by generating cooperatives, we are already proceeding with an advance construction program of transmission lines in North Dakota, and we are studying the possibility of a similar program in South Dakota. We expect to be able to meet REA needs well in advance of the availability of power from the two dams I have mentioned by wheeling REA-generated power over federally owned lines.

This is another example of the kind of cooperative arrangement between our Department and cooperatives which can result in a substantial saving to both. Others could be described if time permitted.

The operating agencies responsible for marketing power in the Department of the Interior have been negotiating wheeling contracts with private utilities as well as with public agencies. I want to assure you that there is no arrangement, present or contemplated, which will affect the preference status of rural cooperatives. These wheeling arrangements represent a sincere effort on our part to make power available to cooperatives at the earliest possible date, and at the lowest rates consistent with repayment requirements as provided by applicable Federal laws and sound-business practices. Contracts will be made only when the rights of preference customers are protected.

Cooperation in the development and use of public power has been close between the Department of the Interior and the groups you represent. I hope that it will be increasingly a practice of the future. We shall make it our business to understand your needs, and to give them careful consideration in the execution of our programs.

I urge your members, in turn, to make it their business to study the meaning and the impact of water-resource development, and to grasp clearly what it will mean to them in the future.

We are all joined in a mighty national movement to develop our natural resources, and to put them to use for the benefit of all our people. As our farms and industries grow in production to expand our national economy, the need for low-cost power from our rivers will continue to increase. Considerable attention is already being directed toward the study of water and power potentialities in some of our eastern areas, particularly in the New England States.

President Truman, recognizing the impressive importance of an adequate water supply, recently appointed a commission to make a thorough study of the problem. This Commission is already at work, and considerable progress toward a final report has been made.

Two New England governors have recently gone on record as favoring river development for the production of electric power from their rivers.

The people in New England, awakening to the realization that rates for electric energy are higher in that area than in any other part of the country, are discovering that less is being done in their homes, on their farms, and in their factories by electrical methods than elsewhere in the Nation. The present Congress will soon consider an amendment to the flood-control bill, by Senator GREEN, of Rhode Island, which would establish a New England commission of Federal and State representatives to make investigations and survey resources available.

We are presently organizing in the Department of the Interior the Southeastern Power Administration to market power from Army projects in the 10 Southeastern States. This organization, like others in the Department, will give preference in the marketing, over a 6-year period, of 1,500,000 kilowatts to cooperatives and public bodies. Since the projects in the Southeast are widely distributed, we hope and expect to be able to serve many of the REA groups either directly or through the generating and transmission cooperatives now being formed.

There is abundant evidence that the people of our country are becoming fully awake to the importance of their natural resources, and to the potentialities for human betterment which they promise. It is the intention of the Department of the Interior to continue our cooperation with your organization and other groups to make sure that these potentialities are fully realized.

We know, as you know, that the campaigns by selfish interests to defeat the people's will can be expected to continue. Legislation to sell power only at the bus bar, or the point of origin, will be pressed by those who would profit by such an arrangement. The development of public power will be called socialistic, and a threat to free enterprise.

But if we never falter in our devotion to the democratic principle that free men can direct their own affairs for their own greatest welfare, such campaigns will not succeed. Our Department, and your organization, will go on strengthening the democratic patterns which guide us to our common objectives.

Girl on a Train

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1950

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Girl on a Train," published in the New Hampshire Sunday News of March 26, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GIRL ON A TRAIN

Mavis Benjamin of Nashua, the whilom apple blossom queen of Hillsborough County, is off to the National Capital this week, as the guest of the New Hampshire Sunday News and the New Hampshire Society of Washington. She will appear in the Capital's annual Cherry Blossom Festival, and may win the title of "National Cherry Blossom Queen."

Miss Benjamin—who placed near the top in last year's Miss New Hampshire contest—was chosen for the Washington trip by the

Sunday News on extremely short notice, after an urgent telephonic appeal from the New Hampshire Society. This newspaper considers itself a most excellent, as well as totally disinterested judge of feminine pulchritude and charm. We will back Miss Benjamin against the field, and feel certain she would win the national title if only the choice were left to a board of flesh-and-blood experts instead—as it happens—to the decree of pure chance involved in the spinning of a wheel.

Whether or not fortune brings her the title, Miss Benjamin will remain queen of the Hillsborough apple orchards. A small anecdote will illustrate why we think her freshness and lack of sophistication, as well as her good looks, entitle her to this claim. It had been our plan to send her on to Washington by herself, to be met there by a chaperone furnished by the New Hampshire Society. Miss Benjamin demurred. She felt she should get her chaperone at this end, and make the trip with her. Questioning developed that Mavis, who is 22 and a professional model had never spent a night away from home—except with relatives—and had never gone even so far as New York on a train.

We were glad to accede to her wishes, and glad to send her to Washington as the glamorous but unspoiled symbol of all the nice New Hampshire girls who spend most of their nights at home, and seldom get the chance to go anywhere on trains.

Letter From James K. Knudson to Hon. Warren G. Magnuson, of Washington

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1950

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter sent to me under date of March 24, 1950, by Mr. James K. Knudson, who has recently been nominated to be a member of the Interstate Commerce Commission. The letter is in the form of questions and Mr. Knudson's answers.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 24, 1950.

Hon. WARREN G. MAGNUSON,
United States Senate,
Washington, D. C.

DEAR SENATOR MAGNUSON: It was my privilege Wednesday March 22 to appear before the Senate Committee on Interstate and Foreign Commerce, of which you are a member, in connection with Senate consideration of my appointment by the President to the Interstate Commerce Commission. During the hearing acting chairman Senator Brien McMahon, of Connecticut, suggested that it would be in keeping with your informal request if I submitted to you answers to certain questions which, I understand, you would have propounded had you been present at the hearing. The acting chairman handed to me two sets consisting of five pages of such questions, and I propose herein to answer them to the best of my present ability. I am sure you will realize that I am not presently acquainted with all of the problems implied by the questions to the extent that I hope to be as a commissioner, and that, therefore, some of my answers must be somewhat tentative. I shall answer the questions in the order in which they appear:

1. "What is your theory as to desirable rate making in the field of domestic transportation?"

I can truthfully say that I have no theories or predilections concerning this matter. I believe that the Commissioners and the Interstate Commerce Commission staff should be governed by the rate-making principles set forth by the Congress in the several parts of the Interstate Commerce Act, and particularly by the National Transportation Policy and section 15a of part I, and similar sections in other parts of the act.

2. "Do you believe that the free play of economic forces alone should govern in the transportation field?"

The answer to this question is obviously "No," for a "Yes" answer, as I understand the question, would suggest the desirability of no regulation whatsoever. Again, I refer to, and propose to be governed by, the intention of Congress in the National Transportation Policy, as it relates to this question.

3. "Do you believe that 'lowest possible cost of transportation' is always the cheapest form of transportation, and do you believe that such a standard must preserve a fair, compensatory return to the carriers?"

I do not believe that the lowest possible cost transportation is always the cheapest, in the long run. Unless competition is preserved in a balanced form there is always the possibility that the cheapest form of transportation will overcome other forms and be left as a monopoly in the field. Obviously, no carrier can operate long in the public interest without a fair compensatory return.

4. "Do you believe that one form of transportation, in competition with other and weaker forms, should be tolerated to make rates which either are noncompensatory, or made at no higher than 'out-of-pocket' cost levels?"

Noncompensatory rates are not lawful under the Interstate Commerce Act. But the zone of reasonableness in rate making is flexible, and depends to a large extent on the judgment of regulatory agencies. Such agencies should be governed in the exercise of that judgment by the intention of the framers of the act to prevent "destructive competitive practices."

5. "Do you agree that by such rate-making practices the stronger of the competing forms must inevitably drive the weaker forms out of business?"

Pursuant to the national transportation policy, it is incumbent upon the Commission to so administer the act as to develop, coordinate, and preserve the national transportation system by water, highway, and rail, as well as by other means, adequate to meet the needs of the commerce of the United States, of the postal service, and of the national defense. So long as the Commission keeps this congressional mandate in mind there should be no danger of one form of transportation driving another form out of business.

6. "Are you acquainted with the highly essential role played in the war, at a time of high urgency, by the seagoing vessels of the coastwise and intercoastal fleets of the United States?"

This question calls for a "Yes" or "No" answer, and the answer is "Yes." This affirmative answer should be implemented by the recognition of the need for coastwise and intercoastal transportation media, both for purposes of national defense and in the interest of a balanced transportation system. I think it is only fair to add that I am also cognizant of the vital role played by motor carriers, pipe lines, freight forwarders, and railroads in the war effort.

7. "Are you familiar with the serious difficulties being experienced in preserving these vital facilities, or forms of water transportation because of the intensive competition of rival forms?"

This question also calls for a "Yes" or "No" answer, and the answer is "Yes," but perhaps I should add: Domestic coastwise and intercoastal water transportation is presently undergoing severe operating difficulties. Even though the national transportation policy may be fully observed, other steps may prove to be necessary to preserve their vitality as a national defense transportation medium. It is to be hoped that new and more efficient operating methods will be discovered and employed by domestic water carriers that will offset the burden of some of their rising costs of operation.

8. "Were such evidence placed before you, would you not be disposed, as a member of the Interstate Commerce Commission, to act affirmatively and to the fullest extent of the powers conferred on the Commission in the direction of safeguarding against the elimination or crippling of these forms of domestic water transportation?"

Yes, as a Commissioner, I would, of course, be bound by the terms of the Interstate Commerce Act as a whole, but it may well be that further study of this problem would convince even the most objective thinker that the Interstate Commerce Commission, acting by itself, cannot solve the problem in its totality.

9. "Are you acquainted with the extent to which the Interstate Commerce Commission has admonished one particular form of competition against rate-making practices calculated to destroy other forms?"

I am partially acquainted with the extent to which the Commission has admonished carriers to cease destructive competition. Where the threat of destruction is real and has been proved of record, it may well be that mere admonition is not sufficient. Again, I refer to the binding provision of the national transportation policy.

10. "Are you acquainted with what has been identified as 'judicial restraint,' whereby by judiciary has liberally construed the powers of administrative and regulatory bodies, such as the Interstate Commerce Commission?"

If by "judicial restraint" is meant the reluctance of Federal courts to overturn the administrative findings of fact of regulatory bodies, I am acquainted with the doctrine. It has been otherwise identified as the doctrine of administrative finality. The courts have gone a long way in the direction of honoring findings of fact made by administrative tribunals. The extent to which this doctrine has become rooted makes it ultra important for such agencies as the Interstate Commerce Commission to decide issues only on the basis of fair and complete showings of the facts. The enactment of the administrative Procedure Act reflects an added intention of Congress that the findings of regulatory agencies be made on the basis of substantial evidence, and affords the reviewing court a wider discretion to review facts than formerly declared.

11. "Conceding that the great values of such bodies, as viewed by the courts, turn on ability to cope with the highly technical and complex character of the business to be administered or regulated, would you agree with the suggestion that when such bodies, thought of as possessing a quasi-judicial status, move too far in their judicial procedures and concepts, they tend to destroy their effectiveness, and frustrate the purposes for which they were designed and created?"

It is my understanding that the Interstate Commerce Commission possesses three powers incident to the will of Congress: (1) a quasi-legislative power, pursuant to which it makes rates for the future, among other things, (2) an administrative power, pursuant to which it handles its day-to-day business, and administers such legislation as that requiring boiler inspection, prescrip-

tion of safety measures, etc., and (3) a quasi-judicial power, pursuant to which it can, inter alia, award reparations on a basis similar to that of a Federal court. Obviously, the Commission could destroy its effectiveness by moving farther than the law allows in any of these fields.

12. "In the light of the highly technical field of transportation and of the complexities of our present economic environment, do you believe that the primary functions of such administrative and regulatory bodies are effectively performed by the assumption of a status of an umpire?"

Formerly, it could be said that the Commission was, in a way, only an umpire in the field of transportation because of limitations in the law, but since 1920, when the original act was amended to broaden the Commission's powers, and particularly since the water carrier, motor carrier, pipe line, and freight forwarder parts have been added, the Commission acts in fact as a regulatory agency, and no longer "simply calls strike-outs and foul balls."

The questions answered below are from the second list submitted by you to the acting chairman, and I have used the same numbering as appears therein:

1. "Do you believe the maintenance and development in full vigor of common carriers by water, operating self-propelled vessels in the domestic trades, is necessary to the national economy and the national defense?" (This is a paraphrase of the statement of policy in the Merchant Marine Act, 1946.)

I am familiar with the declaration of policy in the Merchant Marine Act of 1936. The question is not a complete paraphrase of that policy. But I do believe the Interstate Commerce Commission should be constantly aware of all declarations of congressional policy that have an effect upon the administration of the Interstate Commerce Act. Stated otherwise, there should be proper correlation and enforcement of all laws enacted by Congress. I observe, again, however, that the Interstate Commerce Commission is primarily bound by the statement of national transportation policy given as a prelude to the Interstate Commerce Act. In all of this legislation, common carriers by water are assured the right of healthy existence.

2. "Are you familiar with the postwar problems and difficulties of water carriers operating self-propelled vessels in the domestic trades?"

The answer is "Yes," but I would expect to become even more fully informed through Commission channels and otherwise concerning problems that might arise of which I should take cognizance.

3. "What do you understand to be such problems and difficulties?"

So far as I am presently informed, the root of the water-carrier problem is increased operating costs. Whether such costs have been increased disproportionately with the operating costs of other forms of transportation is a question that will have to be decided on the basis of established comparative facts. It certainly is not a matter that I would care to prejudge. Allegations of unduly depressed rates, noncompensatory rates, and destructive competitive practices, regardless of what transportation agency they are directed against, should have the most painstaking scrutiny of any regulatory agency sifting the charges. The Commission has ample powers under the Interstate Commerce Act to deal with these problems.

4. "Are you familiar with the decline in number and capacity of self-propelled vessels operated in the domestic trades under Commission regulation?"

The answer is "No," except in a very general way, my understanding being that fewer vessels are now operating in intercoastal and coastwise trades than prior to the war.

5. "What is your position on the question whether the railroads should be allowed to maintain depressed rates on a level lower than normal rates where the principal object of such rate-making practice is to destroy or impair competitive water service?"

I believe I have already answered this question in my answers to questions No. 4 and No. 5 above, in the first set of questions:

6. "The Commission has from time to time in connection with general rate increases admonished rail carriers to adjust unnecessarily depressed rates. What has the Commission done to see that its admonitions have been followed? If nothing, why not?"

I regret that I cannot answer this question, because I do not know fully what the Commission has done, nor would I know its reasons for any action or inaction.

7. "You recognize that it is the duty of the Commission to maintain and develop a healthy and adequate coordinated system of transportation for the Nation. Indeed, was this not the plea of the Commission to Congress at the time it sought and successfully obtained jurisdiction over domestic water carriers? The foregoing being the case what if any affirmative rather than passive action has the Commission taken to fulfill its obligation?"

I believe I have fully covered my intended approach to these problems in the answers I have given above under the first set of questions Nos. 3, 4, 5, and 9.

8. "Since you recognize that restoration of the domestic trades is important to the national defense and national economy, would you please tell us what you or the Commission have done or propose to do to restore such services to their proper position in the national transportation picture?"

It would be manifestly impossible for me to foretell what the Commission proposes to do with respect to the matters contemplated by this question. I can only pledge that my actions vis-à-vis water carriers will be governed by the context and intent of the laws, by the factual records that are made by the parties of interest, and with a view to protecting the public interest in the premises.

9. "Do you believe the Interstate Commerce Commission should take the initiative in attempting to solve the problems and difficulties of water carriers in the domestic trades, or do you feel that it should merely await some action by those carriers?"

I am not adverse to the Interstate Commerce Commission's taking action on its own motion whenever circumstances warrant. The Commission has undertaken many investigations on its own initiative and, it is my understanding, has been handicapped in this field, in part, by budgetary limitations. In view of the Commission's heavy case load, I believe it is not inappropriate to suggest that there is a responsibility resting upon the various transportation agencies to keep the Commission acquainted fully with their problems. Although the Commission has an affirmative duty to maintain and preserve a national transportation system, this duty should not encompass the proper functions of the private managers of the Nation's transportation properties.

10. "A proceeding entitled 'Pacific Coastwise Rates' (Doc. No. 29722) is pending before the Commission. Following the release of an interim report, further hearings were held in February 1949, and the case was argued before and submitted to the full Commission in July 1949. The water carriers in Pacific coastwise trade have repeatedly advised the Commission they could not plan adequate resumption of service until that case had been decided, yet it is still pending. Can you offer some explanation for the reason for the delay in deciding that proceeding?"

I can offer no explanation for the Commission's not having decided the issues involved in this proceeding.

11. "Is there any Commissioner in the Interstate Commerce Commission who has had any experience in or familiarity with water transportation and its problems?"

I do not know.

12. "Do you believe that some member or group of members of the Commission should be delegated the prime responsibility of familiarizing themselves with the operation and problems of water carriers?"

I think that all Commissioners should become familiar with the operations and problems of water carriers and other transportation agencies as well. At present writing, I would not know whether water carrier matters within the Commission are sufficient to warrant the establishment of additional units for purposes of giving such matters expedited consideration.

13. "How many members of the Commission's staff have had actual experience in the field of water transportation?"

I do not know.

14. "Do you believe that the problem of competitive rates as between rail and water carriers is a pressing problem confronting the Commission at this time?"

Yes.

15. "Has the Commission done anything, other than deciding cases presented by complaining parties, a case-by-case approach to the problem, to resolve the problem of rate relationships as between competing types of carriers?"

I do not believe that the Commission's approach has been on the limited basis suggested by the question. If there are areas needing additional exploration, the Commission might well take the initiative within the limitations of its resources.

16. "What explanation do you have for the Commission's failure to attempt to work out some general policy covering the intercarrier competitive rates?"

I do not believe it would be appropriate for me to be either an exponent or an apologist for the Commission.

17. "The Transportation Act has been operated to abolish coastwise and intercoastal trade. Do you interpret the Commission's responsibilities under the act to accomplish and continue such abolition of competition?"

The first sentence of the question rests on an unsupported assumption. It is my understanding that considerable coastwise and intercoastal trade is now developing. The Commission should foster and protect this development to the extent authorized and directed by the national transportation policy and under the other terms of the Interstate Commerce Act affecting all carriers involved.

I trust that the foregoing answers reflect my earnest desire to be fair and impartial, and, to the best of my human ability, to administer and interpret the law without fear or favor.

I am returning herewith the two sets of questions handed to me.

Respectfully,

JAMES K. KNUDSON.

Loyalty Hysteria Boon to United States Foes

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 29, 1950

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a constructive and incisive commentary on the current headlining of loyalty charges, written by John A. Kennedy, editor and publisher of the San Diego (Calif.) Journal of March 25, 1950. Mr. Kennedy's article is entitled "Loyalty Hysteria Boon to United States Foes."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM THE PUBLISHER'S DESK—LOYALTY HYSTERIA BOON TO UNITED STATES FOES

These are troublesome times in Washington.

Anyone in Government who has ever been known to have had a liberal thought or an acquaintance of liberal leanings—no matter how long ago—is considered by some politicians to be fair game in the latest klieg-light headline hunt in Washington.

The easiest way to explain away this new development of hysteria on the Potomac is to say that a brash young Senator with an inflated ego (JOSEPH MCCARTHY, Republican, Wisconsin) is trying to smear the State Department in particular and the administration in general for his own selfish political motives. Unfortunately that is not the whole story.

There is an uneasy feeling that this is an inspired fishing expedition type of smear campaign. It goes like this:

Fill the air with charges, even though there is not a scrap of evidence to substantiate them, with the hope that some kind of case, even though a weak one, may be made to stick in one instance. Then the cry: "See! Washington is filled with Reds."

In a more serene period of history, this whole thing could be dismissed as a crazy political side show. But in a period when our Government is trying desperately to mobilize its full moral, economic, and political strength to stave off another world war, these antics give a great measure of comfort to our enemies.

The men in the Politburo may not have outlined the pattern for this campaign, but certainly it is doing for them what they have been unable to do for themselves. It is creating confusion and even distrust, not alone among some Americans, but also among some of our friends abroad.

It is easy to shrug off a charge that our Secretary of State is a "bad security risk" as just another political maneuver. But think what this charge means to the propagandists in the Politburo. It is not difficult to picture them gleefully congratulating each other on "our new allies in Washington" who have joined in the campaign to discredit democracy everywhere.

Can the loyalty program be divorced from politics?

The answer will in a large measure determine how Congress, as well as the country, will survive this latest subversive onslaught from those who, in the words of Vice President ALBEN BARKLEY, see in "every angle worm a spreading adder."

Political issues can be debated—and debated fully, and any and all so-called bad security risks can be weeded out of the Government, without the whole structure of Federal Government being held up to ridicule and scorn before the entire world. Anyone who rejects this reasonable assumption shows little faith in American processes.

President Truman acted wisely, in our opinion, when he established the Loyalty Review Board and named as its chairman Seth Richardson, an outstanding Republican lawyer. We think Mr. Richardson and the Board have performed a valuable public service, despite the noisy attacks from the far left and the far right.

The country is growing tired of the way many of the congressional hearings are conducted. Remember the Howard Hughes fiasco? That hearing, strangely enough, was conducted by the same body, the War Investigating Committee, that won such a great reputation for fairness during the war. The reason lies in the method of conducting the hearing.

The work of the War Investigating Committee was so outstanding that the then Senator Truman was given the Democratic nomination for Vice President in 1944.

That committee conducted its investigations on a nonpolitical basis. It heard witnesses in executive session; only when the facts seemed to warrant public action did it present the matter before public hearings. Witnesses were told that charges had been made against them and they were given ample opportunity to present their cases in advance—before it was hauled before the klieg lights. As a result, the committee performed a great public service.

Remember the Pearl Harbor investigation? Almost endless testimony and political bickering resulting in 39 volumes that have been read by few people. This was due, at least in part, to the method of conducting the hearing as well as the political climate prevailing at the time.

Contrast that investigation with the work of the Hoover Commission. The work of this Commission largely has been kept out of the realm of partisan politics—and we feel one of the major restraining influences has been the presence on the Commission of a group of outstanding private citizens.

We regret that the work of the Loyalty Review Board, composed of the same high-type Americans, has not been supported with similar vigor by more Members of Congress. Possibly this is due to the fact that some feel it is an administrative agency far removed from Congress.

If this is true, the problem could be rectified by the establishment of a joint commission, composed of Members of Congress as well as outstanding private citizens, to hear and investigate loyalty charges against prominent officials and to review cases that proceed through the normal agency—loyalty board channels.

And in addition, Congress should give serious thought to the promulgation of certain rules of fair play, to assure basic rights to every person under attack.

As Senator LUCAS has suggested, these might well include: (1) the right to compel the committee to subpena at least a limited number of defense witnesses; (2) the right to appear personally before the committee, before any charges are publicly aired; (3) the right to cross-examine witnesses, personally or through counsel. We believe too that Congress might well reexamine its privilege of immunity.

If Congress is to turn on the klieg lights every time some politically ambitious individual hauls out a blunderbuss and aims it at a public official, then Congress, for its own good, should give the most careful consideration to the overhauling of its investigating machinery. If it fails to act in that direction, it may seriously damage its own prestige.

Every American has the duty as well as the right to insist that Government officials be competent, honest, and loyal. But if loyalty probes are not conducted on a more sensible, honorable basis, our Nation's prestige will suffer in the eyes of the world. This we can ill afford.

JOHN A. KENNEDY,
Editor and Publisher.

Alaska's Defenses

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Wednesday, March 29, 1950

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent article entitled "Alaska's Defenses," written by Marquis Childs and published in today's Washington Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALASKA'S DEFENSES—DANGER POINT IN ECONOMICS

(By Marquis Childs)

A decision has been taken by the Joint Chiefs of Staff which illustrates all the problems of the Defense Establishment in relation to that much-debated word, "economy." Military installation of the United States in the Aleutian Islands off Alaska are, with one or two exceptions to be abandoned.

This is certain to cause both public and bureaucratic clamor. The decision was taken with a full realization of the risks involved, including the risk of public controversy.

The Aleutian chain extends for about 900 miles into the North Pacific. The islands are, for the most part, barren and fog-shrouded. The most important base to be given up is on Shimya, which is one of the few in the outer chain that is so flat planes can come in for a landing over water without difficulty.

Northwest Airlines uses Shimya as a base on the route to Japan. If this stop is abandoned, Northwest in all probability will have to change to a route on which another line is already operating. The Civil Aeronautics Board is expected to protest the abandonment of Shimya.

During World War II the Navy developed at Adak in the Aleutian chain a fairly large base. According to present plan, this will be maintained as a naval base, if only on a stand-by basis.

In the lengthy debate by the Joint Chiefs the decision on the Aleutians was based finally on the following reasoning. Possession of the outer Aleutians is of little value militarily either to the United States or to its potential enemy, the Soviet Union. The islands are extremely difficult to supply and the persistent fog greatly reduces their value as operational air bases.

The Joint Chiefs of Staff were fully aware of the public reaction should the islands be taken by the Russians in the event of war. An immediate demand would arise that they be retaken. The Joint Chiefs of Staff would resist that demand on the ground that they would be more of a liability than an asset to the enemy.

In World War II United States troops recaptured Attu and Kiska in the Aleutian chain from the Japs. The assault operations were badly bungled and unnecessarily costly.

As to the savings, one estimate is as high as $30,000,000. This is believed, however, to include savings to be made on the mainland of Alaska as well as in the island chain. The defense line for the mainland is based on Fairbanks and Anchorage in the belief that the wild and almost empty terrain to the west would be little use to an invader.

Gov. Ernest Gruening of Alaska has publicly expressed his deep concern over the

safety of Alaska, suggesting as others have that it might become the Pearl Harbor of another war. Total request in the 1951 budget for Alaskan defenses was $137,000,000. House economizers have cut this to $96,000,000. Gruening believes that not less than a billion dollars should be spent on Alaska's defenses during the coming fiscal year.

Gruening is an ardent advocate of statehood for the Territory, believing that only in this way can Alaska obtain funds sufficient for its defenses. The House already has approved a statehood bill and a Senate committee is expected to start hearings. Certain Senators have been using delaying tactics to prevent a vote on statehood for both Alaska and Hawaii.

This is, of course, a political question with which the Joint Chiefs cannot concern themselves. On a related issue they are conducting a debate with the Bureau of the Budget.

The Joint Chiefs of Staff have asked for $100,000,000 for housing desperately needed for troops in Alaska. Present facilities are woefully inadequate for the approximately 8,000 stationed there and an expansion program is essential to take care of the 25,000 now planned for the defense of the Anchorage-Fairbanks line.

The Budget Bureau has suggested that only $75,000,000 of this could at the most be spent in one fiscal year. The Joint Chiefs of Staff argue that construction must be speeded up and the full amount spent in a 12-month period if Alaskan defenses are to be put on a stable basis.

A somewhat similar argument is going on over whether $50,000,000 or $35,000,000 can be spent in 1 year for construction of the radar warning network around North America. The network is also vital to Alaskan defenses.

The outsider has no means of judging the merits of these individual arguments. But the belief is growing that when economies originally made by military men themselves are compounded first by committees of Congress and then by the House and Senate, the danger line has in fact been reached or passed.

Peace of Mind

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely and thought-provoking editorial, entitled "Peace of Mind," which appeared in the Worcester (Mass.) Telegram edition of March 28, 1950. The editorial follows:

PEACE OF MIND

Future historians and philosophers may, as Dr. George Gallup suggests, look back on this present period of man's experience as a time when men and women were sorely troubled—not by physical discomforts, but by an uneasy frame of mind, unhappiness and a seeking after a peace of mind that so often seems so elusive.

For extremely high percentages of the American people have confided to Dr. Gallup's pollsters that inner happiness and peace of mind are definitely getting worse for them, while their health and knowledge have been improving.

This seems, at first glance, a rather queer commentary on a civilization which has brought man more material comforts and luxuries than the richest and most powerful kings had a generation or so ago. American families have their automobiles, radios, televisions, and electric refrigerators, yet the indications are that happiness—real peace of mind—is somehow eluding them.

There is considerable verification for Dr. Gallup's findings, too. There has been a rising interest in psychiatry, and the psychiatrists' offices are crowded. Books—one of them in fact was called Peace of Mind—on attaining happiness and spiritual satisfaction have been selling at a phenomenal rate.

It is true, of course, that there have been powerful forces to destroy anyone's peace of mind. The atomic bomb, the world wars, the depression and the prevailing uncertainties of the age have all added up to inner conflict for many people. Yet Dr. Gallup's poll figures show, perhaps, one of the fundamental reasons for many cases of unhappiness. The American people say moral conduct and faith in religion have suffered severe setbacks in recent years. They have declined in about the same percentage as has man's peace of mind, according to those questioned by Dr. Gallup. There does seem to be a connection between the declining faith in religion and human unhappiness.

Centennial of Clinton, Mass.

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a recent excerpt from the Clinton Daily Item containing the address of State Representative Henry W. Pickford at the Clinton, Mass., centennial banquet on March 14:

"The next speaker is known to everyone in this hall," said Congressman PHILIP J. PHILBIN, the toastmaster, in introducing State Representative Henry W. Pickford.

"Born in Clinton, educated in our local schools where he distinguished himself not only as a student but as an athlete, able, prominent and successful lawyer, honest and courageous in his convictions, he has represented this district in the general court for several years. He has served our district with marked ability, earnestness and distinction.

"I am happy to present to respond to the toast 'Clinton and the general court,' Clinton's distinguished member of that body, the Honorable Henry W. Pickford."

Representative Henry W. Pickford, in responding to the toast, "Clinton and our general court," said:

"Congressman Philbin, Your Excellency, members of the clergy, Judge Buttrick, distinguished guests, ladies and gentlemen:

"To participate in a birthday party observing the one hundredth anniversary of a birth is indeed a rare privilege. It is also an occasion for joy and happiness which I am sure we all appreciate to the utmost.

"Commonly when marking an important milestone in the life of an individual one becomes retrospective and reminiscent about the days when the child was born. And it is none the less interesting to do so when observing the centennial of our municipality."

PETITIONS SIGNED BY 342 CITIZENS

"In January of 1850 eight petitions endorsing the idea of dividing Clintonville from Lancaster were signed by 342 citizens of Lancaster and through Representative E. W. Holbrook of West Boylston, with a bill were filed with the General Court of Massachusetts on the 17th and 23d days of January in that year. Some of the petitioners were Charles G. Stevens, Edward H. Fiske, Andrew L. Fuller, Alanson Chace, Levi Harris, Nathaniel Hastings, E. W. Goodale, Franklin Forbes, James A. Weeks, Charles Paine, C. L. Swan, J. C. Howe, James C. Kittredge, and Nathaniel Rice."

THE REASONS

"The reasons for the establishment of the town of Clinton, as set forth in these petitions, were 'that a manufacturing village called Clintonville has recently sprung up in the south part of said town, containing already a population of nearly 3,000 persons, whilst its favorable location, with the amount of capital invested in manufacturers gives assurance of a large increase. That the inhabitants of Lancaster proper and of Clintonville have separate and distinct interests and wholly different business associations; that the distance from the center of the town renders it expensive, while their occupations make it highly inconvenient for citizens of Clintonville to meet with other citizens of Lancaster, as they are now required to do, to hold elections, and for other municipal purposes.'"

LANCASTER ACTS

"Following the filing of these papers, legal notice of the same was served upon the elected officials of the town of Lancaster. Thereafter, on February 15, 1850, Lancaster held a town meeting to take action on this question.

"At this meeting it was voted 'that a nominating committee be appointed by the chair to report a committee of five persons who are to confer with a like committee from Clintonville, and report as soon as may be, what terms, in their opinion ought to satisfy the town of Lancaster, to consent and not to oppose a division of the town and said committee reported the following: John G. Thurston, Silas Thurston, Jacob Fisher, Henry Lincoln, and Nathaniel Warner.'

"The meeting was adjourned for 40 minutes, after which time this committee reported to the meeting the terms desired and they were accepted by the voters. A committee of three, consisting of Henry Wilder, Benjamin Whittemore, and John G. Thurston, was then appointed to ensure the inclusion of these terms in the act of incorporation."

OPINIONS DIFFERED

"The birth of this child, Clinton, however, was not accomplished without protest. Then, as now, differences of opinion existed and divergent views prevailed. Seventy-six residents of Lancaster proper and forty-seven residents of the part to be set off filed remonstrances with the legislature protesting the proposal of separation. The former group asserted 'we do not believe that this ancient town of the Commonwealth ought to be dismembered'—and 'the difficulty of making any just division the increased expense which another town organization will require' justify the remonstrance. While one element of the second group thought that the distance between Clintonville and the center village was not enough to cause a division as it was 'but 2½ miles over a good road, level nearly the whole distance with railroad accommodations in addition; that the territory of the

new town is too small.' And another faction in Clintonville, apparently concerned about taxes, set forth as their objection that 'a very costly town hall has been erected for the accommodation of the whole town for their public business.' "

BILL ENACTED

"However, the bill to incorporate the town of Clinton was enacted into law and approved 100 years ago this date on Thursday, March 14, 1850, and emerged as chapter 72 of the acts of 1850. This act set forth the area of Clinton, its tax obligation, requirement to care for paupers, imposed the necessity of paying Lancaster $10,000 in ten equal annual installments with interest as its share of any obligation due from Lancaster and provided the manner of holding the first municipal election.

"It is interesting to observe the matters of public concern considered by the legislature 100 years ago when Clinton was being incorporated."

STRANGE BILLS IN 1950

"These include a petition to grant some aid to a blind Indian of the Dudley Tribe; another petition that persons coming into the Commonwealth from those States in which colored seamen are imprisoned on account of their color may be required to give bonds to keep the peace while in this Commonwealth, especially toward its colored citizens; a bill relating to the carrying of sling shots; one to prevent the adulteration of spiritous liquors and several bills for the abolition of capital punishment.

PROPHECY FULFILLED

"Thus, tonight, we of Clinton revel in the fulfillment of the prophecy of our forebears made 100 years ago in their assurance for the town of a large increase and congratulate all of our citizens who have in the past century contributed to the present development of the town of Clinton. And in the present-day atmosphere of public thought, even as 100 years ago, of regard for our distressed citizens, concern with racial questions and public welfare generally we hope the birthday anniversary 100 years hence will find a still greater, more forceful and outstanding town of Clinton.

"In conclusion we salute and hail Clinton on this anniversary and say, 'Happy birthday.' "

Moslems Enjoy Full Rights in Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. MULTER. Mr. Speaker, reports from the little State of Israel show how to teach democracy by practicing it. Its citizens of the Moslem faith are receiving a full voice in running their own affairs as well as the affairs of the state. This is a most encouraging development in view of the many problems still facing the countries of the Near East, which at times appear to us to be insurmountable. Courts, schools, community councils, and settlements are being operated by and for the Moslem Arabs, who number in Israel, 120,000 people. Moslem tribunals are already functioning at Nazareth, Acre, Haifa, and Majdal, and a fifth tribunal will soon open in Jaffa. Moslem committees are cooperating with the Israel Ministry of Religious Affairs in providing care for orphans and the aged, and for religious libraries and mosques.

There are now reported to be 150 Moslem officials in the Israel Government, the highest of these being Sheik Taher el-Tabari who is Israel's first district judge for civil and religious matters. That freedom of worship and cultural autonomy are not merely paper ideals is attested by the fact that Moslem religious rites now are conducted in more than 70 mosques in Israel, and the Arabic language is being taught in 27 schools. The Government has also appropriated substantial funds for the development of Arab villages and farming.

These and many other facts indicate that the Moslem population of Israel is accorded and is enjoying the same privileges as all other citizens of this newest democratic state. I have long urged that if there was a minimum of interference on the part of outside forces, the Israeli and the Arabs would come to an early and complete understanding creating a better relationship between them and a lasting peace in that troubled area.

A Shameful Trick

REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. JENKINS. Mr. Speaker, we all know about a month ago the Republicans put on a great Lincoln Day celebration in Washington. Twelve or fourteen thousand attended this celebration and the price of admission was only $1.20 per person. The Government, through the tax on admissions, took 20 cents of that amount. A few days later the other party, whatever it may be called, Democrats or New Dealers, or a combination of both, put on a great show at a hundred dollars a plate, and paid absolutely nothing. They should have paid a tax of at least $100,000. When the President talks about closing loopholes he should not lose sight of this $100,000. He need not worry that he would be doing an injustice to persons earning small wages. Any person who can afford to pay $100 for a seat at one of these New Deal banquets surely can afford to comply with the law and pay the tax that he should pay.

Our distinguished and beloved colleague the gentleman from New York, Mr. DANIEL A. REED, has put out a very positive and pungent release with reference to that situation involving the legality of the action of the Treasury Department.

Mr. REED's statement is as follows:

Congressman DANIEL A. REED, Republican, of New York, ranking minority member of the tax-writing Ways and Means Committee, charged today that the Bureau of Internal Revenue's recent ruling exempting from the 20 percent amusement tax the proceeds of the Democratic Jefferson-Jackson Day Rally was a shocking example of taxation by political connivance and political favoritism and that the Federal Government had been cheated out of over $100,000.

Congressman REED declared:

"In view of the position of the Bureau of Internal Revenue that the $1 paid to attend the Republican Lincoln Day Box Supper Rally at the Uline Arena in Washington was subject to the 20 percent amusement tax, I requested on February 20 the Bureau to advise me whether a similar tax was payable on the $100-per-person Democratic Jefferson-Jackson Day Rally held in the Armory in Washington on February 10.

"After more than 1 month's delay I have just received the Commissioner's reply that the approximately $530,000 proceeds from the Democratic spree is not subject to either the admission or cabaret tax in the same manner that the proceeds from the Republican rally were held taxable. In view of the basic similarity of the two events, both of which included professional entertainment and political speeches, this ruling is a shocking example of taxation by political connivance and political favoritism. Although the Presidential henchmen hunger for the pennies paid by even our children in the form of the amusement tax on their movies, museums, playgrounds, county fairs, and many other simple pleasures, they avoid applying the amusement tax to any fund destined for the Democratic coffers for use in fostering their socialistic program.

"As a result of the Bureau's ruling, the Federal Government has been cheated out of over $100,000 in revenue. Even more significant than this is the revealing fact that the Democratic Party is unwilling to help the working men and women of America shoulder their tremendous tax burden.

"This type of tax discrimination and favoritism is indeed a new low in politics."

St. Patrick's Day Address by Hon. John Cashmore, President of the Borough of Brooklyn

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. ROONEY. Mr. Speaker, on the evening of St. Patrick's Day, March 17, 1950, the Honorable John Cashmore, president of the Borough of Brooklyn of the city of New York, delivered an inspiring address at the one hundred and first annual St. Patrick's Day banquet of the St. Patrick Society of Brooklyn. Under permission of the House heretofore granted me by unanimous consent, I include the text of Borough President Cashmore's address:

President Cronin, Father Flynn, distinguished guests, and members of the St. Patrick Society of Brooklyn, I feel, tonight, you are paying me a twofold honor.

To be your guest at this first annual dinner in your second century of progress is a rare distinction. But you have also given me the privilege to speak at your first annual gathering since that day last April—a day that will live in history—when Ireland threw off the yoke of bondage and became once more a free and independent nation.

So, I am grateful to your president, your officers, and to each and every one of you for this heart-warming act of friendship toward me.

The preceding speakers—and Father Flynn especially—have spoken this evening with great eloquence. I am sure that St. Patrick, looking down on this happy gathering, must be pleased. In fact, I would not be at all surprised, nor would some of you, if St. Patrick were to enter here and extend his blessing. Certainly the spirit is here, and I am not referring to the other kind of spirits which seem to go with an occasion of this kind.

Now, like many of you, I have never been fortunate enough to see the lakes of Killarney. Neither have I been privileged to visit where the River Shannon flows.

But, I am sure, I can find in my veins at least the one drop of Irish blood which, I know, your society requires for membership. I know, too, I can gain admittance in one other way. And that is by mentioning just two magic words, St. Patrick, that same password the American patriots used over 150 years ago—on the night of St. Patrick—when the British were evacuating the port of Boston.

That password, St. Patrick, is but one example, I think, of the manner in which the patriotism of the Irish has been interwoven in the whole history of America. To honor their patron saint, we, of America, need only to glance at the heroic deeds of the sons of St. Patrick in our own land. They are many and historic. And it is in the achievements of his sons that the true greatness of a good and loving father can be seen and appreciated.

From our earliest days, our Nation in its struggle for independence, had one of its greatest bulwarks in the Irish. Ireland set the example. In their own native land, and down through the centuries, the Irish laid down their lives in thousands to resist oppression. With such a history, is it any wonder that Irish immigrants should have played such a vital part in the founding and making of America?

The hopes, ambitions, and strivings of the Irish have always been for freedom. The principle upon which the American Nation was founded, the end to which it was dedicated, is that same freedom. Easy to explain, then, is the fact that the Irish immigrant has never found it difficult to be a faithful son of St. Patrick and a loyal citizen of the United States.

In rich full measure we have seen that American loyalty of the Irish immigrant. During the Revolution, more than one-half the soldiers in General's Washington's Continental Armies were Irish. Our own beloved Brooklyn was defended against the redcoats of Cornwallis by General Sullivan.

Indeed, if you gentlemen are willing to take the word of a statesman in the British House of Lords, with regard to the Revolution, I offer you the classical remark of Lord Mountjoy. In explaining the British disaster in America's War of Independence, he readily admitted England was defeated by "Irish emigrants."

So it is that in this year of 1950, Irishmen and the sons of Irishmen find no need to protest their American loyalty. For the Sons of St. Patrick have marched beneath the Stars and Stripes for a century and a half. Their bones lie beneath our every battlefield, their blood illuminates our history's every page. And the true measure of their greatness lies not merely in what they have done, but in that which they have not done. Comb the pages of America's history as you will. No traitor to this Nation will you find among them. Commodore Barrys, General Sullivans, Father Duffys you will find in profusion, but an Aaron Burr or a Benedict Arnold—never.

Yes; the Irish have given much to America—and to the world. And more than mere loyalty was theirs to give.

To France and Germany they brought Christianity and the love of God even as they brought liberty and the love of freedom to America. But the civilization they brought, the way of life they preached, was always taught—never imposed. It was a culture carried, not by the weapons of warriors—but borne on the lips of poets and scholars, who came to sing and teach of God and peace.

Throughout her long history, that same deep spirituality, that same love of peace remained the keynotes of Ireland's international conduct.

By a happy coincidence, it was one whose memory we honor tonight—the great John Boyle O'Reilly, who set forth in words undying the splendid record of Erin's peaceful statesmanship. O'Reilly's proud boast is one that few nations can equal and none can surpass:

"We have wronged no race, we have robbed no land,
We have never oppressed the weak;
And this in the face of Heaven is the nobler thing to speak."

Much of our own American credo of peace we see contained in that poetic statement of a nation's peaceful past. And happy, indeed, we in America should be, that this ancient and honorable race has been reborn this year in the family of free nations.

Ireland that has given so much to so many nations of the world in the past, today, like all other nations, needs the world. And the world needs Ireland—because a people that believes in peace and works for peace is sorely wanted in the councils of nations.

A world in agony cries out for men of faith and principle who will die if need be in defense of their faith and their principles.

With whole races enslaved by an alien Godless tyrant, oppressed people everywhere need the spark of hope and courage that can come only from men who have freely offered life and fortune for God and freedom.

If the races enslaved in Europe are ever to rise—and rise they must—they will need the inspiration of nations that have overcome a despot's rule.

Significant it is that the slave master of Europe and Asia has thrice vetoed the application of the Irish Nation for admission to the world forum we call United Nations. Eire can wear those three Russian rejections as medals of honor. For the world knows now that those medals of honor are the symbols of freedom and liberty. They are the credentials of free men who believe in the fatherhood of God and the dignity of man.

It is also significant, I think, that only 2 days ago the first American envoy of ambassadorial rank, ever to represent this Nation in the capital of the new Irish Republic, left for Dublin. By that gesture we acknowledge, we emphasize, that America stands on the side of men of principle, lovers of liberty, and defenders of freedom. By our action we indicate to a world seeking vainly in its councils for peace, that we Americans can commend to it the example of this brave and ancient Celtic nation, free at last after 700 years.

And in commending to the world this Irish Nation, we act in the hope that side by side with America she may help bring peace to a troubled universe.

God grant that Ireland and America whose destinies have been so long interwoven in struggles for lasting peace and freedom, may achieve together their hope of centuries.

And may Ireland whose brave sons gave their lives to fulfill the American dream of independence, may this glorious Ireland achieve her ambition of the ages, to be like America, one nation, indivisible, with liberty and justice for all.

Depletion—Parallel Cases in the Lumber and Mining Industries

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1950

Mr. WHITE of Idaho. Mr. Speaker, much consideration is being given at this time to depletion allowances made to mining companies for taxation purposes. To make a comparison between depletion allowance made to a small lumbering operation and a small mining operation, and ascertain the method by which depletion is computed in taxing these two basic industries by the Bureau of Internal Revenue, I have submitted parallel hypothetical cases to the Bureau and insert my letter and the Bureau's reply for the information of my colleagues:

MARCH 10, 1950.

Mr. GEORGE J. SCHOENEMAN,
Commissioner, Bureau of Internal Revenue, Department of the Treasury, Washington, D. C.

MY DEAR MR. COMMISSIONER: With reference to the plan of the Bureau of Internal Revenue in making depletion allowances, I would be very pleased to have a statement concerning the depletion that would be allowed in the following case.

The Ale Co. owned a timber stand of 10,000,000 feet valued at $1 per thousand. Under their operating program, one-tenth or 1,000,000 feet would be cut and manufactured each year; and at the end of 10 years, this timber stand would be completely exhausted. What depletion is this company allowed annually?

And I would be very pleased to have a statement concerning the depletion that would be allowed in the following case:

The Byron Co. owns a lead-silver mine with an indeterminate quantity of ore. The company, by their mine operation program, will extract and process 10,000 tons of ore, valued at $10 per ton, that will be marketed annually. There is an indication that the ore deposits in the mine will be completely exhausted in 10 years. What depletion will be allowed annually to this company?

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

UNITED STATES TREASURY DEPARTMENT,
Washington, March 22, 1950.

Hon. COMPTON I. WHITE,
House of Representatives,
Washington, D. C.

MY DEAR MR. WHITE: Reference is made to your letter dated March 10, 1950, relating to the depletion allowance provided by the Internal Revenue Code in the case of taxpayers who are in the timber business and the mining business.

With respect to the timber allowance in the case of the Ale Co., if the adjusted basis of this timber under section 113 (b) (1) (B) of the Internal Revenue Code is $1 per thousand feet, then the annual depletion would ordinarily be computed by multiplying the number of thousands of board feet cut in

any year by $1. Of course, if exactly 1,000,000 feet were cut each year the annual allowance would be $1,000 or 10 percent of the total basis. Although depletion may be determined on the basis of the percentage of the total stand cut, as a rule it is simpler to multiply the units cut by the proper unit rate.

It may be noted, that if the taxpayer so elects in his return, the provisions of section 117 (k) (1) of the code are applicable. That is, the difference between the adjusted basis for depletion and the fair market value as of the first of the year for the timber cut during the year may be treated as a long term capital gain, provided the timber has been owned for more than 6 months prior to the beginning of the taxable year.

In the example cited, if the fair market value as of the first of the taxable year is $2 per thousand feet, then the difference between this figure and the adjusted basis may be treated as a long term capital gain under section 117 (j) as follows:

Fair market value of timber cut (1,000 at $2)	$2,000
Adjusted basis of timber cut (1,000 at $1)	1,000
Capital gain	1,000

If an election is made under section 117 (k) (1) then the fair market value of the timber cut during the year shall be considered to be the cost of the timber which was cut, in lieu of the actual cost or other basis of such timber, for all purposes for which such cost is a necessary factor.

With respect to the Byron Co. the percentage depletion would be 15 percent of $100,000 (10,000 tons at $10 per ton) gross annual income from the property, or $15,000, provided that the net income from the property before depletion was at least $30,000. If the net income from the property before depletion was less than $30,000 the allowable depletion would be 50 percent of such net income as provided in section 114 (b) (4) of the Internal Revenue Code. However, section 114 (b) (4) also provides that in no case shall the depletion allowance be less than it would be if computed with respect to the adjusted basis. Section 114 (b) (1). The depletion computed on the adjusted basis might be substantially greater than the percentage of income depletion.

Since information as to the cost or adjusted basis of the property under section 113 (b) (1) (B) is not available, and you state that the reserve of minerals is indeterminate, it is impossible for this office to compute the alternative allowance for depletion provided in the Internal Revenue Code. It would be highly desirable, however, for the taxpayer to make some reasonable estimate of the mineral reserves and determine the depletion allowable on the adjusted basis since the statute provides that the larger of the two computations is allowable in each year and that the basis shall be reduced by such amount. It might be necessary in some future year for this taxpayer to determine the correct adjusted basis for the purpose of determining gain or loss in the event of sale. Under such circumstances it would not be permissible to compute the adjusted basis on the theory that the reserves of mineral are indeterminate. Hence, some determination of the reserve should be made in the light of the facts which are known by the taxpayer even though such a determination of the reserve of mineral may be only a rough approximation.

If any further correspondence is necessary in connection with this matter, you are requested to refer to the symbols IT:EV:NR-L°A.

Very truly yours,

GEO. J. SCHOENEMAN,
Commissioner.

Crop Insurance Is Here Again

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I present the editorial from the March edition of the Louisiana Farm Bureau News entitled "Crop Insurance Is Here Again." This reads as follows:

CROP INSURANCE IS HERE AGAIN

Many Louisianians have noted with interest the fact that crop insurance, once killed by Congress because of heavy losses suffered by the Federal Crop Insurance Corporation, is on its way back. The experimental program authorized by Congress has proven much more successful and crop insurance once again promises to be an important part of the national farm program. This year, cotton crop insurance is being offered in Bienville, Richland, East Carroll, Catahoula, Washington, Caddo and Natchitoches Parishes. Combined insurance on cotton, corn, sweet potatoes and rice will be offered in St. Landry Parish and combined insurance on these crops plus sugarcane in Lafayette Parish.

The new program differs from the old in several ways. First, it is intended not to assure the grower of any particular percentage of a regular crop, but rather of his investment in his crop. It offers protection against complete disaster and provides the insured grower with money to pay his costs or put in another crop next year. Secondly, premium payments and indemnity payments are figured in dollars and cents rather than in pounds of cotton.

But the most interesting difference, perhaps, is the combined insurance plan, which makes crop insurance available in general farming areas and not just in cotton areas, or wheat areas, as the case might be. The general farmer takes insurance on his investment in his entire crop, not just one of his crops. Since he has several opportunities for hitting, so to speak, his rates are lower than the rates for insurance on a specific crop.

Since the coverage for both cotton insurance and combined insurance is on a different basis from the old cotton crop insurance program, rates in general are lower and the program appears to be on a somewhat sounder basis.

Address by Hon. Austin J. Kittredge

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent, I include in the RECORD the text of an address delivered by the Honorable Austin J. Kittredge at the centennial banquet on March 14 in honor of the founding of my home town of Clinton, Mass. The remarks of Judge Kittredge, chairman of the centennial committee, appeared in the columns of the Clinton Daily Item of March 15, as follows:

(In his introductory remarks and in presenting the toastmaster Congressman PHILIP J. PHILBIN, Chairman Kittredge said:)

His Excellency, Lieutenant Governor, Congressman Philbin, Reverend Clergy, Representative Pickford, Honorable Judges, Mr. Foster, distinguished guests and ladies and gentlemen:

No birthday party would be complete without song and music and it becomes my happy privilege at this time to present our master of ceremonies, one whose accomplishments and success in that field gives assurance of a pleasant and enjoyable evening.

His life has been one of song; his profession a noble one; his purpose in life is to spread cheer and happiness, to gladden the heart music, to stir the imagination, to bring a sparkle of the eye and laughter to the lips. All this he has accomplished by his many compositions which have won for him a place high in the ranks of his profession.

During the last war he gave freely and generously of his time and talents to brighten the lives of his fellow servicemen in the camps and in the hospitals.

Honored by the members of his profession by being elected to high office in the American Society of Composers and Publishers, he has come home to be with us tonight.

He has given to us our centennial song which you will hear tonight for the first time.

It is with profound pleasure that I give you our genial, talented and lovable master of ceremonies John Redmond Lynskey.

On behalf of your committee, of which I have the honor to be chairman, I extend to you, one and all, a very cordial welcome and wish to thank you for your very generous response to our invitation to be with us tonight.

On March 14, 1850, just 100 years ago today, an act of the legislature incorporating our town of Clinton was approved by the Governor. Tonight we celebrate her anniversary.

The story of her growth and development, the achievements and success of her distinguished sons and daughters, I leave in more capable hands and to more elcquent tongue than mine.

(Chairman Kittredge read the following letters:)

THE WHITE HOUSE,
Washington, March 11, 1950.

DEAR MR. KITTREDGE: The foresight of the citizens in establishing Clinton as a town a hundred years ago is amply justified by the things accomplished during the last 10 decades.

Clinton had the advantage in sharing in the historic traditions of the fine old town of Lancaster and thus came into being under happy circumstances. It also has had the advantage of superior location, rich natural resources, and a diversity of industries.

Great as are all of these assets, I am one who thinks that any community's chief wealth is in its men and women. And Clinton has raised up a very large number of able citizens who have enriched the life of the State of Massachusetts and the Nation.

I have in mind one citizen, a Clinton boy born and bred. I wish it were possible for me to be with you next Tuesday evening so that I might acknowledge to the community the debt of gratitude and appreciation I owe to Matt Connelly for his invaluable service to me through many years. Wise, resourceful, industrious, and always tactful, he is one of those faithful and efficient public servants without whom government could not function.

Very sincerely yours,

HARRY S. TRUMAN.

AUSTIN J. KITTREDGE,
Chairman, Clinton Centennial Committee, Clinton, Mass.:

Many congratulations to the town of Clinton for having completed its first century. Deeply regret that my necessary presence in Washington in connection with the current investigation of the State Department makes it impossible for me to leave the Capital. Otherwise I would certainly be present to extend my warm personal greetings. As a Senator from Massachusetts, I am always proud to refer to Clinton as a particularly progressive American community. May the next 100 years be prosperous for you all. Please call on me for any service that I can render.

HENRY CABOT LODGE, JR.,
United States Senator.

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
March 13, 1950.

AUSTIN J. KITTREDGE, Esq.,
General Chairman, One Hundredth Anniversary Committee, Holder Memorial, Clinton, Mass.

DEAR MR. KITTREDGE: It is a great pleasure and a real privilege for me to convey to the good citizens of Clinton my hearty congratulations and sincere good wishes on the occasion of the Clinton centennial banquet. An event such as this, celebrating 100 years of achievement, is one in which you all can take great pride and in which the Commonwealth and Nation can properly join.

Since that faraway day in 1654, when John Prescott began grinding corn in his mill on South Meadow brook, the growth of this town we know and love today as Clinton has been steady and sound. Although a full century has passed now since Clinton came to maturity as an incorporated town, there has been not a single year in which it has not made an important and valued contribution to Massachusetts and to New England. In business, in industry, in education, in Government, and in religion, the town of Clinton played a valued and vigorous role always. We all salute the town with pride and with enthusiasm. May this centennial year have many happy returns.

Sincerely yours,
LEVERETT SALTONSTALL,
United States Senator.

COMMONWEALTH OF MASSACHUSETTS,
THE SUPERIOR COURT, BOSTON,
March 11, 1950.

DEAR MR. CHAIRMAN: I am very much distressed at my inability to be present at the centennial of the town of Clinton, but it is impossible for me to attend.

It will be 53 years the 10th of the coming September since I started the practice of law in the town of Clinton, and it seems like yesterday. I owe a great deal to the people of Clinton, and I wish for them the following: health, prosperity, and an enriched cycle onward to through the next century.

It is a great privilege, to assemble to observe a centennial to pay our respects, and honor a town so rich in heritage. Clinton is the birthplace of many famous men and women, folks who have left their mark and their influence felt in the far corners of the earth.

Clinton has kept abreast of the times with her pioneer spirit, always at the front, ready for a new day in industry, and modern methods. We have come a long way within a hundred years. The mother town of Lancaster has every right to be proud of her offspring. We can count on Clinton to keep faith in the twentieth century and to forge ahead as successfully as in the past. We shall continue to improve our living conditions, and overcome hardships, as in the past.

Sir John Prescott, our founder, would be proud to see the vast changes which have come to pass here in the Nashua Valley during the past 300 years.

Yours truly,
ALLAN G. BUTTRICK.

Under an article in the warrant for town meeting held on October 17, 1949, a committee of 25 was appointed to make all arrangements and to conduct a celebration worthy of the occasion. Tonight we officially open the celebration. The general celebration will begin Sunday, May 28, and continue up to and including June 3 of this year. If hard work and careful planning mean the success of any undertaking, I know that your celebration will be a huge success.

I wish at this time to sincerely thank the members of the general and executive committees and all subcommittees and organizations for their generous and wholehearted cooperation. I further desire to thank the press for their liberal donation of time and space in their papers. To each and every one who have given of their time and ability, I extend my sincere thanks. I thank all our distinguished guests for their kind acceptance of our invitation to be with us tonight.

To his excellency, the Governor of our Commonwealth, who has honored us by being with us, I give my sincere and grateful thanks.

The chairman of every committee has its compensations as well as its worries, and tonight I feel fully compensated in having the honor and pleasure in presenting Clinton's most distinguished citizen, a man who has never failed to answer the call of civic duty, many times at a great personal sacrifice; a man who has, and always will, acquit himself with credit and distinction wherever he may go, be it in the halls of Congress or elsewhere; a man who will continue to bring still greater honor to himself and to his town, your Congressman, my Congressman, the people's Congressman, our Toastmaster, PHILIP J. PHILBIN.

False Social-Security Propaganda

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. MADDEN. Mr. Speaker, the continental Foundry and Machine Co.—Chicago works—circulate the following unfair and false propaganda to its employees. It is fortunate that the employees today are informed and cannot be mislead or intimidated. Twenty years ago this propaganda might have been effective:

JANUARY 11, 1950.

FELLOW EMPLOYEE: Why the pay cut? You may find a little less than you expected in this pay. It isn't our idea. This year, because of the failure of Congress to postpone the evil day, your and the company's social-security taxes were increased from 1 to 1½ percent, beginning with the first pay roll in 1950. This means that this year we are compelled by law to hold back from your earned pay one-half again as much as we did last year (up to $45 a year) and turn this part of your pay over to the Federal Government, together with an equal amount from the company.

You get nothing more for this increase in your taxes. It is simply that the cost of the original social-security program has naturally gone up as more and more of us are reaching 65, and Uncle Sam has no sources of revenue to pay the cost of this or any other Government program except what you and we, as taxpayers, provide. This pay cut is the way the Government collects from you its increasing cost of operating this one program.

If the cost of social security continues to go up, and it probably will as more and more people retire, these taxes are almost bound to be increased again. In fact, if the Senate this year follows the lead of the House of Representatives and passes a proposed amendment of the social-security law, your social-security bill will go up to 2 percent of your regular pay next year and will keep on going up.

No matter what the cost, you and we, as taxpayers, will have to pay the bill for whatever social-welfare programs we adopt. Unlike some other countries, Uncle Sam has nowhere else to turn when he needs money except to us.

So, for 1950, your social-security tax will be 1½ percent of your pay. Where it will go from there is partly up to you. Think it over.

CONTINENTAL FOUNDRY & MACHINE CO.

A Measure of Freedom

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. MULTER. Mr. Speaker, the following article, published in the April 11 issue of Look, is "must" reading for every good American. The author, Arnold Forster, is the civil rights director of the Anti-Defamation League of B'nai B'rith. The league annually surveys the status of civil rights in the United States. Its chairman is New York State Supreme Court Justice Meier Steinbrink.

In sending this article to me the director of Look magazine states:

We believe this is the strongest blow to bigotry and intolerance ever published by any magazine. I am sure you will want to read it and hope you will bring it to the attention of other Representatives.

I agree completely with what he says about this article, and I am glad to call it to the attention of my colleagues.

Listed in the article are the big-time bigots who use anti-Semitism as a means to fill their purses and to undermine democracy. Here, too, you will find the answer to the question, "Are our colleges really democratic?"

The article is as follows:

A MEASURE OF FREEDOM

(By Arnold Forster)

How far can a rabble-rouser go in inciting an audience in a public hall against a religious group? In deciding this issue, the nine Justices of the United States Supreme Court felt compelled last May to write four separate opinions.

The case was that of the *City of Chicago* v. *Arthur Terminiello*. The constitutional principle involved was that of free speech. Did Terminiello have the unlimited right to stand up in a Chicago auditorium and make an inflammatory speech against a religious group?

The majority position of the court can be summed up in the phrase: "Let them get it off their chests." This view is supported by such a liberal group as the American Civil Liberties Union.

ANOTHER VIEWPOINT

But there is another section of opinion, equally concerned with the preservation of democracy, which asks the question: "Haven't we learned from the tragedies of Nazism that you must protect the people against the dissemination of completely false and vicious appeals to religious hatred?"

This is no mere academic dispute. It reaches directly into our daily lives.

The majority opinion of the Court rejected a concept of law which would prohibit such acts of incitement as Terminiello's speech. It declared that one function of free speech is to invite dispute. "It, free speech, may indeed best serve its high purpose when it induces a condition of unrest, creates dissatisfaction with conditions as they are, or even stirs people to anger." Deciding that the case at hand evidenced no "clear and present danger of a serious substantive evil that rises far above public inconvenience, annoyance, or unrest," the majority held that Terminiello's speech was protected from censorship.

LIBERTY OR ANARCHY?

Against this majority view, Mr. Justice Jackson, speaking for himself and Mr. Justice Burton, wrote: "This Court has gone far toward accepting the doctrine that civil liberty means the removal of all restraints from * * * crowds and that all local attempts to maintain order are impairments of the liberty of the citizen. The choice is not between order and liberty. It is between liberty with order and anarchy without either. There is danger that, if the Court does not temper its doctrinaire logic with a little practical wisdom, it will convert the constitutional Bill of Rights into a suicide pact."

Freedom to speak, or freedom to destroy a religious or racial group? Can we protect the first and stop short of the second?

This much can be said with certainty: Only an antidemocrat can espouse serious restriction upon the rights of free speech, assembly, press, religion, and the other guarantees of the Bill of Rights. But unfettered license to say and do as one pleases does not limit the right of others to condemn what is said or done as a threat to the country's welfare.

If Gerald Smith has the absolute right to label the Jews, before an audience of a thousand Americans, as a menace to the country, Jews have the right to label him an anti-Semite and declare it from the rooftops. If the KKK has the right to condemn Catholics for allegiance to the Vatican, Catholics have a right to label the hooded order un-American. If Congressman JOHN RANKIN proposes that American Negroes be deported to Africa, it is right for these Negroes to label him as a racist.

THE FREE SPEECH ISSUE

Some freedom-minded men are reluctant to label any viewpoint un-American. To condemn a viewpoint as antidemocratic may be to silence it forever. And there, once again, we are confronted by the same clash over free speech.

Until the questions arising from this issue can be resolved within a democratic framework, one must use the weapon of public condemnation intelligently and cautiously. But there can be little argument today about the wisdom of exposing democracy's enemies. No wall can keep the facts of prejudice from democracy's citizens.

We now realize, too, that no group or class is safe from corroding prejudice so long as any single one among them is insecure. When a United States Supreme Court judgment declares that restrictive covenants in real estate are unenforceable, it protects not only the Jew or the Negro in the free right to choose his home; it also prevents the development of slum ghettos.

JEW HATING IS BIG BUSINESS

One responsibility falls upon all interested in preserving democracy—to encourage those who are helping the Nation and to expose those who are trying to destroy it with racial or religious hatred.

Organized bigotry seeks to undermine the security and welfare of minority groups. It is the "white supremacy" and anti-Catholicism of Klan groups; the distorted theology preached by hypocrite "reverends."

Money is the inspiration of organized hatred. A handful of promoters who make Jew hating a business enjoy a comfortable income. But for the bulk of the bigots the pickings are slim—a fact which explains the disappearance in the last year of at least 35 once-active groups.

In 1949, 57 organizations, 23 of them newcomers or reactivated groups, were engaged in spreading anti-Semitism in the United States. Nine other propaganda outfits, while not directly involved in such activity, were controlled by known anti-Semites. These groups used an assortment of façades in search of respectability; 36 disguised themselves as politico-economic groups; 16 others used religion as a front; 2 posed as educational organizations; 12 boldly publicized themselves as out-and-out racist groups.

There are 49 anti-Semitic periodicals. Their format varies from crudely mimeographed throw-aways to expensively printed magazines. The basic anti-Jewish themes they embrace are monotonously repetitious.

THE LEADERS AND THE LINE

The petty hate merchants take their cues from a handful of top propagandists. These leaders, wittingly or otherwise, interpret current events in the light of their own prejudices and issue a line which is promptly absorbed by a mass of followers.

These leaders include:

Gerald L. K. Smith: Bigotry is big business with Gerald Lyman Kenneth Smith. He makes it pay substantial dividends. In 1949, his total "take" exceeded $150,000. Though making a very good living, he fails to win any serious following for his crackpot Christian Nationalist Crusade.

Attendance at Smith's meetings varies from 50 to 2,000, depending upon locality and the intensity of his planned publicity. In 1949, he concentrated in the Los Angeles area, where he spoke before several overflow audiences of 2,000. In other sections of the country, he drew an average of less than 300.

The 1949 convention of his Christian Nationalist Crusade, held at the St. Louis Kiel Auditorium, was sparsely attended; audiences were as small as 30 and never exceeded 150. But the virulence of his program was undiminished.

Circulation of Smith's monthly magazine, the Cross and the Flag, remains virtually constant at about 25,000. He also continues to issue his usual quota of pamphlets and newsletters.

Hardly a year passes without Smith's becoming involved in the creation of some veterans' organization. Last year was no exception. In the fall, he lent a hand in the formation of a National Veterans of America, whose offices were established in the St. Louis headquarters of the Christian Nationalist Party. The charter aims of this enterprise include: the preservation of America as a white Christian nation, and the limitation of immigration to European white Christians.

Smith depicts himself as the archenemy of the Reds. Despite the preposterous exaggeration about the number of his followers—more than 3,000,000—Smith undoubtedly makes some impact upon the more unstable elements in some communities in which he appears.

Joseph P. Kamp: In one respect the suave Joseph P. Kamp is a greater nuisance than the crude Gerald L. K. Smith; Kamp has succeeded in deceiving a greater number of important people regarding his real nature and true purpose.

As this is written, Kamp faces a possible prison term. Indicted in December 1944 by a Federal grand jury for self-righteously refusing to reveal the officers and contributors to his Constitutional Educational League, Kamp has thus far avoided serving his 4-month sentence by a series of legal maneuvers. A petition to the Supreme Court for a review of his case is now pending.

While preoccupied all through 1949 with an impending jail term, Kamp found ample opportunity for his propaganda work as acting chairman of the Constitutional Educational League.

HITLER'S APPROVAL

His record of antidemocratic propaganda began in 1933. Some of his early efforts earned him the approval of World Service, an official Nazi news bureau. Join the CIO and Help Build a Soviet America, which he wrote in 1936, was recommended by the Hitler news agency in 1938; it was also sold at the German-American Bund's Aryan bookstore in Los Angeles.

In the early days of World War II, Kamp's destructive propaganda concerning this country's war effort finally got him into difficulties. In July 1942 and again in January 1943, his Constitutional Educational League was named as an organization used as a tool by groups indicted by Federal grand juries for conspiring to undermine the morale of the armed forces.

Walter Winchell, who publicly branded Kamp a Fascist, was the subject of a vicious pamphlet in which much space was devoted to a discussion of the columnist's alleged real name (originally pinned on him as a joke by humorist Harry Hershfield and then maliciously spread by Fritz Kuhn). Actually, Winchell is his real name.

A substantial part of the league's income comes from subsidies and contributions which Kamp promotes from large industrial organizations and wealthy individuals interested in his antilabor, antidemocratic propaganda. Kamp has a list of 500 such contributors.

Upton Close: In a banquet speech on October 29, 1949, Upton Close, the former radio-network news analyst, accused Roosevelt and the Jews of having caused his removal from the NBC network in 1944.

Close's career, which began in the early 1920's, gave no clues in its formative years to the role he eventually was to play. An obscure author who had traveled widely in the Orient, Close eked out a living during that period by speaking before ladies' clubs on such innocuous topics as Cherry Blossoms and Pear Orchards. Twenty years later the same Upton Close, by then a national network news analyst, was being denounced as a Fascist and anti-Semite.

CLOSE BLAMED THE JEWS

The commentator's metamorphosis became evident in the early forties. He was one of those who minimized the threat of Hitler and Japan. At the same time, he developed an antagonism toward Jews, who, he claimed, were pushing the United States into war.

In 1941, in a San Francisco speech, Close declared: "There will be no more democracies ever again in Europe until the Island Empire and its umbilical protégés outside cease interfering in Europe, and I have an idea that that is what many of you still think while the Anglophiles and the Jewish people on the umbilical coast east of the Hudson River lose their heads. * * * I can quite understand how those two groups

can be taken for a ride in the taxicab of sympathy for England or hatred for Hitler."

In 1945 Close revealed his attitude toward the so-called Jewish problem in an open letter to Nathan M. Ohrbach, the department-store owner: "I wonder if four million or forty million dollars' worth of hired agents can buy or wheedle the love of people. I wonder if there is any solution at all to the problem of keeping the majority from regarding with some reservations a minority which makes its basic principle that of maintaining its own peculiar identity."

In 1946 Close attacked Chcago's Bishop Bernard J. Sheil, and the Catholic prelate blasted Close's "untruthful statements, unjust implications, despicable insinuations and utter intellectual dishonesty."

Close climaxed his checkered career as a network commentator by appearing over the Mutual network under the sponsorship of Merwin Hart's National Economic Council. Beginning in February 1946, these broadcasts ended abruptly on February 11, 1947.

There followed a period of hard times for Close. For a while he turned to Mexican stations. Late in 1949, however, he began to stage a comeback. In November he reported to his subscribers that his transcribed propaganda was being carried by more than 100 stations.

Close maintains that he is neither anti-democratic nor anti-Semitic. He once made an offer of a $1,000 war bond "to any person who will produce anything I have ever written or said in public that is anti-Jewish."

But his record belies the denial. He incorporates thinly veiled attacks against Jews or sly innuendoes aimed at them, as when he stated: "We have just passed through Brotherhood Week, as very skillful promoters named the week of collecting for a program of racial tolerance under the National Committee of Jews and Christians. * * * The idea of brotherhood is very often twisted. Some one faction, or element, wants to be the big brother and boss all the rest * * *."

His fundamental distrust of democracy was made evident in his radio broadcast of March 20, 1949: "The Government of our Nation is a representative Republic," he said. "All the wise men who won independence and founded it agreed that it should be a representative republic, not a democracy."

Merwin K. Hart: Anti-Semitism such as Merwin K. Hart exhibits is never a sudden acquisition. It takes years to develop. Hart's antidemocratic roots lie deep. But as president of the National Economic Council, the Harvard-bred propagandist likes to pose as a high-minded patriot whose organization is "dedicated to the preservation of human liberty, including maintenance and invigorating of private enterprise, rights of property and American independence." His record hardly fits this high-sounding description.

Hart never reveals his anti-Semitism in a vulgar way. His attacks upon Jews are cloaked in opposition to opinions among different groups of Jews. If the group does not exist, he creates it.

Hart repeatedly disavows anti-Jewish prejudice; his record makes it necessary.

After Roosevelt's death, Hart immediately issued one of his council letters on America's destiny, and used the opportunity to attack Jews in American life. He captioned his piece: "Shall alien minds determine America's future?" and then listed 81 men and women in American life (most of them persons whose loyalty and distinguished service to the Nation are universally esteemed). Of the 81, no less than 72 are Jewish. Included were the late Stephen S. Wise, Henry Morgenthau, James P. Warburg, Paul M. Warburg, Albert Einstein, Nathan Straus, Abba Hillel Silver, Albert D. Lasker, Felix Frankfurter, Benjamin V. Cohen, Walter Winchell, Leonard Lyons, Adolph Sabath, David E. Lilienthal, Bennett Cerf, and Ben Hecht.

THE GIESEKING CASE

Rarely does Hart miss an opportunity to inject his prejudices into a public controversy. When the United States Government refused to approve the visit of Walter Gieseking, the German pianist, to this country in 1949, the Economic Council Letter reported: "Jewish Communist influence dictated this high-handed procedure. It is clear this influence overruled agencies of the Government of the United States."

Anti-Semitism is not Merwin Hart's sole activity. He devotes much of his attention to pro-Franco propaganda. He pleads the cause of the Spanish dictator with every means at his command.

In 1944 Walter Winchell exposed a particularly unsavory aspect of Hart's pro-Franco operations. The columnist discovered that Hart was cooperating with Jane Anderson, an active Spanish agent who later broadcast Axis propaganda over the Berlin radio.

Hart's Franco sympathies, like his anti-Semitic attitude, stem from an anti-democratic bias. In 1940, he publicly proclaimed his fundamental distrust of American democracy. Speaking before the Nassau Club in Princeton, N. J., he declared that democracy is the rallying cry under which the American system is being prepared for despotism.

The same year, a distinguished New York Union League Club gathering heard him declare: "It is time to brush aside this word 'democracy'."

Hart is a shrewd fund-raiser. Last year the National Economic Council's "take" was at least $140,000. Most of this came from a small group of prominent industrial leaders who see Hart as an ardent champion of their narrow concept of the American way of life. A current list of contributors reads like a section of Who's Who in American industry. One wonders whether the officials of these great businesses know him for what he is—one of the Nation's key bigots.

Now let us see how much prejudice there really is in America.

Fortunately, there seems to be little deliberate anti-Semitism in responsible quarters. The basic democratic ideal is violated from two sources: first, prejudices which have led to deeply imbedded discriminatory practices; second, community tension or controversial public issues which bring hatreds to the surface.

In Congress, for instance, there were fewer anti-Semitic remarks in 1949 than in 1948. Representative ED GOSSETT, Democrat of Texas, used the displaced persons problem as the lever for his expression of anti-Jewish bias. He told a Washington, D. C., audience of the American Association of University Women that the admission of Jewish DP's was "an injection of virus into our bloodstream which is already becoming polluted."

In connection with the same DP issue, Senator PAT MCCARRAN demonstrated his essential hostility toward Jews. As chairman of the Judiciary Committee, he refused to allow any testimony at the hearings to amend the DP Act of 1948, concerning the plight of European Jews. Ironically he agreed to schedule hearings on displaced Pakistanians, Arabs, and Germans.

THE QUOTA SYSTEM

When we come to the realm of unspoken prejudice which exists in deeply imbedded practices, however, we have another problem. Such a problem is the racial and religious quota system used in admission to colleges.

Theoretically, the doors of American colleges and professional schools are open to all students who have the necessary financial resources and scholastic ability. In practice, however, many institutions exclude or limit Jews, Negroes, Italians, and in some cases Catholics and others.

The discrimination suffered by Negroes who seek higher education differs from that of members of other minority groups. Segregration of the races is established by law in 17 States and the District of Columbia. Negroes cannot share the same classrooms with white students in these jurisdictions. Segregation and exclusion of Negroes in the South is, of course, a publicly avowed policy. No college or professional school, however, publicly admits using a quota system to restrict the admission of minorities.

ADMINISTRATORS CONDEMN IT

Administrators of 140 liberal arts colleges, questioned by the Anti-Defamation League on their policies of admission, were remarkably unanimous in condemning the quota system: "I think it would be a fine policy if all higher institutions would admit students irrespective of race or religious creed. * * * I am in hearty accord with your efforts to eliminate discriminatory practices in the field of college admissions. * * * We do not tolerate quota ideas. * * * Our admissions policy is based purely on a student's school record. * * * I am not interested in whether a student is a Jew or a Negro."

And yet discrimination does exist. In November 1949, Dr. Floyd W. Reeves, chairman of the Committee on Discrimination of the American Council on Education, provided a conference of educators meeting in Chicago with the following facts:

1. All researchers agree that there exist racial, religious, economic barriers to higher education.

2. For many youths, restricted curricula and inadequate educational facilities present formidable obstacles to education.

3. Many institutions employ techniques in the admission of students which lend themselves to discriminatory practices and appear to serve no purpose other than that of discriminating against youths from certain minority groups.

The Anti-Defamation League in 1949 made a study of the application forms of 518 liberal arts colleges and found that over 92 percent contained at least one question which could lead to discrimination (such as race, religion, or parents' nationality).

One additional research project deserves mention. In October 1949 two letters were sent to each accredited liberal arts college in New York, New Jersey, Pennsylvania, and Connecticut. One letter was signed with an apparently Jewish name, and the other with an apparently non-Jewish name.

DISTINCTION IS MADE

Both requested application blanks for entrance in the fall term of 1950. No qualifications were given by the "applicants."

Of the total of 106, 41 responded differently to the non-Jewish letter. This distinction in handling was revealed in any number of ways. In some instances, the "Jewish" applicant received only an acknowledgement, while the "non-Jewish" applicant received an application form; or the "Jew" received no response whatever, while the "non-Jew" did; or the "Jew" received only a primary application form while the "non-Jew" received a final application form.

To prevent any unfair conclusions from this survey, these 41 institutions were tested again in November with another apparently Jewish and another apparently non-Jewish letter. The final codification of the two surveys disclosed that only four institutions in both instances gave apparently preferential treatment to the non-Jewish names.

Strangely enough, on the campus itself, the students show less anti-Jewish prejudice than their elders. College students are overwhelmingly opposed to quota systems and other discriminatory admissions policies.

In an ADL survey just completed, only 1 out of 10 seniors expressed a preference for colleges which discriminate. By contrast, almost one-third of the general adult population—including college graduates and nongraduates—are so inclined.

To determine how much prejudice college students feel toward Jews, Negroes and other minorities, researchers asked a series of key questions which probed such sensitive areas as education, social contacts, housing, employment and intermarriage.

AN ENCOURAGING PICTURE

An encouraging number of students did not want to set any limits, short of actual intermarriage, to their association with minorities. Almost 80 percent of the non-Jewish seniors said it would make no difference to them if a member of a minority group worked beside them, and almost 70 percent would be willing to entertain any of them in their home. When it was proposed to move a minority group member into the neighborhood, the shoe really began to pinch—but even here 47 percent said they would not object.

Although the college seniors were overwhelmingly outspoken against barring minorities from college admission, they were slightly more prejudiced about admitting Jews to fraternities and sororities. There was still an over-all majority opposed to any discrimination even here; although not a majority of fraternity members.

Since the exclusion of Jews from Gentile fraternities and Gentiles from Jewish fraternities is the usual rule on American campuses, it is encouraging that this rule finds so few defenders who frankly admit they prefer it that way. When the Phi Kappa Psi chapter at Amherst recently put up a fight for its right to pledge a minority group member, it was voicing a growing preference among college students.

The low index of prejudice on the campus is apparently, however, not the result of a college education. The incidence of prejudice among seniors is largely the same as that for freshmen.

YOUTHFUL IDEALISM

It is difficult to say why American colleges have made no significant contribution in reducing anti-Semitism. Perhaps the major job of education in fighting prejudice is being done in high schools, and the only prejudiced students left are bitter-enders with whom education has already proved ineffective.

Actually, the absence of prejudice among many college students may be due to the idealism of youth. Perhaps, in 10 or 20 years, these same students may be considerably more narrow-minded and prejudiced.

In all of this, we, as citizens, have a democratic responsibility. Unwholesome racial and religious prejudice and discrimination in the United States are blemishes on an otherwise healthy body politic.

The strengthening of democratic life in America is the job not of any single group or individual, but of every citizen who would enjoy the benefits and the freedom that America gives. Men and women in the conduct of their daily affairs must at all times be aware of the need to protect their democratic heritage.

A BACKWARD STEP

Wholesome attitudes must be instilled into the hearts and minds of all the people. Attention must be focused on flagrant violations of justice and fair play; and public opinion must mobilize behind the forces struggling to shape this Nation into a better likeness of the ideals upon which it was founded.

The sorry failure in the last year to obtain the passage of even one Federal civil-rights law in Congress was not just a matter of standing still; it was a step backward.

By comparison with other years, the enactment of civil-rights legislation on the State level indicates true progress; the overall picture is heartening.

At the beginning of 1949, only four States had fair employment practice laws. Today, there are eight such States. The enactment of fair employment practice acts has also begun. Legislation forcing the Ku Klux Klan to unmask is spreading throughout the South.

There are three fundamental forces which can be used to fight prejudice—law, education, and community action. Education may prod a community to action and lead to the enactment of legislation. At the same time, legislation itself is frequently a potent educative force.

AIMING AT TARGET

In the use of these forces, it is not enough to rest with the expression of well-meaning generalities. It is necessary to deal with realities. The targets must be pointed out clearly. Lip service to the concept of equality is not enough. There must be an insistence upon such steps as elimination of discriminatory practices in housing, in education, in employment, in voting, and in the use of public accommodations.

A secure and free people who have adequate opportunity to lead happy lives will reject those who spread hatred. On the other hand, exhortations will have little effect in breaking down racial and religious hostility while men are frustrated or while they are afraid.

There can be no freedom from discrimination in employment until there is full employment. There can be no freedom from discrimination in higher education until there are adequate facilities for all persons capable of higher education. There can be no freedom from discrimination in housing until there are ample housing facilities for all. Where there is scarcity, and men compete desperately for the basic necessities of life, the minorities—and eventually the majority—will be at the mercy of those who stir up hatred and fear.

Racial and religious bigotry cannot thrive in an economically and democratically healthy society.

Planes Over Shanghai Raise a Question

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I enclose copy of an article entitled "Planes Over Shanghai Raise a Question." This article was forwarded to me by Maj. Gen. Claire Lee Chennault, retired, a former resident of the State of Louisiana who is now in China. It is worthy of consideration, thought, and study by the Congress. The article is as follows:

PLANES OVER SHANGHAI RAISE A QUESTION

(By Clyde Farnsworth)

TAIPEH, FORMOSA, March 21.—Appearance of strange fighter planes over Shanghai, as reported by the Chinese Nationalist Air Force, raises the question of how far Russia will go to clinch the final victory of communism in China.

If these were fighters of the new Chinese Red Air Force or of a Russian or international volunteer group—and there is no other possible explanation—they mark a new phase of Russian intervention.

Three blunt-nosed planes diving out of the Monday morning sun over Shanghai's Lunghwa airfield while Nationalist P-51s reconnoitered there probably mean Russia will go as far as she can without openly assuming a belligerent role in China.

She would not want to precipitate American help to the Nationalists whom the United States State Department has repeatedly written off as ineffective champions of a lost cause. Yet, that "lost cause" has become an increasing threat to the China Red regime and the Russians are aware of it.

The Communists will never be secure in China so long as Chiang Kai-shek and his followers continue their stand in Formosa and Hainan and keep needling the Reds by sea, air, and occasionally by land, with a view to a mainland come-back.

(A United Press dispatch from Hong Kong reports that between 5,000 and 10,000 Russian troops are taking an active part in China's civil war. These troops reportedly are (1) helping bolster Chinese Red resistance against increased Nationalist air attacks, (2) may be used to discourage uprising against the Red regime by starving Chinese and (3) may be used to insure the pro-Kremlin faction of China's Communists against nationalist Communists.)

Nationalist air attacks on strategic targets in China's largest city, Shanghai, seem to be forcing Russia's hand. The three strange planes probably are part of a 50-plane fighter force which the Russians are said to have furnished Red China, along with technical and probably flying personnel.

Recent bombing of Shanghai's airfields and the former air training center near Hangchow were intended to wreck that fighter force before it could be uncrated or assembled, it was disclosed here. Perhaps the fighters were of the group previously reported ordered from Czechoslovakia.

The P-51 scouts who reported the Red planes said they were of a kind not used by the Nationalists. They looked something like Japanese Zeroes. Indeed they could have been Zeros if the Russians have taken the trouble to preserve those captured in Manchuria in 1945.

Significantly, Red China's air arm seems to be making ready with non-American planes rather than with the American-made fighters and bombers that fell into their hands.

Appearance of the new type in this way tips Russia's hand both as to planes and pilots.

New fighter types probably mean that Russians or other experienced foreigners are flying them or that Chinese pilots were trained in such craft long ago in Manchuria. Fighter pilots cannot be produced overnight and readily transferred from a known kind of plane to an unknown.

It is possible, of course, that every plane in Red China will be used eventually. But it has been generally accepted that the Reds would first take the air in P-51's, B-25's, and B-24's, if for no other reason than to foster the fiction that the Chinese Reds armed themselves largely from American-made equipment captured from or surrendered by the Chinese Nationalists.

Since there was no shooting in yesterday's encounter over, Lunghwa, it could be assumed the Reds' new fighters were merely being tested.

This Is the Central Arizona Project

EXTENSION OF REMARKS
OF

HON. JOHN R. MURDOCK
OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. MURDOCK. Mr. Speaker, so much has been said that is misrepresentative concerning the central Arizona project that I feel impelled, as one of the authors, to state briefly just what the project is, that all may read and check my statement.

The Subcommittee on Irrigation and Reclamation of the Committee on Public Lands held lengthy hearings on H. R. 934 and H. R. 935 in March, April, May, and early June of last year. The record of those hearings has been printed and is available.

H. R. 934 and H. R. 935 are bills authorizing the central Arizona project and the construction, operation and maintenance of the Bridge Canyon Dam together with appurtenant dams and canals, to generate power and take badly needed water from the Colorado River into central Arizona for lands that are now irrigated but with an inadequate supply of water. The project will make available greatly needed hydroelectric power and the water to be diverted to central Arizona will save the economy of that entire State.

The testimony and evidence presented at the hearings clearly establishes: (a) the need for the project. It is clear from the testimony and the evidence that without additional water on lands now cultivated in central Arizona the economy of the sovereign State of Arizona will enter a period of decline ending in chaos and disaster to the great detriment of the entire Southwest and of the United States.

The need for the project and the need for the water in Arizona is admitted by the few opponents of the authorizing legislation.

(b) It is clearly established by the evidence that the water is available in the Colorado River for the proposed diversion to central Arizona of 1,200,000 acre-feet per annum. All the engineers agree that the water is physically available in the river.

(c) The plan of the development to serve the needs as outlined above is clearly established by the evidence to be the best possible plan and to establish the fact that the works to be authorized by the authorizing legislation will serve the need.

(d) It is clearly established by the evidence that the project is feasible and that the cost of construction will be repaid with revenue derived from the sale of power and from the delivery of water and it is clearly established that all of the cost, except approximately 1½ percent made nonreimbursable for benefits to flood control and fish and wildlife conservation, will be repaid in full within a period of 73 years.

The economic feasibility is clearly established by the report of the Bureau of Reclamation and the independent economic analysis of the Doane Agricultural Service of St. Louis, Mo., and by the testimony of many men who are thoroughly familiar with the area and the people involved.

Companion and identical bills were introduced in the Senate of the United States at the same time that H. R. 934 and H. R. 935 were introduced in the House. Lengthy hearings were held before the Senate Committee on Interior and Insular Affairs, and that committee made certain amendments and reported the bills as thus amended to the Senate of the United States as S. 75.

Other amendments were made on the floor of the Senate and the Senate on February 21, 1950, passed the bill as thus amended by a vote of 55 to 28. The act as passed by the Senate has come to the House in due course and the Senate amendments are acceptable to me and my colleague as the sponsors of H. R. 934 and H. R. 935 and therefore we urge passage of S. 75 by the House.

The Senate Interior and Insular Affairs Committee and the Senate amended the bill as originally introduced to provide for the protection of Indian rights with provisions which were accepted by and are acceptable to the tribal councils of the Indians involved, and to the Bureau of Indian Affairs, and further amended the bill to make reimbursable costs of benefits, which in the original bill as introduced were made nonreimbursable and to prohibit the construction of any steam plants for the production of electrical energy, none of which were ever contemplated at any time and also to remove any possible objection from the National Park Service by limiting the height of the dam to a height which was and is acceptable to the National Park Service.

All of these matters are fully and clearly set forth in the Senate debates on the floor on February 6, 17, and 21, 1950, and the positions of the Federal agencies and departments are clearly set forth in the CONGRESSIONAL RECORDS for those days or in the record of the hearings. The Senate further amended the bill as originally introduced in order to permit suit to be brought by any State which might allege that the use of water for the central Arizona project would in any manner interfere with or jeopardize any of its uses or rights.

Arizona, the Bureau of Reclamation, the Department of Interior, the Colorado River Basin States Committee, representing the States of Arizona, Colorado, New Mexico, Utah, and Wyoming, and the Senate of the United States are firmly of the opinion that the water for the proposed central Arizona project for use in Arizona is clearly within the legally established right of the State of Arizona and that the use of that water does not in any manner jeopardize or interfere with the use of water or the right to the use of water of any other State in the Colorado River Basin.

Their opinion is based upon the law of the river, the Colorado River compact, the Boulder Canyon Project Act, the California self-limitation statute and the Arizona water delivery contract of 1944 between the United States and the State of Arizona under which the United States undertook to deliver water from the Colorado River to permit the beneficial consumptive use to the maximum gross quantity of 2,800,000 acre-feet per annum. The water for the central Arizona project is certainly within Arizona's share of the water. Arizona has the right to rely upon the Congress of the United States to see that the State of California respects and lives within its solemn agreement and covenant with the United States which was made expressly for the benefit of the State of Arizona and the other basin States forever and unconditionally limiting the use of the waters of the Colorado River in California. The law of the river is clearly established and under it Arizona is clearly entitled to the water for the proposed project.

Certain special interests in southern California dispute that belief and accordingly provision is granted by S. 75 as passed by the Senate to the joinder of the United States in any suit brought by any State to challenge Arizona's right to the use of the water and it is provided in the authorizing legislation as passed by the Senate and as now before this House that works to be used solely for the diversion of water from the Colorado River into central Arizona shall not be commenced until the termination of such a suit if one is brought.

The works authorized by the bill to be thus deferred until the conclusion of such a suit if one is brought, are by the Bureau estimated to cost some $267,000,000. The works about which there is no dispute and which it is admitted are all badly needed in the Southwest are estimated by the Bureau to cost approximately $440,000,000. All of these figures are from the estimates of the Bureau of Reclamation based on costs as of July 1, 1947. Actually costs are now declining and contracts have been let by the Bureau of Reclamation for much less than their estimates. In recent months the Bureau of Reclamation has let contracts 15 to 42 percent below the estimates of July 1, 1947. The construction of the works authorized by the authorizing legislation will necessarily extend over many years and it is apparent at this time that the cost of the works authorized by this legislation when built will be much less than the estimate of July 1, 1947, of the Bureau of Reclamation.

This Congress in the act admitting Arizona to the Union as a sovereign State, imposed a condition reserving to the United States all the dam sites on

the Colorado River and lands across which transmission lines or canals could carry either power or water from the Colorado River into Arizona and in the enabling act required that the State of Arizona agree to such conditions in its constitution, and Arizona did so.

The Congress therefore, by such act, effectively walled off Arizona from power and from water from the Colorado River unless there be later authorization by the Congress of the United States. The Supreme Court of the United States—Two Hundred and Eighty-third United States Reports, page 423—has held that Arizona cannot utilize any of the water of the Colorado River without the consent of Congress.

The Supreme Court of the United States has held—Two Hundred and Eighty-third United States Reports, page 423, and in Two Hundred and Ninety-eighth United States Reports, page 558—that there does not now exist any controversy over the use of water for the proposed project within the jurisdiction of the Court and that the Court cannot take jurisdiction in any such matter unless and until Arizona is authorized by the Congress to divert water from the Colorado River. Then and then only can any State that might feel injured or that might allege that it was injured by the authorized diversion bring an effective action to enjoin such diversion.

Such court action is authorized in S. 75 as passed by the Senate and as now before the House, so that any State that feels a grievance will be given its day in court and in the meantime no construction of any works which might be involved in such action could be undertaken.

Authorizing legislation is therefore essential now in order that a controversy within the jurisdiction of the Supreme Court might be started, if any State feels endangered, in order that the Supreme Court might by final and definite judgment end the controversy and the dispute which has delayed many years the development of the natural resources of the whole Colorado River Basin to the detriment of the people of that region and of the United States as a whole.

In no other way can the matter be authoritatively and finally settled. Every possible safeguard of the national interest and of all the States and of each of the States of the Colorado River Basin has been written into and is contained in Senate bill 75 as passed by the Senate of the United States. With the passage of that measure by the House of Representatives and the approval of the measure by the President of the United States, peace will come to the Colorado River Basin and the full benefits of that great natural resource will be made available to the people of all the States of the Colorado River Basin and to the great benefit of the whole of the United States.

Such, briefly stated, is the legislative case of the central Arizona project now before the Public Lands Committee of the House.

Is Holy Writ a Traitor's Bible?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I am inserting the following article which appeared in Destiny magazine, Haverhill, Mass., for March 1950:

IS HOLY WRIT A TRAITOR'S BIBLE?

ACHESON QUOTES THE BIBLE

The jury has convicted Alger Hiss of perjury and he has been sentenced to a prison term. His lawyers have appealed the case to a higher court and, in the meantime, he is out on bail. Without awaiting the outcome of this appeal, Secretary of State Dean Acheson has stated that, regardless of the action of the jury and the courts, he will not turn his back on Alger Hiss. He then cited certain verses in Matthew, chapter 25, as a precedent for his expression of loyalty to his friend.

In the chapter of Matthew's gospel in the New Testament referred to, Jesus Christ was instructing His disciples concerning those nations who were to enter into the blessings of the Kingdom of God. He stated that when the Son of Man comes, all nations will be gathered before Him and He will separate the goat nations from the sheep nations. The sheep nations in the parable questioned Him as to what they had done to give Him meat to eat and water to drink, or when did they see Him as a stranger and take Him in? Jesus replied that insofar as they had done these things unto one of the least of His brethren, they had done them unto Him.

TRAITOR IS A CRIMINAL

Mr. Acheson should read these passages over again and carefully note that our Lord did not say criminals were to be given this aid and comfort; rather, it was His brethren who were to receive such succor. By no stretch of the imagination can Alger Hiss, a traitor to his country, be placed in this group. He has not shown himself to be a righteous man, nor can he be numbered among those who have suffered because of service to the Lord in faithfulness to Christian standards.

In its actual setting, this parable is national in aspect and the goat nations are those who have demonstrated their propensity toward evil aggression and tyranny against the peaceable. The sheep nations are those who have desired peace and abhorred war, yet have been willing to become involved in war to go to the assistance of those who are downtrodden and persecuted. The Secretary of State has overlooked the real intent of the parable, and also that Jesus said it was the stranger or foreigner suffering unjustly whom the sheep nations were helping and for which they were to be rewarded.

ACHESON REWRITES BIBLE

When Mr. Acheson undertakes to construe our Lord's instructions to mean that individuals should be loyal to persons convicted of crimes, and that they should defend them regardless of the evil acts committed by them, he is giving voice to the criminal's code of conduct, not the high ethical standards and teachings of the Scriptures.

Alger Hiss was convicted of perjury. Under the righteousness of the law of the Lord perjury is a serious crime, even carrying the death penalty in certain cases. Treason to the Government is punishable by death. In stating that he would support Alger Hiss regardless of the facts, Secretary of State Dean Acheson has violated the Scriptural injunction that, upon conviction for a crime, the criminal must pay the just penalty. No official may forgive or forget a crime committed against the state, but must mete out true and impartial justice, making the punishment fit the crime.

BIBLE A BOOK OF JUSTICE

"The law, 'Life for life, eye for eye, tooth for tooth, hand for hand, foot for foot, burning for burning, wound for wound, stripe for stripe,' is a rule governing the administration of justice, demanding that the punishment fit the crime and that there be no excessive punishment in any case. If a hungry man steals a loaf of bread, he should not be punished as the thief would be who robs his neighbor of all his goods.

"Jesus referred to this law and declared it was the law, but He counseled individuals not to conduct their personal relations, one with another, in accord with this rule of law governing the judges who must make the punishment fit the crime. Individuals can forgive and forget all manner of trespasses committed against each other, but the judge cannot forgive and must administer the law in justice." (Digest of the Divine Law, p. 143.)

CRIME AGAINST THE STATE

This principle is equally applicable to all officials in Government. Mr. Acheson has a definite duty in his official capacity, for the crime was committed in the department of the Government of which he is today the head.

When the commandments, statutes, and judgments of the law of the Lord were originally given, the people of the nation were instructed concerning what their attitude must be when a criminal is convicted of a crime against the welfare of the state:

"Thou shalt not consent unto him, nor hearken unto him; neither shall thine eye pity him, neither shalt thou spare, neither shalt thou conceal him." (Deuteronomy 13: 8.)

WHAT OF HUMAN SLAVERY?

If Mr. Acheson is so desirous to keep the requirements laid down by our Lord concerning help for the oppressed, setting the prisoners free, and liberating the slaves, as well as visiting those in prison, let him, as the head of our Department of State, set in motion ways and means to aid the millions in prison behind the iron curtain. God-fearing men and women are suffering and dying, and many are even now languishing in prison who have committed no crime other than to desire personal freedom.

What of the unfortunate Lithuanians, Latvians, and Estonians, whose nations we allowed to be enslaved by the tyrants in the Kremlin with hardly a protest? What of the millions of unfortunate human beings in China being thrown by our State Department to the Red wolves of Moscow? They are strangers it is true, but it was the stranger, not criminals, we were to help.

DARE ACHESON TURN ON HISS?

Can it be that Mr. Acheson is trying to hide something and actually dares not turn his back on Hiss? His defense of a convicted criminal leads one to wonder if he is not serving notice that, in case Hiss should talk later, he, Mr. Acheson, is remaining loyal to him, thus notifying Hiss to refrain from implicating him in any way with previous questionable activities within the State Department? If Hiss finally faces no alternative but a prison term and should decide to talk, the revelations would very likely have all the force of a bombshell explosion in their implications. Could this fear be one of the reasons why Mr. Acheson has experienced some sleepless nights since the conviction of Alger Hiss for perjury?

Why a Coast Guard Reserve?

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I present the article entitled "Why a Coast Guard Reserve?" by Lt. Walter K. Handy, Jr., United States Coast Guard Reserve. The article is excellently written and presents in a strong manner the reason for a Coast Guard Reserve. I invite the attention of all the Members of Congress who are interested in the preservation of this country to read it carefully. The article is as follows:

[From the Reserve Officer of October 1949]

WHY A COAST GUARD RESERVE?

(By Lt. Walter K. Handy, Jr., USCGR, president of the ROA Coast Guard Headquarters Chapter, Washington, D. C.)

It requires only about 20,000 to 25,000 officers and men to perform the peacetime duties of the Coast Guard, but another 150,000 are necessary to carry out its wartime functions. And for these the Coast Guard must rely on its Reserve.

In peacetime the Coast Guard, which is the smallest of the military services, operates under the Treasury Department as a law-enforcing, life-saving, life-protecting agency. It regulates and supervises the loading of dangerous cargoes, inspects vessels and enforces maritime safety regulations, and maintains search and rescue services, aids to navigation, weather stations, iceberg patrols and many other services for the safety of persons at sea and the protection of both lives and property in normal times and in time of disaster.

But the Coast Guard must always be prepared to undergo a rapid transformation, expanding to many times its peacetime size in order to fulfill its roles as a specialized service within the Navy in time of war. The key to this rapid expansion for wartime service is the Coast Guard Reserve. The experience during World War II is a vivid illustration of the importance of the reserve in wartime expansion. Prior to our entrance into the war the Coast Guard numbered less than 20,000 officers and men. By VJ-day the military strength of the Coast Guard exceeded 172,000 persons, of which about 144,000 were reservists. In short, it requires only about 20,000 to 25,000 officers and men to perform the peacetime duties of the Coast Guard, but another 150,000 are necessary to carry out its wartime functions. And for these the Coast Guard must rely on its reserve.

But the whole story is by no means told in terms of numbers. The United States code specifies that "the Coast Guard Reserve, as established on June 23, 1939, is a military organization and a component part of the Coast Guard for the purpose of providing a trained force of officers and enlisted persons which, added to the personnel of the regular Coast Guard, will be adequate to enable the Coast Guard to perform its functions and duties at all times."

The reference to "trained personnel" adequate for the performance of the Coast Guard's functions and duties at all times is significant. In meeting the responsibility for manning vessels assigned to the Coast Guard, the maintenance of aids to navigation, search and rescue services, merchant marine inspection, and similar functions, the Coast Guard can utilize the training and background of its regular personnel augmented by reservists trained or experienced in these fields. Many reservists with the proper training and background will be required to augment present crews and to man vessels of all types. Others will operate high-frequency direction-finding stations used to locate distressed vessels and aircraft. The inspection of merchant vessels for safety, the examining and licensing of merchant marine officers and the investigation of merchant marine disciplinary cases both in the United States ports and overseas will require additional reserve personnel in wartime. Pilots and crews for rescue craft will also be required by the expanded necessity for search and rescue services. In addition, the increased requirements of wartime communications, the administration of personnel and maintenance of records will all necessitate the rapid availability of reserves to supplement the regular personnel.

In addition to the expansion of normal activities, however, the functions of the Coast Guard expand greatly in time of war, and the performance of many of these specialized functions requires the special training or experience of reservists in fields not normally stressed in the training and experience of the regular personnel. Most of these specialized functions fall within the field known as port security, which includes all of the measures necessary for the protection of ports and vessels in port from sabotage, fire, explosion, or other danger.

One of the greatest dangers in the operation of a port during wartime is the ever-present danger involved in the loading and unloading of tremendous quantities of explosives. Unless proper precautions are observed and proper care taken in the handling of these explosives, many lives, many ships, and vital port facilities may be destroyed through explosion. The Coast Guard reserves are the men relied upon to prevent such catastrophes. They must have a thorough background of training in the nature and properties of various types of explosives, the precautions to be observed in handling and stowing them, the operation of ships handling gear, stevedoring equipment, fire fighting where explosives are involved, dangerous combinations of explosives or explosive chemicals and acids, and many other detailed and specialized factors in providing safety from explosion, not only in port but after the ship has put to sea. This is obviously a specialist's responsibility, and the Coast Guard must rely on its reserve to provide such specialists. It is significant that not one explosion occurred in the loading of any vessel supervised by the Coast Guard during World War II, although over 29,000,000,000 pounds of explosives were loaded under their supervision.

The prevention of fire at port facilities is another highly specialized field in which trained and experienced reserves are required. This specialty involves the determination of proper preventive measures against both the start and the spread of fire. It requires a knowledge of the design, construction, and alteration of buildings, warehouses, piers and other water-front facilities for the maximum protection against fire. These specialists must be able to appraise the probability of fire originating in any particular water-front facility, the extent to which it might spread, the structural, operational or other modifications which will reduce the probability of fire, and the fire-fighting facilities which should be provided for the best protection against fire.

Closely related to fire protection is fire fighting, which requires thorough training in the tactics used in fighting fires of all types on vessels, piers, or other water-front facilities. Personnel trained and experienced in fire fighting under all conditions will be needed promptly for proper protection of the ports. This need can be met adequately only by the maintenance of a Reserve which includes fire fighters trained thoroughly in combating all types of fires ashore and afloat and under unusual conditions, as in cases where explosives are involved.

In addition to these specialties, the protection of port facilities requires large numbers of personnel with an adequate background of training in all of these specialties to provide adequate inspections and patrols of vessels and water-front facilities. These men must also be trained in the detection and prevention of sabotage, evacuation procedures for endangered water-front areas, law enforcement, general police duties, and must have a thorough knowledge of Coast Guard regulations for the security of vessels and water-front facilities.

Any adequate program for the protection of our ports must also make provision for well-trained and organized identification specialists to screen and control the personnel having access to vessels and water-front facilities.

Our ports are the bottlenecks through which supplies and men must flow in time of war. The destruction or impairment of any of these ports, whether accidentally or by sabotage, would seriously disrupt the flow of essential men and material. Therefore, it is obvious that all possible precautions must be taken to protect them and the ships which use them from any damage; otherwise all of our other defense preparations may be jeopardized or to a great extent nullified.

In order to give our ports this protection, the Coast Guard must be prepared to place on duty within a matter of hours sufficient nmbers of men, thoroughly trained in all of the aspects of port security, to assure the complete safety of all port facilities and vessels from sabotage or accidental damage by fire or explosion. The Coast Guard can meet this responsibility only if it has promptly available a well-trained Reserve which is prepared to assume its role in fulfilling the Coast Guard's responsibility at a moment's notice.

Point 4, Corn, and Mexico

EXTENSION OF REMARKS
OF
HON. GUY M. GILLETTE
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Point 4, Corn, and Mexico," published in the Des Moines Register of March 27, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POINT 4, CORN, AND MEXICO

Corn is far and away the most important crop in the United States, in total value, in

number of bushels, in number of farmers who grow it, in its widespread adaptability (it is grown in nearly every county of the United States).

But corn is relatively unimportant to the United States in comparison with Mexico and other Latin-American countries.

The Latin Americans almost literally live on corn. Mexico, for example, devotes about 60 percent of its cropland to this crop, and corn is the predominant food. South of the Rio Grande little corn is fed to livestock, because the people cannot afford such luxury. They must consume the grain directly, supplementing it with beans as the most important source of protein.

Clearly, the first step toward higher living standards in these corn-bean diet countries is to increase the production of corn. That would provide an excess that could be fed to livestock, thus improving diets with meat and milk. It would release manpower to make industrial goods (or to produce excess agricultural products which could be traded abroad for industrial products).

Mexico averages only about 10 bushels of corn to the acre. If that yield could be doubled, Mexican living standards would rise rapidly. Mexicans would no longer have to import corn and could begin to expand their livestock production.

What would this mean to the United States?

It would mean the loss of a tiny export market for corn. In the past we have exported somewhere around 3,000,000 or 4,000,000 bushels of corn and 2,000,000 or 3,000,000 pounds of corn meal annually to Mexico. This is considerably less than the production of one Iowa county.

In return for this insignificant loss, we would get a large increase in exports of industrial products which would in turn mean more industrial employment and greater demand for farm products in the United States.

Mexico, like all Latin-American countries, has such a small production per man today that it is unable to contribute much to world trade and world prosperity. One of the easiest ways to keep our own economy prosperous and expanding is to find new markets, and one of the easiest ways to find new markets is to create them by helping the world's poor people toward higher living standards.

This is the idea behind President Truman's proposed point-4 program of technical aid to backward areas: Help ourselves by helping others.

The Rockefeller Foundation already is applying this idea with a considerable degree of success in Mexico. Since 1943 it has been carrying on a research and educational program designed to increase Mexican agricultural production. So far, 24 improved varieties of corn have been released to Mexican farmers. The Rockefeller scientists have not waited until they could develop hybrids suitable to Mexico; they have distributed open-pollinated seed from selected better varieties.

Last year about two-thirds of a million acres were planted to these improved varieties. This program already has begun to have an impact on total Mexican output. In 1948, Mexico did not import corn for the first time in 35 years.

The Rockefeller people are also making progress with new varieties of wheat, beans, and other crops. Most important, they are teaching hundreds of Mexicans how to conduct their own research and educational programs.

This is point 4 at work—in a field that Iowans know well. Corn gave us the start for our chain reaction of economic progress, too.

The Federal Communications Commission

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask to have placed in the Appendix of the RECORD a statement prepared by me, affecting the Federal Communications Commission.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FEDERAL COMMUNICATIONS COMMISSION

When Congress established the Federal Communications Commission in 1934, it set up a bipartisan board to regulate the radio industry. It was clearly intended that the Commission would operate for the benefit of the people of the Nation. The Commissioners were given wide authority. They were entrusted with broad discretionary powers. It was not presumed that they would use such powers to any narrow partisan ends.

I am sure no Senator in this Chamber has any desire that the Commission should now abuse its powers to accomplish unauthorized ends. Particularly, no Senator would desire to condone the operation of this board for purely partisan purposes.

Surely it would be a serious abuse of authority if the Commission, in granting or withholding a license to operate a radio station, were motivated by partisan considerations.

It has been suggested to me that a case now pending before the Commission may have some political motivation behind it.

Therefore, I am going to ask the distinguished Senator from Colorado that he direct the attention of the Senate Committee on Interstate and Foreign Commerce to hearings now being held on the renewal of radio station licenses granted to stations KMPC (Los Angeles), WJR (Detroit) and WGAR (Cleveland).

Reference to these hearings already has been made in the Senate by the distinguished junior Senator from Michigan who has raised the issue of fairness in these proceedings. I wish to join the Senator from Michigan in insisting that these Commission proceedings be scheduled and handled in a dignified and impartial manner without political bias.

Certainly there are some aspects of the present hearings which suggest that some of the parties concerned are acting in a narrowly partisan spirit. I do not suggest that the Commission itself or its Chairman are conducting these hearings for political purposes.

I ask, however, that the Senate committee take cognizance of this case so as to make certain that a majority of this bipartisan Commission does not abuse its authority to control political thinking. It would be outrageously un-American if any radio station were denied an extension of its license merely because the management of that station did not subscribe to the political opinions of the present administration.

The hearings to which I refer were brought about under the following circumstances.

I am told that James Roosevelt, a candidate for Governor of California, wrote a letter on stationery of the Democratic State Committee of California. Mr. Roosevelt supported a complaint against the issuance of a license to the stations I have listed. The principal stockholder in these stations is Mr. George A. Richards who, I understand, has been very critical in his personal expressions of more than one member of the Roosevelt family.

I am not acquainted with Mr. Richards. I have never met him. I know nothing personally of his views. I am told that he is a former New Deal supporter who broke with the party in 1940 and has since been a strong critic of the administration. I am told that the complaint against Mr. Richards is that he allowed his personal political views to slant or distort news reports.

If it is true that these stations are distorting the news, it is a serious charge, and I certainly, for one, do not condone it. I hope the Commission is always vigilant against such distortion in presenting the news to the general public which relies on the impartiality of the broadcaster.

Every Member of the Senate is aware, however, that such distortion is affected by radio stations. I am of the opinion that much of the distortion in news reports that go out over the radio has been done in favor of the administration. This is only an opinion.

It is interesting that the Federal Communications Commission, at the request of James Roosevelt, has invoked seldom-used powers. The case should be considered on its merits. I hope the Senate committee will explore this matter.

I hope it will explore also the question of whether this operator is being singled out while other station operators are given complete freedom to support the party line of the administration in violation of the Communications Act.

The power to regulate can be distorted to become the power to censor. This must not be allowed to happen in the United States.

I want the Commission to enforce the Communications Act fairly and aggressively against any violator. It should make no difference whether a violation is committed by a member of the Democratic or Republican Party.

Surely, however, the Commission should not penalize any loyal American citizen for his personal views if his radio station is properly operated in conformance with the Communications Act. The three stations concerned here have a long history of public service, I am informed, that never was questioned prior to 1940 when the owner broke with the party of the administration. This case may be important to any American who cherishes our heritage of civil liberties.

The Commission must be supported in any attempt to carry out the communications regulations which bar the use of radio news broadcasts as a propaganda medium. However, we want to be assured that the Commission does not become an instrument of thought control seeking to put out of the communications business any station because of this control by a loyal American citizen because of that individual's personal views and expressions.

I am sending to the Senator from Colorado documents which have been sent me concerning this case.

The Brannan Plan

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to insert in the Ap-

pendix of the RECORD an excerpt from a speech in Lincoln, Nebr., on March 21 by Guy George Gabrielson, chairman of the Republican National Committee.

A part of Mr. Gabrielson's speech concerns itself with the Brannan plan and some of the left-wing connections with that program. It particularly recites that the head of the northeastern division of the Farmers Union, one of the principal advocates of this so-called Brannan plan, was accused in 1945 of being a Communist, and when he sued for libel the jury found in favor of the defendant.

This man, Archie Wright, is still one of the leaders of the Farmers Union, which says, "the Brannan plan is our plan."

With the Communist front boring into every segment of American life, it is important that they be exposed. This is particularly true when the Secretary of Agriculture consorts with radicals and adopts their program for attempting to lure the American farmer into the trap of Government control of their farms.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

We have discussed tonight the Communists and the Socialists in the Truman administration. There is another group in the Government who would destroy the opportunity, the freedom, of the American people.

They are the men who serve only political gods. All they want is to win elections even if in the process they destroy the American system.. They are the men who operate on the principle of the big city political bosses that the American people—the farmer included—can be bought into slavery if they offer enough Government money. They are the people who are willing to acept the support and even defend the treasonable Communists so long as they retain their political support. They are the people who do the front work for the Trojan-horse Socialists while giving lip service to free enterprise.

In all charity for them, I say that perhaps they, from President Truman downward, do not understand what they do or the dangerous effects of the course which they pursue. They want only votes, votes, votes.

And now I want to discuss with you one of the high apostles of this latter group. One of those who serves only political masters and who, I trust, only ignorantly and not willingly, follows the designs of those who would entrap the farmer into Government control and eventual slavery.

I refer to Secretary of Agriculture Charles Brannan and his so-called Brannan plan. I shall not attempt to go into an economic discussion of the Brannan plan. Mr. Brannan does not attempt to do that in trying to sell it to the farmers.

Actually the Brannan plan exists in a sort of never-never land of what is it. Mr. Brannan himself dashes frantically up and down the land (at your expense, incidentally) making speeches. He denounces your great farm leader, Allan Kline. He speaks glibly of how the Brannan plan would give higher prices to the farmer and lower prices to the consumer. But he refuses to even estimate what the plan would cost. And, of course, he never mentions that the farmer and the consumer whom he would buy with Government money are the very people who pay this money into the Federal Treasury with back-breaking taxes.

I have analyzed Mr. Brannan's speeches carefully trying to make some sense out of what he says. My analysis boils down to the following conclusions:

1. The Brannan plan is like the old shell game that the suckers used to play at county fairs—now you see it, now you don't.

2. Still using the country fair parallel, it is like the medicine man's bottled remedy—good for man or beast and will cure anything that ails you. Just 50 cents and we throw in a bottle of the best perfume direct from Paris for the little wife.

3. This plan was not written by farmers to help farmers make a better livelihood, but is an instrument for the destruction of free farmers, framed by the radicals who surround your Secretary of Agriculture.

In analyzing Mr. Brannan and his plan you folks out here in Nebraska will want to remember where the Brannan plan came from. And, equally important, who are the friends of the Brannan plan and the friends of Mr. Brannan himself; also those who are against it.

There is an easy answer to the question who is against the plan. The free farmers of America. But let's look further. I have examined into this subject. I find the American Farm Bureau Federation, speaking through its board of directors, denouncing the Brannan plan. I find Mr. Goss, head of the National Grange, speaking out against it, and also leaders of your own Nebraska Farmer's Union. I find Senator ANDERSON, of New Mexico, a recent Democratic Secretary of Agriculture. Two of the great agricultural publications, the Farm Journal and Country Gentleman. I find Representative CLIFFORD HOPE, of Kansas, former chairman of the House Agriculture Committee. He did a masterful job of revealing its origin when we held the Republican Farm Conference in Sioux City, Iowa, last year. Representative HOPE pointed out that the Brannan plan, so-called, had its origin in a resolution adopted by the national convention of the CIO in Portland, Oreg., more than 1 year ago. The idea was taken up by various labor papers and publicized rather extensively before Mr. Brannan thought to affix his name to it. And, I find your two great and influential legislators in Washington, Senators WHERRY and BUTLER, and your able Nebraska Republican Members of the House of Representatives stating publicly that the Brannan plan is a vote trap for the farmer, which would eventually take away the farmer's right to run his own farm.

Now let's take a look at who are the supporters of this Brannan plan.

One of the most insistent spokesmen for the Brannan plan is that hybrid big city voice of the New Deal bureaucrats, avowedly political in nature, the Americans for Democratic Action.

Then the political organization of the CIO chants repeatedly on the dual subject of the Brannan plan and the farmer-labor groups.

Finally, we come to the only national farm organization supporting the Brannan plan and that is the Farmer's Union, which boasts over and over again that "it is our plan."

I wish time permitted to examine with you intimately some of the activities and public statements of the Farmer's Union and its president, Mr. Patton. I do not mean to imply that Mr. Brannan or Mr. Patton are Communists. I do charge now, however, that the company in which these two gentlemen, Messrs. Brannan and Patton, travel lays them open to the suspicion of being taken for a hay ride, knowingly or not.

I do not make this charge lightly; I expect to have more to say on the subject in the future. But I wish here to recite just one example of the type of company Messrs. Brannan and Patton keep; where some of the support for the Brannan plan comes from.

Six years ago the Farm Journal carried an article in which it publicly accused one Archie Wright of being a card-carrying Communist.

And who is Mr. Wright? He was at that time, and still is, the president of the northeast division of the Farmers Union. He was called a card-carrying Communist.

After this article was printed by the Farm Journal Mr. Wright sued for libel, apparently thinking his tracks had been so well covered that it could not be proven. Like so many of these Communists who are exposed he issued an immediate denial and attacked his accuser. But the Farm Journal writer had done his work well.

The case went to a jury in the Federal court in New York. The jury heard the evidence that Mr. Wright was a Communist. It heard Mr. Wright's defence evidence. Then it returned a verdict exonerating the Farm Journal and Mr. Robert McManus, the author, of libel in calling this Farmers Union official a Communist.

Mr. Patton knows this. Mr. Brannan, who works intimately with Mr. Patton, also knows it. Patton says the Brannan plan is "our plan." Yet Archie Wright continues as the head of the Farmers Union in the whole northeast area.

In the face of this evidence, don't we have the right to ask again, "What are the influences back of this Brannan plan?" "Are there other Archie Wright's working among the farmers all over the United States—in Nebraska—attempting to lead and propagandize them into eventual slavery to a Government machine?"

I ask you to remember that the farmer was the first object of Communist mass murders in Russia because they would not bow their necks.

I ask you to remember that in 1920 the Communist leader Lenin wrote to his comrades in New York, urging a survey of revolutionary prospects here, and inquiring: "Have you no farmers in America?"

I ask you to remember that in 1923 Moscow sent $100,000 to this country to aid in the organization of a Farmer-Labor Party.

Middle-Income Housing

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. WHERRY. Mr. President, I have a report telling how homes can be and are being built on a large scale by the so-called middle-income group in the private enterprise way, by which our country has become great and strong, and without the paralyzing hand of Federal socialism.

I ask unanimous consent to have printed in the RECORD a statement received from Ted Baldwin, of New York, who is director of a campaign in several cities in connection with the good American home program, which is sponsored by the National Retail Lumber Dealers Association and the United States Savings and Loan League.

Mr. Baldwin's report indicates that private initiative and private industry are more than willing to provide all the homes potential home owners of the

middle-income group are interested in purchasing.

Furthermore, the cost of these homes is within the reach of the middle-income group, as the price range of homes in the good American home program extends from $7,500 to $12,000, and can be purchased by prospective home owners whose annual take-home pay is from $3,000 to $4,800, the middle-income range.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TED BALDWIN, INC.,
New York, N. Y., February 11, 1950.

To the Honorable Senator KENNETH S. WHERRY:

When you and your colleagues in both Houses of Congress weigh merits of proposed new housing legislation I feel sure you will be interested in the good-American-home program, which is demonstrating two things.

1. People in the modest and middle income brackets can afford to buy good homes at today's prices on their present income. They are doing it.

2. The building industry is erecting houses to meet the needs of this modest and middle income group.

The good-American-home program is a public educational effort to prove by actual demonstration that the above facts are true and that proper use of the family budget permits home ownership. It is sponsored nationally by the National Retail Lumber Dealers Association and the United States Savings and Loan League. Local demonstrations all over the country are being sponsored by local and regional builders associations, individual private builders, dealers in construction materials and financial institutions. All types of public-service groups are cooperating.

Homes built under the program must be within the price range of from $7,500 or less to a maximum of $12,000. Such homes can be purchased on take-home pay of from $3,000 a year to $4,800—the middle income range.

Official designs, prepared by the noted New York architects, Chapman, Evans & Delehanty, permit building under the money-saving principles of modular construction. This means that mass-production economies can be made at the building site without the use of stereotyped prefabricated homes.

The first demonstration homes were opened in Detroit January 22 and still are being viewed. They were built by members of the local sponsoring group, the Builders Association of Metropolitan Detroit. Because of the public-service feature, press, radio and television, theaters, business, and public officials all cooperated to bring the demonstration to the attention of the public.

For each demonstration house, a model budget was worked out, based on Detroit price levels and checked through the cooperation of Wayne University, Detroit businesses, and financial institutions. People are buying the houses—proof of satisfaction with the price and quality. One builder sold 30 the first day.

The Home Builders Association of Greater Cleveland is starting a similar demonstration. So is the Long Island Home Builders Institute in the New York area and the New Jersey Home Builders Association. Other demonstrations are being arranged in New England, in the Middle Atlantic States, South, and far West.

The good-American-home program is not a plan to build houses. It merely brings together people in the middle and modest income group who want homes and the large number of private builders who are putting up good homes for this group at prices it can afford. It is proving that people of modest means do not need charity and that private industry is meeting their needs and that both sides like it that way—the good American way.

Respectfully submitted.

TED BALDWIN.

The Biggest Swindle in History

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which is to be published in the April 11, 1950, edition of Look magazine.

This is an exceptionally interesting and informative article, written by an outstanding American businessman, Mr. L. C. Hart. Mr. Hart is vice president of Johns-Manville Corp. and is an authority in the field of management and human relations. He is an experienced businessman and it is evident that he is an expert in public relations.

Mr. Hart shows accurately and vividly the wide difference between what Communists promise and what they actually deliver when they gain power. He discloses that the rulers of Soviet Russia are the greatest confidence men in history; that they have sold the Russian people a gigantic gold brick.

Mr. Hart makes it clear that no sincere liberal can support this swindle which becomes a slave state.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Since the end of the war, when Stalin made it clear that he prefers two worlds to one, I—like most Americans—have become increasingly alarmed about what the Communists are up to. Recently I decided to read again some of the Communist writings to get a better idea of what their philosophy really is. So I studied an anthology of extracts from Marx, Engels, Lenin, and Joseph Stalin himself.

I won't pretend that it was easy reading. Nor will I attempt to expose here the economic fallacies which Communist theorists, writing in and about a world that no longer exists, believed. Anyone who looks at the standard of living and the great political power of labor in democratic countries today, under systems of private property, must surely realize that they do not bear the faintest resemblance to the starvation, misery, terror, and helplessness which Marx and Lenin predicted were the inevitable lot of the working man. At least that is what some of our best informed labor leaders tell us.

What I do want to write about is something that struck me so hard I haven't been able to put it out of mind: the amazing difference between what Communists preach, and what they do, once they get a chance to put their theories into practice. I am convinced that only people hypnotized by their own imaginings, only people psychologically incapable of looking at facts, can possibly support both communism and Soviet Russia.

Here are some basic principles of communism; let's compare them to the facts about the Soviet Union.

1. The power of the state must be reduced until the state itself withers away. But the state in Soviet Russia is more powerful than any state in history. The men who run the Soviet Union have made the state more and more absolute since the day they took power. (Even the Czars, operating one of the most corrupt and brutal regimes on record, did not liquidate, exile, or terrorize one-tenth as many people as the Communists have done and are doing.) That the gigantic power of the state in Russia today will be reduced, much less wither away, is something only fools can believe. In fact, the very idea is verboten now, in the writings of the faithful.

2. All the means of production will be owned by the people. The people in Russia are told they own the means of production; but the men in the Kremlin use the resources and manpower of the Soviet Union as they wish. There is no way for the Russian people to assert their ownership—to protest against the Kremlin's actions or the Communist Party's program, or vote the elite out of power, or even put up a candidate for a local school board who has not been handpicked by the regime. Own the means of production? Why, any large American corporation is owned by its stockholders (who have the power to vote, criticize management, throw out directors, influence policy, collect dividends) in a way the Russians dare not even dream of. Would men in a prison be better off if they were told they own the prison?

3. Monopoly, and all its evils, will be abolished. But the Soviet regime is itself the biggest monopoly on the face of the globe. The Kremlin exercises absolute monopoly control over every single phase of life—wages, prices, supply, agriculture, politics, law, the courts, education, the press. * * * No capitalist trust or international cartel ever had one-thousandth of the monopoly power exercised by the leaders of the Soviet Union.

4. A Communist regime represents the dictatorship of the proletariat. Communism certainly is a dictatorship—but not of the proletariat. It is a dictatorship over the proletariat. Do workers dictate policy or action in Russia today? The Soviet Union is, in fact, privately owned—lock, stock, and barrel—by a handful of men. They are self-appointed and self-perpetuating.

5. The rights of workers will be expanded. But even Communists admit that the worker in Soviet Russia does not have the right to change his job or strike or move about freely or speak his mind or protest against low wages or high prices or factory speed-ups or piecework—rights that every American worker takes for granted.

6. Communism will bring true democracy into the world. But the Soviet Union has abolished the most elementary human rights, freedoms, and civil liberties. Soviet Russia is actually a caste state. And the men at the top have more power, privileges, security, and status than any group of capitalists in the world.

7. Science, thought, and art will flower into real freedom under communism. Then why the repeated purges of writers, teachers, artists, and scientists in all countries under Communist control? No intelligent person can maintain that thought in Soviet Russia is free. The record clearly proves that the Kremlin's preferences, in everything from the ballet to comic books, are imposed on all

those subjected to Communist rule. This is true even in the sciences; consider the official glorification of the unscientific genetics expounded by Lysenko, whom Julian Huxley, the distinguished English scientist, has just exposed.

8. Since all workers will become Communists, the Communist Party will represent all the workers. But according to their own figures, out of 200,000,000 people in the Soviet Union, only about 2½ percent are in the Communist Party. It is a well-known fact that no one gets into the Communist Party who isn't completely subservient to the top officials, and that no one stays in the party who doesn't toe the party line.

Conclusion: What other conclusion is possible, to anyone with eyes to see and a brain to use, than this: Any sincere believer in the theory of communism ought to be passionately anti-Soviet today. For the Soviet Union, according to the writings and creed of its own founders and leaders, is the biggest swindle in history.

Address by P. S. Marthakis Commemorating Greek Independence

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Utah. Mr. President, on March 22, 1950, the Honorable P. S. Marthakis, a senator from the county of Salt Lake, in the Legislature in the State of Utah, delivered an address commemorating Greek independence. Because of its timely interest and because all citizens of America who have Greek ancestry will be interested in reading the words of Mr. Marthakis, I ask unanimous consent that his address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Throughout the civilized world this week, the people of Greek descent will recall with honor and pride that memorable March 25 of 1821 when Greece threw off the yoke of Turkish Empire and proclaimed its independence. Like those thrilling days of 1776, when the Continental Congress ratified and signed the Declaration of Independence, so did the members of the Greek First National Congress bravely set forth the standards of the cross and proclaim the freedom of the fatherland to all the world.

It was the same indomitable courage and spirit that had brought laurels to the Hellenic standards at Marathon and Salamis, the victory to the campaigns of Alexander the Great and the battle between the holy cross of Greece and the crescent of the Turks at Constantinople. This was the culmination of over four long centuries of oppression and suffering under the heel of a tyrant who sought not only to destroy the glorious past that belonged to Greece but to bury in the ashes of time the spirit of her brave people.

But just as democracy, with its free enterprise and opportunities for all, triumphed here in America, so did the same principles win out over tremendous odds in the 7-year struggle for the establishment of a democracy in Greece.

It is fitting and proper as we approach another milestone along freedom's pathway, that we again recall the splendid spirit of cooperation, both spiritual and material, which has been extended by the peoples of this great America to their compatriots across the seas.

When word was first received of the beginning of the Greek struggle for independence, President James Monroe, in his message to Congress, said, "The name of Greece fills the mind with the highest ideals and arouses in us the most exalted emotions which exist in the human nature. Superior skill and refinement in arts, heroic gallantry in action, and devotion to liberty are connected with our memories of ancient Greece. It is natural, therefore, that their conquest should arouse the sympathy of the entire United States."

That sympathy was first manifested on December 11, 1823, in the city of Philadelphia, when a committee was appointed to give aid to the people of Greece.

Since those early days, millions of American dollars, tons of foodstuffs and clothing and military supplies have gone from the United States to the aid of the Greek Republic. And today, that tiny republic, nestled on the shores of the Aegean Sea, stands as one of the last outposts of democracy in the Old World. There has been little time down through the years for the people of Greece to enjoy immunity from the torments of war. Enemies on all sides have sought to destroy the fruits of long labor; two world wars have cast their shadows across the Greek homeland to bring more suffering and chaos. And now the forces of communism and democracy are engaged in a death struggle on Greek soil.

We have but to harken to the immortal words of Abraham Lincoln, in paraphrase: We are met upon a great battlefield in a struggle to determine whether this Nation or any nation under God shall long endure. That pattern is repeating itself today in the cold war of nerves which we pray shall never erupt into another holocaust more terrible than man has ever witnessed or can long survive. We can gain some ray of comfort from the established fact that the people of Greece, in their continued struggle for freedom will exhibit a persevering courage, a spirit of enterprise, and a contempt of danger and suffering worthy of the best days of ancient Greece. They are determined to stand up manfully and perish before they submit.

This same spirit is the symbol of America, and we of Greek descent who have made our homes in this glorious land can only hope fervently that our peoples will emerge once again from the darkness to the light of the dawn of peace over a troubled world. Let us hope that the torch of freedom which still burns on the frontiers of democracy will continue to shine as a beacon of hope and courage to all who place country above self, free enterprise above socialism, religious freedom above bigotry, and the pursuit of happiness for all mankind.

Status of the Indians

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a short article appearing in the News Letter published in Lawrence, Kans., by the Home Missions Council. The program of this council is to establish and to foster a unity of spirit and service among Indian missionaries, mission board members, Government employees, and other friends of the Indian; to affirm their group consciousness; to share their experiences, and to establish orderly means to discuss any matters affecting the welfare of Indians and Indian missions.

The article is entitled "Are Indians No Longer Wards of the Government?" The author of the article is Mr. G. E. E. Lindquist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARE INDIANS NO LONGER WARDS OF THE GOVERNMENT?

(By G. E. E. Lindquist)

In the American Magazine for January 1950 appears an article entitled "How We Scalp the Indians" by Don Eddy who, after one trip to the Indian country, "a good 9,000 mile buggy ride," "to get the facts about the Indians" reports, among other alleged "facts" that "Indians are no longer wards of the Government." Continuing, this self-constituted analyst says (p. 88), "Every native-born American Indian has been a citizen since Congress gave him that status in 1924 as a gesture of gratitude to young braves who, although they were exempt from the draft, volunteered and served gallantly with our troops in World War I."

While the American Magazine writer insists that "Indians are no longer wards," he did bump into some "facts" which caused him to realize that the alleged citizenship might perhaps be dubbed as "second-hand" and not "full." "Confusion is the only word to describe our relations with the Indians and their thinking about us. They are confused because when they try to assume the initiative of citizens, they bump their noses on special rules and regulations set up by the bureaucracy which bosses them, the Bureau of Indian Affairs."

That the above-quoted author is not the only one confused on Indian citizenship status is evident from recent Washington news releases. For example, last June there appeared under a Washington headline the following: "On June 2, Indians will celebrate the twenty-fifth anniversary of the date on which they gained full citizenship." No attempt was made to explain the limiting features of that citizenship. As early as 1916, the United States Court held (in the case of *U. S.* v. *Nice* (241 U. S. 591):

"Citizenship is not incompatible with tribal existence or continued guardianship and so may be conferred without completely emancipating the Indians or placing them beyond the reach of congressional regulations adopted for their protection."

In this and in other decisions the interpretation has been well established, that citizens can be subject to restrictions, exemptions, and special regulations based on the possession of Indian blood or the identification with some group designated as "Indian." (Quoted from Indian Wardship, revised copy. New York: Home Missions Council of North America, 1944; pp. 10–11.)

That Indians were citizens before 1924, by treaty, by the operation of allotment acts, etc., may come as a surprise to many Americans.

In one way or another, the majority of American Indians were already citizens of

the United States before 192-. The Handbook of Federal Indian Law (p. 153) estimates the proportion as approximately two-thirds. The remaining third were swept into citizenship by the act of June 2, 1924, which provides:

"That all noncitizen Indians, born within the territorial limits of the United States, be, and they are hereby declared to be, citizens of the United States."

But the citizenship thus granted was not incompatible with continued guardianship and trusteeship on the part of the Federal Government through the Interior Department or the Bureau of Indian Affairs. Indeed, this very law went on to declare, as many another law concerning the Indian has done:

"*Provided*, That the granting of such citizenship shall not in any manner impair or otherwise affect the right of any Indian to tribal or other property."

Citizen or not, he would find the trust remaining upon lands held for him; his name upon a tribal roll would still entitle him to share in any distribution of funds or land which other members of the tribe might receive. (Op. cit., pp. 10–11.)

After 450 years of contacts with the dominant race, of which 160 have been spent under a Government bureau, some pertinent questions may very well be asked concerning our first Americans, known to us since Columbus as the Indians. One such question was asked in the Halls of Congress not many years ago by the Senator from South Dakota: "Why aren't the American Indians free?" (See Reader's Digest for August 1945; Set the American Indians Free, by O. K. Armstrong.) Others have raised similar questions: "How can Indian Bureau domination of every aspect of Indian life be reconciled with the basic principles of the Bill of Rights and the Constitution? How can such devices as Indian reservations, Indian segregation, rations, and wardship be reconciled with full citizenship?" (See One America, edited by Francis J. Brown and Joseph S. Roucek, p. 439 ff.)

Does the Indian desire to be considered Uncle Sam's stepchild forever? The answer is "No." Wardship with all its paternalistic trappings is increasingly distasteful to him. Without going into detail, wardship may be summed up as the relation of the Indian to the Federal Government in matters regarding which the average citizen deals with State or local governments or acts on his own initiative. Obviously, no single sweeping enactment will wipe away in a moment the tangled issue of exemptions and restrictions accumulated during a century and a half. Old treaties, numbering at one time 389, have to be fulfilled; tribal claims have to be adjudicated; land problems must be worked out tribe by tribe, often on an individual basis. However, a definite goal should be set for the ultimate release of Indians from Federal wardship.

In this connection it is noteworthy that the term "wardship" has been soft-pedaled of late in bureaucratic circles, both in and out of Washington. Even the Hoover Committee Report on Indian Affairs (October 1948) does not mention wardship by name, although it does emphasize the importance of "target dates" in "the progressive transfer to State and local governments" of functions now exercised by the Indian Bureau.

While Bureau officials taboo the use of the word "wardship," presumably because of its unsavory connotations, or dismiss it as "a greatly overworked rationalization," there have been some indications in comparatively recent years that at least lip service has been paid to the possible withdrawal of Federal supervision of the American Indian. (See the Withdrawal of Federal Supervision of the American Indian, a paper presented at the National Conference of Social Work, April 15, 1947, by Assistant Commissioner John H. Provinse.) Hon. HUGH BUTLER, of Nebraska, calls attention to this in a speech in the United States Senate, October 7, 1949, when he states:

"It is interesting to note that William Zimmerman, the Acting Commissioner and now Assistant Commissioner of Indian Affairs, on February 8, 1947, in his testimony before the Senate Committee on Civil Service, recommended that a group of 10 Indian tribes were then ready for freedom from the Indian Bureau and 19 Indian tribes would be ready to be released from Federal supervision 10 years from that time—February 8, 1947. None has been released, yet the Indian Bureau now comes asking that Congress appropriate millions of dollars for the rehabilitation of some of these same tribes.

"It is a tragic fact that during the past 15 years fewer Indians have escaped from the Indian Bureau into citizenship than have done so during any period of like length during the past 100 years. If now we enter upon a 50-year program of expenditure to establish the Indian Bureau on a grander scale than ever before, there will be fewer and fewer of them becoming real citizens. We must save the Indians from the Indian Bureau."

Congressional leaders have shown increasing concern toward making a start toward the goal of Indian equality before the law with other citizens. Some efforts have been made toward introducing legislation which would furnish an impetus toward the emergence of the present generation of Indian-Americans from what someone has characterized as "the clumsy and outgrown bureau and reservation system," but with no tangible results to date. However, as recently as October 17, 1949, Hon. GEORGE W. MALONE, of Nevada, introduced into the United States Senate a bill (S. 2726) "to abolish the functions of the Bureau of Indian Affairs of the Department of the Interior, to remove the guardianship over Indians and trusteeship over Indian lands, and to repeal the act of June 18, 1934 (48 Stat. 984), as amended." In a statement describing the bill, Mr. MALONE contends, among other things, that—

"The Indian has never had the full rights of other American citizens even since 1924, when Congress declared him a citizen of the United States (43 Stat. 253). The only way he can get these rights is through removal of the two chief obstacles: (1) The Indian Bureau, and (2) the Indian Reorganization Act of 1934. The latter has had the effect of hiring the Indians with taxpayers' money to stick together in tribes and thus of separating them from the rest of American citizens. Originally organized with a well-meaning intention to protect both white man and Indian, the Indian Bureau has come to raise a needless and ruinous barrier between the two races for its own selfish reasons.

"The grip of the Indian Bureau has been tightened over the years by its multiplication of favors such as loans from the Government, appointments to lucrative positions, and by other influence. In fact, Government paternalism at its worst is strikingly exemplified in the Bureau relationship to the Indian. It has undermined the confidence of the Indian in himself and in his own resources. How can the moral fiber of new citizens be built up under such conditions?

"The only solution which will really cut the Gordian knot, so to speak, and it is a solution which only Congress can effectuate, is to tear up the Indian Bureau by the roots and set our fellow citizens of Indian descent free from the deathlike grip of this 'old man of the sea.' Only by the abolition of the Indian Bureau, coupled with the repeal of the Indian Reorganization Act, can the Federal Government remove a gross injustice and right an ancient wrong, once and for all.

"The Government of the United States should determine definitely what its debt to the Indians amounts to—individually and collectively—pay such debts and allow them to take their place in the communities of this Nation on an even basis with other citizens—they have been on probation long enough."

Coming back to the American Magazine correspondent one should not dismiss his story without recognizing that he has brought to light some facts which Americans will do well to ponder deeply and then act upon through their chosen representatives in Congress. He admits that finding the answers is not easy. However, his concluding statement is worthy of more than passing comment—

"Restitution for past wrongs is not so important to present-day Indians as the right to be treated as equal citizens. To accomplish that might necessitate vigorous reorganization of the Indian service, overhauling the five thousand-odd laws it is expected to administer, selection of administrators familiar with Indian psychology, and eviction of those old retainers who still consider themselves 'little white fathers.' Certainly it should give the Indians equal voice in shaping a new policy aimed at alert helpfulness and honest advice, rather than hypocritical chicanery.

"If and when this is done, we stand to create an immensely loyal, valuable body of citizens from a bewildered, distrustful people whose only past sin was protecting their homeland, and who are getting a thoroughly un-American raw deal."

Low-Cost Housing in Iowa

EXTENSION OF REMARKS

OF

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. HICKENLOOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, first, a news story appearing in the Des Moines Register of Thursday, February 23, 1950, in which a young man, unwarrantedly, in my opinion, attacks the Governor of the State of Iowa for certain alleged actions in connection with housing at Drake University in Des Moines.

Following that I should like to have printed the reply of another young man, whose name is Keith E. McWilliams, a student at Drake University, who lives in a trailer camp with his wife, who answers the first young man by expressing his adherence to the doctrines of self-help in America, and his desire to assume the responsibilities for his own destiny.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Des Moines Register of February 23, 1950]

STUDENTS ASK STATE ACTION FOR HOUSING

The Young Democratic Club of Drake University Wednesday urged that Gov. William S. Beardsley call a special session of the legislature to obtain low-cost housing in Iowa.

About 50 club members voted when Neal E. Smith, senior law college student from Packwood, presented the motion. James Naughton, of Sioux City, seconded it.

The club's action followed a fire which February 15 destroyed the trailer home and belongings of J. Royer Seagren, 22, his wife, and infant son, in the Drake trailer court.

NEGATIVE ACTION

In a letter to Beardsley, Neil B. Little, of Hampton, president of the Drake Young Democrats, charged the Governor has taken "a weak, negative action by polling the member of the house and senate who could not possibly be as familiar with the present situation as you are."

Little declared Beardsley personally is standing between the the Federal Housing Act of the Eighty-first Congress and the opportunity for all Iowa families to have decent low-cost housing.

Under adverse weather conditions, a fire could destroy the whole trailer court, Little contended.

"It is your responsibility as chief executive to administer the affairs of the State of Iowa when the general assembly is not in session," Little wrote to Beardsley.

"YOUR DUTY"

"Your duty is to familiarize yourself with the seriousness of this condition [housing] and take positive action to call the general assembly to act.

"You should take positive action to call the assembly to Des Moines to pass an enabling act to make available to the Iowa taxpayer his fair share of low-cost housing units. Our tax dollar is being spent in 42 other States.

"Adequate housing in Des Moines will relieve the pressures so my friends will not be forced to live in shacks."

[From the Des Moines Register of February 28, 1950]

VOICE OF FREE AMERICA FROM DRAKE TRAILER CAMP

To the EDITOR:

I can assure you that this letter has considerable support from the residents of the Drake trailer camp and it is not my feelings alone.

In the February 23 edition of the Register an article appeared whereby "the (Drake) Young Democrats" were seeking to denounce Governor Beardsley's passive attitude concerning veterans' housing problems. To give rise to their "deep concern" of the housing problem, they utilized an unfortunate incident that took place in the Drake trailer camp, namely, the destruction of one of the trailers by fire, which incidentally was the second such fire in a period of almost 4 years since the formation of the camp.

It would seem that everyone has the idea that the veterans who live in the trailer camp are living in miserable piano boxes with little heat or comfort. This is far from the truth. True, we haven't the modern conveniences of running water in our trailers; nor do we have a great expanse of room. To be sure, we have our problems, but we don't need a hand-out to solve them. The trailers are insulated, compact, and for the most part cozy. Certainly we all dream of owning our own homes and having the modern conveniences of running water, owning our own furniture and washing machines, but we are willing to sacrifice now and obtain those things on our own.

GOVERNMENT HELP

Can this dependency on the Government continue forever? We get Government subsistence; the Government pays our tuition, books, etc., and when we get through school even makes it possible for us to obtain a loan to build a home. The State gave us a generous bonus—we don't seek more.

No doubt there are people who are in dire need of housing, but the Young Democrats need not use the Drake trailer camp as an example. The people who live here have enough fortitude to solve their problems. They don't need a politician to solve them for them. If we felt we were unduly abused, we would sell our cars and cash our savings so we might live in better quarters. For the large part we're happy where we are; the average couple who live here have enough of their own personal initiative to make out for themselves. Our country was founded on freedom and personal initiative; let's keep it that way.

The founder of the present Democratic policies, F. D. Roosevelt, once said, "Any government, like a family, can for a year spend a little more than it earns. But you and I know that the continuance of that habit means the poorhouse." Either F. D. R. was mistaken or the country is headed for the poorhouse.

NOT LIKE ANIMALS

No politician need worry about the trailer-camp housing; having lived here for 3 years, I can assure you that we don't live like animals; we are comfortable to a reasonable extent and the majority of us are able to solve our own problems without the help of an insincere politician.

I assure Mr. Little we don't live in shacks. Ours is a temporary housing program. No one told us to live here or to go to school here. It is our own choice. Peddle your sympathy elsewhere; we don't want anyone feeling sorry for us; we don't; we are sincerely resentful that we should be used as a tool of a cheap political move that is meant to secure votes for the forthcoming election.

KEITH E. MCWILLIAMS.

DES MOINES.

Propaganda Affecting Proposed Basing-Point Legislation

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the RECORD a most vicious, deceptive, and willfully misleading piece of lobbying propaganda, obviously intended to deceive retail druggists as to Senate bill 1008, the conference report on which I hope will soon be considered by the Senate.

I have received, as have other Senators, a number of letters from retail druggists opposing S. 1008. Since this bill has no effect upon them, I have been unable to understand the reason for those letters.

Now, Mr. President, I have, and want the Senate to know, the reason.

The National Asscciation of Retail Druggists has sent a bulletin to their members urging them to deluge us with an avalanche of messages opposing the bill. It urges them to tell us what the elimination of the Robinson-Patman Act means to (their) business, and claims that before enactment of the Robinson-Patman Act small independents were being driven out of business by the thousands.

The association might just as well have told the druggists of the horrors of having all their homes burned, for it is as truthful to imply that the bill eliminates the Patman Act as it is to imply it will eliminate their homes.

There being no objection, the bulletin was ordered to be printed in the RECORD, as follows:

[The National Association of Retail Druggists, Washington bulletin, vol. 7, No. 3, March 28, 1950]

THIS BILL, S. 1008, STILL PLAGUES US

It is an afflictive evil—it is a scourge—infestation. It not only harasses small business, but pierces the heart of the Robinson-Patman Act—the friend and protector of small business.

EXTREMELY URGENT

Most of the conferees authorized to work out an agreement on the highly controversial S. 1008, the bill cleverly written to emasculate the Robinson-Patman Act, did a swell job for monopoly. In reality they worked out on small business to a fare ye well. When monopoly plays—it doesn't play for marbles—it plays for keeps. If small business is killed off in the melee that's all right too.

The conference report is now back again in the Senate for consideration. It is minus the Kefauver and Carroll amendments—the amendments which at least would have softened the hurt to the Robinson-Patman Act.

EXTREMELY URGENT

There are many Senators who have not had time to thoroughly study S. 1008 because of other pressing duties. Consequently they rely on the advice of legislative colleagues. Here's where an avalanche of messages from the folks at home will have a telling effect. Let the Senators rely on you.

It is again time to telephone, wire or air mail your two Senators and tell them in your own words what the elimination of the Robinson-Patman Act will mean to your business. Get your friends and associates to do the same—your bread and butter is involved in this fight. Do you want big business to conspire—eliminate competition among themselves then divide the markets of the Nation among themselves?

EXTREMELY URGENT

Before enactment of the Robinson-Patman Act small independents were being driven out of business by the thousands—that's why NARD spearheaded and worked so hard for the enactment of the Robinson-Patman Act.

Small independent businessmen don't go crying to Government for subsidies—all they want is a fair shake of the dice. The Robinson-Patman Act gives them that—why invalidate it? S. 1008 is a bad bill to begin with—there is no need for it. The conference report without the amendments is worse still. S. 1008 does a disservice to the South and West.

EXTREMELY URGENT

You know that when one manufacturer sells cheaper to one merchant than he does to another the former has a distinct price advantage to be used as he sees fit. If S. 1008 is enacted all of us must ask the President to veto the bill. If organized pharmacy has what it takes, now—right now—is the time for urgent action. S. 1008 favors the biggies—it smites small business.

Cordially,

GEORGE H. FRATES,
Washington Representative.

Mr. Lippmann and the Lodge-Gossett Amendment

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a paper entitled, "Mr. Lippman and the Lodge-Gossett Amendment," written by Mr. Joseph E. Kallenbach, associate professor of political science at the University of Michigan. This is an extremely impressive and valuable paper on the subject of reform in the electoral system.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MR. LIPPMANN AND THE LODGE-GOSSETT AMENDMENT

(By Joseph E. Kallenbach, associate professor of political science)

In this recent series of articles on the proposed Lodge-Gossett amendment (see issues of the Herald Tribune for March 6, 8, and 9) Mr. Walter Lippmann has presented a critical analysis of it which could have much influence upon popular and congressional thinking regarding the advisability of adopting this very desirable reform. Mr. Lippmann, while conceding that the Lodge-Gossett plan has numerous merits, concludes that it is not the right remedy for the present weaknesses in our presidential electoral system; that "it has disadvantages at least as great, and probably greater, than those which it would remove"; and that there is a better remedy. The better remedy which Mr. Lippmann would hold out for, even apparently at the risk of perpetuating indefinitely the present illogical and dangerous electoral vote system, is a plan by which presidential electoral votes would be awarded automatically to candidates on a district plurality vote basis. An amendment proposal of this nature has been advanced in Congress by Representative COUDERT, of New York, Senator FERGUSON, of Michigan, and others.

The Lodge-Gossett amendment and one embracing the automatic district electoral vote idea, endorsed by Mr. Lippmann, are both infinitely preferable to the present system. I would heartily favor adoption of either one. I cannot, however, follow Mr. Lippmann in his argument for the superiority of the district vote plan over the Lodge-Gossett proposal. Much less can I follow him in his contention that the disadvantages of the Lodge-Gossett plan are so great that even the present system might be preferable to it. To oppose adoption of the Lodge-Gossett amendment solely on the ground of its failure to embrace the district vote formula is to strain at a gnat while swallowing a camel; and if my understanding of Mr. Lippmann's line of reasoning is correct, an imaginary gnat at that.

Mr. Lippmann's reasons for favoring the district electoral vote system over what he mistakenly refers to as the Lodge-Gossett proportional representation formula in distributing a State's presidential electoral votes boil down to two: (1) The district vote plan will minimize the effects of accident or fraud in terms of the final electoral vote results, and (2) acceptance of the Lodge-Gossett formula might well lead to the adoption of proportional representation in the choice of Members of the House of Representatives.

With regard to the first point, the oversight in Mr. Lippmann's reasoning is quite obvious. His argument is that if some extraneous factor such as the state of the weather or interest in local contests affects the turnout of voters, the effects on the presidential vote will be confined to the electoral vote of the district or districts affected. Moreover, supporters of all party candidates for President will presumably be equally discouraged from or encouraged to turn out in these areas; consequently the result in terms of presidential electoral votes in such districts will not be altered. He goes on to maintain that if the actual popular vote in such cases is reflected in the distribution of the State's electoral votes among the various candidates, as would happen under the Lodge-Gossett plan, then the national electoral vote totals will reflect these vagaries in local election-day conditions. Similarly, he maintains, fraudulent popular votes will always be reflected in the national electoral vote totals; while under the district vote system they will not affect the final result unless these fraudulent votes constitute the critical element in a close popular vote in an electoral district.

The point which Mr. Lippmann overlooks in this line of thinking is that popular votes cast or not cast because of the vagaries of the weather or other such accidental factors, or popular votes obtained or lost through fraudulent practice, assume significance in the final election result only if, in their cumulative aspect nationally, they are preponderantly on one party's side, and if the margin of advantage gained by one party through such factors constitutes the difference between defeat and victory for that party's candidate in the national contest. Looking at the matter realistically, it would seem to me just as probable that the outcome of an election nationally might hinge upon factors of this nature operating at the district level preponderantly to the advantage of one party, as at the national level under the Lodge-Gossett formula. While a margin of a few hundred or even fewer popular votes at the district level may determine the party column in which that district's electoral vote is recorded under Mr. Lippmann's plan, it would, on the average, require about 100,000 such marginal votes to cause a difference of one electoral vote in the national vote totals.

Furthermore, while straining at this gnat of a possible miscarriage of the popular will under the Lodge-Gossett plan, Mr. Lippmann fails to note that his proposal to use congressional districts as electoral-vote districts opens the way to a distortion of the popular vote in terms of electoral votes in a way which the Lodge-Gossett plan obviates entirely. State legislatures in discharging their function of defining congressional district lines have notoriously been influenced by considerations of partisan and sectional advantage. Consequently it is not uncommon to find congressional districts of widely varying population in the same State. To cite one of the many horrible examples, the Fifth Ohio District has a population (1940 census) of 163,000 while the Twenty-second Ohio District has 686,000. The district vote system in Ohio would mean, therefore, that a voter in the down-State Fifth District would have a voting power more than four times as great as his fellow Ohioan in the Twenty-second District who happened to have the misfortune to live in the Cleveland area. Even the present system, with all its faults, has at least the merit of giving equal value to all the popular votes in a State for determining how that State's electoral votes shall be cast. It can be said, of course, that there could be included with the district vote plan a provision to insure, by national action if necessary, a fair and equitable system of districts within each State for congressional and presidential election purposes. Inclusion of such a feature, however, would be an additional handicap in securing ratification by the necessary number of State legislatures. Those bodies are not likely to surrender lightly and willingly the power which they now possess to define congressional district lines with a view to personal, partisan, and sectional advantage.

The second point Mr. Lippmann makes in his attack is wholly insupportable. It is based on a misconception of the true nature of the Lodge-Gossett proposal. Since the election of 1800 the principle has been accepted in this country that the choice of a President is actually made by the people. The electoral college system has been tolerated for so long only because it has been possible to modify and adapt it to this purpose. What the Lodge-Gossett plan proposes to do is to clear away the useless and potentially dangerous machinery of the electoral office, abolish the unwholesome general ticket system which has grown to be a part of the present system, and go as far as practical considerations will permit in the direction of bringing our method of choosing the President into harmony with political realities.

For cogent reasons, which Mr. Lippmann recognizes, the Lodge-Gossett plan does not propose to make the Nation one single constituency for election of the President by a simple direct popular vote; it proposes to keep for the States the present relative political weight which they have through Presidential electoral votes based on their respective number of seats in the Senate and House. To do this and at the same time to give appropriate effect to the expression of popular support for the various candidates, State by State, requires the use of the Presidential electoral-vote device for canvassing the results nationally. Popular votes are merely translated into presidential electoral votes at the State level for a national canvass of popular sentiment. Mr. Lippmann, as some others in and out of Congress have done, seizes on the concept of proportionality inherent in this process of equating the popular vote for a candidate in a given State to an electoral vote for him and brands it a scheme of proportional representation.

I have no inclination here to question Mr. Lippmann's views on the dangers to our political institutions inherent in schemes of proportional representation. He may well be right in this. But the proportional-representation argument is strictly a red herring as applied to the issue presented by the Lodge-Gossett plan. It is utterly impossible to have a scheme of proportional representation in electing a single officer, such as a President. A one-man office cannot be divided up among the various contestants. The nearest approach that could be managed would be to permit the various candidates to hold the office for that proportion of a year, or of a month, or of a week, to which their proportionate shares of the votes would entitle them. If the Lodge-Gossett plan is a scheme of proportional representation, or if it would give encouragement to adoption of proportional representation in the election of other officers, then we had better look to our present scheme of electing governors, Senators, Representatives, and the like. For do we not credit the candidates in the voting districts and counties with the exact proportion of the popular vote they received and carry these totals on through to the final canvass? That is just what the Lodge-Gossett plan proposes to do, except that the proportions of popular votes are translated into the common political coin of Presidential electoral votes at the State level before the Nation-wide canvass is made.

It is clear enough that the influence of certain key States, such as New York and Ohio, and of strategically situated organized

minority groups in them, on party strategy, the shaping of party platforms, and the selection of candidates, would be diminished somewhat by the adoption of the Lodge-Gossett amendment. I can understand why some individuals oppose the amendment on such grounds, even though I cannot give decisive weight in my own thinking to objections of this sort which arise out of narrow personal, group, and sectional interest. It is unfortunate that Mr. Lippmann, by advancing objections to the Lodge-Gossett amendment purporting to be founded on considerations of wise public policy, has strengthened the hand of those whose reasons for accomplishing the defeat of this fundamentally sound proposal have merit only in terms of narrow self-interest.

The Awakening South

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Awakening South," published in the Anniston (Ala.) Star of March 27, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE AWAKENING SOUTH

Theme of a recent issue of the Reporter, fortnightly magazine of facts and ideas, was the South Moves Forward, and supplying one of the most illuminating articles for the issue in question was Ralph McGill, editor of the Atlanta Constitution. "The real reconstruction begins," is the heading of the article which makes a number of pertinent observations with respect to the improving South. Very much to the point, for example, is this sharp contrast between the old and the new on our farms:

"In the South 10 years ago, a green field in January was an oddity. Today all over the South are rich meadows on which cattle can graze the year around. The livestock population has more than tripled, and there is almost a distinct cult of farmers who favor the new grasses and legumes that keep fields green in winter: sericea, lespedeza, ladino, white Dutch, manganese and crimson clovers, Kentucky 31 fescue, and its rival from Oregon, kudzu—the miracle plant that heals land wounds that time alone will not heal, but worsen. Cattlemen from Nebraska, Kansas, and Illinois come to look, and some even stay. There is also a trend toward small grains. Many a farmer, quitting cotton, has started planting oats and wheat, and found them rewarding."

Mr. McGill brings out that along with the trend toward clovers, grasses, and grains, including hybrid corn, there are other evidences as well to indicate that a new era of progress and prosperity is at hand in southern agriculture. He mentions rural electrification, the marketing of millions of broilers each year, improved and expanded dairy herds, new cheese factories, and pumps in the wells and water in the houses of our farms today. Nor is progress confined to rural areas, since in towns and cities, too, growth and improvement are very much in evidence. The editor of the Constitution does not argue that all our ills have been remedied, but he makes the telling point that measured by the past, the South's gains have been dramatic.

"* * * The South today has a feeling it is out of the woods," he states factually. "It still has its frustrations, and its infections, like the Ku Klux Klan, and the demagoguery of some of its politicians, but even these plagues are not as virulent as they used to be. The talk today is not so much of the two lynchings last year, but of the more than 20 that were prevented by forthright action of local law-enforcement officers. As for the Klan, it is an almost impotent organization, unfeared save in the few remote rural regions where population is sparse and frustration and poverty worse. Even in such areas, the Klan is growing less resolute."

Listing education as the South's major problem, the article in the Reporter takes note of developments in two Southern States to show how great has been recent progress in this field. One concerns the recent action in the Dixiecrat State of Mississippi, where the Dixiecrat Governor took the lead in appropriating money to equalize educational facilities in that State, both as to equipment and pay. Meanwhile, in Mr. McGill's own State of Georgia, school appropriations have been increased by the Georgia Legislature from $14,457,132 in 1938 to $50,875,000 in 1950. Such increased budgets, Mr. McGill adds, are "more or less the rule all over the South."

Finally, he takes up in his encouraging article the matters of public health and per capita income in the South. And in both particulars the showing is one of great improvement. For instance, malaria, once the South's worst plagues, has been markedly reduced, and in many areas entirely eliminated. And whereas a study conducted by the University of Georgia in 1935 disclosed that the South's percentage of the Nation's industry in 1930 was almost exactly that of 1865, the period since 1930 has witnessed great industrial expansion in our part of the country. Mr. McGill cites all of this, and more, in support of his entirely tenable proposition that while the new South has not yet overcome all its handicaps, the birth pains are at last beginning.

Foreign Information and Education Program

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. FLANDERS. Mr. President, in view of the plan of the House of Representatives to reduce the appropriation for the State Department, which contains the Voice of America item, I think it would be useful to have in the Appendix of the RECORD an editorial entitled "Whispering Voice," from the Washington Post of this morning. I ask unanimous consent that the editorial be inserted in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHISPERING VOICE

Thirty-four million dollars is all the United States may be allowed to spend on its whole foreign information and education program during fiscal 1951. This, seemingly, is all that can be mustered for defense in the realm of ideas at a time when the country is laying out some $13,000,000,000 for the military aspects of its defense. Thirty-four million against thirteen billion. This dismal contrast comes as the Kremlin is increasing its propaganda efforts in critical areas, both in radio broadcasts and in pamphlets. Nor is this all. Perhaps the most formidable opponents of the United States, propaganda-wise, are the Communist Parties which receive untold support from Moscow. Indeed, practically every major country is spending proportionately more on its information program than the United States; impoverished Britain, for example, before devaluation was spending the equivalent of $27,000,000 for information services alone.

In cutting the foreign information appropriation from $36,500,000 to $34,000,000, the House Appropriations Committee stipulated that none of the cut should come out of Voice of America broadcasts. Yet these broadcasts are only a part of the program, and, as respects such areas as southeast Asia, perhaps not the most important part. Movies, libraries, personal contacts are essential there as means of reaching the people directly. To be sure, maximum expansion cannot come immediately, and perhaps not a great deal more money could be spent wisely at this time. But what is needed is a new and bold concept along the lines suggested by Senator BENTON, a recognition of our tremendous stake in the battle for men's minds and plans to enlarge our operations accordingly. Surely the richest nation in the world can do better than the present piddling effort.

Fulton Lewis, Jr.

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, on February 6 I placed in the Appendix of the CONGRESSIONAL RECORD the first two installments of a series of articles by Mr. Charles Van Devander, Washington correspondent for the New York Post, analyzing the career of Mr. Fulton Lewis, Jr. In view of the deep interest in the series I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the two following installments of the article.

There being no objection, the two installments were ordered to be printed in the Appendix of the RECORD, as follows:

[Installment No. 3]

(By Charles Van Devander)

WASHINGTON, December 7.—Six weeks before VJ-day the writers war board, consisting of top authors who had dedicated their talents to the war effort, took formal notice of the wartime broadcasts of Fulton Lewis, Jr., Mutual's 7 p. m. Washington news commentator.

The writers (Clifton Fadiman, Carl Carmer, Franklin P. Adams, Rex Stout, Russel Crouse, and others) called his radio period "a shockingly isolationist, intolerant, and divisive program."

Lewis' steady harassment throughout the war of the unpleasant, but essential, programs of rationing and price control thoroughly justifies the adjectives, "intolerant" and "divisive."

The charge of isolationism is based on less voluminous, but still convincing, data.

Lewis normally devotes his destructive radio talents to domestic affairs, in which he is a consistent foe of anything remotely connected with the New Deal or the Fair Deal. However, in the fall of 1939, immediately after Hitler plunged Europe into war with his attack on Poland, Lewis made a notable, if indirect, contribution to the debate then going on in the United States over what our foreign policy should be.

He was the friend and agent through whom Col. Charles Lindbergh arranged for two speeches over the Mutual system; broadcasts in which Lindbergh argued for complete and inviolate neutrality as between the cause of Hitler and that of England and France, including the prohibition of credit or arms shipments to the Allies.

A year later, with France fallen and England under the first hammer blows of the aerial blitz, Lewis joined the violent isolationists—Wheeler, Nye, Clark, and the rest—in detecting a bid for dictatorship in President Roosevelt's request for passage of a peacetime Selective Service Act.

NO NEED FOR DRAFT ACT

Lewis approvingly quoted Senator Wheeler's statement that there was no need for the draft act and his charge that "the real forces behind this draft bill are super patriots."

As to the convention that administration leaders were seeking to establish a dictatorship, Lewis told his Nation-wide radio audience on August 5, 1940, that he had done some independent checking and had, in effect verified that charge through admissions he obtained from Senator PEPPER, an advocate of the draft act. (PEPPER had told Lewis that he favored giving President Roosevelt full wartime powers to meet whatever emergency might arise.)

Throughout this period Lewis was on terms of close personal friendship with members of the German Embassy staff here. Their reports to Berlin, which were captured and are now in the possession of this Government, eventually will require some comment—in the form of denial or explanation—from Mutual's star Washington commentator.

The captured German documents are being issued in installments under an agreement among the Allied governments. Those relating to Lewis will be published in about a year.

In 1941 and 1942 Lewis was on the pay roll of the National Association of Manufacturers for a series of broadcasts from defense plants around the country. These programs were a glorification of industry's defense production effort, and were designed as a contribution to industrial morale. Lewis received a nominal salary of $250 a week from the NAM, in addition to the income from his regular broadcast.

His destructive attacks on gasoline and tire rationing, and on the Government officials in charge of those essential programs, started shortly after Pearl Harbor and continued into 1943.

In a typical broadcast in February 1943, he cited "common criticism" that "the economics professors in the OPA * * * apparently are rationing just for the sake of rationing."

"It's an orgy of Government regulations," he went on, "in which the economics theorists and the people who write Government pamphlets on dietetics and nutrition and such things are having a fine time making guinea-pig experiments on the helpless American people."

At the time of that broadcast Americans were fighting on Guadalcanal, Russians were killing Germans at Stalingrad, and President Roosevelt and Winston Churchill had just finished their momentous conference at Casablanca. The rubber and gasoline saved by the economics professors, with the hearty cooperation of most Americans, were useful in all of those endeavors.

Lewis, culminating his series of attacks on rationing, said:

"I hope that the gentlemen here in Washington who are involved will realize that I'm not indulging in any personalities. I'm merely trying to be constructive." * * *

Most of them had no such realization.

In 1944, with the war in full blast both in Europe and in the Pacific, Lewis began a similar campaign against price controls. His keynote, which he embellished with personal attacks on those Government officials who were attempting, against even more trying difficulties, to maintain economic stability, was this assurance to his millions of listeners:

It would be "perfectly safe (and this in 1944) to remove all price ceilings and let prices simmer down to their own level."

Two years later when ceilings finally were removed, prices "simmered" up through the roof—but Lewis was one of those who wasn't too badly inconvenienced.

LEWIS' AUTHORITY: PATRICK J. HURLEY

Since the end of the war Lewis appears to have tacitly accepted the bipartisan foreign policy. He has had little to say on the subject. Recently, however, he has revealed symptoms of itching to join in the Republican assault on the conduct of United States relations with unhappy and strife-torn China.

As a start, he has adopted as his authority Gen. Patrick J. Hurley, an amateur diplomat who was completely duped by both the Chinese Communists and the Chinese Nationalists during his spectacularly unsuccessful mission to China near the end of the war.

"If there is anybody in the world who should know what he is talking about (on China) it is General Hurley," Lewis observed a few evenings ago.

[Installment No. 4]

(By Charles Van Devander)

WASHINGTON, December 8.—Postwar restlessness was widespread in the United States in 1946.

The forces of greed and selfishness which had been under restraint since Pearl Harbor were bursting out of bounds on a dozen fronts. The meat-shortage hysteria which swept the country just before the congressional elections of that year was a symptom of national state of mind.

To some degree this restlessness was natural and inevitable, but it was exploited and aggravated by reckless men for their own ends. One of these was Fulton Lewis, Jr., Washington news commentator for the Mutual Broadcasting System, who generally plays hand-in-glove with the most reactionary elements in America.

Lewis selected for his special mission the destruction of any effective price control. Riding with the tide in his campaign against OPA, Lewis reached the peak of his popularity among confirmed antiadministration elements of the population—and with that the ultimate of his power to mobilize pressure against nervous Members of Congress.

At the same time, he established a new low for sustained misrepresentation and distortion of the facts by a supposedly responsible news broadcaster.

Occasionally, Lewis professed that he was only trying to correct the faults in the administration of price controls by Chester Bowles and his hard-pressed band, although his tactics of magnifying every small error was hardly directed toward this end.

"I don't want to discontinue OPA, and have so stated over this program many times," he asserted. But on another occasion he declaimed:

"The truth is—the plain truth is—that the greatest single force in America today for inflating the cost of living and making you pay higher prices than you ever paid before is the OPA itself and the very price-control system which they say is your protection against inflation."

Stepping back into the disguise of a friend trying to save OPA from its own mistakes, he told the country—or as much of it as was tuned to his MBS program on May 3, 1946, that the Republican drive in Congress to amend the Price Control Act by cutting out its heart was only a case of corrective surgery.

"Don't be fooled by this stuff and nonsense, that this is a question of whether price is to be controlled or not," he said. "It is no such thing. It's a question of whether the slide rule quiz kids in OPA are going to be permitted to continue to run things just as they jolly well please, without any restraints, without any requirement that they straighten out the mess they've made."

This was the same Lewis who in 1943, when the fortunes of a world war were hanging delicately in the balance, told his radio audience that the "economics professors in OPA" were "rationing just for the sake of rationing," and who in 1944 said it would be "perfectly safe to remove all price ceilings."

Not many Americans had listened to his divisive pleas then, but now he was riding high on the tide of postwar discontent. Lewis rode it for all it was worth. In his sweeping condemnation of the OPA and his reckless assurances that prices would fall once controls were removed, he easily outdid the National Association of Manufacturers and Senator TAFT combined.

Throughout the campaign Lewis adroitly switched back and forth between the self-contradictory roles of a partisan advocate and an objective Washington news commentator.

Night after night he belabored OPA with the case of the three little Swiss. These pets of Lewis were owners of a San Francisco restaurant, who had unsuccessfully sought permission to increase their prices after remodeling the place. It is possible that the three little Swiss were victims of overzealousness—the case was at least questionable. But on the strength of this single case, Lewis condemned the OPA from top to bottom.

EXHORTED LISTENERS TO WRITE CONGRESS

At the height of the battle in Congress Lewis begged for support from his listeners. He told them that Drew Pearson, Walter Winchell, Mrs. Franklin D. Roosevelt, the CIO and the Communist Party were stirring up OPA supporters to write to Congress.

"Let's show them what some writing is," Lewis countered. "Get your neighbors to write, too. Get the members of your family to write. * * * Don't delay this."

The response was tremendous. That one Lewis broadcast is credited by former price control officials with having changed the preponderance of congressional mail from pro- to anti-OPA. With the 1946 congressional elections only months away, the effect of this demonstration on nervous Members of Congress may well have tipped the balance toward adoption of the amendments which finally spelled the death of OPA.

TURNED HIS GUNS ON WOMEN'S GROUPS

Shortly after this incident, Lewis violently attacked the leaders of 23 women's organizations which joined in an appeal to the Senate Banking Committee to preserve OPA. The organizations included the American Association of University Women, the National Board of the YWCA, the General Federation of Women's Clubs, the National Women's Trade Union League and the National Councils of Catholic Women, Jewish Women and Negro Women. Lewis assailed the officers of all of these groups for presuming to speak for all of their members.

A nasty scene ensued, in the Mutual studio and on the air, when Dr. Caroline Ware, who

had presented the statement of the 23 organizations to the Senate Committee, appeared with Lewis on his program to answer his attack.

ASSURED LISTENERS PRICES WOULD DROP

Lewis had given her 3 minutes to present her reply. She ran over the allotted time by 50 seconds, and Lewis then spent the remaining few minutes of the program upbraiding her for taking an unfair advantage of his offer of free air time. He devoted his entire broadcast the following night to more of the same.

Lewis repeatedly assured his listeners that without price controls prices would go down, not up.

Official warnings to the contrary, he said, were panic-stricken and hysterical bugaboo tales * * * horrible ghosts and specters in the haunted house. He accused the OPA of resorting to thoroughly unprincipled and immoral methods * * * in their propaganda.

When all price controls temporarily lapsed July 1, 1946, following President Truman's veto of an unsatisfactory bill, newspapers from coast to coast reported immediate and startling increases in food prices. Lewis, speaking from Washington at 7 p. m. that night, accused OPA of having invented these stories as propaganda.

Butter prices were in every newspaper headline. Lewis asserted that actual shopping tests by himself and his staff proved that, in fact, butter still was selling in stores throughout Washington at the old ceiling price of 67 cents a pound—not at 97 cents, as reported in all of the local newspapers.

He was equally confident that prices of manufactured articles would not go up.

"I have talked to the top leaders of the automobile industry today," he said. "* * * Most of them told me that they have no intention of increasing the prices on their cars at all. * * * I have contacted top officials of the steel industry * * * and there is no indication that there will be any increase (in steel prices) at all."

HIGHER PRICES ENTIRELY TEMPORARY

During the fall, Lewis joined wholeheartedly in the hullabaloo over the meat shortage, dutifully echoing the antiprice control propaganda of the stock raisers. Chester Bowles warned that if meat price controls were abandoned, prices would jump 40 to 50 percent within 60 days. Lewis retorted that prices would go down, not up.

When controls actually were lifted in October, cattle and hog prices shot up even higher and more rapidly than the most pessimistic Government official had predicted. Lewis, however, was unshaken.

"These present prices are entirely temporary, indeed momentary," he asserted confidently, "and they'll last only a few days."

Prices, in fact, continued to hit new highs for months after the date of that broadcast, but by then Lewis had changed the subject. He had begun a campaign to destroy the so-called veterans' housing program and was regaling his radio listeners with invented fantasies and nonexistent scandals involving frantic young Mr. Wilson Wyatt and his hyperthyroid housing program.

Just last week, however, Lewis stirred some nostalgic twinges when he referred briefly to the coming 1950 battle over extension of rent control. He quoted the authorities on whom he relies as saying that "in reality rent control is holding rents up, not down. * * *"

"They said," Lewis droned on, "that when rent controls are dropped, as shown by actual experience in places where rent controls have been dropped, the increase in rental rates is negligible or nonexistent."

Hold onto your hats; here we go again.

Plight of Jews in Countries Behind the Iron Curtain

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent of the Senate to insert in the Appendix of the RECORD a very interesting document containing a description of the status of the people of the Jewish faith under the various iron-curtain regimes in eastern Europe, including the Soviet Union, which I have received from a highly reputable organization known as the Jewish Labor Committee.

Mr. President, in view of the claims sometimes made by apologists for the totalitarian regime of Soviet Russia regarding the alleged freedom of these areas from racial prejudices and alleged freedom from persecution of the so-called racial and religious minorities, I think this document should be required reading for anybody who is inclined to have any illusions in the matter of Soviet Russia. The organization sponsoring this report is headed by individuals of such repute as Mr. Adolph Held and Mr. David Dubinsky.

There being no objection, the excerpts from the report were ordered to be printed in the RECORD, as follows:

[Excerpts from report on plight of Jews in countries behind the iron curtain, delivered at meeting of national executive committee of the Jewish Labor Committee, March 12, 1950]

In February 1949, at the national convention of the Jewish Labor Committee, a survey of the condition of Jews in countries behind the iron curtain was presented to the delegates. In that study we pointed out that liquidation threatened the Jewish communities in all the countries dominated by Soviet power. A year has gone by and we deem it advisable to bring to public attention a report of what has happened to Jewish life in the same countries since our original survey was published.

Our conclusion is: While for most of the people living under the Soviet regime that reign means impoverishment, slavery, and moral degradation, for the Jews and the Jewish groups it spells thorough spiritual annihilation as well. The national liquidation of the Jewish populations in Communist-dominated countries is now proceeding with an iron hand.

SOVIET RUSSIA

According to the last Soviet census of January 17, 1939, there were 3,020,141 Jews in the Union of Soviet Socialist Republics. With the incorporation of the Baltic republics, eastern Poland and Bessarabia into the Soviet Union in 1941, about 2,200,000 persons were added to the Soviet-Jewish population. Allowing for a slight natural increase, the grand total of Soviet Jews prior to Hitler's attack on Russia in 1941 amounted to 5,300,000. At present, after Hitler's mass extermination of Jews, the national strength of Jewry in Russia is estimated at 2,000,000 persons, which means that about 3,300,000 were exterminated by Nazi legions, died in Siberia, or were liquidated in concentration camps.

The campaign to exterminate Jewish national cultural life was officially launched by Ilya Ehrenburg, himself a Jew, on September 21, 1948, in the Communist newspaper, Pravda, in Moscow.

In January 1949, a pamphlet by the Soviet economist, T. A. Genin, proclaimed that the aims of Jewish nationalism and Zionism are similar to the aims of reactionary capitalism and American imperialism. In November 1948, Einikeit, the only Yiddish newspaper published in Russia, was liquidated.

During 1949, almost all Yiddish literary figures, even though they were members of the Communist Party, vanished. The most outstanding of these were Itzik Feffer, Peretz Markish, David Bergelson, L. Kvitko, S. Alkin, and Nistor. Inquiries by American-Jewish organizations at the Soviet Embassy concerning the fate of these Yiddish literary figures have met a stone wall of silence. When the Yiddish literary almanac, The Star, in the Ukraine, was closed, the reason given was that it "cultivated Jewish national consciousness."

Simultaneously, a drive started against all Jews who occupied important places in general Soviet life—the struggle against so-called cosmopolitanism. Of all the so-called followers of cosmopolitanism who were liquidated, about two-thirds were Jews. The most important of them were active in Soviet literature, science, philosophy, history, the theater, and included even special writers on sports matters. The Communist line was that Jews are landless, stateless, and are not an integral part of Russia and her people, and that they are devoted to abstract Jewish nationalism, which is basically Jewish chauvinism. Cosmopolitanism, which was largely identified with Jewish national culture, was harshly castigated. In particular, Jewish literary figures were pictured as lifeless corpses, renegades, men wearing traitor's masks and were accused of playing up the cosmopolitan idea of the existence of a world-wide Jewish literature and of putting Soviet writers on a par with burned-out businessmen of America and Palestine.

During the year, concrete signs of anti-Semitism emerged. In a very prominent position among those attacked were persons who had Jewish names, and who for years had been writing under Soviet pseudonyms. In numerous instances the Russian names were followed by the original Jewish names in parenthesis.

The worst, however, that the Jews had to go through in 1949 was the mass deportation to Siberia of Jews from the Ukraine, Eastern Galicia, Bukovina, Bessarabia, and the Baltic States. Some 30,000 Jews were deported from the city of Lemburg, alone. Very little information about this forced exodus has reached the outside world. American relatives of some of these victims have given up hope of locating them. Letters are returned with a notation that the whereabouts of the addressee were unknown.

During the course of the last 12 months, the Communist legend of a Jewish republic in Birobidzhan has dissolved in thin air. The Birobidzhan territory in the Far East has been completely cut off from Russia herself. Even non-Russian Communist journalists are not permitted to visit that territory. All hopes for Jewish settlement in Birobidzhan have been destroyed. In all the years of its existence, only a small number of non-Soviet Jews, all together 784 persons, was reported to have come there. According to conservative estimates only about 23,000 Jews in all were present in the Birobidzhan region in 1939. According to all available information the idea of Jewish mass settlement in Birobidzhan was a complete failure.

In Soviet Russia today there is not a shred of Jewish cultural life remaining. All

Jewish institutions and organizations, including the Yiddish press and Jewish publishing houses, have been liquidated. The Russification of the Jewish population has been carried out with an iron hand. All contact between Soviet Jews and Jews in the western world was destroyed. In Russia today Israel is considered an American-British colony, and sympathy for its constructive efforts is ruthlessly suppressed.

Very few Jews have remained in government employ. Needless to say, the emigration of Jews from Russia is strictly forbidden and correspondence with relatives abroad is most dangerous. The 2,000,000 Jews in present-day Russia are on the precipice of spiritual annihilation.

POLAND

Officially there are between 60,000 and 70,000 Jews in Poland today. Though their economic condition is not worse than the plight of the general Polish population, their natural cultural life has in 1949 been subjected to a savage liquidation similar in intensity and form to that in Soviet Russia. Though the destruction is not going on as brutally as in Russia, the direction is the same and we are rapidly approaching the complete liquidation of the Jewish community in Poland.

All Jewish economic institutions, cooperatives built mainly with American-Jewish financial resources, were taken over by the government. The Central Committee of Polish Jews, which included all Jewish groups—Zionists, Bundists, Communists, and religious Jews, was converted into a thoroughly communistic institution. The Jewish Central Committee of Poland, though formally still in existence, has been taken over by the Communists and has become a caricature of its former self. The Jewish district committees were dissolved.

Simultaneously, all Jewish political organizations were liquidated. On January 16, 1949, the Jewish Socialist Party, the Bund, was forced to merge with the Jewish section of the Communist Party. Following this, all Zionist groups and Jewish religious organizations were smashed, and many prominent Jewish religious leaders escaped from Poland.

The relief efforts of the American Joint Distribution Committee, OZE and partly of the ORT, were declared illegal.

The Yiddish schools were subjected to the same treatment. All studies above the fifth grade in the Jewish schools, may henceforth be conducted only in the Polish language. In the school year 1948–49, there were still 25 Jewish schools with an enrollment of 3,086 pupils. At the beginning of the school year 1949–50, these schools were taken over by the government. Similar treatment was accorded to all Hebrew schools. A few minor Jewish papers are still allowed to publish and there remain 39 libraries, 43 cultural clubs, and 6 Jewish orchestras in Poland, which are all on the verge of destruction.

At the beginning of 1949 the government announced that Polish Jews will be allowed to emigrate to Israel, and close to 30,000 Jews registered for emigration. The Jewish Communist press, however, simultaneously launched a vicious campaign against this exodus, describing the Jews who wanted to emigrate as traitors to Poland. This campaign of intimidation served to halt the registration and only a small number of Jews have to date succeeded in leaving the country.

In January of this year, leaders of the Jewish Communists, M. Mirsky and S. Zachariash, declared at a Jewish meeting in the city of Lodz that "the Jews in Poland will not be misled by Jewish nationalism. They will not submit to the agitation to go to Israel where cultural annihilation and unemployment awaits them."

Insecurity, loneliness, homelessness, and forced assimilation are the lot of the remaining tens of thousands of Jews who are compelled to remain under Soviet-Communist domination in Poland today.

RUMANIA

About 350,000 Jews are in Rumania today—this being the largest Jewish population in Europe, after Russia. The economic plight of the Jews in Rumania is most difficult, with 80 percent of them not being self-sustaining. Most of them are selling whatever possessions they have left in order to eke out a miserable existence. A Jew can find employment only upon joining the Jewish section of the Communist party. Most Jews in prewar Rumania were engaged in trade, and under the new regime have been completely declassed.

The destruction of Jewish communal life has been proceeding at a rapid pace. Jewish non-Communist communal leaders have been eliminated. In March 1949, the American Joint Distribution Committee office in Bukovina was ordered to close its doors. This was followed by similar orders to ORT and OZE. The possessions of these organizations were turned over to the so-called Federation of Religion Communities, which is fully controlled by the Communist Party.

In April 1949, 256 charity institutions were liquidated, including orphanages, children's homes, and 19 Jewish hospitals. At the beginning of 1949, 3,000 Jews were in prisons in Bukovina province. By the end of 1949 some 11,000 Jews had been incarcerated in Rumania on the so-called pretext of speculation and Zionist propaganda.

In June 1948, there were 69 Jewish elementary schools and 23 high schools, with a student body of 13,000 and a teaching personnel of 1,000. By August 1949, all these educational institutions had been taken over by the government. Opposition to the liquidation of the Jewish language in the schools was penalized as an act of sabotage against the state.

In order to abolish Jewish religious life, these institutions were turned over to Jewish Communists who overnight became the so-called religious leaders. The conduct of religious rituals was punished severely and Communist dogma took their place. In one instance, 28 Jews were arrested at a Jewish wedding because they sang Hatikvah, the Jewish national anthem. Under the leadership of a Communist, Marcelle Fisher, a Jewish organization to fight religious customs and ritual was organized. Young Jewish Communists were given instructions to invade synagogues and force the people to join them in singing the Rumanian national anthem.

The dream of Rumanian Jewry today is to leave their country of birth. In January 1949, the Rumanian Government agreed to permit 3,600 Jews to emigrate, and then withdrew this permission. All Zionist organizations were forced to go out of existence and immigration to Israel is considered by the government as an anti-national act. Illegal emigration through Hungary to the displaced persons camps in Austria is practically impossible, as the guards have orders to shoot on sight, anyone who attempts to flee the country.

Jewish communal life in Rumania is on the brink of physical and material extinction.

HUNGARY

The rapid nationalization of the economy in Hungary has actually brought Jewish economic life to catastrophe. Prior to the war, Jewish wealth in Hungary amounted to about one and a half billion dollars, which was confiscated by the Communist government. Many Jewish government employees were fired because of the general appeasement policy which the Communist government has been pursuing toward undemocratic and anti-Semitic elements in the country. Jews have now been eliminated from positions in the Communist Party.

A particularly notorious case of discrimination and injustice against Jews is the episode of the "gold train," a train loaded with gold, jewelry, and precious things which the Horthy government had shipped out of the country during the last days of its rule. American authorities in Germany seized this gold train and discovering that a rather important part of the precious cargo had been looted from the Jews, returned the whole property to the Hungarian Government, which promised to restore the valuables to their former owners.

The Communist government, however, kept the entire treasure. On January 26, 1949, Perens Yeshensky, the director of the Hungarian National Bank, declared that the items in the train were not the property of Jews, as most of these items had Fascist inscriptions. We have since learned from former high Hungarian officials now in exile, that these Nazi inscriptions were made by the Communist government itself, in order to deny the valid Jewish claims.

The same pattern of destruction of Jewish religious and cultural life as observed in Russia, Poland, and Rumania repeated itself in Hungary. All Jewish schools under the direction of the Jewish community were nationalized and the teaching of Hebrew was outlawed. Non-Jewish Communists have replaced the Jewish teachers in the school system. Jewish pupils are forced to attend school on Saturday and the government ordered all Jewish shops and places of business to remain open on Saturday. Political spies and informers have been placed in synagogues and wherever Jewish ceremonies are held.

At the beginning of 1949, the Zionist organization was officially disbanded. Following this, some 60,000 Jews registered for immigration to Israel. By that time, however, the Hungarian Government had become hostile to Israel and proclaimed it an Anglo-American colony. A number of Zionist leaders who did not escape in time, were arrested and given prison terms of 6 months to 3 years.

Today, no Jew can emigrate from Hungary and we witness the complete national cultural destruction as well as the physical impoverishment of Hungarian Jewry.

CZECHOSLOVAKIA

Only 55,000 of a prewar Jewish population of 360,000 remained in Czechoslovakia after VE-day. By September 1949, there were only between 18,000 and 20,000 Jews residing there. Their economic plight is a difficult one. All hopes for restoration of their former possessions have been dissolved in thin air. Nationalization deprived the Jews of their former means of livelihood. Anti-Semitic excesses are not a rarity, the most violent having taken place on August 20, 1949, during a demonstration in Bratislava, in Slovakia.

Czechoslovakia, like Russia and the other satellites, had at the beginning given support to Israel. It should be underscored, however, that the Czech Government has, for its shipment of arms to Israel during the latter's war with the Arab, been well paid. The campaign against Israel was commenced about September 1948, and was followed by the liquidation of Zionist groups and the arrest of Zionist leaders.

At the beginning of 1948, an understanding was reached between Czechoslovakia and Israel to allow 20,000 Jews to immigrate to Israel within a period of 3 to 4 months. This agreement was not kept by the Czech Government and only a small group of Czech Jews succeeded in leaving the country. The Czech Government also halted the practice of issuing transit visas for Jewish refugees from Rumania.

The remaining Jewish population in Czechoslovakia is in agony, as their hopes for survival in their country of origin have been shattered. They are rapidly dying behind the bars of the iron curtain.

Surplus Farm Products and Activities of Commodity Credit Corporation

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 30, 1950

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an article from Barron's, a weekly business and financial paper.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRAVO SENATOR!

It is always a pleasure, especially in the dreary realm of farm policy, to be able to pass some bouquets around.

Senator WILLIAMS, Republican of Delaware, deserves just that for his speech in the Senate last week wherein he advocated: (1) Defeat of the administration's request for an additional $2,000,000,000 for the Commodity Credit Corporation, which is already bulging with some $4,000,000,000 worth of surplus farm products, including prunes, turkeys, and rosin. (2) Repeal of the 90-percent parity props under the country's so-called basic commodities (wheat, cotton, corn, tobacco, and peanuts).

Taken together, these two suggestions are radical enough to bring down on the Senator's head charges that he is trying to ruin the American farmer, pull the plug under the commodity markets, and plunge the Nation back into 1933 conditions.

Actually Mr. WILLIAMS has an eye on the interests of eastern poultry and dairy farmers who find themselves squeezed by the high price of feed grains. Beyond this his position is both courageous and temperate. In February he joined hands with Senators IVES, HENDRICKSON, and SALTONSTALL, in a vain attempt to have price supports lowered. Now he has returned to the fight for restoring some measure of sanity in a farm situation that daily grows both more serious and ludicrous.

Consider the news of last week on the agricultural front. At home the Department of Agriculture released figures which must come as a jolt to all those who believe that American farming can really be controlled in the interests of price maintenance. The figures showed that farmers this year will put 360,000,000 acres of land into cultivation as against a hoped-for cut to 340,000,000. Even where farmers have followed Government orders in some crops they have expanded operations in others—notably corn, oats, barley, sorghum, and soybeans.

While American production continues full blast world demand is definitely slackening. China is gripped by famine but cut off from even a give-away program. West Europe's output is on the rise. Two years ago France imported some 149,000,000 bushels of wheat in a year. Today, thanks in part to ECA, tractors and other aids, she is a net exporter. In addition, she is overburdened with output of butter and of meat. And Russia has offered export of grains to European countries.

Congress has no real answer to this shift in the economic weather. While attempting to deal with the American surplus of potatoes it last week actually increased acreage in peanuts and cotton. The House Foreign Affairs Committee came up with its dazzling economy plan for cutting ECA's appropriation by $1,000,000,000 while empowering the Secretary of Agriculture to give away $1,000,000,000 of farm products abroad. This would, of course, wreck such autonomy as is left to the ECA without saving the taxpayer a nickel. For as the Department gave supplies away it would be buying an equal amount in the market.

Most preposterous performance of the week was the Government's announcement that it had sold some 32,000,000 pounds of dried eggs to the British for $7,000,000, with the implication that this was a shrewd deal. But, when various domestic and foreign subsidies are taken into account, it turns out that the Government paid $1.26 per pound for the eggs, and sold them at around 3 cents per pound. This egg deal was only one of many examples offered by Senator WILLIAMS to illustrate the phoniness, if not downright dishonesty, of the Government's accounting. What happens is that the Commodity Credit Corporation buys products from farmers and then resells them to other agencies, including the ECA which gives them away.

Looking to the grand total Senator WILLIAMS was able to show not only that CCC has accumulated nearly $4,000,000,000 worth of commodities over the past 18 months, but that in the same period the United States has given away nearly $3,000,000,000 worth. The United States has thus produced approximately $7,500,000,000 of farm products more than it has consumed or sold.

This burden on the taxpayer is in Senator WILLIAMS' view intolerable. It is also intolerable that at a time when the United States needs to use its resources to best advantage it is in fact subsidizing waste on a gigantic scale. The cure is precisely where Senator WILLIAMS puts it—elimination or at least reduction of Federal price supports which encourage the over-production that no amount of acreage controls can possibly prevent.

For years it has been the fashion to believe that in some miraculous way the American farmer could be isolated from the action of the free market which is at the basis of America's economic life. Senator WILLIAMS' speech is a portent of an awakening common sense—doubly refreshing in view of the straddle which Republican politicians make on the issue. From this point of view the CONGRESSIONAL RECORD for March 21 (pp. 3736–3740), makes exciting reading.

Results of McGregor Poll on National Issues

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. McGREGOR. Mr. Speaker, under permission to extend my remarks, I would like to place in the RECORD the results of a poll I conducted among my constituents on various important issues facing the Members of Congress today. I regret I could not send a questionnaire to every citizen, but I believe the replies I have received are the opinions of the majority in the Seventeenth Ohio District.

In my district, the population is divided almost evenly between city and rural residents. Represented are nearly all of the labor and farm organizations of our Nation as well as large and small businesses, two colleges and two universities.

The questionnaire was sent to every occupational group: committeemen and women, both Democrats and Republicans; laborers; attorneys; barbers; housewives; public-office holders; salesmen, and educators. Also included were those engaged in business and industry, newspaper, radio, and professional work.

Over 3,000 blanks were mailed to individuals and replicas of the questionnaire were published in six daily and eight weekly newspapers in my district. The total number of returns, approximately 2,000, proves to me that the average citizen is interested in the important issues now before this legislative body and is anxious to express his views on them.

Attached to many completed questionnaires were letters and notes explaining why that particular person answered various questions as he did. I am very pleased they took the time to do so. It is not often that a Congressman can obtain a true picture of the feelings of the people of his district on important matters, but through the questionnaire method I feel I have gained an insight into the wishes of those I represent.

The questionnaire and the results are as follows:

QUESTIONNAIRE FROM HON. J. HARRY MCGREGOR, MEMBER OF CONGRESS, SEVENTEENTH OHIO DISTRICT

1. Do you favor the continuation of the European recovery program as recommended by President Truman? (Giving or loaning to foreign countries for the next 12 months, including the giving or loaning of money, food, and military equipment direct to foreign governments.) Yes ____ No ____

2. If voting "yes" on question 1, should distribution be made direct to the people or to their governments? People ____ Governments ____

3. Do you favor the President's new program of giving assistance to the underdeveloped areas of the world (a program similar to our former WPA)? Yes ____ No ____

4. Do you favor:

(a) Outright repeal of the Taft-Hartley labor law? Yes ____ No ____

(b) Amending the Taft-Hartley labor law? Yes ____ No ____

(c) A closed shop which requires an employee to be a union member in order to retain his job? Yes ____ No ____

(d) A requirement for both labor and industrial leaders, in contract negotiations, to sign a noncommunistic pledge? Yes ____ No ____

5. Do you favor legislation giving Federal aid to schools (allocation of Federal funds to assist in operation) even though it might threaten local control and jeopardize our teachers' retirement fund in Ohio? Yes ____ No ____

6. Do you favor any type of Federal legislation placing the medical and dental profession and operation of our hospitals under Federal control? Yes ____ No ____

7. Do you favor the President's demands that he have Federal control over production? Yes ____ No ____

8. Do you favor the President's demands that he have Federal control over wages? Yes ____ No ____

9. Do you favor Government-support prices regardless of supply and demand? Yes ____ No ____

10. Do you favor the repeal of the veto power in the United Nations even though it might mean severing our relations with Russia? Yes ____ No ____

11. Do you favor the admission into the United States of about 300,000 additional displaced persons? Yes ____ No ____

12. Do you favor the present policies of the administration attempting to place tax-free Government enterprises on a competitive level with private businesses confronted with threats of tax increases? Yes ____ No ____

Please write on the back of this page your comments on the above questions and any suggestions which you might give to aid me in better serving as your Congressman.

Signature _____
Address _____
Occupation _____

Please return this questionnaire to me, House Office Building, Washington, D. C.

You will note, Mr. Speaker, that I asked my constituents to sign their names and give their occupations, and this information enabled me to secure the opinions of individuals according to occupation. Following is the percentage distribution of replies to the questions, according to occupational classification:

PERCENTAGE DISTRIBUTION OF REPLIES TO QUESTIONNAIRE

Question 1. Do you favor continuation of the European recovery program as recommended by President Truman? (Giving or loaning to foreign countries for the next 12 months, including the giving or loaning of money, food, and military equipment direct to foreign governments.)

	Yes	No
	Percent	*Percent*

Jewish Youth Week

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. ADDONIZIO. Mr. Speaker, March 24–31, 1950, has been designated as Jewish Youth Week in the United States by the National Jewish Youth Conference. The conference is a permanent Nation-wide youth body which represents local and regional youth and young adult councils and national Jewish youth organizations. The theme of the week, "Working Together—Jewish Youth Builds," is described in the editorial in the March edition of the National Jewish Welfare Board Circle. Our Jewish young men and women have willingly accepted their responsibility of citizenship and service and have given generously of their time and efforts in working for deserving community projects. They have accomplished much and will continue to work, with the vigor and inspiration of youth, to build a better world for all of us.

The editorial follows:

JEWISH YOUTH BUILDS

A world at peace does not mean a world in which nations think alike, feel alike, act alike. One world does not mean one mind. Neither does unity require uniformity. Differing opinions are, in fact, essential for the progress of humanity, provided, of course, they are accompanied by a mutual respect for the right to differ.

"Working Together — Jewish Youth Builds," the theme of this year's Jewish Youth Week, which the JWB-sponsored National Jewish Youth Conference has set for March 24–31, reveals significantly the fact that American Jewish youth have learned the art of working together around areas of common interest for a healthier, happier, more positive community. Through youth and young adult councils—which in the majority of cases, are representative of all organized Jewish youth in the community—they have been able to develop dynamic programs for a richer, vibrant Jewish life.

Reflected also in the theme is the recognition by Jewish youth of its role in the growth and development of the American Jewish community. Across the nation, young people have taken their seats on boards of Jewish community centers, Jewish community councils, Jewish welfare federations and on committees of national organizations such as the National Jewish Welfare Board itself. They have made such rapid strides that there now exists a Nation-wide Jewish youth body—the National Jewish Youth Conference—which is representative of 300 local and regional youth and young adult councils and most of the national Jewish youth organizations.

During Jewish Youth Week, the searchlight of the communities will be turned on the major advances which Jewish young men and women have been able to make by working together. Through such events as cultural festivals, Youth Sabbath services, exhibits, rallies, conferences, forums, institutes, pageants, athletic and social events, Jewish youth will demonstrate its abilities, accomplishments, role and responsibilities, and needs. They will demonstrate the fruitful results of concentrated efforts to build together a better world.

These are the future leaders of American Jewry, and, for that very reason, the future of American Jewry looks bright. They are building on a solid foundation, a sound premise. There is indeed a way for people of varied interests and ideological differences to meet on common ground.

CIO Leader Condemns Partition

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Philip Murray at the Knights of Equity banquet at the William Penn Hotel, Pittsburgh, Pa., March 19, 1950:

I have engaged myself with you this evening briefly referring to the things which in passing our good friend, Father Duffy, talked about * * * the wit of the Irish. I know that meetings of this description have matters to consider that are more relevant to the issues of the day than the telling of stories. One which was pressed home for some consideration by our good friend, Mr. Hayden, the president of the Knights of Equity, this evening had to do with a united Ireland. Now every decent citizen, every honorable and upright citizen, every citizen possessed of integrity who believes in justice recognizes the prime need of the Irish people for unity, a united Ireland.

I am delighted as the president of an organization of some 6,000,000 organized workers to say to this group here this evening that my own union, the Congress of Industrial Organizations, at several of its recent conventions, particularly at its last convention held in the city of Cleveland November of last year, unanimously adopted a resolution against partition in Ireland. We authorized our duly accredited representatives, who participated in the formation of the new International Federation of Trade Unions—some 60,000,000 people being affiliated with that body, 60,000,000 organized workers from 57 countries—to secure approval of our CIO resolution at the London conference of trade-union workers held in the city of London last October, and that resolution has

been referred to the executive committee of the trade-union movements of the democratic free trade-union countries for their special consideration sometime during the coming summer; and it is the purpose of our organization here in the United States to give effect to that resolution by pressing not only for its consideration but its actual adoption by the trade-union internationals of these 57 countries presently affiliated with this world federation of trade-unions. It is a tremendously important subject. It has to do with the question of servitude, an issue which was fought out here in the battlefields of the United States of America where your forefathers and our forebears fought for the freedom of this, the greatest nation of all. The people of the United States are wedded to the idea that there should be a united Ireland. There can be offered no justification for the maintenance of a situation in Ireland which provides disunity. The overwhelming majority of the people in Ireland seek freedom from the economic and political bondage of the British Empire. Their cause is a justifiable one and all right-thinking citizens, whether in the United States of America or not, should support the position of the Irish people in their fight for complete over-all independence.

Oh, I know that we here, although in the spirit of gaiety, and jollity and observance, regard this as a kind of a festive occasion; nevertheless, must needs give special consideration to the more important fundamental things which attach themselves to the observance of this great holiday.

Our Nation and the nations of the universe for the moment are greatly disturbed. The Irish people are disturbed because they are not accorded their rightful recognition as an independent state by the British Government. It should be the business of not only the British Government to seek and secure the unity of Ireland, but I dare say, it should also be the business of the great Republic of the United States of America to assist them in a very practical way toward the attaining of that goal. Our Federal Congress must needs direct its attention to the consideration of this very vexing problem. Our State Department must of necessity, if it seeks the abolition of colonial enterprises, also give consideration to the formation of a united Ireland.

So that no time could be more appropriate for proper consideration of this all-important subject than now. We all have a common understanding of the international travail and sorrow that prevails throughout the world right now—the danger of a hydrogen bomb, the ideological conflicts which are going on in almost every nation throughout the world, the unrest, the confusion, the disorder which prevails no matter where you go. But great organizations such as yours, Mr. Toastmaster, outstanding organizations such as yours can lend much toward the attainment of these great democratic goals to which we all achieve, all aspire. I oftimes wonder if we who are living in the midst of this travail today here in the United States and in other countries, busy as we are rushing madly to do things that have to be done every day we live, if all the peoples throughout this universe, particularly those who are afflicted or who may be in danger of affliction, yes, even the United Nations itself, if these groupings and those peoples could only rest their bodies long enough to permit their souls to catch up with their bodies, we might then be able to solve many of the problems and solve satisfactorily many of the problems which our universe has confronting it today. The prayers, the solicitations, the devotion, the advocacy, the intelligent constructive thoughts that proceed from a mind that is clear and has not designs lending comfort to the afflicted and lending solace and assistance to the nations who are dependent would lend much, lend a great deal toward the attainment of the lofty objectives to which we all aspire.

I'm happy to be one of you here tonight. Unfortunately, for me I do not have the opportunity to meet with too many of my townsfolk too often. Life is that way. It takes you from your hearthside, from your family and from your friends and from your community life because you have other things to do and do in so many places. I am doubly grateful therefore, that the opportunity has been provided me to break bread with you here tonight. I hope out of these associations, these St. Patrick Day celebrations, and other celebrations of a similar nature, we may be able to attain many of the things in the very near future to which we so logically and so constructively aspire. My good friend, Dennis Mulvihill, Jr., the toastmaster here, when I came to the head of the steelworkers in the city of Pittsburgh some 15 years ago, he together with Vince Sweeney did a lot of collaboration with me. Dennis used to come down to the steelworkers' office a good deal lending his spirit, h's soul, his mighty intellect constructively and in a very cooperative fashion to another group of dependent people. They were not independent in those days. They suffered under the yoke of tyranny also here at home. They had economic millstones thrust around their necks and then they formed an organization. An organization dedicated in the name of God to serve, to render service to others unselfishly and self-sacrificingly and that organization in the course of the past 15 years has become a rather substantial segment of our community life here in the city of Pittsburgh. It has grown from no membership in 1936 to over 1,000,000 members today. It has brought more bread and more butter and more meat and more medicine and more clothing into the homes of the people than they ever had before. It has placed pictures on their walls, carpets on their floors, and music in their homes, and it has provided greater cultural and educational opportunities for the young than their fathers and mothers had, at least. So we have an organization like your organization that is an organization of service dedicated to the good of the community and the Nation. We are in the midst of some ideological conflicts for the moment with certain subversive influences who are bent upon the undermining and ultimate destruction of our form of government. I make particular reference now with a special significance to the Communist Party. Our organization of the CIO the United Steelworkers, and all of the affiliated organizations of the CIO presently, are fighting these despots, these atheistic people who would undermine not only the economic well-being of the people who inhabit our Nation, but undermine the principles of a true God-fearing people, destroy their souls and their characters and their homes and inject into the economic life-stream, blood-stream of the United States of America like they have done in other countries their despotic system of dictatorship. So, like you, we are engaging ourselves in the holy crusade on that front lending comfort and assistance to the peoples of the United States and to our Government in a fight against totalitarianism, against dictatorship, against atheistic communism, against any form of subversion which has for itself the purpose, the undermining of the peoples for the destruction of our Government.

Those are our ethics, those are our codes. That is our catechism. Those are the things in which we believe. And to you, worthy toastmaster, and to all the members of the Knights of Equity and to your many friends of many faiths who are here tonight, may God speed you in your blessed and your noble work.

What's Happening to Eggs?

EXTENSION OF REMARKS
OF
HON. JOHN C. DAVIES
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. DAVIES of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Consumer Reports for March 1950:

WHAT'S HAPPENING TO EGGS?—A CASE STUDY IN FOOD PRICES AND THE BRANNAN PLAN

(By Edward M. Brecher)

(Consumers Union, for reasons set forth in the June 1949 Consumer Reports, favors the Brannan farm plan as the best proposal currently under consideration for maintaining farm income while permitting retail food prices paid by consumers to fall to reasonable levels. Secretary of Agriculture Brannan's proposals have in recent months been widely attacked. Many of the attacks, Consumers Union believes, are based on mistaken facts and false assumptions. To clarify the issues, Consumers Union here presents a study of one specific food—eggs—to show how present price-support laws are working, and how much better, from the point of view of both farmers and consumers, the production payments underlying the Brannan plan would work. While the study is limited to eggs, the same principles apply quite generally to other foods now being supported at high price levels under present laws.)

Housewives in Washington, D. C., who paid 75 cents a dozen for large grade A eggs last October were buying the same eggs early this year at 46 cents a dozen. Housewives in New York City who paid 95 cents a dozen for large grade A whites last September paid 55 cents or even less for the same eggs just 4 months later. In Minnesota and Wisconsin, eggs were selling at the farm for as little as 20 cents a dozen during January 1950. Throughout the country the same dramatic fall in egg prices affected both consumers and farmers.

Consumers asked three questions as they saw eggs fall to bargain prices from near-record highs in the space of a few short months.

First, why did prices fall?

Second, what held prices up before?

Third, isn't there something that can be done to prevent the price of eggs from shooting back up again?

Here are the best answers CU has been able to find, based on Department of Agriculture statistics and other sources:

First, prices fell in part because the Government lowered the support level at which it buys eggs to hold prices up. Increased production, consumer resistance to excessive prices, speculation on the egg exchanges, and seasonal factors may have contributed to the sharpness of the drop, but an anticipated change in the Government buying price was the immediate cause of the collapse in retail egg prices.

Second, just as Federal action caused the collapse, so it was Federal action—specifically the price measures of the Eightieth Congress—which held prices high throughout 1948 and 1949.

Third, there is a better way to manage prices than the Federal egg-buying program which kept prices too high for consumers for 2 years, and then let them fall to levels which mean distress for farmers at the moment. The better way was proposed by Secretary of Agriculture Charles F. Brannan last year, and promptly rejected by Congress. Briefly,

the Brannan plan would not spend tens of millions of dollars to support the price of eggs, as in the past. It would let wholesale and retail eggs prices fall in accordance with the supply and demand situation. Farmers, however, would not suffer as a result. The hundreds of millions heretofore spent to hold egg prices up, or a part of them, would be spent to maintain farm income directly.

Conversely, the Brannan plan would prevent the wasteful accumulation of so-called surplus eggs. Currently, the Government has in storage, in caves and warehouses throughout the country, more than 2,500,000,000 eggs in powdered form. These were eggs which we didn't consume because the price was too high, and which the Government bought to keep prices high. Under the Brannan plan, such surpluses would not accumulate at all. We'd eat them up.

Meanwhile the present bargain prices for eggs at retail, in some stores and cities, are likely to prove short-lived. Already Congressmen from the poultry States are putting the heat on the Department of Agriculture. Additional Federal egg buying designed to raise prices again—though not to 1949 levels—has already begun. Thus, following a brief interlude in which farmers were getting too little for their eggs, we are likely to return to a situation where consumers are charged too much. To see just how we got into this jam, let's look at the egg record of the past 5 years.

1945

This was the year in which egg eating in the United States hit an all-time high. There was a meat shortage, and for the first time in history Americans consumed more than an egg per person per day. Even so, a small surplus developed, for American hens cooperated by laying more eggs per hen than ever before in history. But the British wanted all the eggs they could get under lend-lease, so the surplus was useful. Prices were controlled by OPA.

1946

The production of eggs exceeded the 1945 record by a wide margin, while prices rose when OPA controls were ended. Consumption declined. As a result, a 3,600,000,000 egg surplus—eggs which could not be sold domestically at prevailing prices—was purchased by the Government. Again the British were prepared to take the entire amount. Despite the enormous surplus, prices remained firm as a result of Government buying for the British.

1947

Almost as many eggs were purchased by the Government to hold prices up as in 1946. But by 1947 Lend-Lease was dead, and the British had dollars to buy only a small portion of the excess—even though eggs were offered them below the price which the American Government paid. Some of these 1947 eggs, in frozen form, remained in Government warehouses into 1949. Total cost to the Government of the 1947 program for acquiring and disposing of eggs: about $52,000,000.

Despite the enormous unsalable 1947 surplus, average retail prices were actually kept higher through Federal purchases in 1947 than in 1946 by more than 11 cents a dozen. Thus, the net effect of the 1947 price-support program in which millions of dollars were spent was to raise the cost of eggs to consumers some $440,000,000 over 1946 costs.

1948

For a variety of reasons, egg production dropped somewhat, and egg consumption rose, so that there was a much smaller 1948 surplus. Again the Government had to buy eggs to support prices, however, and again it bought enough to lift egg prices above the levels of the previous year. Many of the eggs purchased, in dried form, are still stored in caves and warehouses.

1949

Under the Agriculture Act of 1948, the Department of Agriculture was required to support egg prices at a level which would bring the farmer an average of 45 cents a dozen on the farm. This level was achieved by purchasing eggs in dried form. Purchase price of the eggs to the Government: about $80,000,000. Effect on consumers: prices of grade A whites rose as high as 95 cents a dozen.

At the end of 1949, the Government had on hand, in dried form, some 2,500,000,000 1948 and 1949 eggs. A small part of these eggs were being given away through the school-lunch program.

Surplus dried eggs were also being offered for export at less than half the price which the Government paid for them. This is a process known as dumping—selling abroad at less than the cost of production and less than the domestic price. It is a process on which the United States has frowned for many years when other countries attempted it. Dumping is likely to build unlimited ill will on the part of other countries which make a living in part by exporting the products we are trying to dump. But even at the equivalent of 14 cents a dozen—the present dumping price—there are few takers for dried American eggs.

Numerous proposals were made for avoiding the evils of dumping by turning unsalable surpluses over to the Food and Agriculture Organization (FAO) of the United Nations, for distribution to countries where they are desperately needed. But according to Washington scurces, the State Department has resolutely opposed such measures.

THE OUTLOOK FOR 1950

After years of holding egg prices high for the benefit of farmers, it began early this year to look as if the end of that road was at hand. Indeed, the pendulum swung to the other extreme, and it was farmers who were victimized by egg prices below the cost of production. Farmers, remembering the great depression, talked "strike." One poultry State congressman summarized the situation in mid-January:

"Eggs in the Midwest are 20 cents a dozen at this time. Eggs in the Midwest were 20 cents a dozen in November 1932 when Mr. Hoover was defeated for President. * * * Are the egg producers back where they started? Or further back yet?" [1]

Egg production per hen, at a record high in 1949, is expected to go higher yet in 1950. With enormous stocks of 1948 and 1949 eggs on hand, the Department obviously has no desire to buy up all the eggs in sight for a third straight year. Moreover, the money is not available. Congress seems determined to force the Department to hold farm prices up by wasteful purchase and storage of surpluses; but it has not so far shown its willingness to vote the billions of dollars such a program would cost.

Here is the way Assistant Secretary of Agriculture Knox T. Hutchinson sums up the situation:

"In the past 4 years the Government has spent an average of $85,000,000 a year to support the price of eggs. And consumers have paid out an estimated $125,000,000 to $200,000,000 more for eggs than they would have if the support program had not been in existence. Thus in reality the public has shelled out from $200,000,000 to $285,000,000 a year for egg support."

One way out of the egg-price omelet, of course, would be to eliminate Federal concern with the level of farm prices altogether.

Such a policy is politically impossible, and—in Consumer's Union's opinion—unwise even from the point of view of the consumer who wants low-egg prices. For American farmers are an integral part of our total economy. When farm income falls so low that farmers are unable to buy the things they need, the entire economy suffers. Major depressions have frequently been ushered in by farm depressions, and there can be no doubt that a serious drop in farm income now would promptly be reflected in unemployment and depression for other groups as well. For better or worse, the United States is irrevocably committed to maintaining a reasonable level of farm income.

When steel production exceeds the demand for steel, the few companies which control the steel industry promptly curtail production. The same is true of other dominant industries. But farmers, by themselves, cannot adjust supply to demand in this way. There are too many of them. Indeed, when surpluses occur and income falls off, the average farmer is tempted to increase production of some crops, in order to maintain his personal income. The effect is to pile up still larger surpluses.

But while CU applauds the principle that a fair return to farmers is a proper concern of Government, the particular means for achieving that fair return—namely open market purchase and storage of surpluses—is an outrageous imposition on the consumer in many respects. It keeps retail prices too high. In this way, it discourages consumption and therefore leads to still further surpluses. It also opens the opportunity for commodity speculation at the expense of consumers. Egg speculators on the Chicago and New York egg exchanges, for example, can gamble on a price increase, and thereby drive prices up, without much risk of losing money if the price later falls. For if it does begin to fall, the Government is always standing by to purchase eggs and relieve the speculator of his risk. Finally, Federal purchasing of surpluses subsidizes the giant corporations which manage farm factories as well as the family farmer for whom the program is ostensibly designed.

A better way

Under the Brannan plan, instead of buying up surpluses, with all its attendant evils, the Government would permit wholesale and retail egg prices to fall to whatever level supply and demand might dictate. For 1950, that would probably mean an average retail price of grade A eggs in the vicinity, let us say, of 45 or 50 cents a dozen—or even less during months when the supply is large as at present.

Such a retail price might force farm prices down to bankruptcy levels. Accordingly, at the end of the year, the Government would use the funds it has heretofore used for buying surpluses to make production payments direct to farmers.

The Department of Agriculture estimates that, for the money we have been spending to buy surpluses during the past few years, production payments to farmers averaging 5 to 8 cents a dozen could be made. This payment would be enough to make up the difference between the farm price of eggs and a fair return to farmers.

The arguments against the plan

Four major arguments are being made against the Brannan plan. One is that it

[1] The 20-cent price has since risen to 23 cents or 25 cents. These prices apply, moreover, to eggs of low quality, produced in the Midwest where egg prices are traditionally lower. The 1950 support program is geared to provide farmers with a national annual average price of 37 cents a dozen after balancing out seasonal, regional, and quality variations. This means retail grade A egg prices lower than in 1949, but in all probability higher than the average consumers paid in January and February.

would cost the Federal Treasury too much—perhaps billions. But buying up the surpluses also costs billions; for eggs alone, the cost has been $340,000,000 over the past 4 years. Whether the Brannan plan would cost more or less for any given crop in any given year is difficult to calculate. In general, the same conditions which might make the Brannan plan very costly would also make the present farm program very costly. There is no reason whatever to believe that, on the average, the Brannan plan would cost more—and it might cost less. It would certainly cost much less when the savings to consumers in lower retail prices are included in the calculation.

Second, it is argued that the Brannan plan's production payments would make the farmer a recipient of Federal charity and that consumers would object to spending Federal funds to subsidize farmers. But the Brannan plan is no more charity than the present plan. And consumers, if they once learn the full facts, are much more likely to revolt against the spending of billions to hold prices up, as at present, than they are to revolt against a reasonable program for maintaining farm income while permitting retail prices to fall.

Third, it is urged that the Brannan plan means forced curtailment of production—a type of economic waste which riles both farmers and consumers. But production curtailment is an essential element in the present illogical system of price supports, and a number of crops are actually being curtailed this year. Under the Brannan plan, increased consumption because of lower prices would make curtailment unnecessary in many cases where it is necessary without the Brannan plan. Curtailment of production would be necessary, in fact, only where production exceeded the full amount that consumers would want at reasonable prices.

Finally, it is alleged that the Brannan plan is a two-faced "pie in the sky" scheme which promises low prices to consumers on the one hand and high income to farmers on the other. Clearly, say the plan's enemies, you can't both eat your eggs and have them, too, as Secretary Brannan promises. But actually there is nothing at all contradictory in the consumer and farmer aspects of the plan. There is a real saving from the plan, and it is this saving which benefits both farmers and consumers.

A part of the saving would come from middlemen and food processors. Under the present plan, the farmer gets only a portion of the Federal expenditures. Middlemen and processors, through whose hands the surpluses pass before the Government gets them, get the rest. Needless to say, the middlemen who would lose their cut in the Federal subsidy bitterly oppose the Brannan plan.

Another major saving would result from a reduction in wholesale and retail mark-ups on the food which reaches consumers. These mark-ups are generally figures on a percentage basis. When farm prices go up, the wholesaler's and the retailer's margins go up proportionately. With eggs at 45 cents a dozen on the farm, for example, the average store price is likely to be around 75 cents. Knocking a dime off the farm price may knock 16 cents or more off the store price.

A third saving would come, under the Brannan plan, by limiting benefits to family farmers who need them. Production payments would be made only up to a cash farm income of about $26,000 per farmer. Farmers could continue to earn whatever they were able to earn, but they would participate in production payments on the first $26,000 of marketed crops only. The limitation would affect only a small percentage of the farmers, but it would save the Treasury millions now channeled into the profit ledgers of large farm corporations. The benefits from all these savings would be shared by consumers and farmers alike.

Perhaps most important of all, under the Brannan plan there would be no surpluses, so-called. Consumers would eat them up. For actually there is no surplus of eggs, or of many other crops. If all consumers ate as many eggs as the moderate and upper-income consumers now eat, there would be a shortage. The so-called surplus is simply an accumulation of eggs consumers can't afford to buy at Government-pegged prices. Under the Brannan plan, prices would fall to a level where consumption of eggs would equal production.

There are weaknesses in the Brannan plan—chiefly its limitation to a few crops and its failure to provide consumer representation on the administrative bodies which would make the basic price decisions. These and other shortcomings CU set forth last June. But compared with the folly of the surplus-purchasing program under legislation passed by the Eightieth and Eighty-first Congresses, it would be a long, long step in the right direction.

Secretary Brannan is still fighting for at least a trial run of his plan. But he has received a cold shoulder from both Democrats and Republicans in Congress—with a few noteworthy exceptions. While such reactionary farm organizations as the National Farm Bureau Federation oppose even trying out the Brannan plan, an increasing number of farmers and at least one farm organization—the National Farmers Union—are in favor of the plan. CU believes that consumers would do well to join forces with such farm groups to demand a return to sanity in our national farm-price programs.

Authors of Our Defeats Still Manage Our Affairs

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, George E. Sokolsky, noted columnist, has reviewed our foreign policy in a searching editorial. This is "must" reading for Members who are interested in the forces that are changing our lives. I include the article as a part of my remarks:

REVIEW OF OUR DESCENT IN POLICY OF DEFEATISM

(By George E. Sokolsky)

It is important for those who wish to think straight to get away from the headlines of the day and to consider the forces and movements that are rapidly changing our lives.

As one listens to the clack-clack on the radio or looks at the enormous headlines in the newspapers, the emphasis is on the unbelievable. Communists everywhere; a King upsetting Belgium; Great Britain in the hands of Socialists; the President sunning himself in Florida while his country is stunned by homosexuals and Communists in high places; a Nation frittering away its wealth while it loses battle after battle in what is called a cold war, which is neither cold nor a war, but a steam roller flattening out the world.

It would seem to be profligate and wasteful to worry about partisanship or about the careers of individuals in the face of our necessity to build a great strength to withstand the shock of the next few years—and we shall be shocked as every nation is that has lost a war.

Let us recapitulate:

In 1939, Europe went to war because Hitler sought to build an empire based on the destruction of the freedoms of man. The world did not know that the Hitler-Stalin alliance included the Molotov-Ribbentrop pact for the division of Europe and Asia between Germany and Russia.

In 1941, the United States entered that war on two fronts; one in Asia; the other in Europe. The United States stated its war objectives in the form of the Atlantic Charter, which set forth high ideals of human freedom and national independence, for friend and foe, for countries large and small.

By 1943, we had deserted those principles. At the Tehran Conference, arrangements were made which, for Europe, practically implemented the Molotov-Ribbentrop pact. By 1945, the Tehran principles were also applied to Asia.

The world was divided between the Russian and the Anglo-Saxon countries, at the River Elbe, with the thirty-eighth parallel as the dividing line in Asia.

The acceptance of this Byzantine concept of human bondage by the United States and Great Britain, a departure from the traditions of the race since Magna Carta, at the Potsdam Conference after the war, encouraged the Russians to believe that the western nations had shot their bolt and were hereafter to be regarded as decadent.

We now need to move from what we know to what we may presume; namely, that the Russians analyzed our weaknesses from their own experience with us. They established in each western country an effective Communist Party whose members despised their own country and willingly served Russia.

They found such persons not only among the proletariat, but in the upper intellectual circles, among old families of distinction, among the wealthy and within the Government. This has been as true in the United States as in France, Italy or Great Britain.

They also discovered a marked tendency for the intellectuals, particularly scientists, to forsake the basically Christian traditions of their civilization.

Therefore, they decided to move swiftly. In Europe, they resorted to Marxian propaganda; in Asia, they successfully went to war. In Europe, their influence has expanded beyond the Elbe, but they failed to take Italy, France and western Germany. They have, however, taken Czechoslovakia and Hungary, which were altogether in the Christian world.

The governmental resistance to this advance has been trifling. American diplomacy based itself entirely on dollars, which is not enough. Even in the expenditure of dollars so many subterfuges had to be employed that no rallying to a great set of principles of life appeared.

While such a concept as the Marshall plan can produce a statistical success, it has failed as a spiritual force. In Asia, China was deserted and became Russian by default.

Now this is the story and here is where we now are. And all the apologies of such a man as Dr. Philip Jessup and the strongly worded speeches of Dean Acheson will not help, because the map is what it is.

Denials do not prevent the lines on the map from moving and whenever they do move, it is to our disadvantage. Yet, this also is true: the authors of our defeats, the makers of our failures are still managing our affairs.

Housing Activity in the Nation and in 15 Metropolitan Areas

EXTENSION OF REMARKS
OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. GAMBLE. Mr. Speaker, under permission of the House, I include in the RECORD a statement by Ewan Clague, Commissioner, Bureau of Labor Statistics in the Department of Labor, dealing with housing activity in the Nation and in the 15 metropolitan areas:

HOUSING ACTIVITY IN THE NATION AND IN 15 METROPOLITAN AREAS

NATIONAL HOUSING VOLUME AND HOUSING DEMAND

With 80,000 new nonfarm dwelling units started in February the Nation has just completed the most spectacular winter home-building season in its history. Builders have been starting new dwellings at the rate of about 80,000 units a month since last December, a volume we would not normally expect until the spring. Still, this monthly volume represents a seasonal drop of 16 percent from the huge November figure of 95,500. Thus the usual seasonal pattern has been maintained, but with activity at a very high level.

The unexpectedly large volume of housing so far this year reflects assurance about costs, which most experts agree will probably change little over the year. Added to this has been uneasiness about credit after expiration on March 1 of the emergency mortgage insuring provisions of the National Housing Act. Unusually favorable weather in many parts of the country has also contributed to the winter's large volume. Housing demand continues virtually unabated, buoyed by high consumer income and the continuing high marriage and birth rates.

Accomplishment this year follows the home building record achieved in 1949 when, as latest estimates show, 1,025,800 new units were started, nearly 10 percent above the previous peak of 937,000 in 1925. Even without the 36,000 public units started, 1949 surpassed all other years in housing activity. What is more, while attention was centered on the boom in apartments (41 percent above 1948), builders started the largest number of one-family houses in any single year in history. About 790,000 single-family homes were begun last year, up 3 percent from 1948, when the previous record was established.

What inroads had we made in the housing shortage by the end of 1949? One way of answering this question is by comparing the number of new dwellings started with the increase in the number of households over the past few decades.

The number of new nonfarm dwellings started in the 1920's outnumbered by a million and a third the increase in the number of households (approximately the number of family units) between 1920 and 1929. This housing advantage, however, was completely wiped out in the thirties, when the increase in households outdistanced new housing volume by 1,840,000. The gap became wider still in the 1940's, when nearly 1,500,000 more nonfarm households were added than new dwellings started. The housing deficit, created largely during the depression and war years when new home building dropped sharply, exists primarily in urban areas. We do know that building of new rural nonfarm dwellings had exceeded the increase in rural nonfarm households by the end of 1949.

This discussion has so far been confined to provision of new housing units. For one thing, there is no accurate information about the volume of converted dwelling units—housing provided by conversion of nonresidential structures to residential use or by conversion of old residences to include additional apartments. A large proportion of converted units are in any case makeshift accommodations. In addition, if they are weighed against the units lost by change from housing to nonhousing use, it appears that conversions have provided a relatively small addition to the permanent housing supply.

Indications are that the new dwelling units started each year will have to exceed a million for several years to wipe out the backlog, as well as to meet current population increase and effective demand.

HOUSING IN 15 METROPOLITAN AREAS

Because of the backlog in urban places, the housing shortage is especially acute in the Nation's metropolitan areas. For this reason, the Bureau of Labor Statistics is now engaged in studying the volume and characteristics of the new housing started in 15 major metropolitan areas—Atlanta, Boston, Chicago, Cleveland, Dallas, Denver, Detroit, Los Angeles, Miami, New York, Philadelphia, Pittsburgh, San Francisco, Seattle, and Washington, D. C. We are comparing here for the first time the results of the surveys in these areas with respect to the volume of new housing started since the war. A little later this year we shall present the results of the Bureau's studies of the characteristics of the new housing provided in the 15 areas.

The Bureau's surveys show that New York and Los Angeles far outstripped all other metropolitan areas in home building since the war. The 293,260 new nonfarm dwelling units started in the New York-northeastern New Jersey metropolitan area, and the 277,325 started in the Los Angeles area, constituted 16 percent of the Nation's new housing units begun in the postwar years, 1946–49. No other area came within as much as 40 percent of the New York or Los Angeles achievement. Next in housing volume was Chicago with 95,660 units. Pittsburgh, among the first 6 metropolitan areas in the country in size and industrial importance, was one of the least active in home building among the 15 surveyed.

The reason for such wide variation in housing activity lies in differing rates of population growth as well as population size. In general, the metropolitan areas which were among the leaders in population increase from 1940 ranked high also in home-building rate (number of units started per 10,000 population). Of nine areas for which an estimate of 1949 population could be obtained, Miami, the smallest, ranked first in population increase from 1940 (53 percent) and greatly surpassed all the others in the number of postwar dwelling units started per 10,000 population. Miami held only seventh place, however, in the actual number of units started, but nevertheless ranked ahead of both Boston and Pittsburgh. This may be explained by the fact that the Boston and Pittsburgh areas held the last two places, respectively, in population growth, with less than a 10-percent increase between 1940 and 1949, compared with Miami's 53 percent.

The most urgent housing need in the metropolitan areas is for rental units. Home builders in these areas have responded variously to this need. Apartments were 7 percent of the total number of nonfarm dwelling units started in the Detroit area in 1949, and, at the other extreme, 69 percent in the Washington, D. C., area. In 1949, as compared with 1948, significant gains were made in the number of apartments started in the majority of the areas, but there were declines in Chicago, Denver, Los Angeles, Miami, and Seattle. In the Boston area, the entire 1949 increase in rental-type units was in public housing; in New York, public housing accounted for nearly two-thirds of the rise in apartment construction.

In the majority of the 15 surveyed areas, the proportion of rental-type units to the total of nonfarm dwellings started was greater than the proportion in the United States as a whole (23 percent). This is to be expected, however, since rental housing is largely urban and is most common in the largest cities. It is more extraordinary that the ratio of rental-type units to the total started in 1949 was less than the United States ratio in the Cleveland, Chicago, Denver, and Detroit areas.

TABLE 1.—*Number of new nonfarm dwelling units started—1948, 1949, and 1950*

Period	
1948	931,300

How About America?

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. VAN ZANDT. Mr. Speaker, the editor of the Altoona Tribune, Altoona, Pa., in my congressional district, has the following to say about the state of our national defenses:

HOW ABOUT AMERICA?

While Congress wrangles over how many more millions of American public funds to hand Europe, and while the State Department urges that still more millions be allotted, and Mr. Truman refuses curtly to speak in anything except vagaries, and Russia single-mindedly builds up Russia and prepares to take over all of Asia, two of America's foremost military leaders sound a warning note.

Gen. Omar Bradley, Chief of Staff, on March 8, warned this country against any immediate lone-handed disarmament.

Last night, Thursday, Gen. Dwight Eisenhower declared America has slashed her armaments below the danger point in a world that has not yet attained peace.

These are warnings that should be heeded. In Washington today, much of our governmental operation is in charge of men who were not in positions of active leadership during the war. Both General Eisenhower and General Bradley were in such positions. And, as war ended, both made notable addresses in the cause of peace, General Eisenhower, in 1946, even urging that world leaders ignore the word "war," make no mention of it in the future.

Now, his words unheeded, General Eisenhower, Thursday, asserted that our weakness in the face of Soviet strength is "well nigh as criminal as war itself."

He declared, "America already has disarmed to the extent—in some directions even beyond the extent—that I, with deep concern, for her present safety, could possibly advise, until we have certain knowledge that all nations are doing likewise.

"Only by deliberate lies can the propagandist—foreign or domestic—stretch our arms program into more than reasonable posture for the defense which George Washington urged on his countrymen. And the heads of state everywhere, even the most suspicious and fearful, know that it is below that level."

At least two things are noteworthy in the general's address. His reference, in the latter paragraph, would appear to strike at recent statements by Secretary of Defense Louis Johnson, who spoke of our adequate military strength, and how we "could lick hell out of Stalin."

And, secondly, the general obviously does not concur in the New Deal-Fair Deal tendency to relegate the wisdom of George Washington to the dead past.

It is the usual practice of administration spokesmen to answer opponents who quote Washington, Jefferson, or any of the founding fathers, by declaring that "things are different now."

But, they are not.

Europe offers the very same menace to America today that it offered when Americans rebelled against the others of King George in colonial times.

The only real savings made in a major Government department has been in that of national defense, at a time when Russia, the only world power besides ourselves, absolutely refuses to join with us for world peace.

Instead of reducing expenditures abroad, and of trying to reduce the mammoth bureaucracy at home, America's defenses are being whittled away for political purposes, and short-sighted leaders who already appear to have forgotten Pearl Harbor are centering our defenses in western Europe while Russia spreads across half the world.

Archduke Otto, of Austria, speaking in Pittsburgh the other day, said Soviet activities in central Europe are just a cover-up for Stalin's big push across Asia.

He declared America is losing the cold war because we are not considering the world as a whole, as Stalin does.

In other words, our internationalism ends in western Europe.

Russia is deliberately unfriendly. She is openly aggressive. She rejected insultingly the greatest peace move made by any nation—the United States offer to share the atomic bomb secret nearly 3 years ago, provided all nations would agree on controls and UN inspection of each nation.

Russia is now the predominant military power in the world.

It is time to forget western Europe for a while and to think about maintaining freedom in America, and defending it.

Letter to Editor of Oneida (N. Y.) Daily Dispatch

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 29, 1950.
EDITOR, ONEIDA DAILY DISPATCH,
Oneida, N. Y.

SIR: I note that the battle you are leading against me is continuing in full swing and it is O. K. with me.

However, I take issue with you on the following, I note that you are emphasizing the fact that I have sent out material under the frank which is "a cost to us taxpayers of a minimum of a thousand dollars."

May I remind you that the Oneida Dispatch during 1949 franked its own propaganda which was likewise paid for by the taxpayers and which reached more than three times the tonnage I sent, according to official Post Office Department estimates.

While you are making such a to-do about my right to defend myself against your ruthless attacks, please also point out to your readers that you are fighting me with taxpayers' money.

It is no more than fair that the voters of Madison County should understand that your newspaper has used and is using as many tax-dollars to subsidize mailing out your papers as I use in like periods of time. I will continue sending to the voters remarks of mine which you refuse to print but which are nevertheless utterances by an elected representative of the people and should be made public by any patriotic local newspaper.

In other words, you are guilty of the same abuse you attribute to me, possibly on a more colossal scale.

In spite of the tremendous advantage you have over me from a financial standpoint, I expect to challenge any Goliath which attempts to put me in a bad light with the fellow-members of my party.

It is obvious that you do not want a man who is nominated by the Republicans of Madison County unless he answers to your beck and call and does what you want him to.

I repeat, my record is 93 percent Republican in Congress which is among the highest and your challenging a man on that record in a Republican primary is asinine, regardless of your petty personal dislike for me.

Sincerely,

EDWIN ARTHUR HALL.

Problems of Government

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered on Monday, March 27, 1950, before the Conference of American Small Business Organizations at the Wardman Park Hotel, Washington, D. C.:

Chairman Virkus and members of the Conference of American Small Business Organizations, I appreciate the opportunity of speaking to you at this luncheon. I shall speak generally with reference to the problems of government, realizing that all problems and policies of government, and all legislation, whether in the foreign or domestic field, effects every small-business man in the Nation.

I know you realize the present serious condition of the state of the Nation. I should like for you to know that the majority of the Members of Congress are serious-minded men who probably realize more keenly than any other group of men in America the serious state of the Nation on both the domestic, and in the foreign field.

We are struggling with the problem from day to day in the hope of stabilizing the economy of the Nation, maintaining the financial solvency of the Government, and eventually bringing about more amicable relations with foreign countries which may lead to world peace.

I know of no single group in America who is cooperating in a finer spirit to this end than the small-business men of the Nation. National defense and financial solvency on the home front are the two main essentials for the preservation of our Government, and the contribution it can make toward world peace. Without a strong Government financially we cannot have adequate defense, we cannot preserve the American way of life, we cannot make our world contribution to peace. There is much to be done along this line on the home front.

Your Government needs your cooperation and effort on the home front as never before. I know you realize this need. And I know you are contributing to, and will continue to make your great contribution to this end. Throughout this land the over 5,000,000 small-business men who still represent the pioneer spirit that has made America great have been lending the Government your solid effort and contribution to preserve free enterprise, and a sound economy

in building a greater America. You have defied and resisted the poisonous virus of socialism.

You represent a great and powerful force in the business life of the Government that asks little or nothing from the Government except to be let alone. You want less meddling of the horde of bureaucrats in your private business affairs. You are against the expanding and building of a greater bureaucracy in Government. You are opposed to Government continuously entering the business field in competition with private business, paying little or no taxes to the support of the Government. You are concerned and opposed to present confiscatory taxes on small business and all of the people. We serious Members of Congress join with you in this same effort.

The time is here now when the small-business men who are the backbone of the economy of this Nation must greatly expand your organizations and make yourself felt as a mighty political force in the future to protect the ideals of government for which you stand.

You can be a mighty force in this effort as you employ 90 percent of the nearly 60,000,000 wage earners of the Nation. You furnish approximately 75 percent of the investment capital of the Nation. You are not only competitors of big business, but you are producers, fabricators, suppliers, and distributors for big business, rounding out and making possible the most dynamic economy the world has ever known. You furnish the greatest amount of risk capital necessary to the expansion of business throughout the Nation. Retail merchants complete the job of distribution.

You are opposed to the present socialistic trend of government, to governmental regimentation, to government waste and spending that threatens the destruction of free enterprise and representative government.

BIG GOVERNMENT

The greatest threat to the Nation today is big government, its expense to the taxpayers and the abuse of its power over the people. It carries the imminent threat of financial bankruptcy with the loss of freedom for all, and the death of our representative system of government that has preserved our liberty. Big government, through big bureaucracy, now in peacetime has 2,000,000 people employed on the Federal pay roll at a yearly cost approaching $5,000,000,000.

The Federal debt is $260,000,000,000. Our Government, in addition, has guaranteed loans, or obligations up to $93,000,000,000, much to which it may later have to pay.

FOREIGN COUNTRIES

We have given to foreign countries since the close of the war $28,000,000,000, and a bill is before the Congress today to give in aid to foreign countries another $5,000,000,000. All of this money has to be borrowed from the people.

PRESIDENT'S BUDGET

The President has before the Congress a budget request for $42,500,000,000—the biggest budget ever requested to date. He admits that if this amount is granted that at the end of the coming fiscal year we may still have a 2-year total deficit of $10,000,000,000 which must be added to the national debt through deficit financing.

When you realize that your Federal Government, in years of the highest income the Nation has ever known, against which the highest taxes in peacetime have been levied, still spends each year $5,000,000,000 more than we take in, you must come to the conclusion that financial bankruptcy is imminent, unless drastic action is taken to reduce the cost of Government. No businessman can follow such a policy without going broke. The Government cannot follow such a policy without bringing about the same result.

Many of us Members of the Congress will attempt to reduce the budget by a minimum of $3,000,000,000. With the cooperation of the President it could be done and the business of the Nation would expand to a point where possibly more taxes would flow into the Treasury than the amount of the budget cut.

Unfortunately, in the face of this danger, the President has asked for new and unnecessary legislation that would possibly add $20,000,000,000 a year to the present budget request of $42,500,000,000. The Congress is stubbornly resisting the passing of such new legislation with its additional expense.

SOCIALISM

The small-business men of the Nation see the threat of socialism and are against it. Much socialistic legislation has already been passed. The Federal housing and slum clearance passed in the last session is a typical example. It will cost billions and billions in the future unless it can be repealed at a later date. The attempt of this administration to pass its companion bill last week, the Federal housing bill which the Congress soundly defeated is another example.

SOCIALIZED MEDICINE

The administration's effort to pass a socialized medicine bill which would increase medical cost to the people and bring them a lower type of medical care is another example.

BRANNAN FARM PLAN

Its support and agitation for the Brannan farm plan, socialistic to the core, that would regiment the farmers as never before, and add an extra cost of probably $10,000,000,000 a year to the Government, is another example of the present dangerous trend in Government.

HIGH TAXES

High taxes are a powerful force in bringing about the socialized state. It operates by taxing business until it dries up risk investment. Then the Government proclaims that business and free enterprise has failed and the Government must step in and take over. You may remember some months ago that the President threatened to put the Government into the manufacture of steel, claiming that the big steel organizations were failing to produce in sufficient quantities. It was a ridiculous statement, but illustrates the point.

The Federal Government, on an average, takes over six times as much in taxes out of the States as is collected in all taxes for State, county, municipal, and other subdivisions of Government.

Something must be done to stop the impoverishment of the States from the confiscatory tax load imposed upon the people by the Federal Government.

CORPORATIONS

Corporations are taxed from 36 to 40 percent in some instances, with individuals up to 85 percent, and the President asks that a heavier tax now be laid on corporations. Small-business men find present tax loads a great burden that makes it difficult to obtain new risk capital for expansion. Large corporations experience like difficulties. We are following too many of the socialistic policies that have wrecked the government of England and established the socialized state. It can happen here unless the small-business men and the thinking people of America rise up in mass and demand a drastic reduction of the cost of Government which is the only way to lower the present tax burdens.

THE THREAT OF BIG LABOR LEADERS

The No. 2 and serious threat to our Nation is the power and policy of the big labor leaders. They boldly boast through the press that they are raising millions of dollars to defeat the Members of Congress who will not take their dictation. If they can defeat 17 men in the House and 6 in the Senate, they can control the Congress.

If they can control the Congress, they can control the Government and bring about a Socialist labor government here like in England. That is their aim.

The coal strike is the best example of the chaos that would befall us Nation-wide if they are allowed to gain this power.

NO ONE GROUP SHOULD CONTROL THE GOVERNMENT

All legislation enacted should seek to bring about the best climatic atmosphere under which agriculture, labor, and business can operate as harmoniously as possible, bringing their great combined contribution to the welfare of the Nation. The 5,000,000 businessmen, of which you are a part, must keep up the fight to cut the cost of Government spending; stop waste, reduce taxes, balance the budget, and begin the reduction of the Federal debt. In this effort you will have the continued support of the serious Members of this Congress who realize that this must be done in the interest of all our people. Let's keep the faith and continue the fight together to save America.

Educational Program To Combat Communism

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. TOBEY. Mr. President, in connection with Senate Resolution 243, favoring an increased educational program by the United States in combating communism in foreign countries, submitted by the Senator from Connecticut [Mr. BENTON] and other Senators, I ask unanimous consent to have inserted in the RECORD two editorials, one from the Boston Globe of March 24, 1950, entitled "Wanted: More Steam," and the other from the Boston Post of March 24, 1950, entitled "A Louder Voice."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Boston Globe of March 24, 1950]

WANTED: MORE STEAM

Senator WILLIAM BENTON, of Connecticut, deserves hearty public support for his plea urging the institution of a Marshall plan of ideas. The former Under Secretary of State in charge of the Voice of America knows whereof he speaks. His complaint, that no adequate governmental program of affirmative news about this country is being directed toward the outside world, is amply justified.

Senator BENTON urges complete reorganization of our efforts toward this end. He wants better broadcasts, more thoroughly representative motion pictures, and an expansion of the foreign information service so as to meet and counter the distortions and plain falsehoods which are being disseminated abroad against America. Our opponents are sleeplessly on the job in this struggle for the minds of men. Thus far, we have been attempting to counter them half-heartedly and half in a doze.

[From the Boston Post of March 24, 1950]

A LOUDER VOICE

The world, despite the jet-propelled illusion of diminishing distances, is still a big place, dotted with sinister watch-your-step signs at the crossroads and full of confused or fearing people who think that Santa Claus is a free-handed giver only because he has some racket which he wishes to work on the unwary.

The propaganda mills of the Kremlin have spared no expense nor effort to sow the suspicion from pole to pole that the little package marked "made in the United States of America," may contain a time-bomb instead of a pair of Argyle socks. People living in terror, past or present, naturally succumb to such doubts and innuendoes.

Returning travelers tell the tale. They are alarmed by the antipathy held for America among people in countries we lifted literally out of the bottomless pit of communism by their galluses and made a part of the free world that looks to the gold star of hope instead of the red star of reaction.

The answer is simple. We have beaten the Russians in the Berlin airlift. We have defeated them at the polls in France and Italy. We have united the Europeans in the common defense of their ancestral acres and are implementing their will to battle for them with weapons to match those of the foe.

While nourishing their war-weakened bodies, giving them something more than their fists to fight with and making them more self-sufficient by restoring their factories and farms, many evidently are still unconvinced. We haven't got at their minds.

A freshman Senator would tackle that next. BENTON, of Connecticut, in his maiden speech in the Senate, backed by 14 colleagues, launched a plan to coordinate the information programs of the world to combat communism.

In his own right, an able advertising man, with State Department experience added, he would gather the non-Communist countries together for conference in which they would pool their propaganda-making apparatus and battle the Reds in the field of thinking by a cooperative, concerted, and all-powerful effort.

The new Senator from Connecticut is not selling wooden nutmegs with that idea. It's sound. It would make the Voice of America the voice of free men everywhere. It would be fighting communism at its best—propagandizing.

Some Statistics We Must Never Forget

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. VAN ZANDT. Mr. Speaker, those who harbor thoughts of world war III in which our Nation might become involved, should seriously consider the statistics of previous wars.

The following frightful figures are taken from data prepared by the United States Veterans' Administration:

War	Participants	In-service deaths
Revolutionary War	395,000	4,000
War of 1812	536,000	2,000
Mexican War	130,000	13,000
Spanish-American War	392,000	11,000
Civil War	2,192,000	364,000
World War I	4,744,000	131,000
World War II	16,535,000	409,000

Our Global War on Narcotics

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. PATTERSON. Mr. Speaker, during my years in government service, prior to my election to Congress, I was fortunate to serve with, and know, such outstanding men as Harry Anslinger, Malachi Harney, George White, and many others who exercise a constant vigil over narcotics consumption. These gentlemen, from Commissioner Anslinger down to the agents in the field, perform what is far too frequently an unobtrusive public service.

Due recognition has come their way in a Reader's Digest reprint of an article in American Mercury. Without fanfare the narcotics agent performs his duty, hazardous though it is. I am pleased to insert the above-mentioned article as part of my extended remarks:

OUR GLOBAL WAR ON NARCOTICS

(By Frederic Sondern, Jr.)

It was late afternoon in the ancient city of Istanbul. As street vendors, beggars, people of every race and dress jostled along the Rue Cabristan, no one paid much attention to a group of workmen digging a ditch outside a little cafe. Suddenly, at a window above the cafe, a shade jerked up. Immediately the ditch diggers dropped their tools, rushed into the cafe and up its stairs, pistols in hand. In a few moments four cursing men emerged from the building, prodded forward by an American seaman. Before a crowd could gather, police cars had whisked them off.

Within the hour Commissioner Harry J. Anslinger of the United States Treasury Department's Bureau of Narcotics received a cable from the American seaman—United States Narcotics Agent George White: "Able today to buy quantity pure heroin from biggest ring of dealers here and arrest same. Brilliant support from Turkish police who have seized refining plant and 900 ounces of narcotics, source large shipments to the United States."

Agent White's triumph in a city on the other side of the globe was not an unusual project for the Narcotics Bureau. A tightly knit organization of some 300 officers, the Bureau deals with one of today's most intricate law-enforcement problems.

With the end of World War II, habit-forming narcotics began to flow again to Europe and the United States from dope racketeers in the Far East, the Middle East, and South America. In the United States the drug traffic climbed rapidly back toward prewar levels. By 1949 more than 10 percent of the inmates of our Federal prisons were men and women convicted under the narcotics laws. Drug trafficking and addiction were contributing more and more to crime of all kinds—from gang warfare and murder to prostitution and larceny by addicts in need of money to satisfy their expensive craving.

Some months before the raid in the Rue Cabristan, field offices of the Bureau of Narcotics reported to Washington that heroin, most vicious of the opium derivatives, was getting into the illicit market from a new source. Examination showed it to be of Turkish manufacture. Narcotics-squad detectives of New York's police department ferreted out a Greek sailor and two friends who seemed to be doing most of the peddling. They were shadowed to their cache—a suitcase in the parcel room of a bus terminal. After arrest, the sailor told of a big heroin ring in Istanbul which sold to seamen.

Commissioner Anslinger decided to push right into the enemy's camp. A few years ago that would have been difficult. Owing to the work of the United Nations, however, new weapons have been put into the hands of the men who fight the illicit drug traffic. Anslinger telephoned the chief of the narcotics section of the Turkish police, then sent for Supervising Agent George White of the San Francisco field office.

A few days later, in Istanbul, the Turkish police welcomed their American colleague. They briefed him on persons in the Turkish underworld who might be involved, on their habits and headquarters, warning that undercover men had a way of being found in the Bosporus with their throats cut.

Disguised as an American merchant sailor, White began frequenting water-front bars. He dropped hints that he had money to spend, had connections in New York, and was open to business if the profits were right. The scouts of the dope syndicate reacted almost at once. For more than a week he was put through a grueling inquisition. Questioned and cross-questioned by Turks who seemed to know a great deal about our underworld, he was aware that one slip would mean a quick bullet or a knife in the back. White's answers, based on an encyclopedic knowledge of our criminal elements, passed muster. He was finally taken to the Rue Cabristan café where he met the four men he had come 5,000 miles to catch. They agreed to let him have $6,000 worth of heroin the next day.

The gangsters arrived at the appointed hour. White was to signal the ditch-digging police outside by raising the window shade when the deal was consummated. After endless delays and arguments the precious carton containing the drugs was produced. White said that he wanted to examine it in better light. And then—the shade stuck. White fought with it, too violently. The others reached for their guns but the agent managed to draw first. At that moment the disturbed shade flew up with a bang, and tthe police pounded up the stairs.

Other raiding squads converged on headquarters and plants of the gang in and near the city. It was a clean sweep, the biggest catch in Turkey in recent years.

Almost as soon as a gang in one of the drug capitals is knocked off, however, another takes its place. With heroin selling in New York or Paris for $300 to $500 an ounce, the returns for drug racketeers are high. A single shipment which United States customs inspectors found not long ago in the tail assembly of an airplane at LaGuardia Airport would have been worth over a million dollars in the underworld retail trade.

When Charles Luciania (Lucky Luciano), former New York racketeer, was deported to Italy in 1946, after serving 10 years in prison, he had big plans. In Rome he allied himself with the cream of Italian black marketeers and arranged for a flow of drugs from the eastern Mediterranean. Then he obtained an Italian passport and permission to visit Cuba. In Habana the suave Signor Luciania began to establish contact with correspondents in Miami, New York, and Chicago.

Actually the Narcotics Bureau knew his plans before he left Italy. They let him carry them out—up to a point—to see what contacts he would make. Then the Commissioner suggested to Cuban authorities that Luciania be deported. Just as Lucky saw his dream of another empire coming true, Habana detectives appeared at his door one morning and asked him to pack; his plane was leaving shortly.

This swift and silent international cooperation often results in underworld catastrophes. The steward known as Louis was nervous as the steamship *Santa Luisa* from South American ports steamed into Charleston harbor not long ago. He was carrying

a big load this trip. The customs men made their usual careful search, apparently found no contraband, and cleared the ship, Louis was relieved. The next day he decided that the coast was clear. His runner, a colored newsboy, had come aboard and the two sauntered to the cleverly concealed cache in the forepeak. No one was around except a steam fitter, who seemed absorbed in his work. Quickly Louis opened the cache, the boy slipped several small bags into his clothing and shuffled off. The steward had just closed the compartment when he felt a hand on his shoulder. It was the steam fitter but he had a badge. The newsboy found agents waiting for him at the foot of the gangplank.

Louis's cache had been under guard from the moment customs searchers had found it—not many minutes after they had come aboard. A message from narcotics men in a Latin-American country, who had been watching a big new syndicate that was building up a coastal trade, told Washington that the ship was "hot." They had not been able to identify the runner, however, and Anslinger wanted him. So, from the time the ship landed, narcotics and customs agents dressed as electricians, steam fitters, and longshoremen took turns staying in sight of the cache until their quarry sprung the trap.

A nemesis to many a narcotics trafficker has been the international list of narcotics violators, which is kept up to date by the Bureau of Narcotics from reports sent in by other nations. Besides names and descriptions of all known illicit drug traders, the international list describes every unusual smuggling trick tried in recent years. There are some classics. An Egyptian syndicate discovered a new method of concealing narcotics in the camel trains which they dispatched across the Sahara Desert to Casablanca and Tangier. Metal capsules containing morphine and heroin, fed to a camel, would lodge in one of the storage compartments of his peculiar digestive system. Each animal could carry tens of thousands of dollars' worth of drugs. At the end of the journey the camels were slaughtered and the capsules recovered. It was expensive transport, but the returns justified the investment.

Egyptian customs inspectors missed this trick until the price of camels went up sharply. Then an Egyptian officer investigating the phenomenon had a bright idea; he examined the camels by fluoroscope, and the syndicate had to look for a new transportation scheme.

It takes time, infinite patience, and ingenuity to build up an ironclad case against the shrewd operators cataloged in the international list. Take Joseph "Pip the Blind" Gagliano, who was until recently No. 121 in the book.

Several facts were known about Gagliano. His headquarters in New York were modest—the back room of a bar on East One Hundred and Seventh Street. His runners smuggled in opium from Mexico, brought it to his secret New York factory to be converted into heroin. From there dealers and peddlers fanned out across the country, did a huge business. Pip never handled dope himself and would discuss a deal only in his back room with no witnesses present.

A Bureau agent whom we'll call Jackson, after months of building himself up as a prosperous racketeer from the west coast, finally succeeded in developing an acquaintance with the gangster. But to obtain a conviction he had to get Pip the Blind to hand over narcotics and accept payment—or order one of his men to do so—before witnesses.

Jackson drove up to the gang's headquarters one morning and honked his horn. One of the boss' musclemen responded to the summons. "I've got to see Pip," said Jackson. "Big deal. But I've banged up my leg. Can't walk on it." He exhibited a foot swathed in bandages; crutches leaned against the seat. "Pip don't never talk to nobody on the street," the gunman replied. "But since it's you I'll see what he says." The agent held his breath. Behind his seat, in a reconstructed baggage compartment, crouched another agent with his eyes at a peep slot from which he could see and hear anyone who came to the side of the car. Across the street, in an innocent-looking truck, were more agents and a camera.

Pip the Blind walked toward the car with his chief henchman. What he said in the next few minutes and the orders he gave his assistant sealed his doom. The next day Jackson and his helpers repeated the process with his two principal lieutenants. Police traps snapped shut from New York to the Mexican border. Pip the Blind later hanged himself in his cell.

Narcotics Bureau agents thus concluded another case—with quiet satisfaction. For, as Commissioner Anslinger's executive officer, Malachi Harney, said to me: "When you break a narcotics case you not only nab some of the nastiest specimens in existence but you save a lot of people from a lot of misery. An ounce of cocaine sold in New York may account for a hop-headed hold-up man who kills a peaceful citizen in Dallas or a doped-up driver who rams a school bus in Ohio."

Men in Light Stetson Hats

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. SMITH of Kansas. Mr. Speaker, there are those who believe that the first men to wear the light broad-brimmed hat came from south of the Rio Grande, who came into the southwest country to carve out a new empire. But we do know that the Texas Rangers, who for a hundred years protected the frontiers of Texas, wore the light-colored hats.

In that broad expanse of territory from Fort Worth, south to the Rio Grande, thence north to the Dakotas, and between this line and the Rocky Mountains, is the home of the stockman.

Seventy-five years ago, these cowmen, who trailed the cowherds from Texas to Wichita, Abilene, Ellsworth, Hays, and Dodge City, wore the light, broad-brimmed hats. The men who rode these trails—guardians of law and order—makers of peace—all wore the light, broad-brimmed hats. This hat in those distant days was a badge of courage. It also was, by reason of its workmanship and size, the most useful article of dress. It protected its wearer from the scorching heat of the high plains. It served as a useful dipper to water both man and his faithful horse. At night, it could be used as a pillow when sleeping under the star-studded heavens. So this hat had its utilitarian purposes as well as a badge of honor.

The descendants of these men of the light hats still live in this land known as the Great Plains area. They no longer ride the trails to Dodge City or Hays, but they are still cattlemen. They take their cattle to Fort Worth or Kansas City by truck or rail. They no longer worry about the quicksands of the Canadian, Cimarron, or the Arkansas Rivers.

They don't fear the drifting of their cattle into the dry beds of canyon breaks during the winters' driving snows. No longer do the cattle rustlers offer a menace to their herds.

Where do these cattlemen look for danger in these modern days? The prairies are peaceful; water tanks, fed by windmills and ponds, furnish the water. Cottonseed cake takes away the hazards of the wintertime. Now, where are the dangers for "the men of the light hats"?—in the Nation's Capital—Washington.

These men are still individuals. They survived the days of OPA, rationing, WPA. All they ask is to be let alone. They ask nothing from the great white father in Washington—except their freedom.

"These men of the light Stetson hats" just know these fundamental facts—that you cannot socialize the schools, mills, mines, farms, ranches, medicine, and money without socializing the people. They know the more we accept of Government hand-outs and doles in any form or by any name, from necessity we will be told what to do and when to do it. The net result—we lose our freedom and independence.

These men know also that socialism subsidizes inefficiency, and where inefficiency exists, there is no profit, and where there is no profit, there can be no welfare or security for anyone.

These men who now ride in automobiles still wear their "light Stetson hats" because to them it is a heritage of the past, of brave, fearless men who could and did buy a thousand head of cattle by only their word. Honesty to them was not just something taught in school, but was a matter of principle.

On these high plains of Texas, Oklahoma, Kansas, Colorado, Montana, Wyoming, and the Dakotas, occurred the last conflicts between the westward movement of hardy pioneers and the Indians. The law of the Indian was the survival of the fittest. The Indian fought back for the land of his fathers. These men in "light colored hats" who have conquered the "great American desert," as it was called 150 years ago, were not descendants from the cast-offs and the riff-raff of more cultured eastern seaboard. They were hard, but they were gentlemen. They sought to mold from a raw material the finished product of a new country.

In recent years, the descendants of these men who forded through the quicksands of the Pecos, the Canadian, the Cimarron, the Arkansas, driving their cattle to the valleys and hills of the Smoky Hill for shipment to eastern markets, have been all over the world. They built bridges over the Rhine and the Danube, landed on the unheard islands of the Pacific. Some drove tanks up the beaches of Normandy on to the Siegfried Line and waded through the snows of Belgium during the Bulge.

Now these men are home. They wanted to live as their fathers had lived, as freemen in a free Nation, paying a fair share of taxes to help maintain a Government that belonged to them.

Maybe there is still to be a frontier—maybe in the scheme of things to come—this broad expanse of high-plains country will again be the last frontier of freemen who will continue to wear the "light Stetson hat" as the badge of courage.

To my colleagues, I commend to you a resolution recently passed by the Kansas Livestock Association. This resolution shows what the stockmen are thinking about. These men just know that there is no such thing as security in a bankrupt Nation.

The resolution is as follows:

HOLDING TO FREEDOM

There impends today a stupendous threat which so menacingly overshadows the future of our country that we Kansas stockmen, of all shades of political belief, feel it our duty to speak out in unmistakable terms.

The threat lies in the fact that our country—without opportunity for conscious choice on the part of its people—is rapidly drifting toward the consummation of a false concept—contemptible to free men—the socialized state.

Tokens of this danger are everywhere and undeniable. The growing power and expansion of a wasteful Government; the colossal public debt; the heavy burden of taxation, designed in large part to redistribute the wealth of the people; the ridiculous attempt—by dictating wages, hours of labor, prices, etc., and by innumerable other false expedients—to substitute an artificial economy for the natural economy which alone can function in freedom; the gradual assumption by the state of financial responsibility for every hazard incident to the life, labor, infirmity, and old age of all—hazards which must be personally met and borne by every human being who has the instinctive will to survive and the inherent impulse to be free; the arraignment of economic and social groups, one against the other, in denial of the obvious fact that their interests are identical and can be logically promoted only by application of the Golden Rule; and numerous other kindred concepts, similarly inspired and equally false.

Government produces nothing and has no means by which to support these false and destructive policies except by exacting from its citizens the fruits of their labor. The present semblance of "prosperity" is only the byproduct of the most terrible and destructive war that ever afflicted the world and is now maintained only by artifice implemented by folly, fear, and dire forebodings.

The course our Government is now taking, unless it is prompty reversed, will inevitably lead to national bankruptcy. In a vain effort to prolong a specious sense of security, more similar expedients will be applied until we all become mere numbers in a completely socialized state: therefore be it

Resolved, That we, the members of the Kansas Live Stock Association, in convention assembled at Topeka, Kans., March 16, 1950, deplore the fallacious policies that are beguiling our country into socialism, that we censure and condemn those in public office who support or tolerate these policies and that we call on all patriotic Americans to denounce them and to work energetically and courageously for the reestablishment and maintenance of free and competitive enterprise and the restoration of the Republic.

Our decision to take this stand is supported by the firm conviction that the policies we here and now condemn are unrighteous and immoral in that they proceed in shameful denial of the inherent nature of man and in impious contempt of nature's eternal laws.

Respectfully submitted.

Richard Robbins, Pratt, chairman; George Andrews, Kanopolis; Herb Barr, Leoti; J. W. Birney, Bucklin; W. J. Brown, Fall River; C. O. Heidebrecht, Inman; Dan Jackson, Coldwater; Earl Kielhorn, Cambridge; O. W. Lynam, Burdett; J. Willard Olander, Kansas City; Wayne Rogler, Matfield Green; Conlee Smith, Wichita; resolutions committee.

I also set out herewith an editorial by Mr. A. L. Shultz of Topeka State Journal. His comments on this resolution are most timely:

TOPEKA, KANS., MARCH 22.—Kansas stockmen in Topeka last week wrote a new Magna Carta that ought to be printed on the fly leaf of every text book in every classroom in America.

More than 600 men who produce beef steaks for hungry people around the world sat in a hall and cheered a pronouncement that "the course our Government is now taking, unless it is promptly reversed, will inevitably lead to national bankruptcy." One man in the hall voted "No."

Those men who take their winnings and their losings in the stride of pioneers who made America great, disdained the dole. They asked no favors. They wanted their chance—were willing to fight for it. They are not afraid of the elements. They have faith in the laws of God, but contempt for the laws of politicians who seek votes and self-glory.

That's the story of it all. Those cowmen, who are the bravest most rugged individuals, the most forthright characters to band together in these days of confusion and distress, took their stand without blinking an eye. Of paternalistic policies as presented from Washington, the stockmen almost held their stomachs as they wrote words of derision and contempt. For men in public place everywhere who subscribe to doctrines of a welfare state where man does not enjoy the fruits of his labor, those characters from the feed lots and pastures snorted holy condemnation.

"We call on all patriotic Americans to denounce them," those almost righteously indignant individuals declared in a resolution that was as refreshingly simple and honest as it was astoundingly bluff. Not a politician in all this big, broad land will fail to understand every word of it. Dan Casement, in his most rugged manner, never more daringly denounced regimentation of the people who feed the world.

Hundreds of conventions come to Topeka. Most of them sound off with words of glittering generalities. Not so these growers of beef steers and their cousins. They recited a principle and a policy that was as solemn and sincere and sacred as defined in the foundation laws of the land. Republicans and Democrats alike had given 2 days and 2 nights to the writing of that declaration of principles. The sponsors believed in it, were ready to fight for it. Somehow, it seems, the pronouncement should echo in the Halls of Congress.

There's none of the "me-tooism" of succeeding Republican national platforms in that resolution which keynoted the statement from the stockmen's meeting. There wasn't a word of pussyfooting, office-seeking applesauce in any line. It was a call to arms by a group of strong men of both major parties. Richard W. Robbins, of Pratt, a Republican leader, was chairman of the committee of 12 men. Herb J. Barr, former Wichita County legislator and candidate for the Democratic nomination for United States Senator, helped draft the resolutions. No member of the committee protested a line of the document. No stockman in the hall took the floor to challenge an utterance.

Nothing comparable in strong, concise indictment of a philosophy of government has come from any group of people assembled in Kansas in this generation. So this column is breaking a custom and a practice to present the text of the resolution. We hope it will afford guidance and inspiration to people everywhere who rebel against Government dictates for a life which defies the laws of nature. Try these words for comfort and solace:

"There impends today a stupendous threat which so menacingly overshadows the future of our country that we Kansas stockmen of all shades of political belief, feel it is our duty to speak out in unmistakable terms.

"This threat lies in the fact that our country—without opportunity for conscious choice on the part of its people—is rapidly drifting toward the consummation of a false concept—contemptible to freemen—the socialized state.

"Tokens of this danger are everywhere and undeniable. They include the growing power and expansion of a wasteful government, the colossal public debt, the heavy burden of taxation, designed in large part to redistribute the wealth of the people, the ridiculous attempt—by dictating wages, hours of labor, prices, etc.—and by innumerable other false expedients, to substitute an artificial economy for the natural economy which alone can function in freedom; the gradual assumption by the state of financial responsibility for every hazard incident to the life, labor, infirmity and old age of all—hazards which must be personally met and borne by every human being who has the instinctive will to survive and the inherent impulse to be free; the arraignment of economic and social groups, one against the other; in denial of the obvious fact that their interests are identical and can be logically promoted only by application of the Golden Rule; and other kindred concepts, similarly inspired and equally false.

"Government produces nothing and has no means by which to support these false and destructive policies except by exacting from its citizens the fruits of their labor. The present semblance of prosperity is only the byproduct of the most terrible and destructive war that ever afflicted the world; and is now maintained only by artifice implemented by folly, fear, and dire forebodings.

"The course our Government is now taking—unless it is promptly reversed—will inevitably lead to national bankruptcy. In a vain effort to prolong a specious sense of security, more similar expedients will be applied until we all become mere numbers in a completely socialized state.

"We deplore the fallacious policies that are beguiling our country into socialism. We censure and condemn those in public office who support or tolerate these policies and we call on all patriotic Americans to denounce them and to work energetically and courageously for the reestablishment and maintenance of free and competitive enterprise and the restoration of the Republic. Our decision to take this stand is supported by the firm conviction that the policies we here and now condemn are unrighteous and immoral in that they proceed in shameful denial to the inherent nature of man and in impious contempt of nature's eternal laws."

That intrepid band of cowmen harpooned the Federal Department of Justice for disruption of the free channels of marketing in beef through its antitrust suits against

A. & P. store chains which annually distribute millions of pounds of meat. The Brannan plan was denounced as an attempt to "subsidize consumers, rich and poor alike, and eventually necessitate Federal control of all agriculture. We are opposed to the proposed program," is was asserted, and "we consider it unsound economically and entirely impractical, and we urge Congress to reject it."

Some of the State's most prominent and successful stockmen were on the committee with Robbins and Barr and aided in drafting the fearless pronouncement of principles. They included: George Andrews, Kanopolis; J. W. Birney, Bucklin; W. J. Brown, Fall River; C. O. Heidebrecht, Inman; Dan Jackson, Coldwater; Earl Kielhorn, Cambridge; O. W. Lynam, Burdett; J. Willard Olander, Kansas City; Wayne Rogler, Matfield Green; and Conlee Smith, Wichita.

Valley Forge General Hospital

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. GAVIN. Mr. Speaker, to close Valley Forge General Hospital in Pennsylvania on July 1st, as anticipated, in my opinion would be a very grave mistake. I want to be recorded as vigorously opposed to such action.

Certainly, we cannot indorse the hasty withdrawal of needed medical facilities from servicemen, veterans, retired personnel, and dependents of servicemen, without any provision being made to meet these needs.

In particular, I wish to invite attention to the situation at Valley Forge General Hospital, located at a historic site just outside of Philadelphia, Pa. That hospital has a capacity of almost 2,000 beds and cost the taxpayers some $11,000,000 when it was built in 1942–43. To replace it at current costs would take from forty to sixty million dollars depending upon the location and type of construction. Valley Forge General Hospital has heretofore served the Army, Air Force, and veterans in the Philadelphia area, and is currently meeting a very real and substantial need. Yet it is proposed that this hospital be closed down, without replacement, and possibly before the new veterans' hospital in Philadelphia will be in operation. In addition to providing general hospital care for approximately 100,000 troops in this densely populated area, it is the principal center of ophthalmologic or eye surgery, and practically the only one providing specialized diagnosis and treatment for liver diseases. These programs might possibly be carried on elsewhere, if facilities were available; but such relocations would involve substantial delay and major costs before they could become fully effective. To close the Valley Forge General Hospital at this time, along with the others slated for inactivation, would leave the Army and Air Force with only one general hospital in the United States east of the Mississippi River; namely, Walter Reed, in Washington, D. C.; and this is already overcrowded. Inactivating Valley Forge General Hospital will mean that the Army and Air Force will lose substantially all of their existing facilities for treating hepatic-metabolic cases, over 80 percent of those for plastic surgery, and two-thirds of existing capacity for specialized eye surgery. These specialized programs, which are a necessary part of first-class medical and surgical care for personnel of the armed services, cannot be reestablished in small isolated hospitals, nor can the latter afford necessary training and experience in such specialties to young medical officers of the services.

In short, closing Valley Forge General Hospital at this time achieves economy only at the expense of necessary medical and surgical care for servicemen, veterans, and dependents. In reaching this result, it totally disregards the taxpayers' $11,000,000 investment in the facility, the specialized treatment and training programs carried on there, and the very real need of maintaining this installation in operation until more nearly adequate facilities are available for veterans' care in that area.

Unpartisan Policy

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of March 27, 1950:

UNPARTISAN POLICY

The strong ebb tide of economy swirling through the House of Representatives which threatens to sluice away $500,000,000 from the funds requested by President Truman for the continuation of the Marshall plan had its beginning in a vacuum created for partisan political purposes while the chief spokesman for the bipartisan foreign policy, Senator ARTHUR H. VANDENBERG, has been away from the Senate Chamber because of illness.

The warning from President Truman that a slash in the Marshall plan funds would bring the peril of world war III closer may not be heeded by those who press for economies—regardless of prudence and foresight. It is no accident that Senator VANDENBERG has made an appeal to both parties to support the European recovery plan and to create an unpartisan commission to recommend a long-range economic and peace policy for the United States.

The Michigan Senator's warning that it would be unwise to lose sight of the forest of Soviet aggression because of the trees of incomplete achievement of the Marshall plan drives home the fact that 2 years ago a Republican Congress enacted the Marshall plan at a time when the United States was threatened with isolation in a communized world.

President Truman must of necessity consider foreign affairs from the standpoint of their effect on domestic policies. It is fortunate that a statesman of the breadth of vision and stability of character of Senator VANDENBERG has made the forthright declaration that we bought temporary security at a dark hour in our history and swept communism away from the western shores of Europe. Otherwise, the whole question of our present security might fall into an abyss created by a niggardly and imprudent economy of a bloc chiefly concerned with creating an issue for the congressional campaign of 1950.

The proposal of a commission to study and recommend an economic and peace policy to carry the gains of the Marshall plan beyond 1952 when our investment in Europeap stability comes to an end is one of the most statesmanlike acts of Senator VANDENBERG's long career. His choice of a title is particularly felicitous. Nonpartisan is generally less emphatic than unpartisan. Unpartisan means not partisan, and such a commission should be just that.

To trifle with our foreign affairs with baseless charges and partisan pleadings is dangerous at any time, but laden with dire peril today. The Marshall plan is a keystone of our present foreign policy. To chip away any part of it might bring the whole bastion against Communist expansionism down in a heap of rubble.

Pacific Mills

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include a radio address delivered by me over Station WLAW, Lawrence, Mass., upon the celebration of the one hundredth anniversary of the Pacific Mills of Lawrence, Mass.:

Two men stood on the banks of a New England river many years ago and they were thrilled by what they saw. In those days, the picture was that of the river, the forests, and meadows which stretched away from it as far as the eye could see, and a few scattered farmhouses.

It was hardly an exciting scene on the surface. But these two men were looking not only with the organs of physical "seeing" but with the superior foresight and vision of their "mind's" eyes.

And what they saw was a tremendous opportunity.

It would take effort and risk and persevering courage to bring the dream into being. It was fortunate that these men, Daniel Saunders and Abbott Lawrence, had the ability and the character to do the job. For their example was an inspiration to the long line of managers and workers who followed them and established our community as a leader in the world of textile manufacturing.

They saw not only the energy of a great river which could be utilized to power machines that would make cloth and provide jobs and earn profits for themselves. They were businessmen, but they were also men with a conscience. Although competition from foreign producers who had an established market in the United States was keen, and although they had to weather various

national economic crises, these men had a heart for their workers.

The Pacific Mills, which they founded, not only won ceremonial honors and exposition medals for the quality goods which it produced, Pacific saw, long before others, that something would have to be done for the mutual security of employer and employee.

With thousands of workers massed in this industrial community and dependent upon one major industry, many suffered whenever the wheels of production slowed down.

One of the finest tributes that can be paid to Pacific is that it faced these problems realistically. It is one of the few mass-production industries in which there is a minimum of labor-management strife. Long, long ago, before the days of labor unions and collective bargaining, the men who guided Pacific took a personal interest in their workers. That has paid extra dividends in understanding and teamwork.

In 1854, when such things were unheard of, and at a time when Pacific was fighting for its financial life, the company bought a 2,000-book library for the benefit of its employees.

Abbott Lawrence, worn out by his exertions, was dying. He called one of his associates to his bedside and gave him these orders, and I quote: "Remember, what I want is not only a mill that can make a profit for its owners and pay wages to its workers. I want to prove something more with Pacific Mills—that a business can afford to recognize the right of all men and women who work for it to better their own lives while they better the business, to buy homes and bring up their families in a decent atmosphere and educate themselves."

Pacific has stuck to that enlightened policy ever since.

In the intervening years, there have been difficult periods for management and workers alike. It is reasonable to say that these have been caused by economic forces beyond the control of anyone belonging to the corporate family known as Pacific Mills.

Several years ago we celebrated the one hundredth birthday of Lawrence as a city. Today we rejoice on the similar anniversary of its younger brother, the Pacific Mills. Both grew up together, and both will continue to help one another out of filial loyalty to the proud heritage which they share.

Such a long record of service is proof that Pacific advances with the times.

The new century of its life dawns with every promise that this humane and successful enterprise will still be catering to the needs of the people in A. D. 2050.

Construction of School Facilities on the Hoopa Indian Reservation

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. SCUDDER. Mr. Speaker, I introduced in the first session of this Congress a bill to authorize construction of school facilities on the Hoopa Indian Reservation in Humboldt County, Calif. This bill received the full support of the Bureau of Indian Affairs and the Bureau of the Budget. It was approved unanimously by both Houses and signed by the President.

An expenditure of $800,000 was proposed in the 1951 budget, but the House Committee on Appropriations has seen fit to strike this sum from the omnibus appropriations bill, H. R. 7786. It has done so with the excuse that California has assumed the responsibility of educating all the children of the State. This tells but half the story. It is true that California assumes the expenses of education, but there is no provision whereby the State can construct a school building at Hoopa. The land of this reservation is tax-free, and there is no taxable property within miles. Present school conditions at Hoopa, serving a community of 3,700 Indians, are intolerable.

By failing to appropriate funds to construct these school facilities at Hoopa, this Congress would be shirking its responsibility toward the American Indians. It would thereby be abandoning a policy established years ago to provide for their welfare.

In today's mail I received a letter from a grade-school teacher at Hoopa describing conditions as they exist today. Its plain language tells the story of the needs so well that I wish to insert it in the RECORD for every Member of Congress to read. Following is the letter:

HOOPA, CALIF., *March 25, 1950.*

HUBERT SCUDDER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SCUDDER: Please, Mr. SCUDDER, do all that you can to reinstate the bill which would give Hoopa school district, Humboldt County, Calif., money for a new schoolhouse which the community needs so badly.

The building that is being used at the present time is a three-story affair. Fourth-grade pupils are housed on the third floor and on north side of the building. Artificial lighting is necessary.

The eighth grade is housed in the basement; again artificial lights must be used. Nothing else to be done under the present conditions. The rooms are all overcrowded and in the beginning the building was not planned as a school building.

Trusting that this will receive your personal attention immediately,

I remain respectfully,

MARY E. HANNAH,
Fourth-Grade Teacher.

Interview With Carl Vinson on Military Affairs

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. PRESTON. Mr. Speaker, as we become more deeply involved in a cold war more concern is expressed about our state of military readiness. It is reassuring to the Nation as a whole to know that our national defense affairs are constantly under the careful scrutiny of the far-sighted chairman of the House Armed Services Committee, the Honorable CARL VINSON, of Georgia.

A recent exclusive interview given Mr. John T. Carlton, outstanding journalist for the Cox newspapers, reflects Mr. VINSON's acute knowledge of our military affairs, and in an article written after this interview by Mr. Carlton, our distinguished chairman and great American sounded a very timely warning which should be called to the attention of Americans everywhere. The article is as follows:

"LAZY" UNITED STATES INVITING DANGER, VINSON SAYS—NATION MUST STAY READY TO KEEP PEACE—FIGHTING WAR WITH REDS NOT INEVITABLE, GEORGIAN DECLARES

(By John T. Carlton)

WASHINGTON, March 18.—Georgia's CARL VINSON, the congressional iron man of the Armed Services and probably the Nation's outstanding authority on the subject, spoke Saturday from his 35 years of experience to assure the Nation it has "acceptable" security and a formula for permanent peace.

In an exclusive formal interview with this reporter, the long-time House armed services leader discussed calmly and dispassionately the military aspects of international peace problems, professional disagreements among military leaders, the issue of civilian control of the military, and current requirements for national preparedness.

EXPERT ON SERVICE PROBLEMS

In incisive language born of his long-time service in Congress and his virtually judicial authority over the services for many years, he explained in everyday language the significance of problems which have stirred the Nation under postwar unification.

Mr. VINSON, a lawyer who has been a judge and Georgia House speaker pro tempore, has been in Congress since 1914 and is the fourth ranking Member of the National House, in years of service. Most of those years he has supervised the services. For 16 years he was naval affairs chairman and during World War II he directed the building of the greatest Navy the world has ever seen—the Navy which won the greatest of all victories. After World War II, he helped write the unification law and he has directed the shaping of congressional policies in legislation making the United States a force capable of supporting militarily the Nation's position of preeminence in world affairs.

"FAT AND LAZY" DANGER

Mr. Vinson believes unification of the services is here to stay—but he says professional differences such as those between the admirals of the air arm and the air generals will and should continue as "healthy," developing "soundest national defense." He does not believe war with Russia is in any sense imminent, or that it ever need develop, but he warns that Americans are in real danger—largely from themselves and temptations to the "fat and lazy" life.

He believes the Nation currently has "extremely able leadership" in the Pentagon, and he does not believe there is any desire in the military to duck civilian control. While foreseeing no war, he cannot visualize any early justification for substantially reducing armed services below present strength—and costs.

INTENT OF CONGRESS

He makes it unmistakably clear that Congress intends to remain in consultation on military matters at the earliest stages and at the highest echelons. Consultations on the White House-Pentagon-congressional level are everyday affairs but in a continual tug of war.

The Georgian does not dismiss as insignificant the recent displays of temper and questionable judgments in the Navy-Air Force fight over air power—a scrap which has captured the headlines more than possibly any other congressional subject during the past year. But he provides a salty summation which may be an epigram.

"The sad truth," he says, "is that no one knows which side is right."

Mr. Vinson was presented a series of questions relating to security and his opinion of the prospects of war.

ACCEPTABLE SECURITY

"Our present strength," he says, "with some areas of weakness that I would like to see corrected provides acceptable security."

He agrees with Defense Secretary Louis Johnson that, if attacked, the United States can strike back within the hour.

"I am not as sure as he," Mr. Vinson adds, "that we can strike back 'effectively'—for here we enter again into a series of variables. I am more interested in whether or not we can ward off effectively the first enemy attack than I am in whether or not we can strike back 'effectively' immediately. The ability to strike back at once is mainly for the purpose of keeping the enemy from starting a war; but should he go to war anyway, I want to be sure that his opening attack cannot disastrously cripple us and our allies."

REAL DANGERS

The real dangers for the United States in the world today?

"Most basically, I think we need a more vigorous foreign policy to carry the initiative in world affairs and to place Russia in a position of countering instead of keeping us eternally in that position. There is the danger that as a nation we may get tired of providing for defense—a real danger in this country, because we do not like the military very much.

"There is the danger of getting isolationist once again—and signs of this are multiplying in Congress and elsewhere. There is the danger of getting fat and lazy—refusing to put the requisite zeal and determination in our relations with the rest of the world, especially with those vital and vulnerable areas in Asia where the local governments are likely to go by default to a despotic, hostile system unless we do more than we are today.

"There is the danger of letting our guard down to the extent that we might once again be caught napping some Sunday morning by atomic bombardment of our industrial and governmental areas, by guided missile attacks from submarines on our ports and harbors and coastal cities, by sabotage, by sudden march into western Europe. Nothing truer was ever stated than 'Eternal vigilance is the price of liberty.' The danger is that we will forget it."

Mr. VINSON says he sees no war in the near future—"a fighting war I mean." But—

"The Communists have been at war with capitalism for 30 years. We are at war now, in many respects—but not in a fighting war. I see many reasons why there is not likely to be a fighting war for several years at least—and if we are vigorous enough internationally I believe we can avoid war entirely."

WAR WITH RUSSIA?

Are there reasons why we should ever go to war with Russia?

"Yes, there could be reasons. * * * Should she start hostilities, for example, we would have to go to war. Moreover, I do not believe in peace at any price. The situation could arise that would demand armed resistance to excessive Russian pressure here or there in the world.

"But I do not think that Russia will intentionally begin a war—not soon, at least. So the only real possibility for war that I know of would be as the result of some rash act, unpremeditated, that might inflame passions on both sides.

"So long as we stay reasonably prepared for war, and so long as we stand firmly where we must, I see no reason for war to come that would require the use of direct military force.

"Some say war with Russia is inevitable; that we should attack before the Soviet can. I vigorously deny both statements. War is not inevitable—if we exert ourselves vigorously enough today—and we should not attack. Should we begin the war by a sneak attack, the moral fiber of our Nation would be destroyed.

"It is an academic subject anyway. The people would not permit it, and would respond violently toward any President who attempted it, in my opinion.

"The services now have a strength of about 1,500,000 men—630,000 in the army, 460,000 in the Navy and Marines, and 416,000 in the Air Force.

"I see little likelihood that the forces can be reduced to any important extent for some time into the future. The way things are going internationally, the converse looks to me to be more likely over the long haul."

CUT-BACKS CITED

But there already have been some cutbacks—and the 1951 budget reflects as a result augmenting of Reserve and National Guard training.

"This is even true in the Navy, where very sharp reductions have been imposed in nearly all areas. I should expect this process to continue, but not to accelerate, because the standing forces cannot be very markedly reduced."

About the training of the civilian components, a special subcommittee of the House Armed Services Committee is set up to study complaints of the Reservists and Guardsmen.

"It is likely that some inquiry will commence before this session of the Congress adjourns. I do not want to prejudice its problems or anticipate its conclusions."

But about the controversial proposal to merge the Army's National Guard and Reserves.

"The National Guard has traditionally had the edge over the Reserves in the Army, and now in the Air Force. Why? Because the Guard has political support in each State in the Union and can demand the right to be heard within the services. The services have had a 'federalized Reserve' for 30 years, but it has been a sad record. When you lay these two facts side by side, I fail to see any basis for the contention that the national defense would be benefited by the federalization of the National Guard. Quite the contrary, in my opinion."

With respect to unification and the multifaceted problems created, Mr. Vinson says discussion must be based upon definition.

WORKING REASONABLY

"No single Chief of Staff, no merger, no elimination of the Congress has yet occurred wholly; some would say that is success, some would say that is failure.

"If you mean by 'unification' a blending of effort of the three expert military services and a concentration of civilian control throughout the Military Establishment, then I would say that unification is working reasonably well. * * * It needs amending, in my opinion, to insure a properly balanced defense program and to keep the Congress properly a part of the national defense team.

"I think the Congress will never return to a loosely coordinated organization of the armed forces, and to that extent I believe that unification—whatever it means—is here to stay. It is less certain that the Congress will not at some future date do something to make a bit more certain that the Congress is kept in the picture on national defense problems and to keep joint planning among the services on a reasonably high level instead of trickling so far down that the uninformed are making vital decisions.

"I know of hardly any person in public life or in the services who opposes reasonable coordination and control of the three services. But the trouble is in deciding what is reasonable. That is a matter of judgment. I do not think this kind of difficulty will ever be eliminated; it should not be."

Will unification save money? And is it not actually a triplication instead?

EXTREMIST LEADERS

"Unification will assuredly save money. It already has, and more savings will follow. Savings, however, are a byproduct—not the goal of unification. Unification's goal is an efficient national security program, soundly based—a blending of armed forces capabilities to give us the best defense possible. To the extent that this produces savings, to that extent we are better off; but security and not economy is our main objective.

"We have both unification and triplication under the unification act. Actually, I think there is a real question as to whether or not it will be more or less costly to operate the armed forces under the new organization than under the prewar system.

"All of the services are having to maintain vast overheads in Washington to effect all of the coordination required nowadays before decisions are reached. All of this is expensive and should be charged off against the claimed savings under unification."

Mr. VINSON denies unification resulted from the Air Force fight for a separate service.

"The air leaders of the Navy and Air Force are simply in complete disagreement on fundamentals of the art of warfare. That disagreement would have continued regardless of unification. Of course, extremists in the Navy and Air Force have complicated the problem—Air Force extremists doing all manner of things to diminish the public emphasis on the Air Force. But basically, the trouble grows out of a fundamental disagreement, honestly produced—inevitably produced because of different training—on the best way to fight a war.

"The sad truth is that no one knows which side is right."

EXCEPTION TO PRESS

Mr. VINSON takes exception to the popular headlines which informed the public of "revolt of the admirals" and interservice "bickering and quarreling."

The House Armed Services Committee was the aggressor in last October's sensational Capitol Hill clash between the service leaders.

"As to what happened before the hearings, however, you are at the old question of who comes first, the chicken or the egg, and which is the chicken and which is the egg. In my opinion, there were both defenders, both aggressors. Both right, both wrong. Probably the first stone was not cast by either side; I suspect it was the Italian duetto."

"The results of the public argument of the services have been extremely healthy, in my opinion. Again I say that a basic disagreement exists, no matter whether the waters are calm on the Potomac or not at any given time, and the disagreements cannot be removed by any fiat by someone. Things like this should not be resolved by someone issuing an order, so the public would get an idea of false agreement. The issues are too basic to the Nation's security to have them handled in this fashion.

"The more public information, the sounder public decisions. I have no doubt that the Department of Defense benefited a great deal from the committee's October hearings, and that we will have a sounder national defense as a result."

About Admiral Louis Denfeld, removed as Chief of Naval Operations:

"Admiral Denfeld has not 'rebelled' against a law of Congress. He has criticized, as have many others, the administration of the law. Whether or not he would be subject to discipline on that score is not properly an area for comment. If someone should think so, I believe it would be most difficult to prove.

"Service disagreements must not be labeled 'bickering' and 'quarreling.' The disagreements are professional disagreements; the public interest requires that such disagreements must not be hushed up or forced into the underground, or stopped by official

ukase. There is wisdom in counsel, and I firmly believe that the soundest national defense will come from free expression of views."

The Name Without the Game

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. MILLER of Maryland. Mr. Speaker, the Times-Herald of Washington carried a news article yesterday, in which it quoted the Congressional Quarterly as reporting that scores of residents of the Washington area contributed thousands of dollars to the Democratic national campaign last year and that in contrast, only one person in this section was listed as giving a $1,000 donation to the Republicans.

Under such conditions one wonders how the propagandists are still able to persuade many that the GOP is dear to the hearts of the "special interests" and the group the late President Roosevelt used to characterize as the creatures of entrenched greed.

It grows more apparent each election that these "fat cats" have migrated, so far as their campaign contributions are concerned. About all the Republicans get from most of them is some lip service and token hand-outs, now and then.

But their memory lingers on, seemingly with nine lives in true feline tradition. The rabble-rousers still denounce the Republican Party for harboring economic royalists, but the royalists seem to have folded their tents and silently slipped over to the opposition.

Under leave, I include an editorial from yesterday's edition of the traditionally Democratic Baltimore Evening Sun:

THE OTHER HALF

Once upon a time, long, long ago, the Republicans had all the fat cats and the Democrats had the lean and hungry look. Now, of course, the GOP dines frugally on box lunches to raise cash and reflect the common touch while the Democrats eat high on the hog at $100 a plate to fill their war chest and celebrate victories achieved and hoped for in the future. To cap this state of affairs, the GOP comes through with an admission tax on their folksy little rallies while the party in power revels untaxed. O tempora. * * *

In 2,000 words which we may assume were well and carefully chosen, the chief counsel for the Internal Revenue Bureau has ruled that no Federal tax applies on the Jefferson-Jackson day dinner. This has caused the loyal sons of the elephant to become very angry indeed, and not without cause. Out of the paltry returns from their brave little box supper they gave Uncle Sam upward of $2,000. If the Democrats paid the same percentage on their opulent festival, the Treasury would be enriched by more than $100,000.

Internal Revenue officials have declined to make public the ruling which they handed down. It is undoubtedly ingenious in nature and may even be reasonable and right. It is, however, hard if not impossible not to sympathize with the box-lunching Republicans. Apart from kindly feelings for the mighty who have fallen, there is the practical point that it might do the Democrats some good to pay a full tax bite on their affair. It would remind them how the other half lives.

The Most Certain Things of Life

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. HOLIFIELD. Mr. Speaker, if you should ask a southern Californian to name the most certain things of life, his reply might surprise you. It is unlikely that he would mention good weather. More likely, his answer would go something like this: "Death, taxes, and a water problem."

There is good reason for inclusion of the latter in such a statement. Water today is the greatest economic problem facing the soaring population and expanding industries of southern California. And today southern California's water supply is dangerously menaced by H. R. 934 and S. 75, now before Congress.

If you look at a topographical map you will see a narrow coastal plain along the southernmost coast of California. In this small area, which contains only 10 percent of the land area of the State, live approximately half of the State's population. It is estimated by the United States Census Bureau that close to 10,500,000 persons now call California their home. More than 5,000,000 of these Californians are crowded into the small area of the coastal plain along the southern coast.

An easterner might well be expected to take water for granted and might not think of it as he looks for the first time upon the luxuriant groves, vineyards, fields, parks, and gardens of southern California. The water problem of easterners too often takes the form of a fight to keep it from flooding their farms or cellers.

The southern Californian, however, has every good reason for including a water problem among the most certain things of life.

Although half the population of California live in the southern coastal plain area, this area has only 1.4 percent of the total water resources of the State. The other 5,000,000 Californians, scattered throughout the State, have available 98.6 percent of the State's water resources.

The southern California coastal area is the world's largest and most heavily populated oasis, and many years ago its natural local water resources were largely exhausted. Today, every drop of water to be used by new residents, new industries—every type and kind of expansion or development—must be imported.

Where is it to come from? It can only come from one place, and that is the Colorado River, a comparatively small stream that is the subject of the most serious water controversy in western history.

The Colorado River forms the border between California and Arizona, 250 to 350 miles eastward from the Pacific coast. Between it and the coast is the great Mojave Desert, an immense area of barren mountain ranges and alkaline valleys, with very little natural water.

From the days of the Spanish padres to the turn of the present century, southern California depended entirely on local water supplies. These included a few temperamental rivers, which for a great part of the year were dry washes, and underground water brought up with pumps.

But more than 40 years ago Los Angeles, for instance, was obliged to go far afield for water necessary to support it as a swiftly growing metropolis and Pacific port. The most available water at the time was found in the Owens Valley, 250 miles to the northeast, and the people of the city shelled out $23,000,000 to build the Owens River Aqueduct.

Only a few more years went by before it was realized that this supply would soon be insufficient. Now other cities and districts joined Los Angeles in a new search for water. The last available source was found in the Colorado River. Contracts were signed with the United States Government permitting southern California to take the needed water from the Colorado, and once more the people mortgaged their future to underwrite the building of an aqueduct. This time a bond issue for $220,000,000 was authorized, and the great Colorado River Aqueduct was built. It was completed just in time to prevent a chaotic state in southern California during the record-breaking wartime expansion.

Despite the continued influx of new people, now averaging 8,000 a month, southern California would have reason to feel sure of adequate water supplies if it were not for one thing.

That is the current attempts of the State of Arizona to take an enormous amount of water from the Colorado River for a gigantic Arizona project. According to the United States Bureau of Reclamation there already is a deficit in the Colorado River. That is, the projects already constructed or authorized by Congress will need more water than the quantity available to the States of the lower river basin. Therefore, any water Arizona takes in addition to her projects which are already built or under construction would have to come out of the share needed by projects that are already operating.

Arizona wants to take it from California, and has asked Congress to repudiate the contracts California has with the Federal Government for Colorado River water.

In a 1949 study of the State's water problems, the University of California said:

> Most of the (water) resources are within the State. Southern California, however, must rely on the Colorado River, which supplies water originating mostly outside California. California has a limited share of Colorado River water.

It is not only the future that creates a water problem in southern California.

Despite the critical situation, the average daily consumption has sharply increased.

In 1940, residents of Los Angeles used an average of 120 gallons a day. Either they were much cleaner or much thirstier, perhaps both, in 1948, for in that year they averaged 135 to 140 gallons per day each. The people of Beverly Hills outbathed and outdrank the Los Angeles residents, however, by establishing a record daily consumption of 270 gallons for every man, woman, and child.

What is going to happen in southern California?

All future residents of southern California, all future development and progress, must depend entirely on water from the Colorado River, water awarded to southern California under contracts with the Federal Government. If Arizona should succeed in securing a large part of this water, southern California would face a desperate situation. Without the present allotment of Colorado River water no new residents could be sustained in southern California, no new industries could be built to create employment, and it is probable that a large percentage of the natural increase of the population would be forced to leave.

The southern Californian is not joking when he includes his water problem with death and taxes as sure things in life.

That is why California is asking for the defeat of H. R. 934.

United Labor Unions?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Christian Science Monitor, of March 29, 1950, written by Robert M. Hallett:

LABOR PULLS TOGETHER

NEW YORK.—Periodically the question arises: Can the big American labor organizations come together under one roof again?

Several local, national, and international developments in recent months bring that question to the fore once more. Even if the American Federation of Labor and the Congress of Industrial Organizations do not reach the difficult goal of organic union there is growing evidence that they are headed towards closer cooperation on the political front at least.

Factors that have brought the big labor giants closer together have been:

1. The teamwork established between them in formation of the new anti-Communist International Federation of Labor in London.

2. The successful combination of political forces in New York City in the elections last fall. Labor was given much of the credit for the victories of Mayor William O'Dwyer, and Senator HERBERT H. LEHMAN. This subsequently stimulated the labor groups to form a permanent joint political organization, and has stirred talk of national labor political unity.

3. The closer cooperation developed through their common opposition to the Taft-Hartley law.

4. The purge of Communists and pro-Communists in the CIO, making closer relations with the CIO more acceptable to the conservative AFL.

Particularly since passage of Taft-Hartley, labor has felt it must strengthen itself politically. Philip Murray, CIO president, recently declared: Labor will be hit by an economic H-bomb if congressional candidates it opposes are elected this fall.

He pleaded for backing of prolabor candidates by labor funds and assistance. He compared contributions of unions to the CIO's political action committee to union dues in importance. Both are necessary to protect the interest of the laboring people, and improve their living standards, he said.

In New York City the United Labor Committee has been set up to carry forward on a year-round basis the political alliance that was forged temporarily last year. The new committee has full jurisdiction over all political matters affecting the city, including the conduct of relations with city hall, the formulation of views on pending legislation, and the approval of candidates for public office.

The first target of the new political combine will be the State elections this fall. Should Gov. Thomas E. Dewey run, as is expected, the new group will oppose him bitterly. Labor spokesmen have indicated the line of their campaign. The issue, they say, will be between the "welfare state" which they endorse and the "special interest state" of the Republicans.

A somewhat parallel AFL–CIO political movement is under way in Connecticut. Organized labor there has agreed to join forces for next November's elections. It is no secret that the prime objective of the labor campaign will be the reelection of Gov. Chester Bowles and other Democratic officeholders.

From the New York experience it is apparent that while labor is tending toward political teamwork, unanimity is not and probably never will become total. Not long ago the New York Central Trades and Labor Council of Greater New York (AFL) removed a member of one of the International Ladies Garment Workers Union from its membership for not conforming to the political program of the council.

David Dubinsky, ILGWU president, appealed to the national AFL to rescind the council's action and his words sounded a note of rebellion against the imposition of political ideas from the top down in labor:

"The principle is whether a central labor union, or for that matter, the executive council (of the AFL) itself, has the power or the right to compel uniformity of political thought and action by all council members."

Furthermore, many left-wing former CIO unions will line up behind the Progressive Party.

For the most part these defections will be relatively minor and labor's growing political coalescence may greatly increase its political power.

The Missouri Basin

EXTENSION OF REMARKS
OF
HON. CHAN GURNEY
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, March 30 (legislative day of Wednesday, March 29), 1950

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Missouri Basin: Growth and First Harvest," delivered by William E. Warne, Assistant Secretary of the Interior, at the Farmers' Day Celebration, held at Chamberlain, S. Dak., on February 28, 1950. The address exceeds the length of speeches generally authorized to be printed in the RECORD without a statement of cost. However, it is of such a vital character, setting forth the plan of the Department of the Interior, and its policy with regard to distribution of electricity and other benefits coming to a 10-State area by virtue of the development of the Missouri River program, that I ask that it be printed in full at this time. I wish to compliment the Assistant Secretary on his able address. I approve of the plan generally, as it has been outlined and specifically as herein set forth.

I am advised by the Public Printer that the manuscript is estimated to make 2⅓ pages in the RECORD, at a cost of $191.34.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to be with a Missouri River Basin audience tonight. I have met with groups like yours in the basin 19 times since I went to Valley City, N. Dak., in 1943 to explain the then forthcoming Missouri River development plan. Every meeting has been useful to me, because I have taken away from each additional understanding of the complex problems with which we wrestle in the vast region that the Missouri River drains.

The Missouri Basin's water resources problem was recognized some 55 years ago. But for half a century, very little was done about it, except in an inadequate, piece-meal way.

It took repeated catastrophes to open the way for us to get started. The great droughts of the 1930's devastated the Plains. And the disastrous floods of 1943 drowned people and ripped away vital parts of great states. The 1940 census figures showed that this region was slipping backward in population. These were the prices we were paying for 50 years of delay.

Against this background, the Federal agencies with major responsibilities brought their studies to conclusion and in 1944 put them together into a plan that the Congress adopted for prosecution by the Department of the Interior and the Corps of Engineers.

Now, after more than 5 years right here in South Dakota, the Angostura Dam has been completed, the first major reclamation dam to be completed in the Missouri Basin project. I remember that I came out to help start Angostura Dam several years ago. I said it wasn't the mightiest dam in the world, but it would have a great place in the history of the West. It is the vanguard of the 100 or more dams on this biggest, most complex, and most significant construction project which our Government has ever undertaken in peacetime.

Today, we have 14 reclamation units under construction in the Missouri Basin, and 13 more being started this year and next. We have 4 major reclamation dams, either completed or substantially so. The whole project is accelerating with enormous speed.

This year, the Interior Department is spending over $80,000,000 on this project. For next fiscal year, the President is asking Congress for more than $100,000,000 for our part of the work.

The Army Corps of Engineers is moving forward with construction of Fort Randall, Oahe, and Garrison Dams, and other works primarily of a flood control or navigation type.

As these works rise, all over the basin, we can now see on the horizon the power, irrigation, flood control, and other benefits that

will change the future of your State and the other Basin States.

As the joint project is now envisioned, it will bring six and one-quarter million acres of new and supplemental irrigation, and ultimately more than 2,500,000 kilowatts of installed hydroelectric capacity to the people of these 10 Basin States. Further inventory of the vast potential power resources of the basin, including your State, from both hydro and fuel, are now being made.

The wealth and good living that you have already contributed to the Nation with the basic resources previously available to you are sign posts pointing to what you will do with these new resources.

The additional crops from the 53,000 farms to be irrigated by this project, alone, will be worth an estimated $130,000,000 per year, even at prewar prices. They will be worth far more than that in the future.

Add to this the effects of great blocks of low-cost power, the protection from floods, and the other benefits, and you will have a terrific acceleration of your economy.

South Dakota is already feeling the impact of this program. It is commonplace to say that it will change the lives of every one of you. The changes will occur in many ways. They will occur gradually as unit after unit goes into operation. Younger generations coming along may not realize their full import. But you, whose toil and sweat, and sometimes tears, mark the road to where we stand today, will be able to measure the difference.

The Missouri River Basin project will bring both power and water. The two are inseparably bound. Power helps pay the costs; power moves the water. In this region, particularly, where a great part of the irrigation must be done by pumping, the water systems themselves require immense amounts of power.

Power is a mighty resource, in its own right. It is high on the list of national shortage items. Perhaps, it is highest of all on the South Dakota list.

For a long time, this State has ranked near the bottom in the amount of electricity used per person. It has ranked near the bottom in the percentage of farms with electricity. The Missouri River Basin project will help you change all that as within your borders there is a potential but undeveloped hydro capacity of over 1,000,000 kilowatts.

A moment ago I said that present plans already envisage more than 2,500,000 kilowatts of capacity as the present goal of the project. But with the work barely under way, we've already found out that ultimately the people of this great basin will require still more than that. No longer do we hear the critics say reclamation power plants will become "white elephants." The question, "Who, on earth, would buy all that power?" is as dead as the legendary "dodo."

We have learned that once the reclamation resources of an area are opened up for use by the people, we can set no limit to the possibilities and potentialities for expanding the economy. That will be true here in South Dakota, as in many other places where it has already been dramatically proved.

The Missouri River Basin project, as now authorized, provided for development only of the most advantageous power generating sites.

We have already expanded our original power goals. Now, it is obvious, that we must search out and develop every hydro-kilowatt that can be beneficially used in the Missouri River basin. In addition to that, your huge fuel resources will ultimately supplement and extend your power supplies. But first we should develop the presently wasting water power.

Abundant power will help open the other natural resources of the region. Through the development of lignite and oil-shale beds, it may add vital new supplies to our Nation's stock of short resources.

The Department of the Interior has given some study and thought to the extensive beds of manganese ore here in the Chamberlain area. As you know, this manganese is too difficult to extract to be commercially useful now. But abundant cheap power may bring it nearer to the point where further studies of commercial development will be justified.

Manganese is one of the few items in which our Nation is not self-sufficient. It is conceivable that at some future time of restricted sources or national emergency, the studies we have made of these beds, and the measures we have taken to bring power into the area, may prove to have been of vital importance to our prosperity and security.

The Federal Power Commission estimates that by 1970, this area will need more than 9,500,000 kilowatts of capacity. This means that about 4,000,000 kilowatts will have to be added to the existing and presently planned fuel and hydro-generating capacity.

When 1970 comes, we will probably still be needing more power. Our industries, the development of our resources, and the enhancement of our daily living, all depend on having as much electricity as we need at our fingers' ends. Experience has taught us that bringing in power creates a demand for still more power.

Not only will your soaring power requirements require fullest scale development of new power generation, but there is another factor of paramount importance to the basin, and of direct concern to the individuals who will be served by this project.

Power is the paying partner of irrigation. Undoubtedly, you have heard that repeated many times. We cannot develop the basin's fullest measure of irrigation, unless the sale of power brings in enough revenue to defray the irrigation costs that exceed the farmers' ability to repay from the products of their fields.

And the Department is committed to complete financial as well as physical integration of the power generating and transmission facilities whether connected with Army or reclamation dam plants. We believe that is what the Congress intended when the Flood Control Act of 1944 was enacted.

Thus, the financial success, as well as the physical success of this vast project calls for maximum development of your power resources.

As a result of the Fort Peck Dam, some of your people in the northern part of South Dakota already are experiencing the initial benefits of low-cost Federal power. Two units are in operation at Fort Peck with a combined capacity of 50,000 kilowatts.

By October 1951, we expect to have a third unit of 35,000 kilowatts in operation. But the main sources of project power for this State will be Garrison and Fort Randall Dams, now under construction by the Army Corps of Engineers.

In accordance with the latest Corps of Engineers estimate, the first power from Fort Randall will be available in April 1954, when, according to plan, the initial 40,000 kilowatt unit will begin operation.

By the end of 1955, Fort Randall should have four units with 160,000 kilowatts capacity, and Garrison should have three units in operation with a combined capacity of 240,000 kilowatts. The ultimate capacities of these plants will be 400,000 kilowatts for Garrison and 320,000 kilowatts for Fort Randall.

This, combined with the Fort Peck capacity, will then give a total installed capacity on the main stem of the Missouri River of about 900,000 kilowatts with an average annual output of nearly 4,500,000,000 kilowatt hours, from facilities already in operation or under construction.

Construction of power plants at Gavins Point, Oahe, and Big Bend, all in your State, will add still more to the power which can and will be developed for the benefit of the Missouri Basin system.

Depending upon congressional appropriations, the Oahe site can begin delivering power in 1959 or earlier. Eventually it will provide 400,000 to 500,000 kilowatts capacity, and the proposed Big Bend plant will yield another 130,000 kilowatts.

Keep in mind this is not all firm power. However, as other power developments are brought into production in other parts of the system, and as the units are linked together and tied into the system as a whole, the proportion of firm power available to all areas will greatly increase. One of the startling things we have learned from the last World War is that pooling and coordination of power supplies greatly enhance the efficiency and reliability of power, especially water power.

You are aware of the copartnership of the Bureau of Reclamation and the Army Corps of Engineers in the construction of the project. All of the project's power, though, is marketed by the Bureau of Reclamation. Power production and transmission are being firmly and intelligently integrated, basin-wide, into the physical and financial structure of the project. This was contemplated in the coordinated Reclamation-Army plan when the project was authorized by the Congress in the Flood Control Act of 1944. The Department of the Interior adheres to this full integration.

Now, how about the distribution of this power. That concerns you quite pointedly.

The Bureau of Reclamation plans to build and operate the main transmission lines to carry power from the generating plants to the wholesale load centers. That means that we shall take it to the main points of wholesale distribution, where supplemental, or feeder lines, can carry it to the various localities for retail distribution.

In order to provide the basin with the maximum measure of firm, dependable power, the entire main transmission system will be welded into a single, interconnected grid. It is necessary for efficiency and reliability that this system be fully coordinated and integrated, and the operation be directed by a single dispatching organization.

The strong backbone of this grid will be a main 230,000-volt loop which will run generally north to south, from Garrison, N. Dak., to Sioux City, Omaha, or perhaps farther south. The return part of the loop will run north, generally along the eastern State lines of South Dakota and North Dakota. The two parts of the loop will be connected together through Fargo and Bismarck. A strong tie will also extend west from Garrison to Montana's Fort Peck power development.

There will be loops and radial lines of 115,000-volts capacity. There may be lines of even lower voltage in some localities.

You, of this audience, are directly interested as the consumers who will use and pay for this power—and as citizens of a State whose economic future will be greatly improved by the impact it will have upon your economy.

Let me restate for you, the five cardinal points of Federal policy, as laid down by the Congress in the distribution of this power. Undoubtedly you have heard them many times before. They are as follows:

1. Federal dams shall, where feasible, include facilities for generating electrical energy.

2. Preference in power sales shall be given to public agencies and cooperatives.

3. Power disposal shall be for the particular benefit of domestic and rural consumers.

4. Power shall be sold at the lowest possible rates consistent with sound business principles.

5. Power disposal shall be such as to encourage widespread use and to prevent monopolization.

The Department of the Interior will adhere firmly to these principles.

The initial block of some 300,000 kilowatts of firm power will become available from Fort Randall Dam in 1955. That is not far

away, when measured by the time it requires to work out arrangements for distribution, build the transmission lines, and get ready to put the electricity into your farms, homes, and plants.

In South Dakota, you have some particularly knotty problems to be solved. Just recently, 21 of your South Dakota rural electrical cooperatives sent representatives to Washington to discuss these problems with your congressional delegation, the REA, and the Bureau of Reclamation. We are quite sympathetic with your needs, and are most happy to help you to meet them in every way we can.

As you know, the Bureau of Reclamation is now negotiating the contracts and is planning or building the transmission lines for distributing Missouri River Basin project power. South Dakota will share in the initial energy made available from Fort Randall, and in subsequent blocks of power as they come on the line.

The initial allocations of this power have not yet been made. But we have now on file with the Bureau of Reclamation, applications for power in 1954 in almost triple the amount of the block that will be made ready in 1955 at Fort Randall. Preference customers—cooperatives and public agencies—are asking for 638,000 kilowatts in 1954, and other applicants another 246,000.

Under the marketing criteria established last August by the Secretary of the Interior, contracts for firm power will be negotiated only for the delivery of this block of power within North Dakota and South Dakota, and within those portions of Nebraska, Iowa, and Minnesota lying within a 150-mile radius of the Fort Randall power plant.

One of the major problems involved in the distribution of this power in South Dakota is how to transport it from the Government lines to the rural electric cooperatives, municipalities, and other retailing distributors.

There are many transmission and subtransmission lines, both publicly and privately owned, in the area. Most of them are already carrying the maximum power loads possible. But some of them, I am told, are not used to capacity.

Again, some of REA's are considering the construction of transmission lines, backed up by generating facilities to firm up the secondary power. As cooperatively owned facilities, such lines would be given favorable consideration if they could offer service comparable to that provided by a wheeling arrangement.

The REA's and others in your State are concerned about the prospect that the Bureau of Reclamation may make contracts for the wheeling of project power over these feeder lines to points of ultimate consumption. Some of them have expressed fears that preference customers under the law will not be able to get all of the power coming to them if the Government uses lines of private power companies to deliver them power under so-called wheeling contracts.

It is the policy to make such wheeling contracts only when line capacity is available and when the rights of the preference customers are firmly protected by the contracts, both as to receipt of their full share of the power and to their enjoyment of the fullest measure of benefit from low power rates.

Furthermore, it will be our policy to see that such contracts protect in full the objectives and interests of the Missouri River Basin project, both in building up and stabilizing the basin economy, and in the repayment of project costs allocated to power revenue.

Where satisfactory agreements that fully discharge these responsibilities cannot be made, it will be necessary to place before the Congress the question of building feeder lines as a part of the required facilities of the project.

Our guiding principle is to make the arrangements which are most economical in the interest of the Government and the public, and which will not interfere with the orderly development of the public-power program. We could not justify a request for funds from the Congress on any other basis.

In Montana, and in some other places, we have "wheeling" arrangements in effect right now. In these areas we found that the number of preference customers was not large enough to justify building our own feeder lines, and the utility company would carry the current at a cost to the Government as low as could be obtained by any other arrangement. So we made the "wheeling" contracts, and they enabled us to get power to the irrigation loads and to the REA cooperatives much earlier than we could have by any other means. In some cases, under such an agreement, we were able to serve customers we could not otherwise have reached.

I have described the Montana arrangements. The wheeling contracts we have under consideration for South Dakota contain provisions giving still greater protection to the preference customers and to the irrigation pumping needs. Such contracts would serve to expand, rather than restrict, opportunities to serve and help the cooperatives and other public retailing distributors.

However, no contracts will be signed until there has been ample opportunity for all State interests concerned to make comment.

The Department of the Interior, through its Bureau of Reclamation, either has under initial construction, or is planning for future construction, "backbone" power-transmission facilities adequate to market all power from Federal plants in the basin. This construction is being scheduled so as to meet area requirements as the power becomes available at the generating plants.

If the Congress provides the necessary funds, we will start construction of the main tie line from Garrison Dam to Fort Randall in the next year. Thereafter, we plan to build transmission lines to the major load centers, when and as the funds are made available to us.

We have had proposals, from REA's in your State, to proceed with the construction of certain lines in South Dakota in advance of the time schedule we have established. These proposals look toward the possibility of obtaining temporary power from sources other than Fort Randall, prior to the time the generators at the dam go on the line. In view of the urgent need for more power and additional transmission facilities in your State, we are giving these proposals most careful consideration.

Now I would like to step back from this power question and glance for a moment at some of the other ways in which the Missouri Basin project may be important to you personally.

There is a big map of the Missouri River Basin in my office. That map has splotches of color all over it showing possible irrigable acreage. There is a liberal scattering of these oases of color around Chamberlain.

Northeast of here is the great Oahe unit with a potential 750,000 acres to be put under irrigation. This work is now on the drawing boards with $700,000 being spent on advance planning this year and $875,000 proposed for next year's budget. Construction of the irrigation work is geared to the completion of Oahe Dam and power plant, now scheduled for 1959.

To the west of Chamberlain, three tributaries flow into the Missouri River. Above you are the Cheyenne and Bad Rivers, and below you is the White River. On my map, their banks are liberally dotted with spots of color denoting numerous smaller areas which can be irrigated by pumping as soon as upstream storage dams are built and pumping power is available.

For example, along the White River there are 42,000 acres of potentially irrigable land. The Bureau of Reclamation is spending $150,000 this year and next in planning a multiple-purpose reservoir and a water-distribution system. We hope to get the work under way in fiscal year 1953, and to have water flowing to the first 10,000 acres of land by 1955 when power will be available from Garrison and Fort Randall for pumping purposes.

In the northern part of the State, preparation of design and plans for the Bixby Dam on the Moreau River is under way. This dam will catch the water from a drainage area of 1,585 square miles and level out the flow along the river below the dam so that a possible 11,000 acres may be irrigated.

Still further west is the Angostura Dam. Construction of an irrigation system will start there this spring, and water will be running down the ditches to a possible 16,000 acres of land by 1953.

At the same time, to the north and south of you on the main stem of the Missouri River, the dirt is flying as construction proceeds on Fort Randall and Garrison Dams. All this construction past, present, and future, ties in together.

In addition to the irrigation and power benefits, these units will enhance your recreational opportunities. People are already coming to Chamberlain from all over the country to shoot upland birds. With this resource—and that's what it is—augmented by the recreational facilities of the reservoirs and the improved river, vacationing can become a new and valuable industry for this region.

You are in the middle of the breadbasket of America. When conditions are right, the wheat almost jumps out of the ground. During the war years you helped to feed people all over the world, with some of the greatest crops the world has ever seen.

But what happens when conditions are not right? Mother Nature has been mighty kind to the high plains in recent years as far as growing conditions are concerned. It has not always been that way. There were the droughts of 1934 and 1936. There have been floods.

The Missouri River is a resource that is finally to be used as other rivers are being harnessed and put to work in other areas all over the Western States. It has the strength to smooth out the high hills and deep gullies of the weather nature has dealt this region.

Your Government, and the people of the United States, are staking billions of dollars on the future of the Missouri Basin. I am confident that they will reap rich returns for you and for those living afar, everywhere in the country. Just as the catastrophic drought that drove 300,000 from their homes in the Missouri Basin in the 1930's hurt the whole Nation, so the economic growth and stability that the Missouri Basin project will bring here will enrich all Americans in the future.

Let Every Schoolyard Become a Living Textbook

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mr. STEFAN. Mr. Speaker, Nebraska is the home of the late J. Sterling Morton, who was Secretary of Agriculture in the administration of President Grover Cleveland. Mr. Morton was the founder of Arbor Day which is now observed in every State of the Union and many foreign countries. Trees are of great importance to the prairie State of

Nebraska. One of the most progresssive and widely read newspapers in my district is the Pierce County Leader, of Pierce, Nebr. Mr. William M. Cox is its editor and publisher. In a recent editorial, Mr. Cox makes a most important suggestion about planting trees in schoolyards. I believe that this is a very valuable contribution and effective plan to supplement the idea of J. Sterling Morton and also supplement the important shelter belt program in the Plains States. Because of the importance of this editorial, I include it herewith with my remarks:

ARBOR DAY, APRIL 22—LET EVERY SCHOOLYARD BECOME A LIVING TEXTBOOK

Why is it? There are trees available for many purposes from various tax-supported divisions. These trees in some instances can be obtained for specified purposes without charge or for a very nominal fee. Here is a fact that baffles all belief: Somewhere is an unwritten law that says not one tree available for a school yard.

School boards will buy a textbook that shows in a poor illustration the difference between an oak and an elm, but still all these tax-supported tree nurseries say don't let children see the beauty or enjoy one of these trees.

The Government spends much money to convince father that a row of trees on a farm will save soil, protect crops, etc. But these same agencies refuse to let a small school child watch a free tree grow in a school yard.

Why can't one of these tax-supported nursery divisions make up a package of five trees of each variety that are suitable for the area to be planted and send them to the school teacher or school board?

In a shelterbelt planting there are often as many as six to eight varieties of trees and shrubs—wouldn't each of these properly labeled be an education in each school yard?

No, that's not how it's done. Send a youngster to grade school for 8 years then high school for 4 years and then after he starts to farm is the time to start to tell him of the value of a tree.

Nebraska often points with pride as being the home of J. Sterling Morton, yet 50 percent of the school yards are barren land surrounding a school house.

This is the second year the leader has pounded on this subject; it may be just a weak sound, but this plea for trees for schools is more fitting for Nebraska than governmental hide-bound rules that say every tree must have a fence around it or no tree.

There will come a day when a school yard instead of a school book will be the source of teaching young folk about trees. So till that day when some agency will "spare a tree for a school," the children will have to look on page 210 for an elm and on page 213 for maple. To keep within the rules and regulations don't let the teacher take that youngster into the school yard and let him water a growing elm or maple that will furnish beauty and shade.

With the World Afire

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to include an interesting editorial which appeared in the Arizona Republic on February 19, 1950. It should be read by all Members.

WITH THE WORLD ON FIRE

The President of the United States made a speech to the Nation Thursday night. He spoke via radio to millions of Americans who may be living on borrowed time, now that an avowed enemy is building weapons of atomic destruction aimed at America. The President spoke to a people who have been told that the even more fearful hydrogen bomb may wipe out civilization and all life on this planet in one flaming breath. At the moment he spoke, the red tide of communism that has engulfed almost all of the continent of Asia was pressing hard against the last friendly outposts in the Pacific. In captive Berlin the noose again was being tightened by a new blockade.

On the same night the President spoke, the fires were going out in basic industries all over America. Schools were being closed, and homes and hospitals were reaching into their last reserves of coal. Men by the thousands were being laid off their jobs, trains were being canceled, and the Nation was faced with suspension of vital telephone service. Food products bought with the taxes of the people were being piled up to rot while millions throughout the world went hungry to bed. As the President spoke, citizens all over the Nation were reflecting on the treachery of those in high positions of trust who had been found guilty of betraying their country. And all over the world desperate men were shoring up the hasty defenses of freedom.

Against this background of national peril and acute drama the President of the United States made a speech.

He said the only danger to the American Nation is the Republican Party.

In the name of Washington, Jefferson, and Lincoln we reverently ask: How much lower can the leadership in Washington descend?

Strengthening the United Nations

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CLARK, BOGGS, PETERSON & BECKER,
Columbia, Mo., February 17, 1950.

In re House Concurrent Resolution No. 64.

Mr. MORGAN MOULDER,
House Office Building,
Washington, D. C.

DEAR MORGAN: I would like to recommend that you vote for House Concurrent Resolution No. 64:

"Resolved by the House of Representatives (the Senate concurring) That it is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law."

I know you are interested in securing a condition of peace and in relieving the American people of the terrific tax burden of the cold war and the armament race, and I know you are interested in protecting our civilization from destruction by scientific weapons.

The United Nations was a step in the right direction but only a first step. Because it lacked attributes of government and the power to make and enforce world law in the fields necessary to preserve peace, it has failed. It was always the intention to preserve peace, it has failed. It was always the intention of the framers of the United Nations to gain the confidence of the people and to strengthen it from a multilateral treaty to an agency of government. We have been slow and hesitant about vesting in some authority the power to preserve the peace.

The State Department will always recommend against any foreign policy which would interfere with its balance of power politics and its power politics. Consequently, it is necessary that the people speak to the State Department in order that there can be no misunderstanding about the desires and hopes of the people.

This resolution is simply a statement to the State Department to get to work to strengthen the United Nations and to vest in it defined and limited powers adequate to preserve peace. Other plans have been suggested, some of which involve bypassing the United Nations, but there is no good reason for not attempting to strengthen this agency already in existence.

There may not be much time to do something to prevent totally destructive warfare. I think a limited world federation will enable us to bring the cold war to an end, remove the fear which obsesses everyone, and give us some relief from the burden of a wartime Federal budget.

The following is a partial list of the United Federalists in Missouri who are backing the resolution: E. R. Windegger, chairman; E. E. Amick, insurance; H. Roe Bartle, Scout executive; Mrs. Marion C. Blossom; J. Lionberger Davis, banker; Dr. Geneva Drinkwater, educator; Hon. Raymond Elliott, Missouri legislator; Hon. Raymond Karst, Congressman; Dr. Charles Lee, professor of education; Hon. Arnold Leonard, attorney; Jay E. Minton, insurance; Stratford Lee Morton, insurance; Col. J. M. Sellers, Wentworth Military Academy; Hon. Murray Thompson, former Speaker, Missouri House of Representatives; Raymond Wittcoff, manufacturer.

There is some opposition by some few people who call anyone with an idea a Communist, but I believe that the class of people backing this is sufficient to insure the integrity of the sponsors.

I suggest that you discuss this with RAYMOND KARST or Congressman BOLLING.

Your attention is also called to the editorial in the New York Times of February 6, where that paper which has no enthusiasm for world federation states: "We are compelled, in short, to accept the concept of a world government insofar as atomic weapons are concerned—or, indeed, so far as any manifestation of scientific war is concerned."

Sincerely yours,

WILLIAM H. BECKER.

Hon. Louis B. Heller, of New York

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. DOLLINGER. Mr. Speaker, on March 16, 1950, Hon. LOUIS B. HELLER was honored by Sgt. Harry G. Rogovin

Post, Jewish War Veterans, in Brooklyn, N. Y., when Post Commander William Weinstein, in behalf of the post, presented the Congressman with a plaque in appreciation of his outstanding work in communal and civic affairs and his ardent advocacy of civil-rights legislation.

I am sure that many Members of this House are as pleased as I am that this recognition has been given our distinguished colleague. His sincerity and outstanding accomplishments in behalf of his constituents, have earned for him all the praise that can be given him.

The address delivered by the Congressman upon presentation of the plaque was so enthusiastically received by the audience, and so many persons who were prevented from attending have expressed their interest in it, that I am inserting it in the RECORD:

Mr. Chairman, distinguished guests, ladies, and gentlemen, I am deeply honored by this very gracious act on the part of the Harry G. Rogovin Post, Jewish War Veterans, in presenting me with this beautiful plaque, and I assure you that this recognition coming to me from this great organization is something that I greatly appreciate.

The Jewish War Veterans of the United States has now become a great institution, filling a large and worthy part in the American scene.

Possibly it is not generally realized that it is the oldest of all the veterans' organizations now active. It was first organized by veterans of the Jewish faith who had served in the Civil War. That was in 1896. The Grand Army of the Republic was at that time composed of vigorous men in middle life. Decade by decade since then, over more than half a century, the ranks of the Grand Army of the Republic became thinner and thinner until this last year a handful of survivors met in their last encampment to disband the organization. The great general veterans' organizations of the present day, the American Legion and the Veterans of Foreign Wars, for example, have all been inaugurated in more recent times, leaving the Jewish War Veterans as the senior extant organized group of those who have served in the armed forces of the United States in time of war.

This organization has been rapidly growing, and today comprises more than 110,000 members. It is operating in 40 States. It has over 630 separate posts. Such a body of patriotic and high-minded citizens can be a great force in the affairs of the Nation. Its size and the character of its membership bring prestige and influence. By the same token such an organization has a responsibility commensurate with its size and influence. It should represent the highest ideals. It should serve the community in the several ways which are open to it. Its weight in public discussions should always be on the side of the welfare of citizens and of the Nation as a whole, not exerted for partisan and selfish interests.

I am proud to say that the activity of the Jewish War Veterans of the United States has been and is, just this.

You are serving 5,800 persons a month in a specific way—veterans and dependents who need the specific guidance and assistance that such a powerful organization can bring to them. You advise the isolated or unschooled veteran of the benefits which our Government has so generously offered to him, in the various forms of pension and compensation, of disability relief, of hospitalization and domiciliary care, of vocational rehabilitation for the handicapped, of training in industry and on the farm, of higher education in the colleges and the universities, of loans and insurance, and other measures great and small. So generous are these provisions, comparable to nothing in all the long past history of warfare, which our democratic government offers to its citizens who have risked their lives in its defense, so varied and so complicated are the various types of need to which they minister, that the Government would be hard put to it to work out the details efficiently, and the veteran himself would be lost and bewildered, if it were not for the aid that organized veterans associations are giving to the official agencies. For this reason, the Veterans' Administration, welcoming this assistance, recognizes some veterans organizations and gives them responsibilities in this connection. The Jewish War Veterans of the United States is one of these recognized organizations, and is doing immense public service in this connection. Though organized frankly on a sectarian and racial basis, it is ready to extend its helping hand, and actually does lend its services, to all veterans without distinction of creed or race.

For this purpose a staff of professional counselor and guidance specialists is maintained.

Great attention has been given to those whom society so easily forgets because they are out of sight, the veterans who are in hospitals. Through the JWV and its splendid ladies auxiliary more than 80,000 hospitalized veterans of the two World Wars are sought out and assisted in their needs of welfare and recreation.

Yet perhaps most important of all is the contribution to American life which the Jewish War Veterans of the United States is making in the pressure which it is constantly exerting in the area of public opinion and legislation toward making this Nation of ours a better place for all its citizens. The stand which the organization takes is courageous, explicit, and forward-looking. It seeks the more liberal admission of displaced persons, victims of the war and the material for the finest future of citizenship, whose entry into this country is in the great tradition of America's past. It supports the Fair Employment Practices Act, which seeks to remove unjust discriminations which prevent many persons from earning a living on even terms with those who have been, by the accident of birth, more privileged. It supports a national health act for the future well-being of all citizens. It advocates that unpopular measure so important for our national defense, universal military training, a measure to which all veterans must be committed who have seen American boys die by the thousands unnecessarily, by being sent into warfare for which they have not been properly trained. Other measures, liberal and sensible but sometimes controversial, have been frankly backed by the Jewish War Veterans of the United States.

The question might arise, perhaps it has arisen here and there, why should there be a separate veterans' organization for Jewish veterans when there are already great national veterans' organizations occupying the field, organizations which make no distinctions of race and creed? Is this a piece of narrow-minded separatism, or is there good reason for it?

I might answer that question in several ways.

First, I would point out that it is not a matter of competition. All members of the JWV are urged to join one of the general organizations as well. In fact, 80 or 90 percent are actually members of other veteran groups of a more general character.

There are some functions, however, which the more general organizations cannot perform, or to which they can give little attention because of their size, and wider general interest. These hinge on the fact that the Jews in this country are a minority group with certain needs and interests and problems especially their own.

I deem it important that the tradition shall be kept which shall inform both the public and our own group of the part which Jews have taken in all the emergencies when men have been called to risk and yield their lives for the defense of the country. This is little known and easily overlooked. But the part men of Jewish blood have taken is a very large one.

I like to note that the story begins a long time ago—200 years ago in fact—and in our own city of New York. The first Jews in New Amsterdam came in the summer of 1654. They met with some prejudice and some difficulties. One was that they were exempt from general training and guard duty. There were dangers from Indians, and some threat of danger from other colonists, as well as from lawbreakers in general. All citizens had to do guard duty. It was a responsibility and also a badge of citizenship. But Jews, owing to the prejudice of the governor were not admitted to guard duty in defense of the colony (though they were expected to pay a certain sum each month in lieu of service). Under the leadership of Asser Levy, who has been called "the first fighting Jew in the New World," the issue was fought out with the governor, Peter Stuyvesant. The Jews won the right to do military service for the little city, and thereafter mounted guard on the stockades of Manhattan. They fought for the right to do military duty.

From that day to the present the Jew has done his full military duty to the Nation, and something over. It is the same story in every conflict—the Revolution, the War of 1812, the Mexican War, the Civil War, the Indian wars, and the First World War.

In the First World War about a quarter of a million Jews served in the armed forces of the United States. While the percentage of Jews in the whole population is estimated at 3.27 percent, the proportion of Jews in the armed forces was 5.73 percent. Three thousand five hundred were killed, 12,000 were wounded, 3 received the Congressional Medal of Honor, while 1,129 received other decorations and citations. Meanwhile on the home front, other Jews were meriting the thanks of the Nation for their organizing leadership. Of the seven members of the Advisory Council of National Defense, the body which organized the home front, three were Jews, and I cite the well-known names of Bernard Baruch, Samuel Gompers, and Julius Rosenwald.

I do not need to describe to you the part which Americans of Jewish identification took in the last war, because you were there and know for yourselves. Upward of 550,000 served, again a larger portion of the whole than the proportion of Jews to the whole population. Eleven thousand died in service and 40,000 were wounded. Fifty-two thousand received some kind of decoration, citation or award, including one Congressional Medal.

Notable features were that 60 percent of all Jewish physicians in the country who were under 45 years of age, entered the service. There were 35 Jewish families which sent 6 or more members into the armed forces.

The individual tales of heroism are touching and endless.

It is not right that the memory of these things should be allowed to lapse—not because of sectarian pride, but because here and there the voice of calumny is raised still, and the facts should be known, in the interest of the country as a whole.

Furthermore there are services which a Jewish organization can render to the Nation because of their peculiar position in the Nation's life. We face the threat of totalitarianism. Right now it is in the form of communism, but it might be also in the form of fascism, which is not totally extinct. The Jewish War Veterans of the United States are in a position to render a unique protection to the Nation. No group knows better what evils live in totalitarianism than do the Jews because no one has suffered more because of them.

Moreover, outside these more or less formal movements, communistic or fascistic, there is still in this country enough of ignorance or prejudice on the part of people who would be shocked to think they were talking the language of either German nazism or Russian communism—which seeks to blow up into flames all kinds of dissension—but who nevertheless have not eliminated from their minds all the things on which these movements feed. As President Truman has expressed it in his gentle but effective way:

"We have only recently completed a long and bitter war against intolerance and hatred in other lands. A cruel price in blood and suffering was paid by the American people in bringing that war to a successful conclusion. Yet in this country today there exists disturbing evidence of intolerance and prejudice similar in kind, though perhaps not in degree, to that against which we fought the war. Discrimination, like a disease, must be attacked wherever it appears."

As veterans, the members of this organization can work with other veterans' organizations, and with nonveterans' groups, toward the elimination of these prejudices, under conditions of exceptional advantage.

Not then in a narrow or sectarian or a vengeful spirit but with a firm resolution to purge American life of a destructive something within it, the Jewish War Veterans will confront evil prejudice and in so doing will confer a benefit on the country at large.

The thought I would leave with you was never better expressed than by a chaplain, Roland Gittlesohn. The place was the island of Iwo Jima. The occasion was the dedication of a cemetery for the dead of the Fifth Marines who fell in battle there.

"This is perhaps the grimmest, and surely the holiest, task we have faced since D-day. Here before us lie the bodies of comrades and friends. Men who until yesterday or last week laughed with us, joked with us, trained with us. Men who were on the same ships with us, and went over the sides with us as we prepared to hit the beaches of this island. Men who fought with us and feared with us. Somewhere in this plot of ground there may lie the man who could have discovered the cure for cancer. Under one of these Christian crosses or beneath the Jewish Star of David there may rest now a man who was destined to be a great prophet—to find the way perhaps for all to live in plenty, with poverty and hardship for none. Now they lie here silently in this sacred soil, and we gather to consecrate this earth in their memory.

"We shall not foolishly suppose, as did the last generation of America's fighting men, that the victory on the battlefield will automatically guarantee the triumph of democracy at home. This war, with all its frightful heartache and suffering, is but the beginning of our generation's struggle for democracy. When the last battle has been won there will be those at home, as there were last time, who will want us to turn our back in selfish isolation on the rest of organized humanity and thus to sabotage the very peace for which we fight. We promise you who lie here to build the kind of world for which you died."

Halleck an Asset to America

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Indianapolis Star of March 22, 1950:

HALLECK AN ASSET TO AMERICA

Among the leading lawmakers giving ardent support to the aims of the Hoover Commission is Representative CHARLES A. HALLECK, of Indiana. After The Star had exposed the padding of personnel rolls in the Post Office Department, Congressman HALLECK said last week the situation proved the Hoover group "knew what it was talking about when it recommended drastic reorganization of bureaucratic activities."

It is characteristic of CHARLIE HALLECK to back the Hoover report. Throughout his eight terms in Congress he has demonstrated an unfailing ability to distinguish between genuinely progressive legislation and socialistic, big-government proposals disguised as progressive legislation.

Congressman HALLECK is a liberal in the real American sense of that misused word. He has always championed sound progress and the changes required by changing times. But he has been an effective foe of pseudo-progressive measures aimed at the limitation of individual liberty. He was one of the first, for example, to detect the evil of the infamous court-packing plan of the 1930's and to speak out against it.

Mr. HALLECK's objective approach to lawmaking after the voters of his district first sent him to Congress in 1935 helped the Republican Party to gain added prestige. It was inevitable that he should come to the attention of party leaders and be given new responsibilities which eventually made him House majority leader. In his present job as assistant minority leader he continues to give distinguished service to both country and party. As the man who single-handedly wrote the GOP congressional campaign platform in 1946, he recently was one of a committee of three which drafted a statement of principles for the 1950 campaign.

Representative HALLECK performs the same invaluable function in the House of Representatives that Senator ROBERT A. TAFT, of Ohio, performs in the Senate. Both are devoted servants of the areas which elect them and of their party, but both also give service which is national and international in scope. CHARLES A. HALLECK's stature honors his district. His reelection in 1950 will give his district, his State, and his Nation another 2 years of high-principled congressional service.

Misuse of Hoover Label

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, the manner in which the President, Harry S. Truman, is misusing the Hoover label, which many people construe as a guaranty of economy and efficiency, to further his own political interests and the political interests of his party, is disclosed by two statements of the Committee for Constitutional Government, dated March 21 and 23, and which read as follows:

MARCH 23, 1950.

DEAR FELLOW AMERICAN: YOU—Members of the Congress—all citizens are confronted with an attempt to usurp the legislative powers vested exclusively in the Congress. The President's plan is to use the Herbert Hoover report as a "cat's-paw" to destroy an important provision of the Taft-Hartley law by turning over its execution to Presidential appointees. Thereby will be restored to the Labor Relations Board the function of prosecutor and judge—a dual power which was seriously abused before the enactment of the Taft-Hartley law.

Here is the background history: The President first tried to prevent the enactment of the Taft-Hartley law by his veto message. It was passed by substantial majorities of both Republicans and Democrats over his veto.

Then, in return for the financial and vote-getting help of the labor-union-monopoly leaders, the President obligated himself during the election campaign to do all he could to secure immediate repeal of the Taft-Hartley law. In the first session of the Eighty-first Congress, a bill, prepared in the departments, was presented to the Congress in a most unique way. At the hearings of the subcommittee on this bill no amendments were allowed.

At the hearing when the bill was reported by the subcommittee to the full committee, it was not even read section by section to the full committee. The chairman of the Labor Committee of the House tried to secure a cloture rule from the Rules Committee of the House which would have denied to any and every Member of Congress an opportunity to offer any amendment to the Lesinski bill. When this measure came before the Congress on an open rule, Congress defeated it by substituting the Wood bill for it on May 3, 1949.

In September 1949 the President stated in a Labor Day address in Pittsburgh, that he planned to "rip the Taft-Hartley Act out of the statute books."

So, having failed in all of these efforts, he now tries through a fraudulent use of the Reorganization Act to do immeasurable injury to the Taft-Hartley Act by restoring investigatory functions to the National Labor Relations Board which had so abused these powers during the 12 years they held them that the Congress had insisted upon depriving the Board of investigating and prosecuting functions.

Please read the statement by Dr. Willford I. King, chairman of the Committee for Constitutional Government, Inc., Using Herbert Hoover as a Cat's-Paw.

If Congress submits to this usurpation of legislative power granted by the Constitution solely to Congress, it will have permitted another long step toward one-man rule and executive dictatorship. A constitutional question of the gravest importance is involved. Shall the people through their control of Congress lay down the policies, make and uphold the laws? Or, will the Members of Congress who are trustees for the constitutional rights of all citizens allow these to be undermined and usurped by the Executive, to secure campaign money and votes from labor monopolists?

If you want to protect constitutional government from this insidious attack, you must take action and speak up now. Tell Congress section 12 of the President's recommendations reorganizing the National Labor Relations Board must be voted down.

Sincerely yours,

COMMITTEE FOR CONSTITUTIONAL GOVERNMENT,
SUMNER GERARD, *Trustee.*

USING HERBERT HOOVER AS A CAT'S-PAW

(By Willford I. King)

When fate brought Harry S. Truman to the White House, many felt a sort of pity for the naive little man from Missouri who was suddenly called upon to step into the shoes of the most adroit politician ever serving as President of the United States. Largely forgotten was the fact that Truman had trained under Pendergast—a man who was no amateur in the game of politics.

Hence, there was great surprise throughout the Nation when, on the evening of November 2, 1948, the returns showed that Truman had turned into victory an election which all the pollsters had predicted would be a walkaway for Governor Dewey. And, since that day, he has shown so much political astuteness that his erstwhile critics are beginning to wonder whether, as a politician, he is really inferior to the great Franklin Delano Roosevelt, himself.

One example of his cleverness is the way in which he has used the FEPC issue to keep the Republicans and Dixiecrats from forming an alliance against him—an alliance which, if consummated, might be a great menace to his future political career. Another example is his handling of the coal strike. He carefully avoided intervention until the fuel shortage became acute. He then used the threat of seizure as a whip to force the employers to grant most the miners' demands. By refraining from seizure, he avoided open conflict with the mine owners; by settling the strike before most areas actually ran out of coal, he escaped calling down upon himself the dire wrath of the general public; and, by securing higher wage rates and more pension money for the coal miners, he intensified the loyalty of his most dependable group of supporters—the members of labor organizations.

But, for thoroughgoing political adroitness, his latest move probably eclipses any of his previous political maneuvers. He is actually arranging to use the prestige of Herbert Hoover to solidify the hold of Harry S. Truman upon the labor unions. Here is what is asked for in the message which he sent to Congress on March 13, 1950. It requests Congress to adopt 21 plans for reorganizing various agencies of the executive branch of Government, thus ostensibly merely carrying out the recommendations outlined in the monumental report of the Commission on Organization of the Executive Branch of Government—a report which was prepared under the direction of Herbert Hoover, and which has received almost universal acclaim for its unbiased and scholarly analyses and discussions of ways and means to secure greater efficiency and economy in governmental administration. All this seems highly laudable.

But, hidden away in the middle of the message is the seemingly innocuous plan No. 12 through which, according to President Truman, "unified responsibility is once more established in the National Labor Relations Board by transferring to the Board and its Chairman the functions of the general counsel and by abolishing the statutory Office of the General Counsel. This plan will bring to an end the confusion which has resulted from divided responsibility."

Evidently, by this explanation, the President hoped to lead Congress and the public to look upon this step as being merely a move to systematize the operations of a bureau.

In reality, however, the National Labor Relations Board has little resemblance to an administrative bureau. For all practical purposes, it is a court, the chief function of which is to adjudicate disputes between employers and employees. Under the Wagner Act, it really operated merely as an arm of the CIO. Following the Russian model, the functions of prosecutor and judge were combined, and, in most instances, regardless of the evidence, the case was decided in favor of the labor organization involved.

One of the main reasons for repealing the Wagner Act and adopting the Taft-Hartley law was to get rid of this un-American setup. In the new statute, the functions of the prosecutor were separated from those of the court. As general counsel, Robert N. Denham, by his fair and unbiased enforcement of the law—neither employers nor employees being shown any favoritism—has gained the respect of all parties, not only for himself, but for the Taft-Hartley law as well. And now President Truman proposes to eliminate from the picture both Denham and his office and go back to the iniquitous system prevailing under the Wagner Act.

But the superironical twist to this scheme is that it is proposed under the guise of carrying out a mandate of the Commission headed by Herbert Hoover. And, to add insult to injury, under the general reorganization act passed by Congress, this plan will automatically go into effect unless it is specifically repudiated by a positive vote of at least one branch of Congress. Does a "doubting Thomas" still remain who is unwilling to concede that Harry S. Truman is a past master of political strategy?

If you are opposed to having the President usurp the constitutional powers of Congress in order to secure the financial support and votes of labor monopolists tell your Congressman and Senator that section 12 of the President's message reorganizing the National Labor Relations Board should be voted down.

Great Lakes Shipping

EXTENSION OF REMARKS
OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before House Merchant Marine and Fisheries Subcommittee, Washington, D. C., March 29, 1950:

GREAT LAKES SHIPPING

I am privileged to appear before your committee in support of legislation endorsed by so many of my colleagues who have a genuine interest in reviving package-freight service on the Great Lakes waterway.

You are undoubtedly familiar with the fact that, in the decade prior to the recent war, about 20 vessels were employed in the Lakes' package-cargo trade, and that most of these vessels were transferred by the Government, in the early years of the war, for service in salt water. Due to the high cost of replacement of suitable vessels, there is no package trade on the Lakes today, and no reasonable hope for its revival is foreseeable unless the Congress enacts legislation for the purpose expressed in these several bills before your committee.

Witnesses appearing before the Senate Interstate and Foreign Commerce Committee on identical legislation have demonstrated the importance of package-freight service to my city, Buffalo, N. Y. It was pointed out that, prior to the war, 2,500 persons were employed in stevedoring and shoreside services connected with package trades, and today there are not more than 50 employed in these capacities.

We who support this legislation are aware that ship operators who bought war-built vessels for salt-water trades oppose our effort to revive the Lakes' package-freight service on the ground that it is inconsistent with the policy of the Ship Sales Act of 1946. We are, also, mindful of the fact that the salt-water operators have, under the Ship Sales Act, purchased war-built vessels to the limit of their needs, and that the 10 ships proposed to be converted for use on the Lakes would otherwise lie dormant in our reserve fleet. The sale of ships under this act, at admittedly favorable prices, has not allowed the purchase of a single vessel for operation on the Great Lakes.

There are many who view the Ship Sales Act as having been discriminatory against waterborne commerce on the Lakes. This legislation would, in some degree, overcome that objection. In addition, it will provide many millions of dollars of work for our shipyards and will afford jobs for seagoing personnel and those employed in the necessary shoreside trades.

In addition, it will rehabilitate a transportation medium that has, historically, been most valuable to the entire Lakes region.

Believe it or not, more tonnage is carried by American vessels each year on the Great Lakes than is carried by all United States flag ships engaged in foreign commerce. Before the war, water transportation on the Great Lakes included bulk carriers, package freight ships, and passenger steamers. Today our passenger tonnage has been reduced to but a fraction of its prewar level; our package freight vessels have been totally eliminated. These two classes of ships so necessary to service Great Lakes commerce have not been available since the Government requisitioned during the war and took them for use on the high seas.

High building costs for new vessels have discouraged private capital from returning to the Great Lakes package and passenger trades. Shipbuildings costs have risen tremendously over prewar construction figures, and operating costs have also climbed. It is impossible for private operators to pay the high costs of building new ships and still give service to Great Lakes commerce at rates low enough for their service to be attractive to shippers. If we must wait to build new ships, I doubt that the package freight and passenger trades on the Great Lakes can be revived in the foreseeable future.

Our Government owns thousands of ships which are presently rotting away in the laid-up fleets. Not only is no revenue received from these vessels, but their upkeep and maintenance costs the taxpayers many thousands of dollars each year. It seems ridiculous to me that these vessels should not be made available for use by the people of the Great Lakes States: After all, the people of the Great Lakes States contributed heavily in their taxes to the building of these ships. It is particularly ridiculous that our people should not be able to use these ships when the sole reason that they are unable to do so is because of a highly technical interpretation by the Maritime Commission of the word "reconvert" in the existing Ship Sales Act.

The essential purpose of the bills now before this committee are to permit allowances for the conversion of these war-built vessels for use on the Great Lakes in the same manner as allowances are presently granted for the reconversion of these same vessels for use on the ocean. Many purchasers today can buy vessels from the Maritime Commission and receive allowances up to 100 percent of the selling price of those vessels in order to reconvert them to a theoretically standard-type ship. There will be presented to this committee a table showing actual cases in which reconversion allowances granted by the Maritime Commission to people who bought these vessels for use on the ocean have exceeded 90 percent and in some cases have reached 99 percent of the total Ship Sales Act selling price.

But even though an allowance up to 99 percent were given to a Great Lakes purchaser for the reconversion of a vessel, that reconverted vessel would be of little value in the Lakes trades. These war-built vessels were constructed for use on the ocean; when reconverted back to a standard type they are suitable for ocean use but completely unsuitable for Lakes use. All this bill does is to say that the allowances similar in effect to those available to reconvert a vessel for an ocean purchaser shall be equally available to Great Lakes purchasers for the

conversion of the same vessels to Lakes use. As a matter of fact, these bills would provide less advantages to a Lakes operator than is presently granted to an ocean operator. For while the latter can get up to 100 percent of the Ship Sales Act selling price for his allowances, this bill would limit the allowances to a Lakes purchaser to 90 percent of the purchase price.

Several facts regarding this bill must be made clear to this committee. In the first place, enactment of this bill will not cost the United States Government one single penny. On the contrary, our Treasury will receive substantial payments under this bill. Lakes buyers will pay the same amount for ships sold under the terms of these bills as they would be required to pay for the same ships under the existing Ship Sales Act. It is particularly important to invite the attention of this Committee to the fact that purchasers who would buy vessels under this bill for use on the Great Lakes would pay exactly the same amount for the same type ship as a purchaser under the existing law would pay for that ship.

Under the bill now before this committee, presently useless Government-owned ships could be put to a useful purpose on the Great Lakes without a penny of cost to the Government and without a penny of reduction in the Ship Sales Act selling price. If this bill is enacted, I feel confident that vessels will be purchased from the Government for use on the lakes. Jobs will result to seamen and longshoremen, taxes on wages and earnings will accrue to the Government, and manufacturers and consumers in the Great Lakes area will all benefit from lower freight rates. It seems to me that under these circumstances the Congress is almost duty bound to enact this legislation.

May I point out that section 4 of this bill merely extends the Federal Ship Mortgage Insurance Act to cover purchase of vessels under this bill for use on the Great Lakes.

Purchasers today who buy ships under the Ship Sales Act are required to pay only 25 percent down and are given a mortgage by the Maritime Commission for the remaining 75 percent. Because this will not be available to the Great Lakes purchaser who must pay high conversion costs and who must, therefore, borrow from private banks, it seems only fair that they can get the benefits of the mortgage insurance provisions up to 75 percent of the value of the vessels' cost and the costs of conversion. The principle involved is similar to that now in use in various housing acts.

In a recent communication on this bill, the Maritime Commission mentioned that certain clarifying language might be required. We certainly have no objection to such clarification if your committee feels that to be advisable. In its letter the Commission noted that the moving of these vessels to the lakes was hazardous and difficult. I am informed, however, that the engineering studies show the complete feasibility of this movement; moreover, all risks involved can be insured against.

The Great Lakes taxpayers have contributed much to the Maritime Commission's ocean shipping program. Our taxpayers have had large amounts of their taxes allocated to subsidize ocean shipping. Not one penny has been spent for Lakes water transportation. It seems to me to be of doubtful taste for the Commission and ocean shipping owners to do otherwise than vehemently support this legislation.

In conclusion let me urge upon this committee the prompt enactment of this bill. It is necessary if Great Lakes package freight and passenger shipping is to be revived in our lifetime. Never has a more salutary objective been subject to accomplishment without cost to our Government.

Sneak Attack on the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Richmond Times-Dispatch of Wednesday, March 29, 1950, entitled "Sneak Attack on the T-H Act":

SNEAK ATTACK ON THE T-H ACT

Because the Taft-Hartley Act, as passed by the Eightieth Congress, whittled the power of union leaders down to size, it was promptly denounced by them as a slave law. Mr. Truman, eager for election in 1948, promptly echoed the epithet.

Neither he nor the labor leaders bothered to explain why they considered the T-H Act a slave law. Presumably, they acted on the political principle of the late Herr Hitler, who said that people will believe a lie—if it is big enough and repeated often enough.

Ever since he became President in his own right, Mr. Truman has used every means at his disposal to maneuver Congress into killing the Taft-Hartley Act. When it became evident that even a Democratic Congress was unwilling to repeal the act Mr. Truman changed his tactics.

He abandoned the frontal attack on the law and tried end runs. He appointed his own fact-finding board, a three-man political instrument whose prejudices on the pension issue precluded an impartial recommendation.

In the coal strike Mr. Truman followed the same tactics. With both industry and Congress begging him to invoke Taft-Hartley injunctive powers to end a dangerous midwinter shortage of fuel, Mr. Truman again bypassed the law and named a personal board; but John L. Lewis spurned its good offices, and the President was finally forced to comply with the law of the land.

Now he has resorted to a sneak attack on the T-H Act—from the rear; he wants to abolish the office of the NLRB's general counsel, Robert H. Denham.

The maneuver was well timed. While the Nation was engrossed in the State Department sensation, he filed with Congress 21 reorganization plans. All of them were reported to have been recommended by the Hoover Commission.

One of the 21 demanded the abolition of the office of NLRB general counsel. Mr. Truman says he wants to abolish Mr. Denham's office "in the interest of economy." Yet this economy would hamstring the Taft-Hartley Act by destroying the balance of power between the Labor Board and its quasi-autonomous counsel. It was not recommended by the Hoover Commission.

It was recommended, urgently and in some cases profanely, by the bosses of the CIO, the AFL, and the UMW. Mr. Denham is cordially hated by union leaders. He has been nonpartisan and fair in the administration of his office.

Mr. Denham is a lawyer of the old school. He believes that a law, once passed, is automatically removed from the sphere of politics and should be enforced without fear or favor. We understand that he has initiated three times as many cases against employers as against unions, and that the first injunction he sought under the Taft-Hartley Act was against General Motors.

There had been no demand for his ouster until the Eighty-first and nominally Democratic Congress convened in January 1949, when Mr. Truman, still flushed with the heady wine of unexpected victory, told Congress that he and it had a mandate from the people.

Mr. Truman did indeed have a mandate, a mandate from a handful of union leaders who insisted that he bring about the demise of the Taft-Hartley Act as promptly and violently as possible.

But Congress withstood the union assault, and hostilities were desultory until last January when Mr. Denham, in a New York address, advised employers to go to the courts if they wanted fair play. The next day telegrams from CIO leaders deluged the White House, clamoring for Denham's scalp.

Last week the President once again yielded to union pressure. He smuggled the knife intended for Denham into an economy package endorsed by the Hoover Commission. The House Committee on Executive Expenditures approved the package as a whole.

The President must not be allowed to get away with this underhanded maneuver to emasculate a law which the Nation as a whole approves. It is of a piece with Senator HUMPHREY's attempt to kill the Byrd watchdog committee in the interest of economy.

Addresses Delivered at Fifteenth Annual Dinner of the Chicago Decalogue Society of Lawyers

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. YATES. Mr. Speaker, one of the distinguished bar associations of the city of Chicago is the Decalogue Society of Lawyers. With its membership of approximately 1,200 lawyers, it is the third largest association in the city and the fourteenth largest in the Nation.

Each year the Decalogue Society of Lawyers presents an award of merit to the person whom it considers to have made a most significant contribution to the community. Its award for the year 1949 was bestowed upon Col. Jacob M. Arvey, an outstanding lawyer of the city of Chicago and the chairman of the Cook County Democratic organization, at the fifteenth annual patriotic dinner of the Decalogue Society held on February 15, at the Palmer House in Chicago. Among those who received similar recognition in previous years were Rabbi Stephen M. Wise, Bartley Crum, Bishop Bernard J. Sheil, and Leo A. Lerner.

In tendering the award on behalf of the society to Colonel Arvey, Mr. Oscar M. Nudelman, of the Chicago bar and a past president of the Decalogue Society of Lawyers, delivered a most inspiring address and set forth the reasons for which the society's award for 1949 was given to Colonel Arvey.

Col. Jacob M. Arvey's reply, I believe, is significant in setting forth the political philosophy of a truly able and successful political leader.

The addresses of Mr. Nudelman and Colonel Arvey follow:

ADDRESS DELIVERED BY OSCAR M. NUDELMAN

Mr. Chairman, Colonel Arvey, honored guests, fellow members of the Decalogue Society of Lawyers, ladies, and gentlemen, beckoned to our shores by an abundance of God-given natural resources and freedom and equality of opportunity, prevailing since the days of the founding fathers, sturdy men and women of all races and creeds, with willing hands and fertile brains, pioneers all, regardless of the time of their coming, and their descendants have made this the richest, freest, and most progressive country in all the world.

In this atmosphere of freedom and opportunity, firmly maintained, and defended to the death whenever threatened, it is natural that we should rear large numbers of that peculiarly American phenomenon which we call the self-made man.

Without benefit of aristocratic birth, inherited wealth or a system of nepotism, a great many of our citizens, often first-generation Americans and even immigrants have, through their own efforts, risen to places of eminence in business, finance, Government, the arts, and education.

Every such incident naturally evokes our warm admiration and applause. Upon reflection, however, we find that no successful man is really self-made. Most often he is a product of that society whose guiding principles of freedom of choice and opportunity constitute, in the main, the catalyst, in the absence of which his growth and development could never have begun.

Thus, while most of us are prone to admire and some to give unthinking adulation to mere success, many have become more exacting and apply certain standards to assess and measure the growth and stature of self-made men.

What such men ultimately do with their lives, their wealth, or their power, is, of course, the real criterion of whether they continue to grow or stagnate and to what extent, if any, their personal success is a boon to society. And because our annual award is given, for the most part, to encourage emulation by others, we, of the Decalogue Society, must be exceedingly careful in our selection of each recipient.

In our yearly search we find that there are some who, having grown only to the point of self-satisfaction, when, in their own eyes, they have reached their goal, arrest their own growth prematurely and spend the rest of their incomplete lives in the drab existence of self-complacency. Having no sense of obligation to society, they vigorously oppose all efforts at the expansion of opportunities for others lest their own positions thereby become insecure. Such men are, in reality, failures and do not merit our consideration.

Others, who have only a vague sense of obligation to society and to their own good fortune, may contribute, even generously to traditional philanthropies, and consider such giving as payment in full. They are, of course, to be commended for their generosity, but unless they do something more, something constructive, we may be certain that their growth has slowed down and will soon be completely stopped by the limitations of their own personalities. Nor do they merit our further consideration.

Then there are some who, in the process of growth, have attained power, power and ability to benefit large numbers of their fellow men by their continued efforts and activities. Too many among them, lacking confidence in the future and intimidated by criticism which comes to all who dare to be different, demonstrate their lack of vision and courage by retiring prematurely into the oblivion of private pursuits. They, too, are not counted among the truly great.

We find still others displaying none of these faults, but who, in the activities which we applaud, neglect the very people from whom they stem. In that event, they have misread American history and have failed to understand the American way of life.

Ours is a Nation comprised of many minorities, and no real American will criticize another for being counted, even conspicuously, among one or another of the minority groups. It is the very essence of our form of government and its underlying philosophy that each of us is expected to make his own peculiar contribution to American life in accordance with the religious, cultural, ethical, and esthetic concepts and heritage of his own group.

It is precisely because our Nation was founded on differences synthesized only by a common love for our country and its institutions that we refuse to become streotypes, all cut from the same pattern.

Our formula, therefore, becomes clear. In order to qualify for our annual award one must have made a significant contribution to American life. He must have vision and courage and a strong sense of responsibility to society. He must be a loyal member of his own group in order to be a better American. He must be strongly imbued with the ideal of the brotherhood of man and generous with his substance and his energy in the service of all mankind. Above all, his life must be such as to inspire others to emulation.

Such men are not easy to find. But this year's choice was inevitable by any standard.

The fourth of seven children, Jacob M. Arvey was born in Chicago, of good pioneer immigrant stock. He gave early evidence of loyalty, grit, and determination by working with his father delivering milk from a horse-drawn wagon in all sorts of weather.

He learned his Judaism and its heritage of the democratic way of life and firm adherence to social justice from his father who was a founder and officer of one of the first synagogues established in Chicago and from his mother who was a pious and saintly soul all her days.

He was only 13 when his father died and in order to assist in the support of the family, he worked in his mother's neighborhood candy store. When he was old enough, he got a job in a factory at $3 a week and was graduated from high school the hard way—by attending night classes. The same was true of law school and he was admitted to the practice of the law in 1916, when he was barely 21.

In the First World War, he was so impressive as a 4-minute man that in 1918 he was appointed as assistant State's attorney. Here he first demonstrated his love for justice by refusing to prosecute in any case unless he was fully convinced by the evidence that the defendant was guilty.

In 1923, he was elected alderman from one of the largest wards in our city. In that day, this district was inhabited principally by immigrants from eastern Europe where a governmental regime and public officials spelled tyranny and were best avoided. This was at once a challenge and an opportunity to assert his devotion to the lot of the common man; to awaken in the immigrant confidence in the American way of life and to instill respect for American institutions. In that task, he succeeded admirably, for soon, fear and distrust were replaced by devotion and love for American ideals and hearty cooperation in government.

In the council, too, he continued his growth and soon became chairman of the important finance committee, a position he held until his resignation to enter the armed forces.

During all this time, his heart responded generously to every plea for help from both public and private, religious and secular, and general and Jewish charitable organizations.

For many years he had been a member of the Illinois National Guard and in 1941 he held the rank of captain. When, after the enactment of the Selective Service Act, his regiment was about to be transferred to the United States Army, he was privileged to resign. He was beyond the draft age. With war imminent, many men younger and more robust than he would have welcomed the opportunity to remain at home—and many did. Not so with him. Although he could have rendered distinguished service in support of the war effort on the home front—service which would have satisfied almost any man's conscience, his convictions as to the rightness of the struggle against tyranny and oppression, his indignation at the Nazi efforts to brutalize all mankind, and his great love for America compelled him to remain with his regiment and the record of the quality of his service is part of our country's contemporary history.

Leaving his family, his friends, and his business, he served for almost 5 years, first giving inestimable guidance in the organization and administration of camp life in this country and then, distinguished himself by more than 2 years of duty in the Pacific theater. Discharged as a lieutenant colonel in late 1945, he is now a colonel in the Reserve Corps. Among other decorations, he is the holder of the Silver Star and the Legion of Merit.

Upon his return from the war, thin, to the point of emaciation, tired to the point of exhaustion from the rigors of severe campaigns, sick with the memory of human carnage and misery, his desire to retire from public life would have been understood and justified by all. But the very experiences of the war and profound meditation about its causes and effects, gave him a new vision of a better world and a better life for the common man, which, in turn, stimulated renewed vigor and courage to resist the temptation to seek isolation.

His associates sensed this new power and he was appointed a member of the Chicago Park District and soon thereafter elected chairman of the Cook County Democratic Central Committee.

The area of his efforts and influence was expanded. He could now make practical application on a broader scale of liberal and progressive ideas which he had always sought to put into practice. His influence began to be felt in national circles. Many of his ideas were incorporated in the national platform of his party. In this recent period, his genius, his energy, his foresight and his perseverance resulted in the crowning achievement of his career—the selection of the highest type of men, approved by the voters and the envy of the whole country, to govern in our city, our State, in the House of Representatives, and in the United States Senate.

Yes; he is the new liberal, the real liberal of the practical kind, with his eyes on the stars but his feet on the ground. It is of him that a Member of Congress from our own State wrote recently, "He played a much larger part than is generally known in getting to the floor of the House, and passed by the House, the social-security bill bringing under coverage 11,000,000 more men and women. His influence was behind the minimum-wage law, and I know it is a matter of pride to him that all the Congressmen from Illinois of the party of which he is the leader have gone all out in support of the Federal fair employment practices bill."

Nor did his loyalty to Judaism and his Jewish brethren ever diminish. His tact and diplomacy have often been called into play in the solution of purely Jewish problems. Only recently, he was selected to head a committee of three to represent Chicago Jewry in the settlement of a fund raising controversy which might otherwise have caused a serious rift in Jewish life in our community. Many such incidents could be related in addition to his being one of the founders of the YMHA in Chicago many years ago and more recently, being the sponsor of the Chicago Lawndale Lodge of B'nai B'rith, of which he remains honorary president, as well as his

membership, in most instances on the boards, in any worth while Jewish religious, charitable and educational organizations including several congregations.

But his outstanding contribution to Jewry and the remnant of Israel was the role he played in those critical days when Palestine was partitioned by the United Nations and Israel was recognized by the United States. With characteristic modesty he will decline to speak of his part in the establishment of a new democracy in the world. But when that chapter of history is written depicting America's participation in the establishment of Israel, his name will stand out in bold type as an illustrious American Jew.

It is of him that one of the leading Zionists of America said recently, "Very few know the significant role he has played in the emancipation of our people and in the restoration of our dispersed to nationhood."

It is of him that the recipient of last year's award, himself a lifelong Zionist leader, the late Rabbi Stephen S. Wise, of blessed memory, said, "No one will ever know how much he did to help the final decision on Israel."

Our choice for this year, therefore, meets all the requirements of our formula; he has made a significant contribution to American life by making us all conscious of our civic duty to participate in government and by demonstrating that such participation results in good government. He is a loyal member of his own minority group, the Jewish people, and is thereby a better American. He is generous with his substance and his energy in the service of his country and all mankind. He is imbued with a deep sense of responsibility to society and with the ideal of the brotherhood of man. He clings loyally to his friends and is well known never to break his word once given. He has vision and courage in abundance. He is kind and modest and humble. He inspires emulation by all of us. He has grown to full stature but his growth continues.

He is supremely qualified for our award of merit and I am honored to be the instrumentality through whom it is delivered. Colonel Arvey, on behalf of the Decalogue Society of Lawyers of which you yourself are a distinguished member, I take pleasure in presenting to you the award of merit for the year 1949, with our best wishes for a long healthy life of continued service to your people, your city, your State, your country, and all humanity.

(Reading from scroll accompanying award:)

"The Decalogue Society of Lawyers award of merit for the year 1949 presented to Col. Jacob M. Arvey for his distinguished service to his country as soldier, statesman, and civic leader; for his profound understanding of and unyielding devotion to the American ideal of equality of opportunity and justice for all; for his historic achievements in bringing good government to his city, his State and his country; for his zealous and fruitful labors on behalf of Israel and the Jewish people; for the high-minded humanitarianism manifest in his lifelong devotion to the realization of democratic principles.

"CHICAGO, ILL., *February 25, 1950.*"

ADDRESS OF COL. J. M. ARVEY

Few things that have happened to me in my career as a Chicago lawyer have moved me as deeply as this tribute you pay me tonight.

In accepting it, I realize fully that it is more than merely a tribute to me as an individual.

I am happy to accept the award, not as a personal honor, but rather as your recognition of the growing importance of a group which I—and many of you—represent—the lawyer in politics.

May I, therefore, express my gratitude not for myself alone, but in behalf of those frequently maligned, often misunderstood, yet indispensable leaders of our democracy—the lawyers in politics.

As members of the American bar as well as of the Decalogue Society, we men of law bear a twofold tradition. This tradition carries with it, I humbly believe, the solemn obligation to use our knowledge of law and legal methods to resolve the contentions which threaten our way of life and the peace of the world.

If there is to be any hope in the world for continued peace and justice, it must come through the development and application of legal concepts and legal mechanisms acceptable to all governments—and not from the use of the hydrogen bomb.

Ours is peculiarly a Government of law. As such it is to a large extent a Government by men of law. Three hundred of the 531 Members of Congress are lawyers. Perhaps this might be expected in a body of lawmakers. But 343 of our 1,600 top Federal officials also hold one or more law degrees. That is roughly 220 times as many lawyers in top Government positions as would be the case if we selected these officials by drawing straws out of a hat.

Certainly, in no other country in history, have legal and political ideas and methods been so closely connected as in the United States.

To the critics of the lawyer in politics—that is in party politics as well as in Government—let me simply remind them that of the 56 men who signed the Declaration of Independence 25 were lawyers. And that famous bill of particulars against George III was drafted by the greatest lawyer-politician of his day—Thomas Jefferson.

Of the 51 men who framed our Federal Constitution, 31 were lawyers.

This state of affairs has continued. Not only has the meaning of our Constitution always been interpreted by lawyers sitting on the Supreme Court bench, but of our 32 Presidents, 26 have been lawyers—or judges, if we include President Truman. Of our 54 Secretaries of State, 50 have been lawyers.

As a matter of fact, the chief objector to the lawyer in politics has usually been the man who feared democracy most—the tyrant.

There is a story to the effect that when Peter the Great of Russia was visiting London—that was long before the present spy scare, of course—he was surprised at the number of lawyers in Parliament. "I have only two lawyers in all my dominions," said Peter. "And I intend to hang one of them as soon as I get back."

Lawyers had little or no place in Mussolini's corporate state. They had little or none in Hitler's Nazi Reich. They have practically none in Soviet Russia or in any other country dominated by a dictator.

As long as America continues to be a Government of law, and as long as members of the bar remain free to talk and act according to legal processes, we have little to fear from tyranny—either from the left or the right.

As long as the lawyer continues to take the same active part in government and politics as did Thomas Jefferson, Patrick Henry, James Otis, Samuel Adams, and our other first American lawyer-politicians, we shall remain a government of law.

I believe there is altogether too much of an attitude of looking down the nose at the politician by people who forget that politicians—and most of them lawyer-politicians—made the United States possible.

As a lawyer in politics, who is generally regarded as a practical party leader, I am as thoroughly convinced of the need of working in one or the other of our major political parties as were Thomas Jefferson, Abraham Lincoln, and Franklin Delano Roosevelt—the greatest and most effective reformers of their times.

In saying this, I do not wish to belittle the importance of independent groups and minor parties working for definite reforms. I am merely pointing out that the main road to political goals, in our American political system, has always followed a major political party.

Only as a political-party worker or leader can you be fully effective—even if your goal is reforming the party itself. You can't clean a house from the outside. You can destroy it—working from without—but you've got to get inside to renovate.

As the titular head of my political party in this community since 1946, I have had a dual objective. I've tried to make democracy with a big "D" work outside the organization, and I've been trying to make democracy with a small "d" work within the organization.

I don't want to be the leader of a rubber-stamp organization. I want to be the leader of a dynamic group of men and women capable of challenging and improving every constructive idea I can promulgate for the good of the order. I feel that it would be foolhardy and presumptuous for anyone in my position to attempt to substitute his ideas, or those of a mere handful of men, for those of thousands of precinct and ward leaders and the millions of voters with whom they have contact.

On the other hand, of course, a ruthless party boss could clean out the deadwood in his organization. He could put go-getters in key positions. He could pick human dynamos for top administrative jobs, and intellectual wizards for top-drawer policy jobs.

Instead of letting members of the organization work out their problems and reach their own decisions in the precinct, the ward, the congressional district, and so on, by the slow, tiresome, wasteful democratic process of discussion, bargaining, and compromise, this political master mind could bypass all this. He could pick whom he considered the best candidates and officeholders, determine what he considered the most expedient policies—and save time, effort, and money.

But granted you could find the right kind of superman for your political boss—a man surpassing all his fellows in wisdom, astuteness, and political knowledge—one with the highest ethical standards and the greatest understanding of human problems—in turning over party rule to this single human being, you would be killing democracy and, of course, history discloses the existence of no such superman.

It is true there are political leaders, commonly called bosses, who do not believe as I do. There is no reason why they should, they are under no compulsion to adhere to the pattern I am employing unless it should turn out, after my theories have been fully tested that I am right and they are wrong. Frankly, some of my own very closest political associates disagree with my views, even though I, and not they, operate under the title that would permit such boss rule.

I realize old forms are always hard to break away from, but that is not, in my opinion, the best of reasons why they should be retained.

I think a bit of experimentation is called for. I believe the end result will be good for the party and its objectives and good for the community.

Now, as I see it, a party leader if he is to lead intelligently must inspire his fellow party members to recognize and embrace those measures and movements which spell not only party success but community progress.

He must encourage the leaders in the organization under him to accept ever greater responsibilities toward the party and its public relations. The broader the base of leadership, the stronger will be the party structure.

As a party politician, I believe our greatest strength as a Nation will come when both major parties are led by strong courageous men who represent the will of their party members, each party having a definite stand on great public issues.

I believe such an alinement would do away with the privilege and pressure groups which are afraid to submit their political ideas to the American people for their decision in the open, but work in the dark.

I have already paid my respects to the nonpartisan and independent groups. I have reason to be grateful to them. Within the past few years they helped the Democratic Party of Illinois and Chicago elect a great governor, a great United States Senator and a great mayor. I know that independent votes helped decide these contests.

Yet, while these independent groups exercise undoubted influence in naming candidates and electing them, they lack the discipline of party responsibility. Thus, when the candidates they help elect, come into office, with either no party responsibility, or a divided responsibility, the result is what we saw in the Eightieth Congress and what we see today in the Eighty-first Congress. Witness the fate of the displaced-persons bill, the civil-rights bill and other important issues.

Voters in a national election vote on issues. They vote on the basis of what they read in the party platforms. They have a right to believe that the parties mean what their platforms say. They have a right to believe that the candidates running for Congress are pledged to vote for the measures in their party platforms.

Without party responsibility, I see no way to hold a candidate to his pledge. I see no way to have party responsibility that means anything unless we have political parties strong enough to hold officials to their campaign pledges. Of course, resolutions help, public opinion helps, newspaper editorials help.

But in the final analysis, it is only the party, whose support means the difference between nomination and rejection, election and defeat, that can make a congressman and a congress toe the line.

At the local level, this question of party responsibility is not, generally speaking, nearly so important. Local candidates are not ordinarily elected on national issues, and do not have the same relation to the party as does a congressman or a United States senator.

The party's broader principles are not so deeply involved, so that mayors and even governors may properly consider themselves to be more or less on their own, accountable primarily to the personal platforms upon which they have been elected.

In Illinois, as in most States, the gubernatorial candidate's platform usually becomes the basis for the party platform.

Such officials, however, run certain risks in straying too far from party councils.

The danger of such a divorcement is that they fall into the hands of special-interest groups, or of self-serving individuals who owe allegiance to no one but themselves. More than one well-intentioned public official has been ruined by his friends.

Adherence to party associations provides, at the least, the safety that lies in numbers.

I would be the last to maintain that political organizations, including my own, are spotless and unsullied. But I do ask you to consider this—for every man in public life who is corrupt, there are plenty of men in private life who are corrupters.

On the whole our political organizations represent a fair cross section of the people of Cook County.

On the whole the average party member compares favorably with his nonpolitical neighbor. I mean in terms of honesty, ability, and interest in good government.

It is particularly fitting that this recognition of the lawyer's place in politics and goverment should come from this society.

We are told that the earliest concept of government by law, instead of by men, came from the Decalogue, handed down to Moses, our first lawgiver, on Mount Sinai.

In the Decalogue, in the sacred books and in the oral decisions, interpretations and commentaries later written down in the Talmud, we have the first written constitution and the first constitutional law in history.

By two great traditions—that of the American bar and that of the Decalogue—we men of law have a double obligations to American democracy.

It is the obligation to lead in the democratic processes of drafting our laws, administering our laws, and supporting the new legal concepts under which alone we may continue to expand as a government of the people.

Sholem aleichem—peace be with you—has come down to us from the days of the Decalogue as a common greeting. It expresses the age-old hope of peace. By establishing government by law—instead of by force—our forefathers laid a foundation for peace upon which we can build.

The foundation of government by law came to the new world long before the American Revolution. It was brought by the displaced persons of their day. I mean the Puritans and other religious dissenters who sought asylum here. For many years the Hebrew law, as it was interpreted by their spiritual leaders, ruled the first American colonies.

When the American Revolution broke, it was the spirit of law, interpreted largely by the lawyers of that day, the lawyers who became the first American politicians, which made possible the founding of our Republic.

It is the same spirit of law, of government by law, the same rule of reason and of conciliation, that alone can lead mankind out of his present wilderness.

Today, more than at any time in the entire history of mankind, we have need for those orderly processes to which legally trained minds turn instinctively. We are living in an era of chaos, a terrifying time in which our civilization is threatened by ideological conflict that persists even after two World Wars.

The fight for world peace—for those ideals toward which we have been groping through all the years of horror and holocaust—we can never abandon. In the end, we will win out through unity, and unity can only come through understanding. Ultimately, we must have understanding at universal levels, but that cannot be possible unless it exists at all of the lower levels, including the smallest unit of all—the precinct.

That is where a responsible political organization can play its part.

My profound conviction is that political enterprise operated through political organization can be instrumental—though the development of leadership and the promotion of good will—in attaining these high goals.

This I consider to be the most important part of my task, and that is the objective I have set for myself.

Allow me to again thank you for this memorable night. I take from it new encouragement to believe that what I am doing serves in at least a small way the welfare of my country and the world in which I live.

What About the Ex-Communists?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, an excellent article appeared in the New York Times of February 19, 1950, entitled "The Complex Issue of the Ex-Communist." It was written by Mr. Arthur Koestler, novelist and former foreign correspondent. It should be read by those Members who are interested in problems presented by the ex-Communist:

THE COMPLEX ISSUE OF THE EX-COMMUNISTS—WAS CHAMBERS THE REAL VILLAIN RATHER THAN HISS?—"NO," SAYS ARTHUR KOESTLER, AND HERE HE TELLS WHY

(By Arthur Koestler)

The second trial of Alger Hiss happened to coincide with the publication of a book in which several former Communists and Soviet sympathizers, including myself, relate their experiences. This explains the letter from which the following extract is taken. The writer is unknown to me—she is a woman obviously of German origin who now lives in a Latin-American country.

"Reading about Alger Hiss I always think: There but for the grace of God and the Communist Party, stand I. I belong to your generation, in age and in spirit. I was one of those who, had the party only asked for, would have spied on God Almighty without the least bit of a bad conscience. It is not my merit that they never did ask me things like that, because the only function I ever held was that of a dumb cashier of party dues and later on I was fortunately only a no-account typist in one of their organizations in Berlin, still later in Spain the same during the civil war, in a party office in Barcelona. It was around that time, summer 1937, when I changed my mind about our "Religion" and no doubt, had Alger Hiss gone through this school he would have changed his mind also. But Americans were rather a few years later in finding out, you know the political reasons for that very well, I suppose. It seems one has to be a European with a left-wing past to understand the Hiss story * * *.

"That is where the call for you comes in. Defend Alger Hiss on ground of his motives. I only know of the Hiss case what I have read * * *. Still, the story seems in a way very clear to me and though I believe he did what he is accused of, I see it in the light of his then decent motives. The question would rather be: have the United States really been harmed through him? I cannot believe that. It must be his difficult position and regard for his family that makes him insist on his innocence which, in a higher sense, is real. Come to think of it, for the American public the case is really a bit involved, but you could make it clear. Maybe, if you did, you would prevent a suicide. Could not this trial be brought around to the real issue: even if he did steal the documents, What were his motives? Probably, sometime between now and then, when Alger Hiss changed his mind as so many did who had been Communists in good faith, he was in no position to announce that change. It must have been like this and Whittaker Chambers is the real villain because he didn't keep his mouth shut about things past and done with."

I have quoted this long extract because I believe that it expresses, in an admittedly

exaggerated and overstrung manner, the vague feeling of uneasiness in a considerable section of the European and American public. The outstanding aspect of the trial was that it was not a case of the State or society calling a citizen to account for an alleged crime. It was a public and deadly duel between two individuals—one persecutor, one persecuted. Thus the abstract equation of justice between individual and society became transformed into a personal equation between two men, and the whole picture became distorted by the public's emotional reactions to these two so utterly different human types.

As far as personal impressions and the testimonies of high-standing witnesses go, the persecuted Hiss appeared as the prototype of the decent, modest, hard-working, well-spoken, happily married, idealistic American liberal who, even if assumed to be guilty, could not be suspected of having acted for any base reason or for personal gain. His persecutor on the other hand appeared as a man who unblushingly admitted having committed perjury, traveled with forged passports, lived with mistresses under false names and was described by some academic gents as a psychopath. To put the whole matter into a nutshell: from the spectator's point of view the casting of the parts was wrong—Chambers should have got the part of Hiss and Hiss the part of Chambers.

But the roles were only apparently miscast. For there is a tragic consistency and deep symbolism in both characters. Without doubting the verdict of the jury, there are many who agree that Hiss' innocence is "in a higher sense real," and that he kept passing those documents to the spy ring happily like a starry-eyed Boy Scout doing his one good deed every day. These people would feel that he is the classic type of well-meaning dupe who becomes addicted to the Soviet myth as if it were a drug and who never finds his way back from the lost week-end in utopia.

Hiss denied to the end and persisted stubbornly on his single track: Chambers confessed, recanted his past, and came out on the side of the angels. One would think that this after all decisive fact should tilt the balance of sympathy toward Chambers. Yet my correspondent excuses Hiss' impenitence by his "difficult position" and calls Chambers the real villain because "he did not keep his mouth shut about things past." And here again she seems to lend a shrill voice to a vague public sentiment. For though it is said that 1 repentant sinner causes more rejoicing in heaven than 10 righteous men, people here on earth not unnaturally prefer the 10 righteous men; and the public spectacle of the repentant sinner causes at best a feeling of embarrassment, at worst a feeling of repugnance. And here, I believe, is the core of the whole problem.

I remember how at a New York cocktail party some time ago a lady journalist of obvious sincerity attacked me with some vehemence. I don't remember what exactly she said, but the gist of it was that people who had once been Communists should shut up and retire to a monastery or a desert island instead of going 'round "teaching other people lessons." She spoke with deep conviction, and what she said obviously reflected a widespread popular feeling: mankind's instinctive horror of the renegade.

This horror probably has its roots in the collective unconscious, in past loyalties to church, clan, or tribe which, even if apparently buried, remain potent emotional forces. Even those who in principle agree that there are considerations of a higher order which may force a man to override his loyalties and who accept the ethical justification of a given renegation—even those feel esthetically repelled by the spectacle of the act itself. In short, people don't mind if you betray humanity in the name of some particular cause; but if you betray your club or party they will turn from you in contempt.

This leads us to the curious fact that in our society most people are in the habit of manipulating two mutually exclusive sets of ethical rules without being conscious of the contradiction between them. The first is expressed by sayings like "right or wrong, my fatherland," or "if the party demands it, I will spy on God Almighty Himself," and by the value set on unconditional loyalty. The second demands that a man should have the courage to become a traitor, renegade, or apostate if the interests of humanity or of peace, justice, or freedom demand it.

Some of the war trials of the last years were good examples of the confusion created by the simultaneous application of these contradictory rules of ethical conduct. Even more startling is the example of France, where people were shot, imprisoned, or sentenced to national ignominy for having loyally obeyed the orders of their own legal government. I do not wish to plead the case of either the prosecution or the defense; I wish merely to point out that if you feel contempt for Kravchenko or Chambers, then you should feel sympathy for Laval or Schacht; and vice versa, if you condemn people for having collaborated with a totalitarian regime, then you must acquit those who have deserted such a regime.

But of the two coexistent and contradictory rules of ethical conduct, the first, which demands unquestioning loyalty to some flag, social body, or institution, is much older and deeper embedded in our unconscious psyche. This may be illustrated by comparing the public's attitude to a Catholic convert on the one hand, to a defrocked priest on the other. Everybody, including hardened atheists, respects the convert, but even atheists are embarrassed or repelled by a defrocked priest taking a girl out to a dance.

Now, in fact, both are renegades who have repudiated their former convictions. But the convert has only deserted the amorphous mass of unbelievers who do not represent a social institution and have no flags, emblems or party cards; whereas the priest has deserted a church with powerful binding symbols. Hence even those who agree on principle with his decision have an uneasy feeling that somehow he shouldn't have done it—or at least if he had to do it he should not take a girl out to a dance, though for everybody else this is a perfectly proper thing to do.

I think one must accept the fact that Chambers and Kravchenko and the rest of us who have once borne allegiance to the "god that failed" will always be looked upon somewhat like defrocked priests regardless of the differences in each individual's history and motives. It is no use to argue whether this attitude is justified or not. It should be recognized as a psychological fact. And the fact itself would be without much interest if it merely concerned the few individuals in question. In this case the simplest solution for these would be to follow the lady journalist's advice and satisfy the demands of good taste and discretion by retiring to a monastery or a desert island.

But if Chambers had followed this advice, his repentance would have become meaningless and the public would never have learned certain facts which it was essential for it to learn. And the same is true of Kravchenko and Barmine and Silone and the others. My correspondent asks why they can't "keep their mouth shut about things past and done with"; and people with esthetic sensibilities, repelled by this flood of renunciations, disclosures, and ringing mea culpas, ask with a shudder the same questions.

The answer is simply that these things are neither "past" nor "done with." The inner structure of a totalitarian regime and the physiology of its tentacles stretching abroad; the facts about the arctic subcontinent of slavery, about the servitude of satellite governments and the psychology of the Communist Parties of the West—all these data, essential for the ideological and strategical defense of our civilization, could never have been assembled if these men had had the discretion and good taste to keep their mouths shut. For only those who have worked inside the hermetically closed regime know its true character and are in a position to convey a comprehensive picture of it; and in this sense at least it is true that one repentant sinner is a more valuable asset than ten righteous men who have never swerved from the path of democratic virtue.

Obviously the decisive fact about Chambers is that he has performed a service of great social utility. It is equally obvious that not all acts of social utility curry favor with the public or make the man who performs them appear in a favorable light. But it is essential that these two facts, the first of an objective the second of an emotive character, should remain neatly separated; and that the emotional factor should not obscure political judgment or interfere with the discharge of justice.

It is not to be expected that the public should like the runaway "priest"—even if the "church" from which he has run away happens to be devoted to perverse idolatry. It is not even important that it should believe in the purity or otherwise of his motives to quit. The public is entitled to feel attracted or repelled by him, but it is not entitled to let its bias interfere with its judgment: to talk of betrayal where loyalty would mean persistence in crime; to talk of persecution mania when millions are persecuted; to defend an evil regime on the grounds that those who denounce it are no saints. The greatest danger to liberalism today lies in such starry-eyed confusion.

Letter From a Constituent

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. KILBURN. Mr. Speaker, I do not think I have ever before put into the RECORD a letter from a constituent but the following one is too good to keep to myself. This letter is from one of the outstanding real old-fashioned American citizens of northern New York. I thought it would be of interest to the Members of the House and I hope that the Ways and Means Committee will especially note its contents.

MASSENA, N. Y., *March 28, 1950.*

Hon. CLARENCE E. KILBURN,
House Office Building,
Washington, D. C.

MY DEAR CLARENCE: I see where you boys have decided that you are going to dip into the dividends of the common man now, asking the corporations to withhold 10 percent, and turn it over to you boys, to be spent wisely, or otherwise. Don't you think it would be all right just to let the stockholder finger the thing a little bit before you take it away from him, so that he would know what it is like?

I know very well that you Congressmen never figured this thing out, but it is about time you started calculating a little on your own hook, before you start letting the fellow with the pompadour haircut and the possum bellied pipe, who probably has figures enough in his head, or handy by, to figure the devil right out of hell, and also

us taxpayers out of all our money. You had better look into this a little, son, and see that it does not happen.

Kindest regards.

Very sincerely yours,

WALTER F. WILLSON.

Final Solution of the DP Problem

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPPESENTATIVES
Thursday, March 30, 1950

Mr. MULTER. Mr. Speaker, there are still several hundred thousand people in the displaced persons camps who are under the care of the International Refugee Organization—IRO. This organization has done marvelous work in the past 3 years in resettling about 700,000 DP's and repatriating another 70,000 people.

But what about those who still remain in the camps? If sufficient funds are not made available to this organization, IRO will not be able to complete the task with which it was entrusted at the time it was established, that is, find homes for the DP's and resolve the DP question which has been such a burden since the end of the war.

We are nearer a solution of that question than we have ever been in the last 5 years. It can be completely solved and eliminated within the coming year or two if we undertake the following steps: First, speedy action to liberalize the present DP law by admitting a larger number of DP's; secondly, appropriation of the necessary funds for IRO to make it possible for this organization to complete its task of resettling the remaining DP's.

In connection with this matter, I direct your attention to an editorial from the New York Times of March 22, 1950, as follows:

CONGRESS AND IRO

The International Refugee Organization has been told by the State Department that no American funds will be forthcoming to continue its operational activities beyond the next 12 months. Since the United States pays nearly half IRO's annual budget, this is equivalent to informing IRO that it must plan definitely to close down. The background of the situation is this:

When IRO was set up in mid-1947 to take care of the gigantic refugee problem, it was thought that its purposes might be accomplished in 3 years, or by June 30, 1950. The Organization has performed splendid work, measured in figures by the resettlement in new homes of over 700,000 war-displaced human beings and by the repatriation of another 70,000. The miracle is not that the job is still unfinished after less than 3 years but that so much has been accomplished. In any case, a few hundred thousand refugees still remain; and the brutal facts of the situation required a decision last fall to prolong the life of IRO to March 31, 1951, by which time it was hoped that the World War refugee question really could be fairly well solved. To this end, the United States agreed to contribute $25,000,000, almost half the necessary sum, for the 9 months' extension. But in asking Congress for this amount the State Department has had to promise that it would make no more requests for IRO, whether the refugee problem is liquidated by this time next year or not. There is every reason to hope that Congress will approve this year's $25,000,000; but whatever the merits, there is no reason to hope that it will grant any more next year. This is what the representatives of the State Department are trying to make clear in Geneva now.

In these circumstances, much depends on whether the existing Displaced Persons Act is liberalized. If we do not do our part in receiving this wealth of human material, the mere abolition of IRO next year will prove nothing. The refugees will remain; they will have to be cared for; and inevitably the funds to care for them will come in good part from the United States. Congress cannot have it both ways. If it wants IRO to disappear, it must take positive action to remove the essential reason for IRO's existence.

Highway Post Offices May Provide Solution to Slow-Mail Problem

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. JENISON. Mr. Speaker, one of the most serious problems affecting the life of the smaller communities and rural regions is the steadily dwindling transportation service for carrying the mails, resulting in slower deliveries and less frequent service in a large section of the country. It is a matter of common knowledge that economic conditions have resulted in the abandonment of hundreds of local trains, and the mail service further crippled thereby.

We must face realities in the problem of mail delivery, as in everything else. If local train service is a thing of the past, the Post Office Department must move into new forms of transportation, or another serious blow will be struck at the community life of America.

A constructive suggestion for meeting this situation comes from James W. Wells, Jr., editor and publisher of the Newton Press, located in the county seat of Jasper County. Mr. Wells suggests that highway post offices may provide the solution to the slow mail problem. As one of the Illinois members of the House Committee on Civil Service and Post Offices I am deeply interested in his suggestions. Through permission granted to extend my remarks in the CONGRESSIONAL RECORD, I am including his article on the matter:

HIGHWAY POST OFFICES MAY PROVIDE SOLUTION TO SLOW-MAIL PROBLEM

Newton is known far and wide for having one of the finest post offices and postal staffs to be found in all of southeastern Illinois.

Virtually all patrons concede that Postmaster John E. Nichols and all postal workers in Newton extend the best in courteous service. It is a well-known fact that they do everything they can do to please the public within the limits of Post Office Department regulations.

Mail received in Newton is delivered with unusual promptness, and material deposited here for dispatch to other cities is started on its way with like speed.

But it is a fact that the mail service here and in other towns and cities of this area has taken a backward step during the last few years due to the withdrawal of passenger trains on branch lines of the railroads. These trains carried mail cars which provided service to dozens of towns.

DELAYS ARE COMMON

Most of the mails now received at the Newton Post Office are redistributed at offices located at the terminus of a star route. Likewise, the mails dispatched from Newton are taken to an office at the terminus of a star route and there redistributed and dispatched to mail trains and other star routes.

This arrangement often results in serious delays.

For example, a letter mailed in a city less than 100 miles from Newton recently required 3 days to reach here. And newspapers mailed Saturday afternoon in a city 41 miles distant do not arrive until midmorning on Monday.

Letters mailed in still another city, approximately 40 miles away, frequently require 2 days on the road before landing in Newton.

Mail which must be sent from Newton to certain cities for redistribution more or less travels at its own risk as far as date of delivery is concerned. Two cities in this section are called upon to handle a large amount of redistribution mail, and postal staffs apparently cannot keep up with the load on frequent occasions.

For this reason, much mail sent out of Newton requires 48 hours to reach destinations within 20 miles of this city.

One solution for expediting the delivery is the establishment of highway post offices in areas where train service is not available.

These highway post offices are busses made especially to distribute mail in transit and are fitted inside with racks where mail sacks are hung and boxes where letter mail is distributed.

Vehicles thus far placed in use are 33 feet long and can accommodate 200 bags of mail. The interior arrangement is identical to that of a railroad mail car.

Mails are distributed in transit and made ready for dispatch at points where train service is available.

TRAINED CLERKS

Clerks employed on these mobile post offices are railway postal clerks who are specially trained in the distribution of mails in transit and required to take examinations every 6 months on the scope of their work.

Exams are on the postal laws and regulations, State schemes of post offices, changes in time schedules of mail trains, airplanes, star-route service, and other important points.

Mail busses are in great part owned by the Post Office Department, but some are owned and operated by private concerns and manned by the postal service.

The first highway post office was established in 1941 between Washington, D. C., and Harrisonburg, Va. As of January 1, 1950, a total of 64 had been established in the United States, principally in the East and Southeast.

NONE IN ILLINOIS

None has been established in Illinois, but Indiana has three in operation—one between South Bend and Indianapolis, another between Fort Wayne and Indianapolis, and the other between Indianapolis and Vincennes.

This type of service probably is more costly than star routes, but it is greatly preferred because it results in expediting the mails.

Regarding cost, it is widely known that the Post Office Department has been operating at a loss for years. However, it provides a service that reaches the rich and poor alike, and probably no other Government agency does this to as great an extent.

Revenue from the Post Office Department is turned into the United States Treasury and in turn paid out for the operation of the

Post Office Department. A large volume of the mail handled originates in other governmental departments which contribute no revenue, although it creates as much expense for the postal service as paid matter.

PEOPLE EXPECT BEST SERVICE

The public has grown to expect the best mail service obtainable and makes its desires known through proper channels.

Newton people point out that this city is on two excellent paved highways, and they believe that highway post office service could be obtained on either the Mattoon-Evansville or Effingham-Palestine routes, or both.

They also point out that United States Highway 40 from Effingham to Terre Haute should not be overlooked. While this famous route parallels the Pennsylvania Railroad, practically all the trains on this line are nonstop carriers.

Due to weather conditions and other factors, this is not a satisfactory service because of damage to mails delivered from fast-moving trains.

It also is common knowledge in Newton that mail sent from this city to places along the Pennsylvania frequently is carried to Terre Haute or Indianapolis before being returned to the proper town.

SHOULD BAND TOGETHER

Many people feel that towns in this area should band together and ask the Post Office Department to launch one or more highway post office routes.

Those who have investigated the subject declare that the Mattoon-Evansville route held No. 2 priority on Illinois plans drafted some time ago, and that the No. 1 route has since been found unnecessary. The same leaders feel that a movement should be launched at once in an effort to at least get this route established.

Crime Increases

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include an article from the editorial page of the March 28, 1950, edition of the Framingham (Mass.) News. The crime statistics presented are a sharp reminder that we cannot afford to abandon any of our youthful guidance programs at national, State, or community levels.

The editorial follows:

CRIME INCREASES

A year ago an FBI spokesman was quoted as saying that it was improbable the high crime rate of the postwar period would continue in 1949. Actually the FBI's number of recorded crimes for the year totaled 1,763,290, an increase of 4½ percent over 1948.

As computed by Mr. Hoover's bureau, that total is at the rate of one crime every 18 seconds. But that is not as impressive as the fact that in the category of major crimes the figures add up to a daily average of 293 persons, feloniously killed or assaulted, more than 1,000 burglaries and almost 3,000 robberies and other thefts. Car thefts averaged 440 a day.

To be taken into account also are such offenses as embezzlement and fraud, forgery, commercialized vice, gambling, and sex offenses.

What consolation may be drawn from the fact that declines were noted in the number of murder, negligent manslaughter, and auto theft cases is more than offset by the showing that more than one-half of all crimes against property were committed by persons under 25. They numbered 54 percent of those charged with robbery, 59 percent of those charged with burglary, 67 percent of those charged with auto thefts, and 54 percent of those charged with rape.

That among the 792,029 persons arrested the predominant age was 21 years is even more cause for sober reflection, for it shows discouraging progress in the face of the mounting emphasis given the responsibility of the home and of society in general for youth training.

Rent Control

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. MULTER. Mr. Speaker, in many areas of this country today there is a growing fear that we are heading toward a premature termination of rent control which has given protection to millions of families during the crucial war and postwar years when we were faced with the terrific problem of lack of housing. Unfortunately, that problem is still with us. We are nearer a solution now than we were a year or 2 years ago, but there are still millions of families who urgently need the protection which this law affords them, and there are still hundreds of thousands of families who have to live doubled-up because of lack of sufficient housing.

On March 10, 1949, when we were considering a 15-month extension of the rent-control law, I stated on the floor of this House as follows:

We have had rent control for a long time. We may have to have it for a long time to come. There is no man in this House who will stand on this floor and say that we want rent control or control of any kind as a permanent part of our free American Government and its institutions that are so dear to all of us. But so long as we are in an emergency period we are going to ask for emergency legislation. * * * But do not fool yourselves. We will not relieve the housing shortage in 90 days or a year or 15 months.

I am not seeking the plaudits of a prophet. But more than a year has gone by since then and the housing shortage still remains acute in various parts of the country. In view of the fact that rent has always been a basic factor in the cost of living for many millions of families, and in view of a slow but gradual increase in unemployment in many sections of the country, we should not be too hasty in suspending this means of protection which will unquestionably hurt the lower-income groups very severely.

I fear that if we allow the rent control law to lapse, that if we do not renew it for another year, our inaction or refusal to extend its protection to those millions of our citizenry who still need it, may lead to a chain of events which would seriously undermine the economic stability of many areas of the country. It would then be impossible for the country as a whole to escape the effects of economic turmoil.

We cannot take such chances at this time when we must maintain national unity and a high degree of national morale to bolster our position in the world. We dare not allow the forces of evil and corruption abroad to ridicule us before the world for failing our own people.

I hate to think of the effects of a sudden disruption of landlord-tenant relations which exist today in 43 of the 48 States. At last reports, effective rent protection for tenants was still extended to 12,000,000 rental housing units throughout the Nation, which means that 12,000,000 families were afforded this protection. It does not require a great deal of imagination to foresee the chaos and turmoil in many communities next June 30 if the present rent-control law is allowed to expire.

My State has taken itself out from under Federal control. It has, nevertheless, chosen to continue rent control on its statute books and to extend to the citizens of my State some form of protection. Extension of Federal rent control will not affect my State. I am not now talking for my constituents, but for yours. I believe rent control is still a vital need for the entire country. I believe that it is our duty to enact a Federal law to afford some form of rent control protection to those communities which are unable for one reason or another to establish any form of rent regulation of their own.

The housing shortage is by no means over. Not until that problem is fully solved can you relinquish that obligation to the people whom you represent here. Let us now encourage economic chaos; let us not contribute to economic instability. Rent control is still a matter of emergency legislation. It is absolutely necessary.

Hiss and the Liberals

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an article by William E. Bohn which appeared in the New Leader shortly after the conviction of Alger Hiss:

HISS AND THE "LIBERALS"

(By William E. Bohn)

From so-called liberals—many of them men of distinction—we have had a strange outpouring since the verdict was handed down in the Hiss trial. Most of those who have made statements openly or covertly impugning the verdict have not been in court during the progress of the case. How many of them have scanned the record I do not know. Probably none. But they all try to cast doubt on the jury's decision.

Now this, I submit, is a singular situation. A man has been found guilty by a jury after a long and obviously fair trial. The judge leaned over backward in admitting evidence. The defense attorneys were men of obvious ability. The prosecution limited itself to a rather dry and factual presentation of its evidence. Anyone who listened carefully to the testimony and examined the exhibits will agree that the case for conviction of perjury was overwhelming.

Yet we have had, since the trial ended, expressions from distinguished journalists directly saying or clearly implying that the whole thing is a mistake. Among them are Max Lerner, Marquis Childs, Frank Kingdon, and the Alsop brothers. Mr. Lerner implies that Hiss and Chambers are equally guilty and that from now on both will be victims of their consciences. Marquis Childs calls the whole thing "persecution—and persecution of men and women for the ideas they hold." Frank Kingdon does not go that far, but he is ready to excuse Alger Hiss as "an honorably intentioned man" who has been "distorted by the confusions of the times."

The statement by the brothers Alsop deals exclusively with Dean Acheson's declaration of friendship for Hiss. Mr. Acheson has been rather closely tied up with Alger Hiss. Donald Hiss was formerly his law partner. Mrs. Hiss testified that she joined the League of Women Shoppers at a meeting held in the Acheson home. The two men were simultaneously employed in the State Department. The Acheson statement, backed up by a passage from the New Testament, said that the Secretary of State will not turn his back on Alger Hiss; the Alsops' comment that Dean Acheson "insisted on his own high standards,' and that in standing by a friend who is in deep trouble the Secretary set an example of Christian charity.

It did not occur to Joseph and Stewart Alsop that there was any reason why the Secretary of State either should have held his peace or should have made a two-pronged statement. The deeds which led to the conviction of Hiss were performed in the Department of which Mr. Acheson is now head. In the course of the trial, sworn evidence was submitted which showed that Alger Hiss was not the only disloyal man in that department. Stories are going the rounds that there are still men there who are more loyal to a foreign power than they are to the country which delivers their pay checks.

It is all very fine for the Secretary to stick to his friends and quote Scripture. But the people of the United States, who want to know what this trial means, are concerned about the possibility that others may at this moment be extracting papers from Government files and making them available to unauthorized persons. Yet neither Mr. Acheson nor the brothers Alsop have a word to spend on this public aspect of the case. Their attention is exclusively fixed on the nobility of personal friendship. It is an ideal of public service and comparative values which goes back to the days of Mark Hanna or to the later times of Warren G. Harding.

Even with regard to the friendship angle of the case, all of these men are curiously blind to the realities. Max Lerner and Marquis Childs seem to believe that Alger Hiss has been persecuted—that this is an American Dreyfus affair. Lerner goes to great length to show that the jury's verdict is the result of cold-war hysteria. Childs thinks, "We make ourselves over in the deformed image of what we profess to loathe." The Alsops are very sorry for Hiss without saying why they are sorry. Frank Kingdon is the only one of the lot who shows any consciousness of the real tragedy that lies at the bottom of the case. Hiss may have taken his course believing he was "serving the highest kind of patriotism." That such a brilliant young man with such a high future before him should make such a tragic mistake—that is something to shed tears over.

Anyone who followed the evidence as the jury did—and who did so with an open mind—will be convinced—as the jury was—that Alger Hiss is guilty as charged. Any man who has any sensitivity, any religion, any kindness, any decency, will be hurt deep down inside by being forced to this conclusion. But if his brain functions normally on what his ears and eyes take in, that is where he will land. Max Lerner was simply too soft-hearted—or soft-headed—to follow through. The other commentators whose thoughts I have criticized were not present at the trial and simply do not know what they are talking about.

Celler Asks Churchill's Intercession in Interest of Peace in the Middle East

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. CELLER. Mr. Speaker, in a letter to Winston Churchill, receipt of which was formally acknowledged, I pointed to the distorted perspective of the present British Government which is blocking the peaceful development of both the Israeli and Arab areas. A copy of the text of the letter follows:

MARCH 8, 1950.

Rt. Hon. WINSTON S. CHURCHILL,
London, England.

SIR: I address myself to you because the event of the elections in your country clearly established you as England's most potent voice for peace. There can be no doubt now that in all external British areas of influence, yours will be the decisive leadership, and because of that fact, your interest, direct and immediate, should be brought to bear on the Middle East.

The distorted perspective of the present British Government with reference to this area has blocked and continued to block the peaceful development of both the Israeli and Arab areas. Just so long as the British Government continues to sell heavy arms to Arab countries, just so long will Arab leadership cherish the ambition to reopen the war with Israel. Torpedoes and tanks and jet planes and submarines are weapons of aggression. To speak of them as defense arms is to place great strain on adult logic. Do the English honestly believe they are arming the Arab countries against Russian aggression? If that is so, is it not pitiful that British leadership is convinced that such arms as the Arab countries can buy and do buy could withstand a Russian assault for even a day? The recent martial history of the Arab countries reduces such confidence in Arab ability to absurdity. Most certainly, the moneys used by the Arabs to buy such arms could more advantageously be used for the bettering of the economic life of the people, which is a far more effective weapon against communism than the arms they can buy.

But such arms as they can buy can be used against the small, young State of Israel. The peaceful development of Israel which gives the greatest promise for the economic and social stability of that whole area is retarded by this supplying of arms to the Arab countries. Moneys that should be spent for agricultural and industrial constructive uses must, of necessity, be diverted to military purposes. The Israelis are aware of the obvious if the British Government is not, that the Arab leaders are still smarting under the humiliation of the defeat. They are likewise aware that not only must these leaders recapture their lost prestige, but must distract their peoples from viewing the benefits of a democratic state in their own midst, lest the democratic ideology prove infectious.

You once remarked that the promulgation of the MacDonald white paper which closed the doors of Palestine, then a British mandate, to the Jews was the filing of a petition in moral bankruptcy. Is this arming of the Arab countries any less so when the use to which they can be put is apparent.

You clearly understand what a viable, stable Israel means in terms of peace and plenty for the whole area. You clearly understand how the blundering attitude of Britain toward Israel's struggle for independence has resulted in self-injury and humiliation both at home and abroad.

I do not exaggerate when I say that now you have the power to change the mischievous policy of your country toward Israel. In doing so, you will serve most effectively the cause of peace.

Respectfully yours,

EMANUEL CELLER.

Trade in Strategic Materials With Iron-Curtain Countries

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following information in answer to questions put by the gentleman from Nebraska [Mr. MILLER] during debate on H. R. 7797, a bill to provide foreign economic assistance.

First, as to trade in strategic materials with countries behind the iron curtain. It is hoped that the gentleman will appreciate that commerce in strategic items is, in some respects, a matter that must be kept confidential. Its delicate nature, from the standpoint of international relations, is obvious.

However, this much is apparent on the face of the record. Ten of the participating countries are parties with us under the North Atlantic Pact. These 10 are also recipients of assistance under the mutual defense assistance program. Under both undertakings they are engaged with us in the most solemn engagements of unity of policy and execution in regard to all strategic matters.

One of the countries, namely west Germany, is under occupation by this Nation and two of its allies, France and the United Kingdom. The same unity of policy and execution as affects our allies in the North Atlantic Pact and mutual defense undertaking applies in the administration of Germany.

Also, two of the recipient countries, namely, Greece and Turkey, are under obligations to us parallel to the obligations entered into in connection with the North Atlantic Pact.

It is their security just as much as ours, and even more immediately than ours—that is concerned in strategic economic policy toward the countries behind the iron curtain.

It would be a matter of personal satisfaction to be able to tell the gentleman the precise figures as to what is considered strategic material and what amounts of such material are concerned in trade between eastern and western Europe. It would be imprudent, however, to make such data public. I can assure the gentleman this: that all participants in the Marshall plan are obliged to establish the same policies as we apply respecting trade in strategic materials with the iron-curtain countries insofar as products derived from Marshall plan assistance are concerned.

The gentleman from Nebraska asked also about the use of dollars in the counterpart funds. There are no dollars in counterpart funds. There are local currencies which may be discussed in terms of dollar equivalents. Were those currencies employable in the dollar markets to obtain those things which only dollars can buy and which are essential to European recovery, then perhaps we should need no Marshall plan. Unfortunately, that is not the case. So the local currencies are impounded in proportion to the amount of aid we tender. They are used in such manner as agreed upon between the country and ECA as will best promote the purposes of the recovery program. In many instances, the best way to use them is not to use them at all—for the time being. To release all these funds in the markets of Europe would produce the most devastating inflation imaginable. I am sure that even the most severest criticis of the Marshall plan would not want that.

Three Brilliant Criminals

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, J. C. Rich writing in the Hat Worker for February 15, 1950, cites the case of three brilliant men who have startled the world by their attachment to communism. The article is a most interesting one, and I recommend it to all Members:

THREE BRILLIANT CRIMINALS

Far be it from this correspondent to pull a Dr. Binger on unsuspecting customers, but in the circumstance he has no other recourse than to throw some long-distance psychiatry at the high-class delinquents in the current news. There is the snooty frat boy, Alger Hiss, for instance. Then there is the amazing Dr. Klaus Fuchs. And for accent and emphasis there is the no-less-distinguished Dr. Alan May.

All three are intelligent, cultivated persons of the highest intellectual rank. All three are either present or potential jailbirds. All three have either confessed or been found guilty of criminal betrayal of trust. They have been faithless with their country, faithless with their friends and associates, faithless with the missions entrusted to them. Each of them has divulged information of the utmost secrecy to agents of a foreign power when it was their official duty and moral obligation not to divulge such secrets.

Two things will disturb thoughtful observers in connection with these refined traitors. One is the capacity of intelligent and intellectually gifted persons to indulge in criminal perverseness. The other is the capacity of equally intelligent, but morally upright persons to indulge these offenders in their crimes and even give them aid and comfort when their criminal acts are exposed.

The example of Alger Hiss is a case in point. Here was a young man with grace, charm of manner and deportment, favored with a brilliant intellect and with privileges and associations such as few outside his category can hope to enjoy. Very likely he was spoiled by the ease with which he was able to charm people and bend them to his advantage. He was quite supercilious with the congressional committee which first broached a few hesitant questions as to his connections with the Communist Party in general and the former Soviet agent Whittaker Chambers in particular. Ridiculous. How could it ever occur to anyone that he could be a Communist? Deliver State Department papers to foreign spies? Preposterous. As for anyone named Whittaker Chambers, he did not know the man and had never heard the name before.

It was at this point that the lie Alger Hiss lived for many years entrapped him and the web of falsehood in which he willingly became ensnared as a Communist adherent tightened around him. Had he stated simply and candidly: Yes, I was a Communist once; Yes, I was misled by what I thought to be a movement of humanistic and idealistic aspirations; Yes, I did serve the Communists once even to a seeming betrayal of office and trust, he might have escaped not alone punishment for his offense but even the devastation to his fortunes and his career that followed when the threads of his falsehood were untwined. Instead he chose to depend on his wits, on his brilliance, on his pose of haughty and injured innocence. He denied everything until proof forced him to revise his denials. He admitted nothing that was not crammed down his throat by overwhelming evidence.

Two juries examined this evidence and found him guilty.

Now, this is no slight thing, this fact that two juries studied the evidence with meticulous care and both found him guilty, one by a score of 10-to-2 and the other unanimously. There can be no doubt that both juries were as dubious of Hiss' guilt and as inclined to favor the defendant as people had always favored Alger Hiss. They found him guilty because no other verdict was possible in the case. He did lie under oath. He did perjure himself when he said he had had no association with a Soviet agent. He did swear falsely when he said that he did not deliver State Department papers to agents of a foreign power. He did, he did, he did betray his trust and his country.

We come now to the second item in our present psychiatric study, the capacity of intelligent and morally upright persons to condone if not aid and abet such criminal perverseness as Alger Hiss demonstrated. Secretary of State Dean Acheson has stated that he would not turn his back on a friend in distress and even cited a Biblical reference to support his stand.

This hardened soul takes such pious references in stride and is not overly impressed when scripture is cited to support the devil. The chapter Acheson leaned on is a particularly unfortunate one, for it relates how the Lord was able to discriminate between the sheep and the goats, the saints and the sinners. By the test in Matthew xxv Hiss was no saint, for he was haughty, proud, and faithless. However, Acheson could still show Christian forbearance toward his friend, and justify his support of him, if by any indication he showed dismay at and condemnation of the crime his friend committed. This Acheson did not do at any stage of the long and fully illuminated proceedings. He did not do so, and this is the moral obtuseness which is so disturbing to anyone concerned with present-day concepts of ethics, morality, and social responsibility.

It seems that Acheson, a man of high-minded purpose, could not alone forgive but even condone falsehood and betrayal when perpetrated by one on his side of the tracks, one whom he accepts as a social equal, if that one committed his crime in favor of a Communist clique. It is this acceptance of the Communists, this tacit acknowledgment that treachery and falsehood are justified if sanctioned by the Communists, this granting of special dispensation to communism that is distressing to men who insist that truth, freedom, and human dignity must prevail as the basic verities of human society.

Mrs. Eleanor Roosevelt showed a similar blind spot toward Alger Hiss. Mrs. Roosevelt, justly revered as one of the lofty-minded humanists of our generation, stated that while she believed that Hiss told a lie, she could not believe that he betrayed his trust and delivered Government documents to a foreign agent. This self-contradictory statement might be dismissed as the charming feminine nonsequitor of a charming and lovable lady. Obviously if she believes that Hiss lied, she must also believe that he betrayed his Government, for it is the act of betrayal that he lied about.

The only reasonable explanation of this attitude of practicing and semipro liberals is that in the first place they are defending themselves when they stand up for Hiss, and in the second, that communism is to them not so invidious a sin as it is to others. Acheson puts the mantle of his protection around Hiss not alone out of Christian charity, but also out of a sense of familial loyalty to him. Hiss is one of his kind; one of the family. He is a frat boy of the select Greek letter aristocracy, and not one of the barbarians who have invaded Washington as a result of the war. Hiss' association with the Communists was perhaps more far reaching and involved than that of others in the higher realms of pink society, but it is a peccadillo, an aberration that the exclusive set will readily excuse.

As for Mrs. Roosevelt who knew Hiss well and favorably, she cannot lead herself to believe that one so able, so intelligent, so brilliant can be guilty of crime, if, indeed, it is a crime to be a Communist fanatic.

But these brilliant, highly favored, highly gifted Communist fanatics are capable of crime. Here is this Dr. Klaus Fuchs. Here is this brilliant scientist who acknowledges that he was capable of lying to his friends, playing false with the land that gave him refuge, and betraying the trust invested in him when he was given the keys to the atomic Pandora's box. He opened the box and let evil and contagion escape, and he knew it was wrong and even accepted money not as a price for his services, but as a token, as pieces of silver, as acknowledgment that he was playing a Judas role.

And here also is Dr. Alan May, another British scientist, caught when the Soviet spy activities in Canada were disclosed. He is now servng a 10 year term in prison and there is no word from him, but his act and his crime speak for him and his like. Yes, he says, these educated, these gifted, these privileged people are capable of doltish surrender to an evil and conniving force.

Why did they do it?

Well, Hitler also had fanatic adherents, and some of them were in this country ensconced in high places. There was a time which they were in the America First group and one like Lindbergh could see a wave of the future in Nazi terrorism and Nazi dominance.

Can it be that these men of brilliant mind need to seek support in brute force for their essential weakness of character? Can it be that they respect the dictators because it is not necessary to think, not necessary to choose and make decisions under a dictatorship? Can it be that they who seek to rectify seeming wrongs welcome a panacea simply because it is offered in one package, so apt, so convenient, so fully packed? Is it a love of easy solutions and ready-made cure-alls that drives them to the snake oil of communism, Hitlerism, fascism, or Yogi hypnotism? How pleasant it must be to drink a heady elixir instead of striving to clear the fountains of social sustenance.

Whatever the case, it is time that these well-placed and privileged characters stop being so almighty superior about their capacities. They will do well to come down to earth and learn a few lessons from lowly working people. Surely the labor movement has done better in respect to the Communist (and Nazi and Fascist) delusion than have the snooty intellectual actors upstage. Surely labor has shown greater perspicacity, greater devotion and greater courage in the struggle for freedom, equality, and liberty, than has the class of brilliant but weak-minded intellectuals who presume to be our guides and mentors.

Integration Is Working Well in the Air Force

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. MULTER. Mr. Speaker, President Truman's Committee on Equality and Opportunity in the Armed Forces has just issued its first report on how the program of racial integration in the Air Force is proceeding. The Air Force established a new racial policy last summer abolishing segregated units and prescribing equality of training and assignment for whites and Negroes.

Now, after its first survey of progress, the committee reports that this program of integration is "working well and without friction," and that 71 percent of the Negroes in this branch of our armed services are already "living and working in integrated conditions." Significant is the following statement in the report which refers to the views of the commanding officers on the new racial policy:

> Without any exception, they (i. e., the commanding officers) added that their fears had been completely groundless, and that they were amazed at the ease with which the new policy had been effected and the absence of trouble.

All of which proves that if we are really serious in our desires to solve this minority problem, to improve human relations in our own country, to afford all our citizens the full benefits of American democracy, and to bring about greater unity among the people of this Nation, we can really accomplish all this in a peaceful manner, with a minimum of loss of privileges to any part of our population and with great possibilities of acquiring additional prestige and leadership throughout the world.

Following is an article from the Washington Post of March 27 on the report of the President's committee:

AF REPORT PRAISES RACIAL INTEGRATION

(By John G. Norris)

Integration of Negroes and whites is "working well and without friction" in the Air Force, President Truman's Committee on Equality of Treatment and Opportunity in the Armed Forces reports.

Last May the Air Force established a new racial policy, which called for breaking up of most segregated units and complete equality of assignment and training on an integrated basis. The President's committee, which had urged the change, has completed a first survey of how the program is working.

E. W. Kenworthy, executive secretary of the group, was sent on a tour of major Air Force bases for a first-hand look. He reports that 71 percent of the Negroes in the Air Force now are "living and working in integrated conditions."

"Almost without exception," his report states, "commanding officers stated frankly that, although they had recognized the merits of the new Air Force racial policy when it was announced, they had been apprehensive.

"Without any exception, they added that their fears had been completely groundless and that they were amazed at the ease with which the new policy had been effected and the absence of trouble."

Kenworthy views this "quiet social revolution" inside the armed forces as influencing racial relations thoughout the Nation. Telling of his conversations with both white and Negro officers and enlisted men at seven USAF bases, he said:

"It was the opinion of some officers that this program could not but have an effect, eventually, on civilian attitudes; that it was impossible for a white boy to live and work beside a Negro in basic training and in the technical schools, without some real change taking place in his attitude toward race and racial equality."

The report attributes the success of the program largely to the "quality and resolution" of commanding officers to make it work.

"Unquestionably, however," it was added, "the almost total absence of opposition that had been anticipated in the enlisted man is a contributing factor in the success of the policy. The men apparently were more ready for equality of treatment and opportunity than the officer corps had realized."

Bolling Air Force Base was one of those inspected. The others were: Maxwell Base, Biloxi, Miss.; Lackland Base, San Antonio, Tex.; Davis-Monthan Base, Tucson, Ariz.; and Williams Base, St. Louis, Mo.

"At Bolling," he said in his only reference to the local base, "there has been virtually no Negro personnel prior to the new Air Force policy. Presently, there are Negroes at Bolling assigned to maintenance, refueling, transportation, food service, and medical squadrons."

Only at Maxwell was there still a segregated squadron. Of the 25,891 Negroes in the Air Force (as of December 31, 1949) 7,402 were still in separate units, with 11,456 in mixed units, and the remainder in "pipe lines"—mostly in integrated schools. Negroes, it was reported, make up 7.2 percent of the enlisted strength of the Air Force. At one technical training school, the percentage of Negro students was over 10 percent—well above the average.

Extracts from the report follow:

"Jobs—Wherever I went I saw Negro mechanics serving and repairing planes in the hangars and on the line. There were Negroes in radio repair. There were Negro instructors in classes. I saw Negroes in personnel work and in Air Police.. There were Negro jet pilots."

"Housing and messing—with the exception of Maxwell Field, I saw no Negroes who were separately messed and housed. Nor was there any attempt at segregation within the individual barracks or at the table. Individual Negroes were interspersed with whites; there was no clustering at one end of the barracks or one end of the table."

"Recreational facilities and social functions—the Air Force policy was limited to military utilization and said nothing about recreational facilities or social life. The disposition of these matters has been left to the individual commander, and there was no fixed pattern in the arrangements and customs observed.

"At some bases there was complete integration of clubs, swimming pools and dances. At others there was a tacit, though incomplete and unenforced, segregation in service clubs and pools, and separate dances for white and colored enlisted personnel. * * *

"Prior to the adoption of the new Air Force policy, there were separate pools or certain days reserved for Negroes. Negroes are no longer prohibited from using any pool, though the local custom varies. * * *

"Dances at the officers clubs and some NCO clubs are attended freely by Negro officers and NCO's. As for dances in the airmen's and service clubs, the custom varies. In some stations there are no separate dances for whites and Negroes. In most camps, however, there continue to be dances for Negroes and for whites. However, Negro couples are not excluded and do attend, though in relatively small numbers.

"Movies and athletic contests are everywhere unsegregated, and Negroes are on service teams. In the South, where scholastic teams refuse to play against service teams with Negro players, the Air Force commanders are now generally taking the view that these schools must either play mixed service teams or be dropped from the schedule.

"Reaction—It was interesting to get the reaction of officers from the South. Some of them stated quite candidly that they did not like the new policy * * * but (they) were quick to add with equal candor that the new policy was working well and without friction.

"Most commanding officers remarked on the increased military efficiency of the new policy and the improved utilization of manpower. * * *

"If press comment is a reliable reflection of community attitudes, the Air Force policy and program are resented in the South. * * * Local commanders have taken the position that while the men under their command must obey laws off the station, the policy of the Air Force need not be attenuated on the station merely because of its geographical locatior * * *

"The difference between the attitude and treatment of Negroes on base and in civilian Biloxi is startling. The Negro airman who on the post, sleeps, eats, works, studies, plays side by side with his white fellows in uniform, finds when he goes off base that he is not permitted to walk on the main street of the town."

Liberals—What Would They Do?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the so-called Liberal is a paradox in the political life of this country.

Mr. Murray Baron asks a very interesting question about this phony. Under leave to extend my remarks, I include his article:

WOULD BACKS BE TURNED IF HISS WERE FASCIST?

(By Murray Baron, chairman, New York County Liberal Party)

To this reader the widespread expression of sympathy for Hiss and admiration for Acheson's loyalty to him accentuates the double standard by which so many of our Liberals live.

Substitute for Hiss a Nazi or Fascist equivalent and for Acheson a Senator MCCARRAN (perish the thought), would we sympathetically describe how the young, brilliant pro-Nazi State Department employee came by his Nazi ideology—how the depression years and growing international crisis contributed to his sincere conversion—to the Fascist ideology? We must assume that some pro-Nazis are possessed of intelligence, brilliance, culture, ambition, and yes, even idealism. We must not fail to recognize that Nazis and Fascists may have been motivated by the sincerest conviction that the cure of social and international ills required the extermination of 6,000,000 Jews—that a happier world community would develop under the rule of pan Germania.

But are these personal attributes to be divorced from the moral and human frame of reference within which they are exercised? Would all Liberals concede that, in my hypothetical case, the mythical, I hope, pro-Fascist State Department prototype of Hiss and his assumed superior, "Secretary of State MCCARRAN," may both be sincere in their fanaticism and bigotry?

The emotional and intellectual conditioning of many Liberals apparently does not yet enable them to evaluate the menace of the Communists and communism by the same criteria by which they judge the Fascist and fascism. This is likewise manifested by the double code of conduct when they oppose the recognition of the second-rate menace of Franco Spain and favor the recognition of the first-rate menace of Communist China. Both states crush religion, free trade-unions, democracy, and freedom. Both states repress Liberals and Democrats of all shades, both are the beneficiaries and in part creatures of external aid from dictatorships.

Time, as we say, is of the essence. In this day of the H-bomb, the presumably anti-Communist Liberal had better open both eyes, the left and the right.

My sympathy, if any, in the Hiss-Chambers case goes out to Chambers. Socially ruined, bereft of a well-paying job, the subject of vicious rumor, spurned and pilloried by many so-called Liberals, he emerges as a tragic object lesson for any current member of the Communist Party who may contemplate escape from that sordid, pervasive, soul-destroying conspiracy. He will not be sheltered by that civilized, sophisticated, intellectualized Liberal community which never compromises with fascism and Fascists. Not he, but his exposed erstwhile Communist colleagues will be the objects of sympathy and understanding and benign tolerance.

The mentality which confuses liberalism with communism is assuredly not less confused when it comprehends this universal double-standard of morality which yet plagues so much of modern liberalism.

It is a similar category of mind which confuses intelligent conservatism with fascism. Because here, too, the irresponsible conservative fails to cultivate the same conditional reflexes vis-à-vis the Fascist as he does vis-à-vis the Communist. The great democratic liberal-conservative middle blocs in our democracy should be governed by one standard, unremitting and equal combat against the twin menaces of communism and fascism.

Application of Social-Security Bill to Wisconsin Retirement Fund

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, on the final day of the hearings before the Senate Finance Committee on amendments to old-age-security legislation, testimony was heard from the executive director of the Wisconsin retirement fund, Mr. Frederick N. McMillan. The director testified on behalf of the some 25,000 folks covered by this pioneering Wisconsin retirement fund—the largest retirement system for public employees in my State. I believe that his views on the unique background of the Wisconsin retirement fund and on the provisions which have been inserted in the Wisconsin statutes for integration for that fund with a broadened social security system, and his comments, will be of interest to my colleagues, particularly those who serve on the Senate Finance Committee. I ask unanimous consent, therefore, that the text of Mr. McMillan's statements be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATE AND LOCAL GOVERNMENTS SHOULD BE PERMITTED TO INTEGRATE EXISTING RETIREMENT SYSTEMS WITH SOCIAL SECURITY

I submit this testimony as the executive director of the Wisconsin retirement fund. This is the largest retirement system for public employees in the State of Wisconsin, and it has been constituted the basic retirement system by the Wisconsin Legislature. Ultimately, after legislative enactments have taken full effect, presumably the only other retirement systems for public employees in the State of Wisconsin, outside of systems for the city of Milwaukee and Milwaukee County, will be the State-wide teachers retirement plan.

The Wisconsin retirement fund now includes more than 25,000 active employees, and about 4,000 inactive accounts of persons who eventually may be eligible for a retirement annuity. Besides the State, 76 cities, 15 villages, 37 counties, and 33 other governmental units have voluntarily acted to include all eligible employees.

This presentation will be confined to a discussion of section 106 of H. R. 6000, which relates to the coverage of State and local employees.

OPPOSITION BASED ON FAULTY REASONING

It is difficult to understand the reason for the almost hysterical opposition to the inclusion of persons under existing public retirement systems which has emanated from certain quarters, and which has resulted in so much pressure being exerted on Members of Congress. I suggest that these persons have acted precipitously without fully thinking the matter through. There are sound reasons for concluding that a little less heat and more light on this matter would probably produce very different conclusions. I think it can be definitely established that if a little ingenuity is used, a way can be found to transform each retirement system into a supplementary system with the following results:

1. The aggregate annuities payable would be increased.

2. Valuable protection will be provided for dependents which is now largely lacking.

3. Survivors of annuitants will continue to have annuity income after the death of the participant, whereas under existing plans many survivors are left without an annuity.

4. There need not be any material change in the cost to either the employee or the governmental unit.

SIMILAR FEARS PREVIOUSLY PROVED UNFOUNDED

This is not the first time that there has been an atempt to stampede the Senate with a proposal for exclusion. In 1935 when the bill establishing the social-security system reached the Senate, an amendment by Senator Clark, of Missouri, was adopted to exclude those persons covered by existing retirement systems maintained by employers. However, this Senate amendment was eliminated by the conference committee.

This decision has proved to be a wise one. While exact statistics evidently are not available, it appears that there were about 650 private retirement systems in business and industry in 1939, covering approximately 2,000,000 persons. By 1949 this had increased to at least 13,000 private systems supplementing social security and covering at least 7,000,000 persons. It should be common knowledge by this time that the existence of social security has not operated to reduce the coverage of private systems, but rather the trend is exactly the opposite. There is no logical reason to assume that the experience would be any different with respect to public employees.

The Advisory Council on Social Security appointed by the Senate Committee on Finance in 1947 gave careful consideration to this matter, and their conclusion as contained in their official report to the Committee on Finance on April 8, 1948, concisely states the essentials:

"Many proposals previously advanced for covering these workers have advocated excluding, on either a permissive or a mandatory basis, various limited groups of State and local employees, apparently in fear that coverage under old-age and survivors insurance would weaken or even completely destroy their State and local retirement system. As pointed out in the Council's recommendations for coverage of Federal and railroad employees, retirement systems supplementary to old-age and survivors insurance perform a valuable and necessary function. When coverage is extended to State and local employees who are members of staff retirement systems, those systems can be adjusted to supplement the basic old-age and survivors insurance benefits. Private employers have demonstrated that such adjustments can be made satisfactorily and without any loss in total retirement protection. The Council believes that in light of (a) the incontrovertible merit of the retention and development of supplementary plans, (b) the fact that employees under industrial pension systems did not suffer losses in benefits attributable to adjustment to the old-age and survivors insurance program, and (c) the fact that State and local governments have recognized the need for, and taken action to provide, retirement protection for their employees, any fear that the availability of old-age and survivors insurance will lead Government units to reduce the total protection afforded their employees is unjustified."

WISCONSIN HAS A PLAN FOR INTEGRATION

The Wisconsin Legislature and the governing bodies of the 161 governmental units are specifically committed to the integration of the Wisconsin retirement fund with the old-age and survivors insurance system established by the Federal Government. From the very inception of this Wisconsin sys-

tem there has been written into the law (sec. 66.903 (2) (f) of the Wisconsin Stat.) a provision whereby these public employees may also be given the advantage of inclusion under social security as soon as this is made possible by the Congress. Automatically the Wisconsin retirement fund will then be transformed into a plan providing supplementary benefits.

The practical result would be that the contributions of employees and governmental units to the Wisconsin retirement fund will be reduced by the amount of the respective contributions to social security. However, the employees will then receive the full benefits of social security, they will retain without change all accumulated credits under the Wisconsin retirement fund, and they will continue to build up additional credits under the Wisconsin retirement fund. Both employee groups and the fund staff have considered this carefully, and no one has yet been able to find any person who would not gain materially by obtaining the benefits to be derived both from social security and from the existing Wisconsin retirement fund.

In practice, integration would work out this way in Wisconsin: At present, for general employees, the employee contributes 5 percent of his earnings up to $350 per month and the governmental unit matches that with a current service contribution of 5 percent. (The governmental unit also pays all prior service, disability, death, and administration costs.) Under integration, beginning January 1, 1951, the employee would pay 2 percent to social security and only 3 percent to the Wisconsin retirement fund. In like manner, the governmental unit would pay 2 percent to social security and its matching current contribution to the Wisconsin retirement fund will be reduced by that amount. Thus, the contentions which have been advanced to the Committee on Finance that "there are grave doubts that many States and subdivisions thereof can afford to have both" and that such "would impose a double burden of contributions upon the underpaid public employee" are completely unfounded. There is no reason why every existing public employee retirement plan cannot be modified in the same manner as the Wisconsin retirement fund

REASONS WHY INTEGRATION IS DESIRABLE

Those who have opposed making it possible for persons under existing public employee retirement systems to procure the material benefits of social-security coverage also would do well to examine the advantages to be derived from dual coverage Here are some of the reasons why such integration seems desirable:

1. Since there is a rapidly accelerating tendency to provide supplementary retirement plans for employees in business and industry, it would be grossly discriminatory to deny the same advantage to those in public employment.

2. Inasmuch as the old-age and survivors benefit system has fallen far short of being self-supporting when considered from an actuarial standpoint, and since the benefits paid are far in excess of what can be provided actuarially from the actual contributions, the system is sound only because taxpayers are liable to underwrite the cost differentials. It is unjust to require public employees to help underwrite this cost without being able to participate in the benefits to be derived therefrom.

3. As previously indicated, each participant would naturally benefit to the extent to which his annuity from two sources would exceed that to be derived only from the existing system. It is not possible to state the exact amount of the increase, since this would vary with length of service and the exact years when the service occurred. However, as an illustration consider a person earning $250 per month who contributed to the Wisconsin retirement fund from age 45 to age 65, and who would at age 65 receive a life annuity of $66 per month. (If he had begun work at age 30, the annuity would have been half-pay.) If the integration authorized under H. R. 6000 were to become effective, the combined annuity which he and his wife would receive, instead of being $66, would range from $130 to $161, depending upon when the service occurred.

4. The protection for dependents would be particularly valuable. Under most existing retirement systems, if an employee dies leaving a wife and minor children, ordinarily the only payment made is a modest death benefit or the refund of the employee's own contributions. Contrast that with the payment under H. R. 6000 where a widow with two minor children would receive $123 per month if her husband had earned only $200 per month and had been covered for only five years. This should provide considerable peace of mind for an employee who now worries about what will happen to his dependents in case of his death.

5. Of equal value is the provision for a surviving widow. Under most existing systems, the widow receives little or nothing unless the employee elects a substantial reduction in his own annuity. For example, of 1,279 now receiving annuities under the Wisconsin retirement fund, in 1,163 instances the widow would receive nothing, with possibly few exceptions. But H. R. 6000 makes substantial provision for a surviving widow which would relieve the worries of a retired employee with respect to the support of his wife after his death.

6. Existing retirement systems provide very limited protection for persons who have spent most of their working career in private employment and have entered public employment later in life. Many pathetic letters are received from old people in this category who find it impossible to live on the small amounts they receive. Yet it is unreasonable to expect the taxpayers of a municipal government to provide a full annuity for a person who had devoted only a few years to serving the public. It is, therefore, important that such persons shall be permitted to participate in the social-security program. This necessity can be shown by the following example:

Suppose that a man had worked in private employment from January 1, 1913, to January 1, 1946, and then would work for the State or a city from January 1, 1946, to January 1, 1956, at which time he would attain age 65. Assume that he earns $200 per month in public employment during the last 10 years of his working career. Since the Wisconsin retirement fund is devised to provide half-pay of $100 in this instance only where a person has worked from age 30 to age 65 at least, the annuity in this case would be about $25 per month, obviously too small to support himself, let alone a wife. Because he had been in covered employment for only 9 years since 1937, he would not have acquired any rights under social security. Thus this man and his wife would be denied any participation in the protection of this national program even though he had devoted the 33 best years of his working career to private employment.

It is difficult to understand how anyone can justify the continuation of any such unreasonable discrimination.

7. Integration is essential for those who leave public employment in the future to enter covered employment. Certainly there should be no disposition on the part of anyone to deny a public employee the free choice of employment by trying to chain him to his present job. In many existing systems, such a change in employment results in the loss of retirement rights. Therefore it is important that he be given full social-security protection. Such change of employment is not rare. In Wisconsin in 1949 those under the Wisconsin retirement fund who terminated public employment for reasons other than death or retirement equaled 12 percent in a single year, and this in a State where the spoils system has been virtually eliminated at both the State and local levels.

8. The fears that existing retirement systems will be abandoned seem to be entirely unfounded. The records of past years do not disclose that sound retirement systems for public employees have been abandoned. Since the trend is to constantly expand the benefits provided for those in private industry and business, there is no reason to anticipate a contrary trend in public employment. There is no reason why these retirement systems cannot be transformed into supplementary systems in the same manner as has been written into the Wisconsin retirement fund law.

9. The safeguard written into H. R. 6000 requiring a referendum in the case of existing public employee retirement systems should effectively allay any alarm that may exist. This means that a ballot must be submitted to each present participant under a public-retirement system to permit him by secret ballot to say whether he wants to integrate the system with social security. However, there appears to be no justification for requiring a two-thirds vote. The American tradition of majority rule should also be allowed to prevail in this instance.

It would be inexcusably selfish for the members of any retirement system which for any reason preferred to remain out of social security (which right they could protect by referendum) to try to prevent the members of another retirement system from being included when it was clearly to their advantage to be included.

10. If the State of Wisconsin and the municipalities under the Wisconsin retirement fund are absolutely barred from including public employees under the social-security system, this will result in impairing the recruitment of qualified employees as vacancies occur in positions covered by the retirement plan. Individuals will hesitate to accept such jobs when it will mean that their dependents and survivors are denied the full protection provided by social security. This will lower the quality of the public service, and may even increase the cost of government.

SPECIFIC CLASSES OF PUBLIC EMPLOYEES SHOULD NOT BE EXCLUDED

It has also been suggested that specific classes of public employees be barred from participation in the old-age and survivors insurance plan—such as, for example, policemen and firemen. Under the Wisconsin system this would be very unfair to policemen and firemen. Under the Wisconsin law all policemen and firemen, outside of the city of Milwaukee, who are hired after January 1, 1948, and many other policemen and firemen, are included under the Wisconsin retirement fund which specifically provides for integration with social security. It would be very unfortunate if in any city the employees of the street department, the park department, etc., were given the additional social-security protection, while the policemen and firemen—working for the same employer—were compelled to be confined to the lesser benefits provided under the Wisconsin retirement fund. This would be entirely indefensible.

REFERENDUM PROVISION SHOULD BE CORRECTED

With respect to the referendum provision, it seems quite cruel to require that present annuitants participate in the referendum which is made mandatory for existing public-retirement systems. Such participation will only lead them to hope that their annuity will be increased because of such integration, when this would be wholly impossible under the proposed bill. This should be modified to exclude annuitants from the referendum.

ADMINISTRATIVE PROVISIONS SHOULD BE UNIFORM

A final comment on the administrative proposal. There seems to be no logical basis for treating governmental employers any differently than private employers from an administrative viewpoint. State governments should not be required to assume the responsibility and the expense of administration which the Social Security Administration pays for private employers. Likewise, it is believed that municipal and county governments and their employees will have a more comfortable feeling if their payments and records are transmitted directly to the responsible Federal agency, rather than channeled through a third party, thus increasing the likelihood of errors and confusion.

CONCLUSION: OPPOSITION TO INTEGRATION ENTIRELY UNNECESSARY

It would appear that in reality all of the pressure which has been brought to bear upon the Congress to induce it to prohibit the integration of existing retirement systems for public employees with the Federal old-age and survivors insurance system is completely unnecessary. All that the Congress would do in H. R. 6000 would be to enact enabling legislation. The real choice as to what would be done in any State would be made within that State. This is entirely proper, since the Federal government should not try to dictate policies with respect to State and municipal employees.

Consequently, there is no logical reason why any State legislature should memorialize the Congress on this point. The final choice in that State will be made by the State legislature under H. R. 6000, not by Congress.

Likewise, there is no justifiable reason why the representatives or members of any retirement system for public employees should exert pressure on Members of Congress. These members of retirement systems will presently have ample opportunity to present their case to their State legislature. Then, even if the legislature should happen to disregard their wishes with respect to integration, these employees still have complete control, since they have the prerogative to reject integration when the referendum is held.

In view of this complete control by each State legislature and also by the members of each existing retirement system, it would seem to be utterly selfish to try to prevent integration in one State where integration is wanted, simply because such is not desired in another State.

American Information Policy

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. SMITH of New Jersey. Mr. President, I was pleased to note that the able Senator from Vermont [Mr. FLANDERS] inserted in the Appendix to the RECORD for March 27, 1950, on page A2219, an editorial from the Washington Post of March 26 entitled "Informing the World." This editorial praises the position taken by the junior Senator from Connecticut [Mr. BENTON] in a recent speech to the Senate calling for a more aggressive American information policy through the Voice of America.

I have in my hand a letter published in the Washington Post on March 29, commending that editorial, and testifying to the vital importance of a revised and expanded American program to win the minds and loyalties of the peoples of the world. This letter is from Mr. J. Earnest Fisher, formerly chief adviser to the Bureau of Public Opinion of the American Military Government in Korea. Mr. Fisher pleads eloquently for the sending of "missionaries of democracy and Americanism" who can speak directly to the peoples of other nations in their own language. I commend the letter to the attention of the Senate, and ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INFORMING THE WORLD

Your March 26 editorial, Informing the World, emphasized the one feature of the cold war which will decide whether we win or lose it. Our Marshall plan, Atlantic Pact, point 4, and ECA are all well and good, and have their proper place in our strategy, but we will get more results for our dollars spent in a well-planned program of information and education than in all of these other programs combined. And without this sort of a program our economic- and military-aid programs will definitely not achieve their ends.

In this program of information and education of other people on the meaning of democracy and on America's attitudes and intentions, there is one type of activity that has had entirely too little attention. I refer to direct, personal propaganda by persons who know and love America, know democracy, and know the people and the conditions in a particular country. The suspicions regarding America's economic aid that are built up by clever Communist propaganda can be dispelled only by the personal impact of those who are known and respected by the people of the various countries in which such suspicions have taken hold.

Building up friendship for and confidence in America can be done satisfactorily only by those who have had years of experience to qualify and train them for this vitally important part of the program. Except in some rare cases, the men appointed to administer our various international programs do not have this background of experience. They are strangers in the countries to which they are sent, and it will taken them a long time to win the confidence of the people and secure their sympathetic cooperation in our efforts to help them. Meanwhile Communist agents are taking advantage of every mistake that our administrators and specialists make; their lack of understanding of native psychology, culture, and customs, and are building up in the minds of the nationals confusion, suspicion, and hatred.

Our regular diplomatic staffs—Ambassadors, Ministers, consuls, etc.—cannot adequately perform this function of making friends and influencing people. The very nature of their positions prevents the type of activity that is demanded. They are the official diplomatic representatives of America, and they are not supposed to identify themselves with local causes and organizations.

The people of the countries that we are helping are, for the most part, friendly and grateful, and they would like to know more about us, and why we are spending our money so freely all over the world. The explanations they usually get are too impersonal and foreign, in their language and nature, to really convince and reassure the masses of the people. The way is thus left open for the Communist propaganda agent to misinterpret and distort.

There are two general types of people who are qualified for this work of being "missionaries of democracy and Americanism" in foreign countries. There are the nationals of those countries, who have spent many years in America, have become naturalized citizens, have a knowledge of English, and have not forgotten their own native language. They must be familiar with the philosophy of democracy and also know the psychology and present-day attitudes of their mother country. Then there are Americans who have spent many years in a foreign country, as teachers, missionaries, business agents, or diplomatic representatives, and who have a wide circle of friends among the nationals of the country who know and trust them. There are undoubtedly persons of both the above-mentioned types who are available, and who would be glad to serve America and world democracy by going to the countries where they are known and where they would be welcomed.

In Asia at this time such people are desperately needed to prevent the rest of that vast area from going the way of China, and to win China back from the Soviet orbit, which is still possible. Gen. William J. Donovan, of OSS fame, who recently returned from a trip to southeast Asia and the Far East, says: "Non-Communist Asiatics want to be on this country's side, but only if we are safe to be with, if we can be relied upon to stick with them when the going gets bad." The countries he mentions are Burma, India, Thailand, Indochina, the Philippines, Formosa, Korea, Japan, but all countries outside the iron curtain might be included.

The only way that these countries can be convinced that we will stick with them when the going gets bad is by sending Americans to them who know the people and are trusted by them. To give economic, technical, and military assistance to these people without accompanying such assistance with an adequate staff of men who know and understand the people and are known and trusted by them is very likely to be an "operation rat hole."

J. EARNEST FISHER,
Formerly Chief Adviser, Bureau of Public Opinion, American Military Government in Korea.
WASHINGTON.

Basing-Point Legislation

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Mr. W. K. Kelsey, which was published in the Detroit News on October 18, 1949. In the article Mr. Kelsey analyzes and criticizes the so-called basing-point bill.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COMMENTATOR

(By W. K. Kelsey)

The small independent businessman took a wallop from the House of Representatives last Friday when that body adopted the basing point bill recommended by the conference committee of both branches of Congress. In effect, the House majority, after having licked

the big-business lobby in the preliminary rounds, threw in the towel at the end, apparently on the peculiar theory that if it gave big business what it asked for, it would behave itself.

The result is that there is a sharp division between the legal staff of the Federal Trade Commission, whose powers are emasculated by the bill passed by the House, and the Department of Justice, whose spokesman in this matter is Assistant Attorney General Herbert A. Bergson. And that seems strange, for Attorney General McGrath, while still a Senator, voted for the Kefauver amendments which aimed at preserving the powers of the FTC, and which, along with the Carroll amendments adopted by the House, were stricken from the bill by the conference committee.

It is likewise extraordinary that the House, by adopting the conference report, acquiesced in the nullification of its action by that committee in tossing out the Carroll amendments, thereby acting contrary to the advice of its chief conferee, Chairman CELLER, of the Judiciary Committee. The crucial vote was 178 to 138, with 110 Representatives absent, paired, or not voting.

The only inference the Commentator can draw from these proceedings is that the House majority, composed in this case of members of both parties, didn't understand the conference report, or was so overwhelmed by the big-business lobby that it voted for the so-called "compromise" just to get the bill out of the way.

The fact is, there was no compromise at all. The object of big business was to kill the Kefauver and Carroll amendments, which stood in the way of its complete freedom of action in crushing competition. It abundantly accomplished what it set out to do, so far as the House is concerned.

FAVORING THE MONOPOLISTS

The bill as passed by the House legalizes the basing-point system of price fixing by sellers acting independently. That means, for instance, that a seller may adopt Detroit as a basing point for a district, including all of Michigan, Ohio, Indiana and Illinois, and quote one price to any purchaser within that district—the price being the same to a purchaser in Detroit, Cincinnati, Indianapolis, or Rock Island. Necessarily, the delivered price includes the average freight rate, so that the purchaser in Detroit and points near Detroit helps pay the higher freight on purchases made by buyers in distant cities.

Court decisions have not outlawed this practice, provided it is carried on without combination, conspiracy, or collusive agreement, such as was proved in the famous Cement case. But the new bill goes on to say that it shall not be unlawful discrimination for a seller, acting independently, to sell at delivered prices if such prices are identical at different delivery points or if differences between such prices are not such that their effect upon competition may be prohibited by this section.

That looks fair enough, until one comes to this definition: "The term 'the effect may be' shall mean that there is reliable, probative, and substantial evidence of the specified effect."

That definition changes the meaning of the Robinson-Patman Act and knocks the ground from under the feet of the Federal Trade Commission.

Hitherto the FTC has been able to issue a cease-and-desist order if it saw "reasonable probability" that a discrimination in prices quoted to buyers tended to create a monopoly. That interpretation has been upheld by the courts. But under the bill passed by the House, the damage must be accomplished and proved before any action can be taken to remove it.

"Such a law as this," said opponents of this section, "might be compared to a traffic law which made it illegal for motorists to run through stop signs only if, after having run through a stop sign, the motorist found that this act had caused a substantial accident."

GOOD-FAITH DISCRIMINATION

But the House measure goes still further. It permits a seller to justify a price discrimination "by showing that his lower price or the furnishing of services or facilities to any purchaser or purchasers was made in good faith or to meet an equally low price of a competitor, or the services or facilities furnished by a competitor, and this may include the maintenance, above or below the price of such competitor, of a differential in price which such seller customarily maintains," unless there is a combination, conspiracy, or collusive agreement to that end.

The Carroll amendment sought to outlaw such price discrimination if its apparent effect was to threaten or destroy competition. How, you may ask, could competition be threatened if one company cuts its price to meet the price cut of another company? It could happen thus:

A dealer supplied by X informs his regular supplier that another company, Y, has quoted him a lower price for a certain commodity. To keep his customer, X agrees to meet the price quoted by Y, but only in this particular dealer's case. Thus the dealer secures an advantage over his competitors who must continue to pay the regular price; and if the advantage is great enough he can in time force his competitors out of business.

If you don't think this practice has been fairly common, ask the various small independent dealers' associations. It is one way by which a large selling corporation can secure complete control of outlets in any territory, if it so desires, and thereafter maintain any price it may choose to fix, to the detriment of consumers.

The defense of X would be that he cut his price to the dealer in good faith, because Y had offered a lower price; and that defense, under the House enactment, would be complete unless there was positive proof that there had been collusion between X and Y.

FAVORING THE LARGE BUYERS

Say the opponents of the conference bill: "The tendency of sellers to grant special price concessions to large buyers is one of the most widely observed characteristics of business behavior. * * * The price discrimination which is philosophically indefensible on any grounds is that which goes beyond cost savings and permits large buyers to drive small buyers out of business. * * *

"When a large seller, with national sales outlets, makes a special low price in one particular territory, at least one other seller will usually meet this special price. In this case, the good-faith defense would exempt the discriminations from a cease-and-desist order, even though the result was to drive out of business small competing sellers having only local or regional sales outlets."

Enactment of this bill clips the powers of the FTC to enforce competition, and plays into the hands of monopolists. By a well-reasoned veto, President Truman could get himself a wonderful issue for his party in the next campaign.

Effect of Taxes on Workers' Incomes

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Taxes Are Hijacking Workers," published in the Philadelphia Dispatch of March 26, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TAXES ARE HIJACKING WORKERS

More and more in the United States the thoughtful people are beginning to realize the gravity of our tax situation. Chief Justice Marshall once said that the power to tax is the power to destroy. Our taxes have now reached 25 percent of our national income. Great Britain has gone above the mark and we see what is happening over there. The people are in doubt about the future, as shown by the results of the recent elections, and there seems little doubt that the old stable, apparently unconquerable British Empire is passing out. There are indications that we are following the same route.

According to a survey prepared by the National Industrial Conference Board, our taxes in 1948 aggregated $56,300,000,000. Of this amount $39,500,000,000 were in Federal taxes and $16,800,000,000 in local taxes. This is a fraction more than 25 percent of our national income which indicates that we are now at the brink and apparently about to take the plunge that was made by Great Britain.

But this is not all the bad news. The rate of rise in taxes has been greater than the rise in the national income. In short, our national income has increased tenfold since 1902 while our taxes have increased 4 times as fast as our income. To go a little further, Federal taxes in 1948, the last year surveyed, were seven times as great as in 1939 and local and State taxes during the same years more than doubled.

Now what are we going to do about it? The sound Senators and Representatives in our National Congress are calling attention to the situation and the disposition is to check further tax increases. Whether the tendency will continue after the November election remains to be seen. But increasing taxes in the States seems to go on unheeded. Many people are lulled into a false sense of security by the belief that Uncle Sam is helping them. What they fail to take into consideration is that the money which Uncle Sam pays back to the States and to them comes from them in the first place.

President F. D. Roosevelt, who became an advocate of lavish spending, said while he was running for his first term that the taxes come from the sweat of the workingman's brow. But since he doesn't pay the money out through the tax collector's window the worker too often doesn't realize how he is being hijacked through rising living costs. Until he gets hep to himself, lowering taxes is going to be a slow and difficult job.

General Eisenhower Advocates Peace Measures Under a Strengthened United Nations

REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mr. HAYS of Arkansas. Mr. Speaker, one of the significant statements of this year is the marvelous address delivered by General Eisenhower at Columbia University on the evening of March 23. It would be unfortunate if

his treatment of defense needs should overshadow a remarkably fine statement on the development of a peace organization that must be built if we escape the burdens of armament that would wreck this and other nations. House Concurrent Resolution 64, which more than 100 Members are sponsoring, is designed to strengthen the United Nations and develop that agency into an effective instrument for peace. I do not know, of course, what General Eisenhower's judgment is on this subject, but his language indicates that he is thoroughly in sympathy with the resolution's purposes. He advocates a United Nations police of carefully defined powers and asserts that to such a police organization a nation would give up nothing beyond its equitable share in men and money. Included in his address is the further comment, "How this organization is to be constituted or how it is to be controlled, has yet to be worked out, but with the principles honestly accepted, the procedural problems would be easy of solution."

Such words from one of the world's distinguished leaders bolster hopes for a stronger United Nations.

Under leave to extend my remarks, I include the following excerpts from General Eisenhower's address:

It is possible, even probable, that hopelessness among a people can be a far more potent cause of war than greed. War—in such case—is a symptom, not the disease.

On the collective side of the coin, peace requires an international society liberated from the threat of aggression by neighbor on neighbor, a threat forever present when one or more nations are committed to the building or maintenance of gigantic military machines. No sane man will challenge, under present circumstances, the need for defensive strength designed to secure against internal or external attack the independence and sovereignty of a free state. But the continued existence of even one purely offensive force—a force for which there is no apparent need based in the logic of self-defense—denies enduring peace to the world. Those who have spawned such a force must either eventually destroy it by demobilization and find justification for the heavy cost already laid on their people; or use it, tacitly or actively, as a threat or as a weapon. There is no middle course. * * *

The two requisites to an enduring peace—the elimination of deep-seated incitements to strife and hopelessness, and the elimination of armament for aggression—are, or should be, within the realm of feasible attainment. But man can remake the face of his physical environment and can harness all the powers of the universe more easily, it seems, than he can learn control of his temper as a member of the international community. Nevertheless, those who term these twin requisites utopian and visionary are cut from the same bolt of cloth as those of an earlier day who claimed that epidemics were an inescapable companion to human existence, and denounced the preachers of sanitation as balkers of God's will.

To prevent the crime of war, all nations and all ideologies can unite without sacrifice of principle. But lest self-interest in minor matters breed a carelessness toward the gravity of this problem, there is required unity of understanding concerning the facts of modern war. After the world-wide devastation that grows daily more possible, none may be able to distinguish between the victor and the vanquished of a future conflict. Confronted by that outcome to another world war, all of us—east and west—are in the same boat. The boat can be swamped in a series of atomic blasts; but, sustained by understanding of a common peril, it can also carry us through to final peace. Thus, the possibility of almost total destruction, terrible though it is, could be a blessing as all nations, great and small, for the first time in human history, are confronted by an inescapable physical proof of their common lot. Franklin's "If we don't all hang together, we shall each hang separately" has its international application today. * * *

In a disarmed world—should it be attained—there must be an effective United Nations, with a police power universally recognized and strong enough to earn universal respect. In it the individual nations can pool the power for policing the continents and the seas against international lawlessness—those acts which involve two or more nations in their external relations.

I do not subscribe to any idea that a world police force or a world organization should be permitted entrance to any nation for the purpose of settling disputes among its citizens, or for exercising any authority not specifically and voluntarily accorded by the affected nation. At this stage of civilization's progress any effort to push to this extreme the purpose of international law enforcement will defeat legitimate objectives. National sovereignty and independence have been won by most at too great cost to surrender to an external agency any such powers.

But by the establishment of a United Nations police of properly defined and restricted but effective powers, no nation would surrender one iota of its current national functions or authority, for none, by itself, now possesses a shred of responsibility to police the world. To an international peace organization, a nation would give up nothing beyond its equitable share in men and money. How this organization is to be constituted or how it is to be controlled, has yet to be worked out, but with the principles honestly acccepted, the procedural problems would be easy of solution.

Evil Fruit

REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mr. TALLE. Mr. Speaker, it is recorded in the Book of Matthew that "a corrupt tree bringeth forth evil fruit."

If modern proof of this eternal truth be needed, witness the treatment given to our overburdened taxpayers by the Truman administration earlier this week. The amount is $100,000—and the Truman administration decided not to pay. The American people, patient and forbearing as they are, cannot help but wonder at such behavior. The Bureau of Internal Revenue must have tongue in cheek after exempting from taxation the $100-a-plate festival held in honor of Jefferson and Jackson. This is the same Bureau of Internal Revenue that assessed a 20-percent tax on each $1 admission ticket to the Lincoln Day box supper held by the Republicans here in the Nation's Capital only a few days prior to the Democratic frolic.

Both of these functions were political in nature; both included professional entertainment, refreshments, and political speeches. The Democrats enriched their party coffers by more than half a million dollars without paying one cent of taxes. The Republicans, on the other hand, paid a 20-percent tax on their admission tickets, and contributed all of the profit from their box supper to charity.

I doubt that in the history of our Republic there is a like example of political favoritism in taxation. But this is only one aspect. Consider, if you will, the broader implications. Mr. Truman and his group have resisted all attempts made by the Republicans in Congress to lighten the tax burden upon our people. They, the so-called Fair Dealers, do not object to taxes on baby lotions, wedding rings, suitcases, telegrams, railroad tickets, and a thousand other items of every day use—but they refuse to pay an admission tax or entertainment tax on their own lavish feasts. A housewife must pay a 20-percent tax to attend a movie in her neighborhood theater; a schoolboy must pay a 20-percent tax for the privilege of cheering his team at a basketball game; a businessman must pay a 20-percent tax to entertain a business client; the Republicans must pay a 20-percent tax for admissions to their functions. But the Trumanites exempt themselves from tax liability on their gold-plated political shindigs. Is this equality under the law? Is this in line with the traditional American concept of fair play? Is this simple justice? Or is it a display of corrupt power?

Mr. Speaker, the next time any one of Mr. Truman's disciples rises to talk about plugging the tax loopholes, he should by all means be reminded of this fertile field in which to collect $100,000 of unpaid taxes. $100,000—this sum would pay the President's salary for 1 year. Of course, it would not defray his annual $90,000 tax-free expense accounts nor would it pay the upkeep on his yacht, or his fleet of automobiles, or his luxuriously appointed plane, or his retreat at Shangri-La. It would not pay for his expensive and frequent Florida vacations. Incidentally, newspaper reports indicate that Mr. Truman's staff is busily working in his Florida beach home on political speeches which he intends to use in a forthcoming tour of the Nation—a tour in his private railroad car, from which he will harangue our people about alleged special interests and special privileges of the Republican Party.

Special privilege. Has any administration in our political history been so clothed with it? Mr. Truman is the all-time arch-practitioner of special privilege. The luxury-loving gentleman from Missouri has put new meaning into the very words "special privilege."

Mr. Speaker, the masquerade of the Truman party as the champion of the common people now lies exposed for all to see. Abraham Lincoln said, "you can fool some of the people all of the time, and all of the people some of the time, but you cannot fool all the people all the time." Our people are not so gullible as Mr. Truman believes. They will not be misled by the same false prophets again, for they have learned the harsh truth

that deeds not words are the measure of a man's integrity. Next election day they will heed the biblical admonition—"by their fruits ye shall know them."

Panama Sea-Level Project Apparently Ditched

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. MARTIN of Iowa. Mr. Speaker, for many months instructive articles, with clear-cut analyses and interpretations, by distinguished Members of the Congress, have effectively pointed out and exposed the many serious fallacies involved in the proposal for the construction of a new Panama Canal of so-called sea-level design. Congressional recognition of the results of this outcome may be said to have been taken in the interim report of the investigation of Panama Canal tolls, of August 23, 1949—House Report 1304, Eighty-first Congress. This report, adopted by the full committee of the House Committee on Merchant Marine and Fisheries, dismissed all consideration of the sea-level plan, and invited consideration of the completion (at comparatively low cost) of the authorized—and partially constructed—third locks project of the present lake-lock type canal, modified to include the principles of what is known as the terminal lake plan.

The investigation of Panama Canal tolls, under the able direction of Representative CLARK W. THOMPSON, of Texas, and the supervision of the late Representative Schuyler O. Bland, of Virginia, long-time chairman of the Merchant Marine and Fisheries Committee, inevitably extended into the field of the management of the Panama Canal, and its organization; and subsequently was the subject of a communication from the President of the United States to the Speaker of the House, on January 31, 1950—House Document 460, Eighty-first Congress—forwarding a report made by Director Frank C. Pace, Jr., of the Bureau of the Budget.

The thanks of the entire country are due Representative THOMPSON, chairman of the special subcommittee for his highly important and tireless work in the premises—and to his subcommittee associates who, also, effectively aided, and cooperated with him. They have, indeed, performed a most difficult task with marked success.

The present status of the Canal situation was well described by Jim G. Lucas, the very capable, and always interesting, writer for the Scripps-Howard newspapers, as appeared March 29, 1950, in the Washington Daily News (noon edition), and other publications of the Scripps-Howard organization. In this article Mr. Lucas emphasizes the views of Budget Director Pace with respect to the supervision of the Panama Canal. The subsequent announcement, on the same day, of the selection, by the President, of Mr. Pace to be the Secretary of the Army, will support the President in his effort to reorganize the executive branches of the Federal Government, particularly the Panama Canal and its various activities. Secretary Pace will certainly support the recommendation of Director Pace, and the liberalization of the Panama Canal Government and organization, with their transfer from the supervision of the Secretary of the Army to that of the Secretary of Commerce, will, it is believed, be now assured. The transfer can be made by executive action, and enabling legislation to effect the other recommendations of Director Pace will shortly be introduced and considered in the Congress.

Under leave granted, I am including herewith the full text of the article by Mr. Lucas:

SEA-LEVEL CANAL APPARENTLY DITCHED
(By Jim G. Lucas)

President Truman apparently has given up hope Congress will approve * * * plans for a $2,500,000,000 sea-level Panama Canal.

The sea-level canal project originated with the Army engineers. The Army argued that it was the only kind of canal which could be defended from an atomic attack. They said the present lock canal could be knocked out by a single bomb.

Opponents of the sea-level canal protested it would cost closer to $7,500,000,000. They argued that no canal can be defended against atom bombs; that the safest defense was to shoot down enemy planes before they arrived over the target. They proposed to expand the present locks to accommodate bigger ships.

ARMY VERSUS SHIPPERS

Essentially, the argument was between the Army on one hand and commercial shipping interests on the other. The Budget Bureau apparently has sided with the shippers. It recently recommended to the President that he transfer control of the Panama Canal from the Secretary of the Army to the Secretary of Commerce. Mr. Truman said he wanted to study the recommendation, but indications are that he will approve. If the shift is made, it apparently will eliminate the last remaining support for the sea-level canal project.

"It is essential that Panama Canal policies be coordinated with the objectives of national transportation policy and such coordination can best be achieved through supervision by the Secretary of Commerce," Budget Director Frank Pace wrote Mr. Truman. "Staff facilities already exist in the Department of Commerce which could be developed to furnish necessary assistance to the Secretary in fulfilling his responsibilities. Such facilities do not now exist in the Department of the Army or the Department of Defense and military staffs cannot satisfactorily be employed for this purpose."

Mr. Pace said the "historic reasons for placing the Panama Canal under the Secretary of the Army's supervision no longer apply. The construction phase of the Canal's operation long since has been completed. * * * In time of war, or when war is threatened, the Panama Canal could be placed under military supervision and control."

MILITARY IN TOP JOBS

By tradition, the Governor of the Canal Zone has always been a general in Army engineers. Since the Wilson administration, Army and Navy officers have held the majority of the important jobs. The Budget Bureau was critical of that practice.

"Under the present system," it said, "civilian employees may not aspire to a number of the top positions. Another important objection to the present system is that it unduly restricts the Governor in the selection of several of his chief assistants and tends to reduce his control over them. * * * The best policy for the Panama Canal would be one which permitted the selection of the most highly qualified personnel from whatever source available, military or civilian."

Currently, 71 Army and Navy officers hold important Canal jobs, the Budget Bureau said.

Mr. Pace said the Hoover Commission recommended that all major nonregulatory transportation activities be grouped in the Commerce Department. He insisted the recommendation included the Panama Canal.

Trend Toward Socialism May Be Halted

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address which I delivered on March 19, 1950, over an Indiana station.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TREND TOWARD SOCIALISM MAY BE HALTED

The congressional brakes have been applied to President Truman's program of forcing British socialism on the American people.

I expect to show in a review of the record of the Eighty-first Democrat Congress in nearly 90 days of its second session that it has joined the Republican Eightieth Congress in refusing to go along on this program.

Mr. Truman said in Madison Square Garden in New York City on October 28, 1948: "What a wonderful thing it was for the people of this United States that they didn't have a President that would go along with that good-for-nothing Eightieth Congress."

I can say right here there are a lot of people in this country who today are saying: "What a wonderful thing it has been for the people of this United States that neither the Republican nor Democrat Congress would go along with the President's program of socialism."

You are quite familiar with the record of the first session of the Eighty-first Congress. It ran along for 10 months, 3 months beyond the legal limit, and yet not a single piece of Mr. Truman's socialistic legislation was adopted.

The second session of that same Democrat Congress has proceeded to pass only two major bills in nearly 3 months and neither of them is on Mr. Truman's socialistic program. Just two bills have been enacted into law in this session and both of them were half way through Congress when the session began.

First came the Korean aid bill calling for $150,000,000. That passed the Senate in the first session and the House voted it through on February 9 this year. Next came the oleo-tax repeal. It had passed the House in the first session and the Senate voted its approval on January 18 of this year. It was held in conference between the two Houses, however, until March 7 when the conference report was approved and Mr. Truman signed it into law on March 16.

These are the only two bills of any importance passed by the second session of the Eighty-first Congress.

Now, let's take a look at the progress report on some of the more sensational requests Mr. Truman asked the Eighty-first Congress to pass—either in the first or second session, or both. The Brannan farm plan, for example.

Mr. Truman asked for this program in his state of the Union message in January 1949, after he had flip-flopped back and forth between rigid and flexible price-support programs for a year. The Brannan farm plan, a blood cousin of the socialistic compulsory health-insurance plan, has had the brakes applied by the Congress and most farm organizations.

Hearings are going ahead on the farm problem in both Houses and Secretary of Agriculture Brannan is going ahead with his efforts to sell the program, but it appears to be certain there will be no Brannan plan in this session. After all, not a single elected official now holding a Federal office had the Brannan plan in his platform when elected, because the Brannan plan was not proposed until after the last election. It will definitely be an issue in the coming election.

Since we have mentioned the blood cousin, socialized medicine, let's take a look at what is going on with it. The short report is: "No action." The long report is: "No action for a long time." Of course, committees continue to compile evidence from time to time because Director of Welfare Oscar Ewing has not given up the fight for this program.

He made no bones about his attitude when he went to England last fall to study England's socialized-medicine program. Mr. Ewing said in England and again when he returned that we were going to have the English medicine scheme—lock, stock, and barrel—or better still, we were going to have it—wigs, pills, and pains.

I can say rather optimistically that I think the socialized-medicine program will not be passed in this session of Congress, but will be offered again next year.

Mr. Truman would like to have this issue forgotten—just as he would his request for a tax increase a year ago—but nevertheless it is still his Congress and he did ask the Eighty-first Congress to give him stand-by authority to control prices and wages.

Remember that? Well, so does Congress and it isn't doing a thing about it either.

Another one he would like to have forgotten is his request for authority to build Government production facilities. This one grew out of a demand for steel, but was not limited to steel.

Today there is plenty of steel and Mr. Truman's fly-by-night legislative policy is safely—for the moment, that is—bottled up by Congressmen who are showing good judgment in this matter.

The same sensible consideration was given another request by the President. He had asked for universal military training. The draft which was voted proved useless to the armed services and the Congress has taken a somewhat distant view of forcing military training on all young men unless there appears to be a need for it. So, we haven't heard anything more about it and probably will not.

Oh, yes, there was point 4. Mr. Truman first revealed this plan to develop all underdeveloped areas in the world in his inauguration speech in January of 1949. The Democratic Eighty-first Congress heard his request then for the first time. They heard it again later that same year and he included his request for authority to proceed with this global program in his 1950 message to the present session.

A long study has been carried on by committees in both Houses of Congress in the last session and this session on this subject but no action. The first step calls for some $35,000,000 to finance technical assistance to the underdeveloped areas. That, of course, is not the complete program.

However, on the specific point of technical assistance, a House committee, on February 21, ordered a favorable report made on the bill. That is the first action taken on point 4, which indicates this highly controversial program has a long road ahead before it gets through the legislative processes.

There are some requests by Mr. Truman which will receive congressional approval in this session. One of them may not be, however, his extension of Federal housing by creating a new Government corporation. This section of the housing bill, which was defeated in the Senate a few days ago, was a badly misrepresented section. It was classified as a middle-income housing bill. It was not that at all.

The only middle-income citizens who would benefit from it would be those who would form a cooperative to build houses or apartments. In addition, it offered a lower interest rate for a longer-term loan than is being given the war veterans and users of FHA loans. Its discriminatory features prompted the vote against that section.

Mr. Truman asked for extension of rent controls, but the home-rule system enacted in the first session of the Eighty-first Congress proved little need remains for such vast Federal controls over private property. I will be surprised if rent controls are continued this year beyond the expiration date of June 30.

There are other measures on Mr. Truman's Socialist list I would like to discuss in detail here today, but I would also like to use a portion of these 15 minutes to talk about what Mr. Truman's followers in the Congress try to do to the legislative program for political reasons. I also want to talk a moment about the spending habits of this administration. Mr. Truman is asking for a budget of $43,000,000,000 for the fiscal year of 1951.

That is $10,000,000,000 more than the Government spent in fiscal 1948 and is at least $6,000,000,000 more than will be collected in taxes. We hear many excuses given for the greater cost of Government in the coming year, but we do not hear good sound reasons for the $10,000,000,000 increase over 1948.

Did anybody in this country, or in any of the countries we are supporting suffer because the Government only spent $33,000,000,000 in 1948?

The Eighty-first Congress will not match the Eightieth Congress in effecting a balanced budget in this session, but I do believe some reductions in Mr. Truman's proposed expenditures will be accomplished. Continued spending beyond our income can be counted as one of the important steps leading toward socialism. The Eighty-first Congress, like the Eightieth Congress, is going to try to stop it.

Now I want to talk a bit about the Taft-Hartley Act. You know the Senate voted 28 good amendments to this act in the first session of the Eighty-first Congress. Amendments favorable to unions.

You know, too, that Mr. Truman's followers in the House of Representatives Labor Committee have made a political football of this important piece of legislation. They have sat on the amended bill because they believe it will be politically advantageous to congressional candidates not to amend the Taft-Hartley Act. Mr. Truman's boys would rather have a campaign issue than fair and equitable labor-management relations.

The same attitude was displayed by Mr. Truman in the coal strike. He flaunted the law of the land. He played politics with human misery. He taught the strikers to ignore the law. Then, as Congress was about to take corrective measures, the strike was settled and Mr. Truman's followers in the Congress immediately whined that no further action was necessary.

Again they demonstrated they were willing to leave the people at the mercy of such political maneuvering. Remove Mr. Truman's New Dealers from their key positions in the Eighty-first Congress and you would have action in this very session of Congress that would protect the American people from the dangers of future sufferings such as occurred in the coal strike.

But what can you expect from an administration that first protects and coddles disloyal persons in its red herring bosom—then, trapped in its own mire, sends its Secretary of State around the country telling the people they do not understand the dangers of communism in this Nation?

Dean Acheson, the man who refused to turn his back on a convicted traitor in his own Department, is now calling upon the people of America to band together in the cold war against Russia. I can tell Mr. Acheson that the American people have fought a harder cold war against Russia than he has and for a lot longer time. They have paid their billions of dollars into the Marshall plan and the Truman doctrine to stop communism in other countries while it was permitted to infiltrate into the sacred halls of our own Government.

They have been helpless against the policy of pouring money into western Europe to stop communism while our own State Department policies are benevolent in nature to the Communists in the Far East.

I could discuss these issues at great length with you if time would permit, but in closing, let me say again that the Eightieth and Eighty-first Congresses—one controlled by Republicans, the other by Democrats—have put the brakes to Mr. Truman's Socialist bandwagon.

These two Congresses have also established another record of merit. It was during the Eightieth Congress that evidence was revealed of the subversive activities within our own Government. The Hiss case was brought to light—with some difficulty growing out of administrative agencies, I might add. Eleven Communists were brought to trial and convicted on the strength of evidence unearthed by congressional committees in the Eightieth Congress.

During the two sessions of the Eighty-first Congress we have seen congressional committees pierce further into the armor that has protected subversives for too long a time.

There will be some—and you can guess who one of them will be—who will say the Eighty-first Congress was another do-nothing Congress. When the Eightieth and Eighty-first Congresses stopped socialism and exposed communism in our country, they did a good day's work for the American people.

Wall Street Journal Predicts Many Ills Ahead for the Coal Industry

---

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mr. VAN ZANDT. Mr. Speaker, a most interesting article appeared in the March 21, 1950, issue of the Wall Street Journal concerning the coal industry. This article written by Philip Geyelin,

staff correspondent of the Wall Street Journal, furnishes much food for thought.

The article is as follows:

COAL ILLS AHEAD—FEDERAL EXPERTS SEE BITUMINOUS PRICE WAR IN A FEW MONTHS—SAY MARGINAL MINES WILL BE FORCED OUT AS OPERATORS VIE FOR SHRINKING MARKET—WHAT WILL MR. LEWIS DO?

(By Philip Geyelin)

WASHINGTON.—President Truman's coal experts think the soft coal industry is going to be mighty sick before many months roll by.

At the moment it's benefiting from a palliative—demand for the fuel from strike-starved coal consumers. Last week prices were marked up 10 to 30 cents a ton.

But the experts are keeping an eye on such statistics as these: Week before last bituminous coal output soared to 13,200,000 tons. At that rate the miners would produce some 660,000,000 tons in a 50-week year. Such a total would top the record-breaking 630,000,000 tons mined in 1947. It would be almost half again as much as the 435,000,000 ton production of 1949, when supply managed to keep up with demand.

PRICE WAR AHEAD

"There's going to be a full-scale price war in the industry in a matter of months," says one top Government mine man. As soon as the operators start battling for the shrinking coal market, "hundreds of high cost, marginal mines are going to fall by the wayside," he adds.

That will mean a return of the industry's basic ailment: Overproduction in a dwindling market, from which fuel oil and gas are luring more and more customers.

Most coal experts believe the industry would have been faced with a severe postwar readjustment before this, had it not been for John L. Lewis' stabilization efforts with the 3-day week and his holidays for miners. By limiting output, the United Mine Workers chieftain spread production across the industry, kept prices up and enabled many high-cost mines to stay in operation.

Hostilities between the mine operators and Mr. Lewis stopped 2 weeks ago when a new wage agreement ended 8 months of costly wrangling over terms. The new agreement can't be opened until April 1951. But Federal officials take small comfort from this one-year peace treaty. They expect a different kind of warfare to break out—keen competition among operators.

COAL DEMAND FALLING

Coal demand has been falling sharply from war and postwar levels.

In 1947 exports to coal-short European countries and to Canada totaled 69,000,000 tons. Last year they were down to some twenty-seven million as European mines got back in full operation.

In this country 3 years ago, coal was supplying 50 percent of the energy for homes and industry. By last year its share was down to 38.9 percent.

The railroads have been taking less and less coal as they put in more oil-burning Diesel engines. In 1947 they bought 109,000,000 tons of coal. Last year they took less than 70,000,000 tons, a drop of 37 percent. More electric-utility companies are finding it's an economy to shift to oil, too. They consumed only 80,000,000 tons of coal last year, compared with ninety-five million in 1948.

Meanwhile, householders have been swinging to oil at a rapid clip. Last year oil-burner sales were up 39 percent over 1948, while factory shipments of warm-air coal furnaces dropped 47 percent. Where natural gas is available, this fuel is grabbing some coal customers, too.

These shifts to competitive fuels are expected to continue apace unless the coal industry can lower the price of its fuel, industry observers believe.

With the industry's capacity to produce still at war level, and Mr. Lewis' power to limit production curtailed in the new coal contract, Government experts are predicting several developments.

DEVELOPMENTS IN PROSPECT

Within 120 days, says one official, coal stocks will be at or near record proportions. Heavy buying will quickly replenish above-ground supplies. Then what?

Customers will start getting finicky, the experts believe; they'll buy only higher-grade coal. This will force many small open-face mines out of operation. Some marginal, less careful strip mines where the fuel is dug from the surface, produce a lower-grade bituminous than that extracted from the bigger, underground pits, or from modernized strip operations.

As customers get choosier, bigger mining enterprises will begin feeling the pinch. Deep-mine companies without far-flung sales organizations will be hit.

At this stage, the experts predict, price cutting will begin. As the mine owners vie for business by lowering prices, high-cost, inefficient mining operations will be forced out. They won't be able to stay in business and pay the $14.75-a-day wages to the miner and the 30-cents-a-ton welfare-fund royalties won by the United Mine Workers in its new coal contract.

A BACKWARD LOOK

How far will this process go? Federal officials note this statistical history: In 1915, before World War I, some 5,500 soft-coal mines were in operation. By 1923 wartime demand had upped this to 9,300. But the coal market fell off badly in the late twenties and early thirties. Consumption by 1932 reached a record low of 306,000,000 tons, compared with five hundred and eighteen million in 1923. By 1933 the mines in operation had shrunk to 5,500 again. Today the number is back over the 9,000 mark.

Comments one Bureau of Mines official: "It may be more than just the old cycle, with the way fuel oil and natural gas have been gobbling coal customers."

The Mines Bureau functionary thinks the number of coal mines in the United States could drop below the 5,000 figure in the years to come. This doesn't mean the industry's productive capacity would be cut proportionately. He explains that most mines shutting down would be small, and the big, heavily capitalized producers would probably weather the storm.

These Government mine experts base their views on the assumption that the mine owners will have a relatively free hand in the next 12 months. Either John L. Lewis or Congress could alter the outlook by stepping in with their own recovery programs. There's been talk of Federal price propping, a subsidy for coal or some other legislation to bolster the industry.

THE QUESTION OF MR. LEWIS

What Mr. Lewis may have in mind is, as always, a mystery. But the mine owners think their new contract puts strict limits on the union's power to control coal production. The operators succeeded in eliminating the controversial able-and-willing clause. This specified that the miners need work only when able or willing. When Mr. Lewis thought coal was too plentiful, the miners were conveniently unwilling to work. With this contract loophole, the union chieftain shut down the mines for 1 week last spring, put his coal diggers on a 3-day week much of the summer, and closed the mines completely for 52 days last fall and 1 month early this year.

This had the effect of spreading work among the UMW's 370,000 coal diggers. While coal consumption dropped some 20 percent from 1948 to 1949, the number of miners employed in the industry fell off only 7 percent. Coal was kept relatively scarce by Mr. Lewis' manipulations.

Says one Bureau of Mines official: "Economically there's no justification for the number of mines in operation today. The 3-day week was an artificial prop for inefficient mines that came in during the war. It succeeded in spreading the work but only delayed the day of reckoning."

Whether Mr. Lewis can continue to exercise any control over production without his able-and-willing proviso is a big question. It looks now as if he can't. But, as one Government official puts it. "You never can tell with John L.—he's always thinking."

COAL LAW COMING?

As for the chances of congressional action designed to help the industry, any coal legislation would be delayed at least a year if Congress sets up a commission to diagnose the ills of the industry, as President Truman has proposed. The commission would need that much time to study the problem and make its report.

At the moment, Mr. Truman's proposal for a commission is fast losing the enthusiasm of Congress. With the coal crisis over, lawmakers are turning to other issues. Mine operators insist any such commission should make a careful study of labor conditions in the industry, and Mr. Lewis is bringing quiet pressure to squelch the whole idea. If the plan collapses, it would clear the way for speedier action by Congress. But even so, new coal legislation in the near future isn't likely.

The administration isn't ready to push for a coal law now. Mr. Truman's aides aren't sure just what's needed. And coal experts in the Government are inclined to give the industry a chance to solve its own problem without interference.

"There's a lot to be said for normal forces of economics." comments one top official who recalls the Government's experiences in the late 1930's with the now defunct Guffey Coal Act. That law allowed the Government to fix minimum prices for bituminous fuel. Federal price propping enabled high-cost mines to stay in business. But it cost Uncle Sam millions of dollars and mountains of paper work to set some 400,000 price minimums for various grades of soft coal in different parts of the country.

Nonetheless, the administration and Congress might go into action if a wave of mine shut-downs created serious pockets of unemployment in coal-producing States. Smaller operators would press for congressional aid if their bigger brothers captured the bulk of the market at low prices which the small mines couldn't meet. The United Mine Workers would also be clamoring for aid, of course, if unemployment should grow in the coal fields.

Reduction in Flour Consumption

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Unhappy Millers," written by

Edward Hughes, and published in the Wall Street Journal. I believe the article contains matters of special interest to wheat risers, flour millers, and those who are employed in the milling industry.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNHAPPY MILLERS—FLOUR GRINDING CLAN SHRINKS AS DEMAND FOR PRODUCT TAKES TUMBLE—HOME FRONT IS EATING MORE MEAT, VEGETABLES; SALES ABROAD SHARPLY LOWER—100 MILLS CLOSED SINCE 1947

(By Edward Hughes)

WASHINGTON.—Candidate for the title of today's least merry businessman: The flour miller.

A slow appetite for his product on the home front and a terrible tumble in foreign demand are making things rough for him.

Since 1947, more than 100 mills have bowed to shrinking profit margins and gone quietly out of business. A score more are on the verge.

It's a sharp adjustment from the biggest boom in milling history. Just 3 years ago, production of flour was at a record annual volume of 30,000,000,000 pounds. This year, output will be at least 25 percent under that level.

THE STEEP SLIDE

The big slump in export demand paces the downturn. Two years after the war, shipments of United States flour abroad had soared to nearly 10,000,000,000 pounds a year. That was in 1947. By last year, exports had dropped to about 3,000,000,000 pounds. And the slide continues into 1950. February shipments were only 30 percent of the year-ago level.

A fading American appetite for bread doesn't help matters. Domestic consumption of flour is sliding back to the prewar level—despite population growth. It was just over 20,000,000,000 pounds last year, near the 1942 level. It points a trend that has long caused anxiety among millers: Mr. and Mrs. America are eating less and less bread. At the turn of the century per capita consumption was 225 pounds of flour in a year. These days, with a greater zest for meats and vegetables, plus weight-reducing diets, per-person flour use is only about 135 pounds a year.

These statistics have tightened the noose around the neck of many a miller. In the late war and the immediate postwar years, every bit of idle plant capacity that could be found was put to work to furnish the greatest demand the industry has ever known.

SHRINKING NUMBERS

According to the Northwestern Miller, flour-milling trade publication, there was a total of 2,571 flour mills, big and small, in the Nation at the end of 1945. At latest count, this number was down to 1,553 mills.

The Millers National Federation, which maintains an office in the national capital, can point up the trend among the bigger mills. It has a list of 101 sizable mills—with capacities of 40,000 pounds or more daily—which were going full blast in 1947 and which are now out of business.

Those that survive aren't happy about the way things are going. Pillsbury Mills, Inc., of Minneapolis, is an example. President Philip Pillsbury says his firm's earnings for 1949, at $2,274,155, were less than half its earnings in 1947.

DOWNTURN AT DENVER

Denver's Colorado Milling & Elevator Co. had an even greater drop in net income in those 2 years. After taxes, 1947 income was $4,016,778. Two years later, its net income was $1,451,641.

Another example: The net income of Commander Larabee Milling Co., of Minneapolis, slipped from over $3,500,000 in 1947 to just $238,000 in 1949. That's smaller than the company's 1939 return.

What's behind the export slump? European farm recovery is of course a big factor. But it doesn't tell the whole story. Milling industry spokesmen contend United States farm-price supports on wheat—the grain that goes into flour—are forcing millers to charge too much for their product in foreign countries.

"There's no doubt about it," says one. "We are simply pricing our flour out of the world market." Then he asks: "What can millers do about it? They're trapped by high wheat costs."

LATIN AMERICAN LOSSES

Shipments to Europe are off drastically. But that's not too surprising—United States millers haven't expected to hold onto their war-inflated European markets.

They've hoped to be able to keep some of the big buyers in Latin America, however. But take a look at what's happened down there: In 1947, Brazil took 836,000,000 pounds of our flour. Last year, Brazil bought only 131,000,000 pounds. More than 366,000,000 pounds of United States flour went to Cuba in 1947. That's been trimmed by more than 100,000,000 pounds in the last year or so. With minor exceptions, that's the picture for the whole Latin-American area.

It all stems from the old problem of the dollar. South Americans, and other good United States customers, have too few of them. So they skimp on purchases that require the hard currency. In some cases, they try to shift to nondollar sources like Australia.

WHERE CANADA COMES IN

But there's not enough nondollar flour to go around. So buying nations look for dollar-flour producers who can provide the least expensive product. That's where Canada comes in. With a much lower cost for wheat, flour millers in Canada can undersell—and have been underselling—this country in many markets.

Currently, say millers, United States export prices are a full 40 cents per bushel (wheat-price equivalent) above comparable Canadian flour for sale to South American countries. "That," says a flour man, "is why Canada's exports of flour in the last 2 years have decreased only 7 percent, while ours are off more than 70 percent."

On the home front, the statistics which food experts trot out on changing dinner table habits over the past three decades show why the flour man is losing ground. Folks are filling their stomachs with other foods.

Back around the First World War, the average American consumed an annual 188 pounds of fresh vegetables. Today, he eats about 250 pounds. Meat consumption: In 1930, per capita use averaged 128 pounds a year. Today the level is running around 146 pounds—and moving upward.

The United States citizen who ate an annual 35 pounds of eggs a generation ago consumes nearly 50 pounds today. He's eating more chicken and turkey, too.

Capehart Is Tough Foe of Isms

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "CAPEHART Is Tough Foe of Isms," written by Harold Cross, which was published in the Hammond (Ind.) Times on Sunday, March 26, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLAIN, EVERYDAY AMERICAN—CAPEHART IS TOUGH FOE OF ISMS

(By Harold Cross)

INDIANAPOLIS.—There is an awfully good reason why United States Senator HOMER E. CAPEHART is battling at all times to retain the American way of life.

He is a symbol of that type of life.

The biographical trail left by Indiana's senior Senator in his 52 years on this earth spells America in great big letters. And he isn't forgetting what he found was possible in America as he goes about the State and Nation preaching against socialism, communism, or any other ism that might be dreamed up from time to time by those who seem to find things wrong with the American system.

You take a good long look at HOMER and then you say to yourself:

He isn't a politician.

He isn't a narrow-brained business tycoon.

He isn't a flowery orator with meaningless words.

He isn't a radical—nor a conservative.

So you just roll all these things around in your mind a bit and you come out with these deductions:

HOMER is just a plain, everyday American who is sincerely trying to save for America what he thinks is its greatest asset—its form of government.

In fact, the affable gent who went from a farm in Washington, Ind., to a Senate seat in Washington, D. C., makes a great talk entitled "Our Greatest Asset," and it's his gospel.

The man whose upturned grin and big cigar form a Capehart trade-mark has done a good many other things in his 5 years and more in Washington than just talk about our Government. But the American way of life is his basic philosophy and all other activities revolve around it.

Both the man and the philosophy were born near the little town of Algiers, Ind., on June 6, 1897, when Alvin and Susan Capehart had a son they called HOMER.

That start in life was not a glorious one, but typical of so many Americans. HOMER'S father was a tenant farmer and HOMER was the second of four children, there being two other sons and a daughter when the final roll was read.

The going is not easy for tenant farmers, but Alvin Capehart, whose ancestors came from Wales in colonial days, managed to provide for his family through hard work and economic management.

HOMER, as a boy, knew the feel of wheat stubbles on his bare feet. He knew the chill of 4 a. m. while donning his dungarees for the morning chores.

He also knew the need for the necessities of life at times.

Nevertheless, HOMER used his 16 wakeful hours of each day to mix schooling with farm chores and out of it came a high-school diploma and a respect for courage.

The diploma and World War I arrived at the same time and the strapping farm boy from Daviess County was the first enlistment in his home county at the age of 19.

From a buck private in the rear ranks he moved to sergeant in the army in the 2 years he served.

Then, endowed with the spirit and courage to make a success under the American system, he tackled the business world as a salesman. Up to this point HOMER CAPEHART had not sold anything except himself on the

fact that under the free-enterprise system you can make a success from any beginning.

It was as ham to eggs that he took to selling plows. But later it was as milk to vinegar that he went into the advertising business. Nevertheless, he kept on eking out the necessaries of life, even though they were quite sparse at times. There were a few incidents in this part of his 52 years that were about as tough problems for him and his newly-acquired family responsibilities as you would want to meet up with.

The pickin's were pretty lean, but the chance was there under the American system and HOMER never knew the words "give up."

His indomitable spirit was made to order for salesmanship and he became sales manager for the Holcomb & Hoke Manufacturing Co. in Indianapolis.

In 1928 the name of CAPEHART first blazed across the business world of America when he organized the Capehart Corp. in Huntington, Ind.

The next year he moved his manufacturing operations to Fort Wayne, Ind. He was for many years associated with the Rudolph Wurlitzer Co., of Cincinnati, and North Tonawanda, N. Y. He founded the Packard Manufacturing Corp. in Indianapolis in 1940. HOMER, the farm boy, the poor boy, was on his way.

When World War II enveloped the United States the Packard plants turned to war production and won repeated awards for their excellence in producing tank parts, plane parts, and parts for 30-caliber carbine rifles.

Your reporter, who has been covering politics in Indiana for more years than he likes to admit, had reason to know CAPEHART long before this point in the career of America's No. 1 booster.

Back in 1938 on a hot August day I joined a good many thousands of other Hoosiers in a trek to the farm of CAPEHART near Washington, Ind. This was when CAPEHART'S name first appeared on the political horizon of Indiana.

He had seen the trend under the New Deal toward changing that system of government which he loved and cherished so much and the poor little successful boy decided to do something about it.

Those thousands of Republicans gathered at the Capehart farm and pledged to fight with all their might against New Deal efforts to change the American system.

It worked.

That very same year the Republicans elected a secretary of state. Two years later they carried the State for Wendell Willkie and reelected the secretary of state. In 1942 they won the legislature and all State offices except governor which was not subject to election.

From that huge gathering on CAPEHART'S farm which has become famous in Republican history as the "cornfield conference" the Republican Party surged forward in Indiana to complete landslides in 1944 and 1946.

Yes, in 1944 the Republicans won a landslide and into office with that landslide went HOMER E. CAPEHART—into the United States Senate. The farm boy, the salesman, the successful businessman, the American, the United States Senator, was now where he could do the most good for that philosophy of his.

To get into the Senate, CAPEHART faced in the general election the man who has been proclaimed in politics as the State's greatest vote-getter, Gov. Henry F. Schricker.

Schricker had just completed a 4-year term as governor and was hailed as a cinch to win the Senate seat on the strength of a complaint-free term in office.

Up and down the State went the man who was new to the game of politics. He shook 100,000 hands, he claims, and visited every nook and corner of Indiana and doggone near every grocery store and filling station. He won over the man they said couldn't be beat, but HOMER never did know the meaning of those words: "give up."

The same old push marked his way through the Senate. He wasn't in Washington long until he found his way around like a veteran.

Who Are "The People"?

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Who Are 'The People'?" published in the Indianapolis (Ind.) Star on March 21, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO ARE "THE PEOPLE"?

In a slashing attack on Senator HOMER CAPEHART, of Indiana, the AFL's Political Education League has used the time-worn political trick of smearing an opponent by association. "CAPEHART," the weekly league reporter says, "has again lined up with the special interests and against the people. He is opposing the middle-income cooperative housing bill."

The implication is that anybody who opposes this piece of legislation is a tool of the National Association of Real Estate Boards and is against the people. Simply because Senator CAPEHART happens to have decided to vote against a bill which that organization opposes, he is charged with being a stooge for a special interest. That sort of attack is not only unfair, it is both vicious and untrue.

Who are the people for whom the AFL presumes to speak? Are they the 55 percent of all the people in all the United States in small-income groups who own their own homes; people who would have to pay off not only their own mortgages, but part of the mortgages of that specially privileged few who got Government subsidies for cooperative housing? Are they the people who are now living in rented homes and are satisfied with the rent they pay? Are they even the majority of the members of the AFL, few of whom would benefit from this middle-income housing bill, but all of whom would have to pay the taxes to support it? We doubt it.

The AFL's league reporter speaks only for those few political experts who edit it, and for the few labor leaders who control the AFL for their own political and personal purposes. It no more speaks for the people than does the National Association of Real Estate Boards. In a previous attack on GOP Congressmen on March 6 the reporter said that the McConnell FEPC bill keeps civil rights from being enforced. It implies AFL support for an FEPC with compulsory enforcement.

Yet the constitutions of many AFL unions today prohibit Negro membership and ban Negroes from being apprentices. How can the AFL political educators reconcile these two opposing actions? And how can the people have any confidence in the sincerity or the accuracy of the league reporter when it puts out such hypocritical opinions as these?

Statehood for Hawaii and Alaska

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "United States Has Real Obligation To Accept Hawaii and Alaska Into Full Family Membership," which appeared in the Salt Lake Tribune on March 10, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNITED STATES HAS REAL OBLIGATION TO ACCEPT HAWAII AND ALASKA INTO FULL FAMILY MEMBERSHIP

The lower House of Congress has approved bills to admit Alaska and Hawaii, respectively, as the forty-ninth and fiftieth States of the Union. Although opposition is reported brewing in the Senate, it may be hoped that the upper chamber will act as forthrightly and intelligently.

The two States would be the only ones not contiguous to continental United States. However, modern transportation and communications facilities and some potent lessons from the Second World War eliminate distance as an argument against statehood. Petitions of the two Territories are correctly being considered separately and each on its own merits. However, there are many reasons for affirmative action, especially at this time. We need to bring all members of our American family closer together spiritually and practically.

Absentee Federal direction undoubtedly has hindered economic and population growth of both Territories. Though they both seem a long way from continental United States, the air lines and modern communication facilities have brought them much closer than were some of the "frontier" Territories in former days.

Hawaii has been ready for statehood a long time—socially, economically, and politically. The islands are a crossroads of the Pacific, a center of trade and cultural relations between all peoples of the Pacific area. Here is a good place to exhibit democracy at work. The argument that Communist strength on the islands should keep Hawaii out of the Union is a weak one. A government in which citizens participate to a greater degree should discourage residents from flirting with subversive ideologies. Eighty-three percent of Hawaii's citizens are American citizens.

Hawaii has been seeking admission to the Union since 1854. The island Territory has had constitutional government since 1840 and has been a Territory since 1900. Hawaii's present population of 540,000 exceeds that of six States and almost equals four others. The population is larger than that of any territory when it was admitted to statehood except Oklahoma. Hawaii's land area is larger than several eastern States. Its contribution to the Federal Treasury of $90,824,693 last year was more than was collected in United States taxes in any 1 of 11 States.

Alaska and Hawaii are vulnerable points in our national defense, it is true. Pearl Harbor proved, however, that an attack on a United States Territory or possession is as important to the rest of the country as if Oregon or Georgia were invaded. The Territories of Alaska and Hawaii cannot be secure

until they are admitted to statehood. They should have stronger voices and votes in the Congress.

Alaska remains largely underdeveloped and vulnerable to attack 83 years after the Territory was purchased from Russia. The proximity of the peninsula to Russia dramatizes the urgency of making it as strong as possible militarily, with a complete democratic government. Though much of it is a remote, icy wilderness, Alaska has tremendous natural resources, such as timber and minerals and open places for settling Americans in new homes. Its possibilities have hardly been tapped. Statehood no doubt would enhance stability settlement and development.

Admission of Alaska has been opposed on grounds it would be unfair for a State of 100,000 population to have the same representation in the Senate as States of several million people. If that argument is valid, then it is unfair for Utah and Nevada to have the same number of Senators as New York and California. This practical arrangement is the price that was paid for the Union in the first place.

Alaska has more population than 12 States boasted at the time they entered the Union. Population per square mile there is greater than that of Nevada, Minnesota, and Oregon at the time they became States. After an extensive investigation, the House Public Lands Committee has concluded that Alaska should be able to support itself financially under statehood.

Arguments against statehood for the two great Territorial outposts are almost a century late. The United States assumed a solemn obligation to accept them into full family membership and to defend them when the Nation acquired them.

Mental-Health Program

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. MORSE. Mr. President, I hold in my hand clippings reporting a horrible disaster in a mental hospital. Nine men were trapped by fire, and went to their deaths. It is reported that they were chained to their bunks.

It is hard to believe that such a tragedy could occur in this day, and yet I realize that the practice of restraining mental patients is mainly due to a lack of trained personnel.

Although this was a private mental institution, this practice of shackling patients goes on, I understand, in many tax-supported hospitals throughout the country.

Our veterans hospitals have made a notable advance in abolishing these restraints, and yet the recent veterans' cuts in personnel threaten to reduce the standard of care that is given. In a statement made by the American Psychiatric Association, which I would like to insert in the RECORD, it is stated:

One of the most serious threats of the cut-back is the reduction in training programs at VA hospitals, particularly for nurses and aides. It is inevitable that incidents of abuse of nervous and mentally disabled patients will increase. Moreover, decreases in supervisory personnel will inevitably encourage an increase in the use of physical and chemical restraints for disturbed patients.

I think it is not only necessary to stop these cut-backs in the Veterans' Administration, but it is clear that we must step up our whole mental health program in the country, as carried on by the Public Health Service.

Neither society nor the Congress can condone inhuman practices. Therefore, society at large, and the Congress in particular cannot afford to neglect any steps that can be taken to eradicate such medieval action in our mental hospitals.

When, by appropriating a small amount of money, we can find new treatments, train personnel to apply them, send patients home as soon as possible, and take care of their rehabilitation, Congress ought to find a way of providing that money.

Mr. President, I ask unanimous consent to insert in the RECORD a release by the American Psychiatric Association and a newspaper article entitled "Tragedy at Mental Hospital Near Philadelphia," published in the Washington Daily News of March 30, 1950.

There being no objection, the release and newspaper article were ordered to be printed in the RECORD, as follows:

Concrete evidence to support the American Psychiatric Association's warning that current cuts in Medical personnel in VA psychiatric hospitals and clinics would have disastrous results, was made public today by APA president, Dr. George S. Stevenson, New York City. On March 4 the association publicly declared that unless the personnel cut-back were prevented, "medical care of nervous and mentally disabled veterans would deteriorate below accepted adequate standards.'

About 3,000 of the VA medical staff are involved, approximately 1,200 of them being doctors, dentists, psychologists, nurses, social workers, and aides in VA psychiatric hospitals and clinics.

Stating that his information was based on reports received from the VA hospitals and clinics in the past 2 weeks, Dr. Stevenson declared the evidence was all too clear that the VA's fifty-thousand-odd psychiatric veteran patients would be the ones to suffer from the lowering of standards and services necessitated by the personnel cut.

For example, he said, the VA hospital at Gulfport, Miss., will eliminate its vocational rehabilitation and education program. At American Lake, Wash., insulin therapy will be stopped. At Downey, Ill., the recreation program for TB patients will be cut out. At Port Lyon, Colo., the leukotomy (operation on frontal lobes of brain) program will be drastically limited. At Marion, Ind., the hydrotherapy program will be reduced. At Togus, Maine, one medical and one surgical ward will be closed.

Particularly distressing is the effect of the cut-back on the VA hospitals which care for tuberculous psychiatric patients, Dr. Stevenson said. They are asked to reduce their staffs by 5 to 50 people. Yet in a recent survey of four of them, not one was found to provide adequate medical care. The cut-back can only agitate already serious deficiencies.

One of the most serious threats of the cut-back is the reduction in training programs at Veterans' Administration hospitals, particularly for nurses and aides. It is inevitable that incidents of abuse of nervous and mentally disabled patients will increase. Moreover, decreases in supervisory personnel will inevitably encourage an increase in the use of physical and chemical restraints for disturbed patients.

The corrective therapy and vocational rehabilitation and education programs will be drastically curtailed, and in many hospitals eliminated altogether. Dr. Stevenson continued. These are crucial activities in preparing patients for release from the hospital and readjustment to community life.

The cut comes at a time when there are about 4,000 psychiatric beds unused in the Veterans' Administration hospitals for lack of personnel to staff them; and when there are about 5,000 "emergency beds" in use—crowded into sun porches and recreation rooms, over and above normal capacity. Yet 21 Veterans' Administration hospitals report they will have to close nearly 1,400 more beds as a result of the cut, and more would be closed if it were not for local community pressure to keep them open.

The situation is aggravated, Dr. Stevenson stressed, by the fact that the Veterans' Administration is asked to staff new hospitals being constructed within present personnel ceilings. In a program analysis approved recently by the Chief Medical Director of Veterans' Administration, it was estimated that the Veterans' Administration needed 4,000 more medical personnel to maintain its present psychiatric hospitals and provide for the new ones planned this year.

Turning to the Veterans' Administration mental-hygiene clinics, Dr. Stevenson described them as the first line of defense against hospitalization. About 25 percent of nearly 25,000 out-patients now being handled by the clinics would have to be hospitalized if clinic treatments were not available. All of these cases involve service-connected disabilities. Yet the personnel cutback requires the clinics to reduce personnel by about 13 percent—foreshadowing a backlog og about 10,000 untreated service-connected cases by the end of 1950. The cutback also will require the clinics to rely more on fee-basis physicians, which costs about a third again as much per treatment and results in less adequate medical care.

At present there are no clinic facilities in Alabama, Idaho, Mississippi, Montana, Nevada, North and South Dakota, and Wyoming, Dr. Stevenson said, and, in general, large areas of the Midwest, South, and Southwest have few or no out-patient clinic facilities. There are 470,000 service-connected cases now eligible for clinic out-patient treatment. Only 25 percent of them have been cared for thus far, Dr. Stevenson stressed.

Dr. Stevenson expressed the hope that a widespread public protest to the Congress would result in a deficiency appropriation for the Veterans' Administration which would put a last-minute stop to the personnel cut-back.

THE EFFECTS OF VA PERSONNEL CUT ON INDIVIDUAL HOSPITALS

American Lake, Wash.: Can't close beds; stop insulin therapy; eliminate affiliate nursing program; reduce total push; less supervision of personal care; return to back wards.

Bedford, Mass.: Cannot elminate 235 emergency beds; no social service on Sunday; hydrotherapy reduced from 16 hours to 1 hour 5 days a week; cannot do family care.

Augusta, Ga.: 280 patients to lose treatment; serious reduction in service; nursing service covers dietetics; need two more nurses for insulin therapy.

Canandaigua, N. Y.: Close 289 beds; eliminate insulin program; PMR (physical medicine and rehabilitation) for 200 patients reduced.

Chillicothe, Ohio: 39 emergency beds eliminated; no effect on patient care.

Coatesville, Pa.: Close one hospital building; have stopped admissions; total push decreased.

Danville, Ill.: Have to stop admissions for 5 months to reach standard capacity; cannot man all nursing stations; unsafe to operate wards; cold food served 1 hour before

meals; 45 patients deprived of treatment; eliminate attendant training.

Downey, Ill.: Cannot operate additional tuberculosis ward; no recreation for TB patients; two vacancies for doctors canceled; professional people have to do administrative work.

Fort Custer, Mich.: Close 85 beds; eliminate VR & E (vocational rehabilitation and education program); reduce PMR program.

Fort Lyon, Colo.: Close 106 emergency beds; 225 patients to 1 doctor ratio; leukotomy program decreased.

Fort Meade, S. Dak.: Have only 146 aides; will reduce push program.

Gulfport, Miss.: 110 beds should be closed but cannot for the sake of serving community; eliminate VR & E; all MAT (manual arts therapy) but one shop eliminated; special training for 25 catatonics eliminated; habit training for 140 abolished; no hydrotherapy on acute service; lessen group psychotherapy; close staff dining room; lose five ward clerks (nurses to do administrative work); have to double up patients in day rooms; no aide training.

Knoxville, Iowa: Close 78 beds or eliminate the 38 beds for TB–NP patients.

Lebanon, Pa.: Are opening beds; need more staff for new beds—but can't hire in advance for training some reduction in PMR activities.

Lexington, Ky.: Inadequate coverage of wards due to lack of nurses and attendants.

Lyons, N. J.: Close 400 beds (have 288 emergency beds); 350 patients needing PMR not getting it; unless get more personnel, have to close beds; PMR activities somewhat reduced; inadequate coverage of wards.

Marion, Ind.: Cannot close beds—too crowded; cannot open new unit for infirm; 200 patients have no sports; movies for wards down 50 percent; stop night hydrotherapy; no PT for TB patients; curtail ward OT (occupational therapy); 4 buildings, no CT (corrective therapy); lessen dietetic ward service; special services activities reduced; hydrotherapy and physical therapy activities curtailed.

Murfreesboro, Tenn.: OT on wards curtailed, fewer activities off wards; shortage of psychiatrists and nurses continues.

North Little Rock, Ark.: Close 86 TB-NP beds and transfer patients; else eliminate 86 other beds.

Northport, Long Island, N. Y.: Stop new admissions, eliminate emergency beds; hydrotherapy reduced from 24 to 16 hours and 16 to 8 hours; off-ward activities for patients curtailed.

Palo Alto, Calif.: Can't reduce beds; must reduce programs, won't do lab work for annual physicals; reduction in ward coverage and ward activities, or increase use of restraint and sedation.

Perry Point, Md.: Patient care will suffer by curtailing program.

Roanoke, Va.: No emergency beds; increase waiting list; reduce lobotomy program (112 operations; one-third gone home); decrease shock program; residency training will suffer.

Roseburg, Oreg.: Ten emergency beds; diminish training for aides; eliminate ward OT; limit lobotomy retraining; need eight more medical jobs; reduce push programs; marked reduction of OT on wards; reduce off-ward activities; reduce lobotomy program.

Sheridan, Wyo.: Reduce extent of off-ward activities; coverage on wards in some cases reduced to danger point; hydrotherapy and other PMR activities reduced.

St. Cloud, Minn.: Need for additional physicians on acute intensive treatment service.

Togus, Maine: Close one medical and one surgical ward; NP hospital personnel never adequate.

Tomah, Wis.: Some reduction in off-ward activities; attendant ratio low.

Topeka, Kans.: Close 200 beds.

Tuscaloosa, Ala.: Cannot reduce beds; discontinue two VR & E jobs; lessen insulin and electric shock therapy; cut down lobotomies due to inadequate nursing; lessen push programs.

Tuskegee, Ala.: 200 beds closed by curtailing administrative; eliminate 5,000 program—2 jobs; eliminate two PMR programs.

[From the Washington Daily News of March 30, 1950]

TRAGEDY AT MENTAL HOSPITAL NEAR PHILADELPHIA—NINE DEAD IN FIRE WERE CHAINED TO THEIR BUNKS

PHILADELPHIA, March 30.—Nine men mental patients, tugging in terror at the chains which bound them to concrete slabs, died today in a fire in a private sanitarium.

The dense smoke which killed them, pouring into their barred cells from a basement fire, felled two other patients in the ward. They were in critical condition at Montgomery Hospital in Norristown, Pa.

A male nurse, George Lewis, 51, saved the lives of the four other inmates of the violent section. He groped through the smoke and unlocked the leather-bound chains which shackled them either by the wrist or ankle to an iron ring in their concrete beds.

When the dead were laid out on the rug-covered floor of the administration building, the cuts and bruises told the story of how they struggled futilely to break the shackles that held them.

THIRTY INJURED

About 30 other persons, including firemen and attendants, were overcome or sickened by the dense smoke from a rubbish fire.

Amid the confusion of smoke, the rescuing of 75 terror-stricken inmates and firemen battering at cell doors, there was heroism.

Mrs. Theresa Shaw, 38-year-old New York nurse, crawled on her stomach through the smoke to lead firemen to the locked doors of bed-ridden patients.

Heroic firemen carried other patients, naked or clad in night clothes or underwear, to safety down ladders in the chill early morning hours. Spectators, drawn to the scene by smoke and fire sirens, aided in the rescue work.

Mrs. Shaw had just returned to work at the Belle Vista Sanitarium in the exclusive Chestnut Hill section when the flames broke out.

REASSURES PATIENTS

Immediately, Mrs. Shaw went to help her patients.

"There was no way and no time to get at the ward records, so we could first rescue the most feeble," she said. "I just called on my memory. As each patient was led or carried to safety, I called her by name and assured her that everything was all right."

The blaze, confined to the basement, was discovered at 10:45 last night.

Most of the patients took the emergency calmly once they noticed the presence of the assuring attendants. Others, however, screamed and fought with their rescuers, flailing their arms violently.

One woman patient choked a fireman as he carried her from the L-shaped two-story stone building.

CHAINED TO SLABS

Fireman Walter Rohrbach of Flourtown said he rescued 12 women, carrying them down ladders 1 at a time.

The patients in the violent ward were chained to the concrete slabs on which they sleep shortly after the evening meal, about 5 hours before the fire broke out.

Straps encircling one arm and one leg of each patient were linked by chains to hooks embedded in the concrete, fireman said.

Other mental patients, not considered violent, were restrained to their beds by simple leather straps in the other wards of the institution. Senile and nervous cases were not restrained.

Opportunity and Justice for All America

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Opportunity and Justice for All America," by Harold Cross, published in the Hammond (Ind.) Times, on Monday, March 27, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR CAPEHART'S CREED: OPPORTUNITY AND JUSTICE FOR ALL AMERICA

(By Harold Cross)

(Pt. II)

INDIANAPOLIS.—The name of Senator HOMER E. CAPEHART flashed around the world when he revealed that Japan had slipped a peace feeler to the United States through Russia. Our officials, who had become habitually secretive about matters of concern to the country, denied the Capehart assertion. But Indiana's then-junior Senator stuck to his guns and eventually his claim was confirmed.

Legislatively, Senator CAPEHART felt his way for the first 2 years, gaining experience and the appreciation of his colleagues as he went along.

In the 1946 campaign in Indiana Senator CAPEHART teamed with the Bill Jenners and the Ralph Gateses and the Tom Baths and the Charley Hallecks and the Hobart Creightons and other big guns in the Republican ranks to swing a rousing Republican victory.

When he returned to the Senate for the Eightieth Congress, Senator CAPEHART was properly equipped to become Indiana's senior Senator. He lost no time in introducing a bill to clarify the portal-to-portal pay problem which was sweeping the country. It was at this same time, too, that labor-management developments in the Nation indicated corrective legislative measures were needed. Senator CAPEHART, whose practical experience as both a worker and employer served him well in his course of action, criticized the Wagner Act, but at the same time criticized the original Taft-Hartley Act, contending it should be amended in several respects.

His completely harmonious labor relations as an employer gave Senator CAPEHART access to sources within the ranks of organized labor which made possible constant discussions with those sources on the problems which arose on labor questions.

He also moved into important positions on the major Interstate and Foreign Commerce and Banking and Currency Committees.

Consistency is a jewel in anything, particularly politics, so Mr. CAPEHART can claim that jewel. In 1944, Mr. CAPEHART stressed in his campaign the dangers of foreign isms creeping into our Government through disloyal officials. Six years later the Alger Hiss conviction confirmed that danger.

Mr. CAPEHART also campaigned on a platform of economy in Government and a balanced peacetime budget. Six years later he finds need for the same platform.

The Eightieth Congress also formed a Small Business Committee and Senator CAPEHART became a member and was made chairman of the subcommittee of the Small Business Committee which had charge of

investigating the newsprint shortage. It was through his deft handling of this critical situation that the problem was solved without Government interference.

While many administration Senators clamored for Government control of newsprint, Senator CAPEHART calmly called a conference of publishers from throughout the country and a voluntary system of distribution of newsprint was adopted. Today, as a result of Senator CAPEHART'S judgment, the press of America remains free from Government controls.

FIGHTS FOR AMERICAN PRINCIPLES

When the Marshall plan was brought to the fore in the Eightieth Congress it came face to face with a man from Indiana who insisted American principles be applied to aid for Europe. As a member of an investigating Senate committee which had toured the war-torn nations of Europe near the end of World War II, Senator CAPEHART was familiar with the European problem. But he also was familiar with what American principles could do toward restoring prewar conditions there.

He opposed the system designed for the Marshall plan, but not before offering a substitute plan which won great support in the Senate although it was not adopted. Today there are many who originally supported the existing Marshall plan who openly admit Senator CAPEHART'S plan would have succeeded in the restoration of Europe in less time and at far less expense to the American taxpayer.

When inflation loomed its ugly head in December of 1947 and President Truman first urged restoration of rationing and controls, Senator CAPEHART again stepped to the front with a 14-point plan for increasing production as a means of combating inflation. Again he was right. For it was greater production that finally defeated inflation.

In 1948 when the Republican Eightieth Congress worked toward a long-range farm program, the Indiana Senator who had grown up on a farm and who today actively operates one of Hoosierland's finest farms knew the course to take.

FLEXIBLE PRICE SUPPORT

He supported the flexible price-support plan for long-range use because in his farming experience he had learned the ups and downs of farming and felt qualified to work out the solution to them. Senator CAPEHART contends today that had the Hope-Aiken flexible price-support program been given a chance to operate it would have prevented the growing inequities that today threaten chaos in the farm program.

While we are on the subject of farming it is quite appropriate to mention something more about Senator CAPEHART'S farm. It stretches for 1,800 acres over his beloved Daviess County just a few miles from Washington, Ind.

Consisting of some of the finest farmland in the State, the Capehart farm borders along the west fork of the White River. It is a farm efficiently operated with the actual supervision and as much of the actual work as possible being performed by the senior Senator himself.

The Capehart farm is not many miles from the Capehart birthplace and the Hoosier Senator expects to close his life on the farm he owns not far from the farm on which his life began so ruggedly.

His wife, Irma, who was a school teacher in Wisconsin before she became Mrs. Capehart, wife of a struggling sales manager, shares the Senator's love for his Indiana farm. So do his two sons and daughter.

Earl Capehart, the eldest son whose full names makes him a junior when the Homer is added, is a practicing attorney in Indianapolis. He won his degree from Harvard law school.

Tom, a graduate engineer from Purdue University, is now the president of his father's Packard Manufacturing Corp. in Indianapolis and carrying the full load of responsibility for continuing the success of the Capehart business reputation.

Both boys are also sharing their time and efforts toward making the Capehart farm tick.

The daughter, Patricia, youngest of the three children, is in her junior year at the University of Maryland. She is a pretty, dark-haired and vivacious girl who exemplified her illustrious father last summer when she took a job as waitress in a Maine resort to earn her own vacation the hard way.

WILL TOUR THE STATE

Well, that is the background of the man who will again be going up and down the State soon shaking another 100,000 hands and an upturned grin wrapped around a big cigar.

He'll be preaching Americanism at every turn just as he did last December when he toured the State for seven public debates with Representative ANDREW JACOBS, of Indianapolis, on the subject of British socialism.

The big and dynamic Senator has had a creed these many years and it pretty well sums up the American way of life that HOMER CAPEHART believes in so thoroughly and at the same time forms a short and effective biography of the man himself.

It goes like this:

"I want to retain that form of government under which the farm boy of today can become the farm owner of tomorrow; under which the worker of today can become the successful businessman of tomorrow; under which the poor immigrant of today can become the prominent citizen of tomorrow."

Russia's Portrait of Us Must Not Hang Alone

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Russia's Portrait of Us Must Not Hang Alone," published in the Louisville Courier-Journal of March 30. The editorial relates to the joint resolution introduced a few days ago by the Senator from Connecticut [Mr. BENTON], which was jointly sponsored by himself and 10 other Senators, of whom I am proud to be one.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RUSSIA'S PORTRAIT OF US MUST NOT HANG ALONE

In too many countries around the world too many people look upon the United States as a power-mad, money-mad, selfish, imperialistic ogre. Those same people, in most cases, have been sold and believe the vision of slave-state Russia as a worker's paradise. The cause, in both cases, is Russia's skillful, highly effective propaganda, open and disguised, promoted not only by the Kremlin but by its satellites and by converted native agents everywhere.

The United States has an obvious interest of the first importance in combating this Russian distortion of truth and in giving other peoples of the world a true mirror of itself. But on this battle for the minds and the possible allegiance of other peoples it now is spending the trifling sum of $34,000,000 a year—far less even than the British, much less the Russians.

Senator WILLIAM T. BENTON, properly alarmed by this situation, has with 10 other Senators introduced a resolution calling for affirmative action to right it. More money is necessary but incidental; the program is the thing. Senator BENTON, who helped to develop our present foreign information program, with its Voice of America broadcasts and its libraries and cultural missions abroad, wants greater American action on every propaganda front: radio stations capable of reaching every listener in the world, a renewed and more aggressive campaign in the United Nations for freedom of information, support of the United Nations Educational, Scientific, and Cultural Organization, promotion of democratic education, a conference of non-Communist countries on information programs.

There are other activities that might be included, too, such as the export of more American teachers and students to friendly nations, more American libraries and well-chosen documentary films (with some sensible discouragement by Hollywood itself of those of its cheap distortions so helpful in promoting Soviet caricatures of us). But Senator BENTON is on the right track, and we hope that he will succeed in getting congressional action. A true picture of the United States can win us friends and influence the world, but if we do little to put it before the world we can hardly be surprised if Russia's venomous portrait of us, hanging alone, is accepted as the one and only.

The Kerr Natural-Gas Bill

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. KEM. Mr. President, Thomas L. Stokes is a distinguished American journalist. He is a winner of the Pulitzer prize and the Raymond Clapper memorial award, and has received other marks of distinction. I believe his views concerning the Kerr natural-gas bill recently passed by the Senate will be of interest.

I ask unanimous consent to have printed in the Appendix of the RECORD an article by him entitled "On 'Special Interests'," published in today's Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON "SPECIAL INTERESTS"—FAILURE TO VETO KERR NATURAL-GAS BILL MAY EMBARRASS TRUMAN ON COMPROMISE

(By Thomas L. Stokes)

President Truman may find himself embarrassed in attacking the "special interests" in his projected cross-country "whistlestop" tour to begin early in May unless meanwhile, he vetoes the Harris-Kerr-Thomas bill that frees independent natural-gas producers

from regulation by the Federal Power Commission.

It would cost the 40,000,000 natural-gas consumers millions of dollars annually.

The measure, which soon will be placed on his desk for decision, was sponsored by Democrats and put over in the Senate this week, as in the House last session, by Democratic votes in a Democratic Congress. A bill of similar purpose, though broader in scope, could not even get through that Eightieth Republican Congress which the President denounced in 1948 as the worst in history.

OIL COMPANIES TO BENEFIT

This was, indeed, a "special interest" coup. The result in the Senate is disturbing evidence of the weight now exerted by big oil in the Democratic Party. Big oil was behind the bill which will benefit handsomely a handful of the Nation's major oil companies. They own the bulk of natural-gas reserves in the Southwest and will enjoy virtually a monopoly status if it becomes law. Credit for the victory goes to Senator Bob KERR, of Oklahoma, former Governor of his State, who is, himself, a big oil and gas man, and has emerged as a powerful figure in Democratic politics. This victory may prove costly to his party.

On his way across the country the President will travel through States where consumers are vitally affected by this measure. A number of Republican Senators from that area, reflecting this consumer concern, fought bitterly against it and voted against it, so that it will become a lively political issue. Republicans supplied the majority of votes against the bill in the Senate, 22, with 16 Democrats voting with them. Twenty-eight Democrats voted for it, along with 16 Republicans.

At the western terminus of his tour the President is to dedicate a great public power project, Grand Coulee Dam in Washington State. There, it is presumed, he will say something, as he has in that area before, about the administration's policy of regulating utilities in the public interest. Natural gas is freed from regulation at the source under the Harris-Kerr-Thomas bill, so that the consumer cannot be protected properly by other regulation along the line in pipeline transmission and sale at the other end. Incidentally, it was while on a visit to Grand Coulee in his transcontinental tour in June of 1948 that the President made his crack about the Eightieth Republican Congress being "the worst in history."

The Democratic Party's leadership in Congress plainly defaulted on this issue, though a minority of individual Democrats in the ranks fought it. President Truman, who openly opposed it in the last session of Congress, was represented about the lobbies of the Senate during its consideration as now accepting it, though this was denied by aides at Key West. At the same time, Democratic National Chairman William Boyle, Jr., belatedly was reported as bestirring himself against it. Pressure from consumer and labor groups got very hot.

LEAD ASSUMED BY DOUGLAS

Senator LUCAS, Democrat, Illinois, the administration's Senate leader, walked out completely on the fight. Shortly after the Senate took up the bill he went back home to campaign for reelection, was absent during the debate, and did not even return for the final vote. Nor was it announced how he would have voted, had he been here, which is customary practice.

Leadership in the fight against the bill on behalf of the Democratic minority opposed to it was assumed by Senator DOUGLAS, Democrat, Illinois, who had thoroughly informed himself on the vital issues involved affecting the public interest. So effective was his direction of the battle, with the able help of a number of Republicans and a few other Democrats, that the reported overwhelming majority claimed for it at the outset was whittled down to a very thin majority ultimately.

The Democratic Party hasn't heard the last of this.

Appropriation for Veterans' Administration

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, I am reliably informed that General Gray will ask for more money so that some of the personnel of the Veterans' Administration hospitals will not be discharged. Apparently the Veterans' Administration realizes it made a mistake in not asking for more money than it did.

Dr. George S. Stevenson said that in reducing the personnel by 4,700 in the Veterans' Administration would result in special abuse not only to the patients but to the nervous and mentally disabled.

I am extremely glad that General Gray, as I am reliably told, will ask for more money and I hope that a mistake of that kind will not be made again.

Mr. Speaker, I include as a part of my remarks an article appearing in this morning's Washington Post by N. S. Haseltine:

HOSPITAL CUT FOUGHT BY PSYCHIATRIC BODY

(By N. S. Haseltine)

Preliminary success in relieving hemophilia, the inherited bleeding disease, with a relatively new plant food drug was reported here yesterday.

The new use of the drug, rutin, was reported at the fifteenth annual Chemurgic Council, at the Statler Hotel, by Dr. James F. Couch, of Philadelphia, an analytical chemist with the United States Department of Agriculture.

Rutin, which can be extracted from buckwheat, is already used widely by older persons to fortify themselves against "capillary fragility," or the tendency of the tiny bloodways to break down. The condition is frequently found in patients suffering from diabetes or high blood pressure.

OTHER ADVANCES REPORTED

Other chemurgists, the scientists who seek new uses for agricultural crops, told of developing a tough, varnish-like furniture coating from potato starches; of fattening livestock from the waste products of distilleries, and of making the hen a better egg factory.

Dr. Couch said that the first inkling that rutin might prove effective against hemophilia came in 1945 with a request for some of the drug from a California physician. Dr. Couch's laboratory, where the drug possibilities were being investigated, filled the order with the notation that there was no reason to believe it would do good, he said yesterday.

SIXTEEN CHILDREN HELPED

The patient, a prominent California businessman, was relieved of much of his suffering, Dr. Couch said. Since then, he added, some 16 hemophiliac children have been given rutin therapy, daily oral doses of the nontoxic drug. These children, he said, have received varying degrees of relief.

He emphasized that the drug, which he termed "really a food," does not cure the condition but relieves many of pain and apparently staves off many of the irregular sieges of suffering in hemophilia. Victims suffer severe hemorrhages, often from the slightest injury.

COATING RESISTS SCRATCHES

Dr. Frank L. Teuton of this city, a member of Agriculture Department's bureau of chemistry, told of the development of "allyl starch," a coating material that has proved highly resistant to heat, scratching, and "glass rings," the markings on furniture from beverage glasses.

The coating, which is painted on like varnish, can be made from many starch and sugar materials, such as potatoes, corn, and sugar.

Dr. Philip J. Schaible, of Cincinnati, Ohio, executive director of the Distillers Feed Research Council, told of the livestock food use of whisky-mash residue.

When the grain is processed only the starches are removed, he explained.

SUPERIOR CATTLE FEED

The rest, enriched in the distilling processes, with yeast, becomes a feed superior to the original grain, he said. Used in combination with natural grain and roughage for livestock and poultry feeds, the distiller feeds produce heavier animals in quicker time, he said.

Dr. H. J. Prebluda, of New York, a nutritionist with the United States Industrial Chemicals, Inc., traced the productivity of the hen back from horse-and-buggy days. Today's model, he pointed out, lays about twice as many eggs for each pound of feed as the 1900 hen.

Much of the increase, he said, can be attributed to the scientifically developed new feeds which provide concentrated egg-building substances.

The 3-day meeting is scheduled to end at a banquet tonight, with Charles F. Brannan, Secretary of Agriculture, the principal speaker.

The Veterans' Administration was warned yesterday that its plan to wipe out about 4,700 medical jobs by April 10 would seriously hamper the care and treatment of veterans, particularly nervous and mental cases.

The complaints were made by the American Psychiatric Association and the American Legion.

Legion Commander George N. Craig sent President Truman a telegram of protest and asked him to take emergency measures to keep the medical staff at its present strength until the full needs of the Veterans' Administration are determined and a more orderly process of adjustment effected.

APA president, Dr. George S. Stevenson, of New York, said reports from VA hospitals and clinics in the past 2 weeks made it all too clear that the VA's fifty-thousand-odd psychiatric veteran patients would be the ones to suffer from the lowering of standards and services necessitated by the personnel cut.

He cited specific hospitals where treatment of mental patients would have to be curtailed, and said a reduction in training programs for nurses and aides made it inevitable that incidents of abuse of nervous and mentally disabled patients will increase.

"Moreover, it will be necessary to increase the use of physical and chemical restraints for violent cases, since lack of supervisory personnel makes it impossible to do otherwise," he said.

Dr. Stevenson expressed hope that a widespread public protest would cause Congress to provide more money for the VA and put a last-minute stop to the proposed cut-back.

VA Administrator Paul R. Gray, Jr., has announced that he will lop off 7,800 VA jobs by April 10. VA officials said about 4,700 of

these would be in the medical program, but not all would be doctors and nurses.

They said the cut was necessary because the agency found it was going to be in the red about $30,000,000 on April 1 largely because Congress voted pay raises last year but didn't provide extra money to pay them.

A VA spokesman said it would be impossible to tell until the job cut went through what the effect would be. He pointed out that the reduction will be in jobs, not actual employees. And he noted that some hospitals had not hired all the staff they were entitled to so in some cases there might be no firings at all.

The following is a letter sent to me by the gentleman from New York [Mr. TABER] and an article by Mr. Beveridge of the Washington Evening Star:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 14, 1950.

DEAR COLLEAGUE: So that the Members may have the information before them to answer letters that may be received from veterans about the recent hospital situation, I wish to call to your attention the fact that, when the Veterans' Administration appropriation was up, the Appropriations Committee and the Congress allowed and approved the full amount asked for hospitals.

This statement was made in the report:

"The reductions in this item arise principally from reduced needs in all programs other than medical and hospital care which are provided for in full as proposed in the estimates. The total cost of the medical program is $566,666,400. The committee has not reduced this sum by 1 penny and directs the Administrator not to reduce it."

General Gray has been before both the House and the Senate Committee twice since this bill was considered, once in the last session and once early in this session. No mention was made of the fact that they were short of money or that they would be obliged to discharge employees connected with and needed in hospitals.

Under all the circumstances I fail to see how it is possible that the Congress is responsible for the cut in employees of the veterans' hospitals.

Very sincerely yours,

JOHN TABER.

DOCTORS SAY VA PLANS BIG CUT IN MENTAL CENTERS—PSYCHIATRISTS CHARGE 1,200 WILL BE FIRED, BEDS CUT BY 1,400

(By George Beveridge)

The Veterans' Administration plans to fire about 1,200 medical staff workers and do away with at least 1,400 beds in neuropsychiatric treatment centers as a result of its sudden personnel cut-back, the American Psychiatric Association charged today.

In some hospitals, veterans will be cut off from treatment, the APA declared, and programs of treatment in others will be drastically curtailed.

VA has announced it will lop off about 7,800 jobs on April 10. The association gave the first detailed public disclosure of its effect.

The Star 2 days ago revealed that more than 4,800 workers would be lost in the vast medical service alone, reporting that the cuts have dealt a terrific blow to medical leaders supporting the program.

LISTS PERSONNEL AFFECTED

In its lengthy statement, the APA said the firings involve 3,000 medical staff workers, about 1,200 of them being doctors, dentists, psychologists, nurses, social workers and aides in VA psychiatric hospitals and clinics.

Reductions in service, APA declared, at some hospitals involve shock treatment, hydrotherapy, and vocational training programs.

"It is inevitable," it added, "that incidents of abuse of nervous and mentally disabled patients will increase. Moreover, it will be necessary to increase the use of physical and chemical restraints for violent cases, since lack of supervisory personnel makes it impossible to do otherwise."

The group's statement was based on official reports received from hospitals, estimating effects. VA officials here are studying the reports, it was learned, and may make some adjustments among various hospitals during the next several days.

LOOKS TO PUBLIC PROTEST

Dr. George S. Stevenson, APA president, said he hopes a "widespread public protest to the Congress would result in a deficiency appropriation for the VA, which would put a last-minute stop to the personnel cutback."

Several Members of Congress already have taken the floor to protest the firings.

VA officials pointed out, however, that present VA budget estimates for the fiscal year beginning July 1 would not allow for reinstating workers lost in the cut-back. A deficiency appropriation, therefore, would provide the personnel only through June.

VA officials knew last fall they were exceeding personnel authorized by the budget, but firings were not announced until this month.

The APA said 4,000 psychiatric beds are unused because of lack of personnel in some hospitals, many of them in isolated areas, and that in others about 5,000 emergency beds have been crowded into sun porches and recreation rooms.

"Yet 21 VA hospitals report they will have to close nearly 1,400 more beds as a result of the cut—and more would be closed if it were not for local community pressure," it declared. In most of such cases, a VA official said, hospitals probably will close off beds as patients now occupying them leave.

WAITING LIST TO GROW

The APA said cuts would increase waiting lists of patients at mental hygiene clinics from 6,000, at present, to 10,000. The move will force some clinic patients to be treated on a fee basis by private doctors, at a cost increase from $7.50 to $12, it was reported.

The APA said only 25 percent of 470,000 eligible veterans with mental ills have been treated so far. VA medical heads have stressed the importance of the clinic program in the hope that early care would correct ailments before they require costly hospital treatment.

Of the 99,000 patients in VA hospitals, about 53,000 are in mental hospitals. About half the patients have service-connected ailments.

The psychiatric association said cuts at hospitals caring for tubercular psychiatric patients are particularly distressing. A recent survey showed not one of four of such hospitals gave adequate care and the cut can only agitate already serious deficiencies, it added.

SPECIFIC HOSPITALS CITED

To document its statement, the APA included effects on a large number of individual hospitals. Included were those located at:

Augusta, Ga.: "Two hundred and eighty patients to lose treatment; serious reduction in service; nursing service covers dietetics; need two more nurses for insulin therapy."

Canandaigua, N. Y.: "Close to 239 beds; eliminate insulin (shock) program; PMR (physical medicine and rehabilitation) for 200 patients reduced."

Coatesville, Pa.: "Close one hospital building; have stopped admissions; total push decreased."

Perry Point, Md.: "Patient care will suffer by curtailing programs."

Tuscaloosa, Ala.: "Cannot reduce beds; discontinue two BR&E (rehabilitation) jobs; lessen insulin and electric shock therapy; cut down lobotomies (psychosurgery) due to inadequate nursing."

Bedford, Mass.: "Cannot eliminate 235 emergency beds; no social service on Sunday; hydrotherapy reduced from 16 to 1 hour, 5 days a week; cannot do family care."

A Policy of Life Insurance on Our Nation Can Be Written Only in the Hearts and Minds of the Boys and Girls Who, in the Public Schools of the Land, Are Training for Citizenship

---

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. JENNINGS. Mr. Speaker, within the next few days the Committee on Education and Labor of the House will make another effort to agree upon a measure to authorize the appropriation of funds for Federal aid to the elementary and secondary schools of this country, to be administered by the school authorities of each State to which this aid is extended.

The promises on this subject made by both political parties have long been in default.

During the week ending March 4, 14,000 educators from all over the Nation meeting in Atlantic City made an intensive study of the public-school problem now confronting the people of this country. This meeting was the Seventy-sixth Annual Convention of the American Association of School Administrators. It is the most influential policy-making group in the public-school field. The theme of the meeting was Education, Dynamic of Democracy.

In all of the discussions the speakers emphasized the importance of creating a sound school system for the protection of the American way of life. They agreed that without good public schools the American tradition of freedom would be endangered. It was also generally agreed that the people of this country have not yet recognized the importance of our free education system.

The president of the association stated that the people of the United States still regard teachers as mass baby sitters. This charge was based upon the starvation diet that our free public schools are compelled to accept.

The United States Commissioner of Education and the classroom teachers in attendance all warned that our schools are in a critical condition. We need more elementary school teachers, more buildings, more equipment, more supplies—more of everything.

It is becoming more and more difficult to obtain sufficient money to meet the increasing demands of our schools. Resistance to increased school budgets is increasing. States, counties, and cities are beginning to say, "We gave you more money last year and the year before. Why do you come back for more?"

To the complaint that the schools are asking for too much money, Tennessee's Dr. Andrew D. Holt, president of the National Education Association, pointed out the unanswerable fact that the schools need more money because enrollment has increased to an unprecedented extent. More children are being born. President Holt predicted that within the next 5 years the enrollment of children in our elementary schools will increase 40 to 50 percent. This means these added milions of children will need more schoolrooms and more school facilities.

The educators estimated that to properly care for and instruct this increased number of our school children will require an additional 350,000 teachers.

In no other way can this tremendous increase in new children be cared for and taught.

This increase in the number of elementary-school children can only be properly housed by the construction of 500,000 new classrooms. The cost of these new school buildings will be in the neighborhood of $13,000,000,000. This cost is staggering unless the people understand the facts creating the necessity for additional school facilities. The vast sum of money necessary is disturbing to public officials and to the taxpayers. The school officials and those interested in an adequate system of education who do not wish to see this oncoming host of future citizens denied adequate training realize that education will have to compete with social security, national defense, the cost of our farm program, and all other Government needs.

The majority of those who considered these questions were convinced that the local and State governments alone could not solve the problem in many parts of the country. It was accordingly proposed that a Federal-aid-to-education bill and a bill to aid school construction are necessary if the need of school construction and additional teachers is met. Practically all of the school superintendents and other officials favored Federal aid.

There is nothing new about Federal aid to education. Land-grant colleges and other colleges throughout the country have for years received Federal aid. The principle of Federal aid is now taken for granted, and if our schools are to continue to afford the adequate and necessary education to the children of our people, the passage of a Federal-aid-to-education law by Congress is inevitable. Despite the reverses that have been suffered by Federal-aid-to-education bills now pending in Congress, it is by no means certain that Federal aid to education has been killed as some of its enemies are hoping and are proclaiming in the columns of the papers they control and in their editorial columns. Many friends of the school children of this country expect such legislation to be enacted before this session of Congress ends.

On the question of whether or not Federal aid should be confined to the free public schools of this Nation, a resolution adopted recited that the grant of public funds should be confined to free public schools. Only two of the 7,000 delegates who voted on this proposition voted in favor of the minority report. In this connection, one of the most encouraging developments in public education today is the growth of citizen school groups in all parts of the country. Parent-teacher associations, working hand in hand with the teachers and with the pupils themselves, will insure an adequate number of teachers thoroughly trained for the duties of their high calling at salaries which will attract and hold them in the teaching profession. The free school is the institution that will preserve us as a free people.

THE NEEDS OF THE PUBLIC SCHOOLS EXPAND AS OUR SCHOOL POPULATION INCREASES

Within the years 1949 to 1952, inclusive, more than 13,000,000 children of this country will enter the first grade and the greater number of them will graduate from our elementary schools. Within that same period more than six million will enter and millions of them will graduate from the high schools of this country.

Dr. Andrew D. Holt, executive secretary of the Tennessee Education Association, stated in a public address in Knoxville, Tenn., on Friday, March 24 of this year, that the birth rate in Tennessee is steadily increasing. In 1945 births numbered 66,620. In 1946 this number increased to 79,098. In 1947 it increased to 88,193. It is certain that Tennessee will have an enormous increase in school enrollments during the period from 1951 to 1953.

In our State, school attendance has increased 60,143 in the past 3 years.

If there is to be 1 teacher for each 30 pupils, the State will require an additional 2,000 teachers. Due to the lack of funds the school system in Tennessee has been enabled to add only 750 teachers. This shortage of teachers is responsible for the overcrowded classrooms in many localities.

The large Federal projects at Oak Ridge, Tullahoma, Memphis, and in other sections of the State will inevitably further increase our school population.

These increases in school population necessitate larger teaching forces and expanded facilities.

The vast majority of these young people will receive no other schooling than what they receive in the elementary and high schools. It is, therefore, of supreme importance that the teachers in these schools be loyal, competent Americans, able and fully equipped to instill in the minds and hearts of these future American citizens the inspiring truths of our great history and the opportunities this land affords to these boys and girls. The future of this country will be in the hands of these young Americans. They are America to the extent of their ability to influence its destiny for weal or for woe.

THE EDUCATION OF THIS NATION'S BOYS AND GIRLS IS OF TRANSCENDENT IMPORTANCE

Adequate salaries for their teachers should not be denied by penny-pinching.

The Federal funds made available by this program are paid by the people of the States. The beneficiaries are citizens of our common country.

The Federal Government is levying and collecting heavy taxes on the incomes and business of our people. The Federal tax collector takes his toll out of the clothes, the food, and the shelter of all our people.

The pennies and nickels of the school children do not escape the grasping hands of the Federal tax collector. When the boys and girls of our grade and high schools stage a school entertainment, a game of baseball, basketball, or football, the United States tax collector is there to take a heavy share of the admissions to such entertainments and games.

I have introduced a bill to repeal this unjust tax and have urged the Committee on Ways and Means to report this measure to the House for a vote.

Abraham Lincoln furnished us our best definition of a nation. He said:

A nation may be said to consist of its people, its territory, and its laws.

Our country is endowed with varied and boundless natural resources, majestic and enchanting scenery. It is teeming with homes, schools and an industrial system that is the envy and admiration of the world.

Our Government, in the words of Lincoln, was "conceived in liberty and dedicated to the proposition that all men are created equal." Under this Government, "so conceived and so founded," the American people have enjoyed greater liberty and wider opportunities than have blessed any other people in all the 5,000 years of recorded history.

Under our system of free enterprise, private ownership of property, individual initiative, the right to earn, own, and enjoy the fruits of our labor, the American people are better housed, better fed and better clothed and have more of the good things of life than any other people on earth.

Can we keep this Republic and all that it means to our children and our children's children?

We live in a hostile and dangerous world.

There is no company on earth that can write a policy of insurance on the life of our Nation. There is but one institution where such a policy of insurance can be written and that is our system of free public schools.

Such a policy can be written only in the hearts and lives of the boys and girls who are training for citizenship in the public schools of the land.

Money invested in the education of our children will bear compound interest forever. The education of our children is a policy of insurance on the life of our country.

We spend billions that our youth may fight, and if need be die, all over the world. Why not spend $300,000,000 to teach them to live here at home?

The home is the unit of society. Man's greatest possession is his child. To rear, educate, and equip their children for the duties of life is the high calling of parents.

When the accounts of fathers and mothers are finally made up the greatest credit that will be given them will be the watchful care, the sacrifice, and devotion they have lavished on their children.

The most that the average parents can give their children is an education. When the two political parties promised the fathers and mothers to give their children better schools, they appealed to the finest qualities of their minds and hearts. The leaders of no political party have the right to trifle with a parent's love for his or her child.

Next in character-forming influence in the lives of our children are the school teachers.

Someone is said to have asked Demosthenes why he made speeches instead of writing books. The great Grecian orator replied, "I would rather write upon the hearts of the living than upon the hides of dead sheep."

If anyone on this earth writes upon the hearts of the living, it is the school teacher. Standing within the schoolroom, where wells the fountain of perpetual youth, dealing with the plastic, impressionable, unfolding minds of boys and girls, the teacher weaves into the warp and woof of his pupils' lives the very fiber of their thoughts and being. There is no more powerful, no higher calling on this earth than that of the teacher, save perhaps the Christian ministry.

We must give school teaching the dignity, the security, the income its importance deserves, and thus assure our boys and girls teachers of the highest ability and character.

The millions of young Americans now in our public schools, and who will pass through them within the next 4 years, have the fate of America in their hands.

For 5 years as a teacher in the public schools of my home county, Campbell, in Tennessee, in my 2 years as county superintendent of public instruction and in my years of service on county and city school boards, and down to this good day, I have seen young America on the march. In the hands of this precious host, in their enthusiasim, their optimism, their boundless energy, and dauntless courage is the unfolding future of this Nation. They will meet our enemies in the gates. They will build, protect, and defend this Nation. The men and women who teach them are the staff sergeants, the commissioned officers who are training the youth in whose hands is the future of this Nation. They are the seed corn of the Nation. There is nothing too good for them. We must not fail them, nor break faith with them.

Remember that in dealing with the parents, the teachers of these boys and girls, you are dealing with men and women of character and intelligence. Shadow-boxing, shilly-shallying, breaking faith with them will be known from ocean shore to ocean shore.

Let us redeem the promises made to fathers and mothers, the teachers of these boys and girls, and to the boys and girls.

I join with the friends of the public schools of this country in the hope that this Congress will enact into law an adequate Federal-aid-to-education measure.

Truman Seen as Using Hoover for Politics

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gould Lincoln, from the Washington Evening Star of March 28, 1950:

THE POLITICAL MILL—TRUMAN SEEN AS USING HOOVER FOR POLITICS—GRAVE CONCERN EXPRESSED OVER CASE OF LABOR BOARD

(By Gould Lincoln)

The attitude of President Truman and his advisers is giving supporters of the report of the Hoover Commission, dealing with the reorganization of the Federal Government, grave concern. Instead of following the recommendations of this bipartisan and nonpartisan commission, Mr. Truman is seeking to use the report as a vehicle to put across political tricks.

A case in point is his proposal to do away with the general counsel of the National Labor Relations Board and to transfer to the Chairman of the Board the functions of prosecutor. This is a palpable attempt to get by indirection what the President has tried to get from Congress—his own Democratic Congress—without success. That is the repeal or nullification of the Taft-Hartley Labor Act.

Under that act, Congress sought to separate the prosecuting function from the judicial, leaving the Board to exercise the judicial function as it properly should, and placing the prosecuting function in the hands of the general counsel. What Mr. Truman is now trying to do is to make the Board, and particularly its Chairman, both prosecutor and judge. That is going back to the old days of the Wagner Labor Relations Act—when the Board did the prosecuting; the judging, too. The result was a completely one-sided operation, since the Board was stacked with 100-percent supporters of organized labor.

DENHAM TARGET OF SPITE

The Hoover Commission, of course, never made any such proposal as that now submitted by Mr. Truman. The President has undertaken, however, through the authority vested in him by Congress last year to submit Government reorganization plans to insert this proposal. He has done it because organized labor hates Robert N. Denham, the present general counsel, and the members of the Board itself dislike Mr. Denham almost as much.

Whether Mr. Truman can get away with it is another question. Senator TAFT of Ohio has filed a resolution disapproving this particular reorganization plan—No. 12 in a list of 21 recently submitted by the President. Under the reorganization law, a recommendation by the President can be blocked and prevented by the action of one House of Congress. A House committee has approved the plan to do away with the general counsel—by a party vote. The Senate Committee on Expenditures, headed by Senator MCCLELLAN, of Arkansas, Democrat, plans hearings on the TAFT resolution to turn down the proposal. Provision is made in the law that reorganization recommendations, which are challenged in either House, must be voted upon. There is no way that a filibuster by administration supporters could delay a vote until enough time has elapsed to make these recommendations effective. Since the Senate has been entirely unwilling to repeal the Taft-Hartley Act, the President's recommendation to do away with the general counsel will have a tough time.

MARITIME CHANGE PROPOSED

Mr. Truman stepped beyond the Hoover Commission report, too, when he proposed to abolish the Maritime Commission and set up a Maritime Board in the Commerce Department. What the Hoover Commission recommended was that that business operations of the Maritime Commission—like the charter of ships—be placed in the Commerce Department, but that the Maritime Commission retain its authority over rates, subsidies, and conditions of service.

Nearly all the rest of the President's reorganization recommendations are in line with the Hoover Commission report. However, Mr. Truman has not tackled yet the main money-saving proposals of the Hoover Commission, and there seems little prospect he will, certainly before the elections. These, for example, are the proposals to place the civil functions of the Army engineers under the Interior Department, along with the Reclamation Service, and to have the Agriculture Department take over certain functions relating to land now operated by the Interior Department.

There is a great mass of public opinion back of the Hoover Commission's recommendations, due to a desire for more efficient and more economical Government. It may be defeated, however, by exigencies of partisan politics, aided and abetted by the so-called vested interests, the interests of incumbent job holders.

President Truman's Point 4 Program

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

AMERICAN FEDERATION OF LABOR,
Washington, D. C., March 31, 1950.

Hon. JOHN W. MCCORMACK,
The Capitol, Washington, D. C.

MY DEAR CONGRESSMAN: I attach hereto a statement issued by the executive council of the American Federation of Labor last month in regard to point 4, which is carried in section 3 of H. R. 7797 now under consideration by the House of Representatives.

The American Federation of Labor strongly urges the adoption of President Truman's point 4 program and reiterates the stand taken in the statement by the executive council of the American Federation of Labor above referred to.

Will you kindly read this letter and the attached statement into the RECORD at the proper time when point 4 is under consideration?

Very truly yours,

WM. GREEN,
President.

STATEMENT BY THE EXECUTIVE COUNCIL OF THE AMERICAN FEDERATION OF LABOR

After giving careful consideration to the report of Assistant Secretary of State Willard Thorpe on point 4, the executive council of the American Federation of Labor declares:

1. We reaffirm our support of the guiding lines and policies elaborated in the comprehensive resolution adopted by our sixty-eighth convention held at St. Paul in October 1949 dealing with President Truman's point 4 program.

2. In view of the disaster which has befallen the geat Chinese people through the overrunning of their country by the Russian-directed military forces and fifth column operating under the orders of the Cominform, the executive council underscores the great urgency of speeding up the application of point 4 policies in the non-Communist areas and countries of Asia.

3. In line with our convention declaration, we urge our Government to aid the Republic of India in overcoming its immediate food difficulties, in developing public education and in the improvement of her public health. We also urge American initiative in the World Bank for a loan to speed the development of an agricultural extension service in India. Vigorous and generous application of point 4 in Formosa, where encouraging economic achievements have already been obtained through the Joint Commission on Rural Reconstruction, will not only further improve the economic and social conditions on this very important island of resistance to Communist totalitarianism in China. It will also dramatize to the people of occupied China and to freedom-loving people everywhere that America has not turned its back on the struggle for liberty and national independence in this vast Asiatic country with which our Nation has always had the friendliest relations.

4. We cannot reaffirm too strongly our convention resolution which emphasizes that labor must have adequate representation in the formulation and application of specific plans and policies and that technical aid to underdeveloped areas in Asia and elsewhere should include provisions for the transmission of bona fide trade-union, cooperative, and farmers' know-how which will enable the workers and peasants of Asia to build effective democratic unions and self-help organizations. This will permit the toiling folks of Asia not only to secure their material betterment but also to enhance their appreciation of their dignity as human beings on a basis of equality with all other races and peoples of other continents. American aid to such moral and spiritual enhancement will far outweigh in importance and lasting value the generous dollar aid we have been providing for the conquest of poverty and tyranny and for overcoming the threat of war.

5. The successes attained to date, through the ERP, raising the levels of production in the countries aided, only underline the necessity of preparing now for the time when the Marshall plan as such will end. It is clear that in the interest of developing a sound and balanced economy in the free part of the world, the democratic nations must lose no time in combining the various measures taken under ERP and point 4. There can be no effective integration of the economy of democratic Europe unless its economic life becomes more closely related with that of Africa, the Western Hemisphere, and the democratic countries and areas of Asia. More and more western Europe should be able to find markets for its manufactured products in the underdeveloped countries. Given this common outlet, the various European national economies, which are competitive in many respects, would tend to integrate more easily. In return, these underdeveloped areas could provide western Europe with the raw materials which it needs for its manufacturing industries. By following such a policy, we would be able to eliminate any attempts to expand business relations with Russian-dominated areas and thus to prevent the feeling of appeasement generated by business-as-usual tactics. This business-as-usual attitude might prove catastrophic to the democratic cause in the event of German heavy industry producing for the Chinese market. The present Russian "baby" blockade of Berlin and the Communists' accelerated national unity campaign in Germany are no doubt part of the Kremlin's over-all strategy for wearing out and drawing Germany into Moscow's military-economic orbit. Thereby, Russia hopes to conquer Europe and Asia.

6. The urgency of gradually combining the basic features of ERP and point 4 is made all the more imperative by the fact that the increased productive capacities of Europe and America are operating in a much-reduced trade area. Totalitarian communism has torn out of the world market nearly half of the population and about one-quarter of the area of the entire globe. Because Russia and its satellites in Europe and Asia have militarized their economies and are gearing themselves solely for aggressive warfare, very little trade in the normal and peaceful sense of the word is possible for them.

7. In view of this critical situation, all efforts and energies of the democratic world should be bent toward raising the productive capacities of the free peoples and toward increasing the possibilities for mass consumption by improving their purchasing power and living standards. There is no other way of counteracting the effects of Russia's disruption of the world market. There is no better way of demonstrating the moral and material superiority, and assuring the triumph of the democratic over the totalitarian Communist world than by our creating and expanding these conditions of life and labor which will enable many additional millions of people to attain more liberty, greater material well-being, and spiritual happiness.

Easterners Have a Lot To Learn

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Friday, March 31 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Easterners Have a Lot To Learn," published in a recent issue of the Bedford Times-Mail, of Bedford, Ind

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EASTERNERS HAVE A LOT TO LEARN

Two things in the past few weeks have roused our anger. We took a West Indies cruise in February. Most of the people were from the eastern seaboard; all of those with whom we talked had been to Europe a few times and were taking their second or third cruise—but not one of those people had ever been west of Harrisburg, Pa.

Finally, we blew up at a couple who lived in Philadelphia, and said, "You ought to be ashamed of yourselves, Europe three times, Caribbean twice, but not a minute for Indiana, Tennessee, Wisconsin, Montana, or Arizona. There are some wonderful things to see out there—and what's more, they are yours, they are American, and they are worth seeing." They didn't talk to us after that.

This was a background for supreme anger at an article in Time magazine this week which listed eight Senators as being the most expendable. In the group was BILL JENNER, of Indiana. All eight had the same fault, according to Time, they were isolationists. They put the interests of their own country ahead of the interests of a lot of countries which are jealous of our prosperity, and want to tear us down to their level.

Senators JENNER and MCCARRAN were attacked for their opposition to the present bill to admit more displaced persons. In private conversation JENNER said, "Here we have 4,500,000 unemployed in the United States. There are 600,000 youngsters coming out of colleges and high schools every year, and most of them won't find jobs this year. Why should we bring in a lot of black marketeers, hoodlums, Communists, and yeggs from Europe? I don't see it." Neither do we.

Time and the folks we met on the cruise are typical of too much thinking from New England through Virginia. They look eastward across the Atlantic, not westward across America.

If the folks from Philadelphia would have listened we would like to have told them something like this:

Get in your car, drive out through Ohio, Indiana, Illinois, and Iowa. Sure, the land is flat and not spectacular, but it is pushing up corn to feed people and animals all over the world. You sense the power of production, the joy of fertility, the thrill of growth. You feel America.

Then drive through northern Wisconsin and Michigan, with their thousands of wooded lakes full of fish, where a man can commune with nature and all the religious ecstasy that goes with the great outdoors.

Stop at Minneapolis, the most beautiful city in the world, and that counts Paris, too. Look at the lakes, feel the civic enthusiasm which has built a great industrial and retail center.

Go to Duluth, stop your car on the bridge just south of the city, survey the landscape, look at the great iron boats opening their mouths to the endless stream of ore cars from Mesabi, and appreciate the strength and greatness of steel, the sinews of America, your country. It's thrilling.

Drive through North and South Dakota, look at the flat country growing wheat that has put white bread on every table in America, and still had enough left over for any part of the world that will work hard enough to produce something to exchange for white bread.

Go to Montana; it's still sort of a frontier, where the men wear cowboy boots, use silver dollars, and play pinguinny in cigar store windows. Have breakfast on the balcony of Many Glaciers Hotel, in Glacier National Park. Nowhere, not even in Switzerland, is there a more majestic view, water, mountains, sunshine—America.

Drive along the Columbia River highway. For breath-taking vistas it has no equal.

Stop at Salt Lake City. Think about its history. A century ago, when Brigham Young came into the valley, there was one lone tree. He said, "Water will flow in the streets of the city we will build for our God." Today Salt Lake City is the cleanest of all American cities. Water flows down Temple Street.

Go to Los Angeles. Sure, it's gaudy, flamboyant, and overpriced—but only 50 years ago it was a desert. Today it is a wonderful collection of homes, boulevards, and industry—a tribute to American adventure,

willingness to take risks, to build, to overcome obstacles.

We could go on like this indefinitely. It all adds up to one thing—there is a lot to see in America, it's the most wonderful country in the world. It doesn't owe a thing to the Old World.

Our forefathers who came here were not the rich and well-born. They were the poor and downtrodden. The rich stayed home and got poor. The poor came to America and got rich.

Instead of being a term of scorn, "isolationist" is an expression of honor, of patriotism, of belief in your own land—of standing on Manhattan Island, looking west, not gazing with servile sentimentality toward a culture which has long since ceased to exist.

There is one bright spot, however. Such biased, slanted reporting as Time is putting out brought Newsweek into the field, and now Newsweek is threatening the circulation and advertising leadership of its older competitor. Isolationists like truth—and they like America. Count us in.

Fair Enough

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Westbrook Pegler from the Washington Times-Herald of March 30, 1950:

FAIR ENOUGH
(By Westbrook Pegler)

The unemployment figures always must be false where there is pay to be had for nothing in the guise of insurance or relief, but there is no doubt that the number of legitimately unemployed and needy workers is again formidable and growing.

Actually, there never has been an hour of substantial, valid recovery from the miscalled Hoover depression. Instead, for one long period, there was pump priming and made work, leaf raking and shovel leaning, which absorbed the more urgent clients and put a little money in their pockets.

It put a lot of money into the pockets of contractors and other deserving Democrats, too. This cost billions at a time when a billion still had a little prestige in the popular imagination, but those billions were forgotten as other expedients were tried in quick succession, all of them negative, all resulting in no substantial gain. We lost ground steadily.

When the war became inevitable in Europe, we were in the dumps again. Although the capitalists or tories are fiercely accused of promoting wars to profit in the agony of the working class, it is a prominent fact that the strongest opposition to war and to the economic underwriting of the war came from the capitalists of the United States, not the New Dealers.

The New Deal had turned out to be a misdeal. It was unworkable. It could produce nothing but debt and deficit, and there we were again, after all that squandering.

Roosevelt's motives were whatever they were. Did he prepare for war because he honestly believed Hitler and the Japs were coming after us? Did he harass the Japs so that the Communists whom he favored in so many ways could capture the Orient? Or did he seize this opportunity and provoke the Nazis and the Japs to create a war boom and put back to work the millions who were idle again?

The haste, the urgency, the clamorous propaganda for conversion and tooling up come back dimly out of memory. The New Deal had created unions and driven millions of citizens into them, and this was called a labor movement.

But it had not revived private industry. The rich magnates of the unions, grateful for the concession granted them freely to exploit these millions and to exploit the danger to democracy, spent money lavishly to whoop up the anger and fear of the people.

Remember the political action committee? The teamsters' dinner? Unemployment was big again in 1941, but as the war effort became not quite total but certainly predominant and overtime and mock work sent wages to inflationary heights, the debt went up and up until thought of the future and the reckoning was put out of mind except by a few practical individuals who seemed morose amid the excitement. Roosevelt haters, no doubt. Pro-Nazis, no doubt. Red baiters, spreading disunity.

After the fighting American industry continued to grind. Now it is producing for the relief and rehabilitation of Europe at American expense and without the slightest thought for the future.

American industry, the American economy, American labor became dependent on the necessity of the European countries, including even the late enemy.

Our biggest business was the manufacture of stuff—all kinds of stuff—to replace the stuff that had been destroyed and feed Europeans who couldn't feed themselves. They couldn't pay for it, so we loaned them the money.

How long had we been doing that, off and on, in various ways under successive plans? Ever since the twenties. God help America, if the Europeans ever got clothes on them, shoes on them, and wheels under them.

God help America because these charity cases were our only important customers. As for our own postponed wants caused by war shortages, they were intentionally postponed still further by strikes causing shortages of steel and hard products or we would have caught up with ourselves sooner.

Even with the strikes and all, we finally did get caught up, and now we are caught up in Europe. Our best customer—the customer on the cuff—has filled his needs and used up most of his credit, and so Americans, by the million, are out of work again.

Russia is not the gallant ally—the mighty democracy that we thought she was. Russia deceived us. The pity of it. So tool up again. Total diplomacy. (Dean Acheson.) War economy. (Senator BRIEN MCMAHON, of Connecticut.)

Hold your hats.

Arming of the Arab States

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. TAURIELLO. Mr. Speaker, for some time there has been tremendous concern about the situation in the Middle East, and it has not been limited to Americans of the Jewish faith.

On Tuesday last, accompanied by a group of 34 Members of Congress, it was my privilege to call upon the Secretary of State, Mr. Acheson, with regard to the problem of the arming of the Arab states by Great Britain. Our delegation lodged a formal protest with the Secretary and urged that the United States, through the United Nations, prevail upon Great Britain to put a stop to the sale of such arms in the interest of peace.

I consider this issue so vitally important insofar as world peace is concerned that I am herewith presenting the State Department's account of our meeting for the information of the Members of the Senate and the House of Representatives:

ACCOUNT OF CONVERSATION BETWEEN THE SECRETARY OF STATE AND OTHER DEPARTMENTAL OFFICIALS AND A GROUP OF CONGRESSMEN ON THE SUBJECT OF THE NEAR EAST ARMAMENTS SITUATION, ON MARCH 28, 1950

Secretary Acheson received a congressional group, headed by Congressman TAURIELLO, of New York, who as spokesman of the group began by saying that many Members of Congress had received letters and visits from their constituents in which the latter expressed their concern over the sale of arms by Great Britain to the Arab states, particularly Egypt. The Congressman added that he and his congressional friends who were present in the office were deeply interested in Israel and believed that anything that happens in Israel affects the United States. They feared that there might be a recurrence of the Palestine war. They also thought that Israel should not have to participate in an arms race at a time when it was so essential for Israel to devote all its energies to the tasks of peace, settlement of immigrants, and reconstruction. Representative TAURIELLO then asked if the Secretary could explain the Department's policy on the Near East armaments situation.

After additional comments by other Congressmen present, the Secretary began by stating that in the first place there was a great deal of misinformation on both sides in this question. The Department had seen reports emanating from Israeli and from Arab sources which gave exaggerated and inaccurate accounts of the armaments allegedly already possessed by, or on their way to, one side or the other.

The Secretary then briefly outlined our policy on the export of arms to the Near East, referring to the fact that as long as the UN Palestine arms embargo was in effect no arms were permitted to leave this country for the Near East, and that the British had adopted a similar course. After the arms embargo was lifted, the United States adopted the policy of permitting the export to the Near East of only such arms as we considered necessary for the preservation of internal security of the states concerned and for legitimate self-defense needs.

From the viewpoint of this Government, the Secretary said, there were two problems involved in the question: One was the relationship between the Arabs and the Israelis and the other was the defense of the eastern Mediterranean. The latter was of the greatest importance to the United States and the United Kingdom. The British, from their experience in two wars, well knew the strategic importance of the eastern Mediterranean, an area which contains the vital oil supplies of Iran and Iraq and Saudi Arabia, as well as the important and strategic Suez Canal, the route to India and the Far East. These elements were also of tremendous importance to the United States, and the United States as well as the United Kingdom considered it essential that the states in the area have some kind of defensive forces to enable them to assist in the protection of the area as much as possible. In these circumstances the United Kingdom had a military program of assisting the near-eastern states, particu-

larly Egypt, to strengthen their defensive positions. The amount of arms involved did not appear excessive. The Secretary emphasized that there was close cooperation between the United States and the United Kingdom on this matter.

With regard to Arab-Israeli relations, the Secretary stated that the United States Government was following this matter very closely, and that the gist of information received from reliable sources was that the trend in the Near East continues to be away from war and toward peace. The Department had received categoric assurances from high Egyptian authorities to the effect that Egypt has no aggressive intentions toward Israel. At least one prominent Israel official had told the Secretary that he was not concerned by the military situation, but much more preoccupied with the present settlement and reconstruction problems facing Israel.

With regard to arms shipments from this country to the Near East, the Secretary said that since the lifting of the embargo we had permitted the shipment to the Arab states and to Israel of a certain amount of military equipment destined for defensive uses. The Israel Government had recently made application for permission to acquire a quantity of additional military equipment from commercial sources. The Department was discussing this request with the Defense Department, upon which the Department must necessarily rely for technical advice as regards the question of whether a particular request is justifiable within the legitimate defense needs of the state concerned.

The Israeli Embassy had also made a request for arms which were only available from the United States Government stocks. Here again there were important factors involved, the principal of which were our commitments to supply arms to other nations under mutual defense assistance legislation. The amount of surplus military equipment in Government stocks was limited, and as a matter of fact inadequate for complete fulfillment of these prior commitments. Here again the Department relied upon the opinions and findings of the Defense Department.

At this point, Mr. Rusk emphasized that what happened to north Africa and the Near East was of overriding importance in terms of the United States strategic position. The maintenance of communications with the Far East was particularly important. Moreover, the attitude of the peoples in the Near East toward the United States was a prime factor. We considered it very important that we be able to count on the friendship of these peoples in any future emergency in that area.

In response to a question concerning British policy toward the Palestine area, the Secretary said that the Department was of the opinion that the United Kingdom sincerely desired to see peace and rtability reestablished in the Near East. It was to the advantage of the United States and the United Kingdom objectives in general in the Near East to assure that peace was maintained among the states in that area.

In response to another question, the Secretary said that he planned to discuss the Near East armaments situation with Mr. Bevin when they meet in early May. In order to illustrate the close watch which the United States is keeping on the situation, the Secretary added that he had talked to Mr. Bevin about Near East armaments four times in the last year.

A question was asked concerning whether it was possible that the United Kingdom was shipping to Egypt arms supplied by this Government to the United Kingdom. The Secretary responded that he was confident that this was not true, as the items being furnished Egypt were not of the kind being furnished the United Kingdom under MDAP. He added that Egypt was paying the British for the arms furnished.

In response to a question as to whether any of the funds being sent from the United States to Great Britain under the ECA program were being used to facilitate the manufacture in England of arms for the Arab states, the Secretary said that his impression was to the contrary.

The Secretary received us most graciously and afforded us every courtesy. From our conference, it could be seen that he is well-informed on the problems of the Middle East.

However, personally, I was not satisfied with the Secretary's explanation of this grave problem. The whole gist of his explanation was to minimize and gloss over the fact that arms have been and are still being sold by Great Britain to Egypt and the other Arab states. It is no secret that British airplanes, tanks, and rifles are flowing into Arab states in great numbers. Arab newspapers carry stories of the importation of these implements of war and of the ultimate sinister use for which they are intended.

The Secretary's explanation that these arms are being sold to Egypt and the other Arab states for the purpose of protection would seem to be misleading because if these states are fortifying themselves from any Communist attack then, certainly, Israel, which is the outpost of democracy in that part of the world, should be included in the defense plans against any aggressor and should be afforded the same opportunity.

It is a well-known fact that the Arab states are still festering under their recent military defeat and are only waiting for another chance to rise again against the Israeli Government. Everyone knows that there remains much ill feeling between the Arab states and Israel. This bitterness finds expression almost daily in the Arab newspapers and radio broadcasts.

A renewal of this conflict would be a tragic development which must not be allowed to take place. The very fact that the Arab states can obtain implements of war in great quantities makes the situation a tense and dangerous one which is very apt to start another conflagration in that part of the world.

The United States has been spending millions of dollars in its earnest and sincere desire to maintain peace. How can we in conscience condone this intolerable situation which might become the tinderbox of another war, causing the loss of thousands of lives and the destruction of property, and which might well spread throughout the globe?

Israel wants peace and needs peace. Whatever funds are at her disposal should be spent in peaceful economic development and reconstruction.

As the foremost bulwark of democratic principles, the United States owes it to the infant Republic of Israel to devote all its energies in helping this tiny country take her rightful place in the family of nations whose objective is permanent and lasting peace.

We must remain, consistently and unfalteringly, a guiding beacon to all small democracies, especially while some of them are now shrouded in darkness by totalitarian aggressors who seek to destroy our democratic beliefs and our very way of life.

Therefore, in the interests of democracy and justice, I again respectfully urge Secretary Acheson to keep this matter under his close personal supervision and I reiterate my earnest desire to have the United States immediately lodge a protest through the United Nations demanding that the sale of arms to the Arab states by Great Britain be stopped.

Under unanimous consent to extend my remarks, I herewith include a list of the Members of Congress who accompanied me to the State Department and I also include a letter which I have just received from Mr. Elihu D. Stone of the American Zionist Council dealing with this vital problem.

LIST OF MEMBERS OF CONGRESS WHO MET WITH SECRETARY OF STATE ACHESON ON MARCH 28, 1950, TO PROTEST THE ARMING OF ARAB STATES BY GREAT BRITAIN

ADDONIZIO, HUGH J., New Jersey.
BARRETT, WILLIAM A., Pennsylvania.
BIEMILLER, ANDREW J., Wisconsin.
ERTEN, EDWARD, Ohio.
CHESNEY, CHESTER A., Illinois.
CHUDOFF, EARL, Pennsylvania.
CLEMENTE, L. CARY, New York.
DAVENPORT, HARRY J., Pennsylvania.
DELANEY, JAMES J., New York.

KEOGH, EUGENE J., New York.
MCCORMACK, JOHN, Massachusetts.

AMERICAN ZIONIST COUNCIL,
WASHINGTON BUREAU,
Washington, D. C., March 31, 1950.

Hon. ANTHONY F. TAURIELLO,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: We deeply appreciate your thoughtful cooperation in joining the delegation which called on the Secretary of State, the Honorable Dean Acheson, relative to the rearmament of the Arab states in the Near East, on March 28 current.

As spokesman of the delegation you have rendered a noble service in presenting the problem in its true light.

It is difficult to reconcile the optimism of Mr. Acheson as to the outlook for peace with the existing reality. A special dispatch to the New York Times of March 29, from Cairo, dated March 28, describes the pressure which the Arab League is bringing to bear on King Abdullah in order to prevent a peace agreement between Jordan and Israel. The former was even threatened with sanctions, should peace negotiations be resumed between Jordan and Israel. The aforesaid dispatch sums it up as follows:

"In any case, the chief result of the Arab League crisis of the past 4 days has been to reduce sharply the likelihood that some type of separate peace agreement will be concluded between Jordan and Israel and that other Arab states may then follow suit."

Moreover, the granting of a seat at the current sessions of the Arab League Conference in Cairo to the representative of the former Mufti of Jerusalem is hardly an indication of any improved attitude on the part of the Arab leaders toward Israel, as reported in the said dispatch to the New York Times. It must be remembered that the Mufti is a former collaborator of Hitler in Berlin during the war and that he is one of the intellectual authors of the extermination of European Jewry by the Nazis. Thus, for the first time, the notorious Mufti obtained an official voice in the Arab League. It is an evil omen, even though Mr. Acheson apparently disregards it.

The kind of arms, including jets, Sherman tanks, etc., which England is delivering to the Arabs may not be a direct part of the arms supplied by the United States to Great Britain. Nevertheless, in effect, the arms shipments to England from the United States constitutes a replacement, and, therefore, indirectly the American taxpayer is footing the bill. Thus, it appears clear that while the United States is supplying certain amounts of arms to both the Arabs and Israel, Great Britain is the additional source of supply of arms exclusively to the Arab states, giving them a preponderance of power. Hence, there is the danger that the Arab threats may be translated into violent action against Israel.

Who is there to guarantee that a "second round" will not take place? It is gambling with the lives of the Jews in Israel, who have already suffered so much.

The tragic experience of the last few decades clearly demonstrates that our statesmen, both American and British, were capable of making errors—errors for which mankind paid a terrible price in blood, and the Jews in particular were the most cruel victims.

Painful events did come to pass in our own day and even very recently—events which our statesmen never anticipated.

Who, therefore, is there in the Department of State today who can speak with an absolute finality and with infinite wisdom as to what might come to pass tomorrow?

It is obvious, therefore, that Israel's fears and eagerness to be militarily prepared in case of a possible attack by the combined Arab states is human, reasonable, and justifiable.

We are grateful to you for your friendship, and we hope that you will continue your efforts in the direction of peace in the Near East.

The need of the hour is not an armament race between Israel and the Arab states, which is now in progress, but rather a disarmament race, so that Israel and its Arab neighbors may jointly enjoy the fruits of peace and jointly maintain the security of the Near East against any attack by a third power.

Your understanding and sympathetic cooperation will always be recalled with deep gratitude.

Respectfully,

ELIHU D. STONE.

Unemployment and Imports, One Caused by the Other

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. PATTERSON. Mr. Speaker, I have, on previous occasions, addressed myself to the ill effects of imports upon our national economy. Every day the disaster of this course is becoming more evident. We have an unemployed force of almost 5,000,000 now with the prospect of more at the end of the current school year in June. In the face of these figures, our State Department is contemplating further cuts in tariffs, thus enabling goods made by cheap labor to unfairly compete in the American market.

We all realize that the American dollar is today the most sought after commodity by the nations of Europe. ECA and other foreign relief programs aimed at expanding European recovery are aiding these nations to compete with our own citizens for our purchasing dollar. More consumer goods are being withheld from their own people by these countries so that production of goods can be exported and sold for dollars.

Ample evidence of the damage being done to industry is the continuing unemployment in a period of relative prosperity in this Nation.

Articles which illustrate this point follow:

[From the Commercial and Financial Chronicle of March 9, 1950]

TARIFF REDUCTIONS NO REMEDY FOR DOLLAR GAP

(By Richard H. Anthony, secretary, The American Tariff League)

(Asserting the tariff is not a tool with which international trade can be tinkered into balance, Mr. Anthony contends there are important American industries still dependent for survival on tariff protection. Cites case of Waltham Watch Co., and denounces proposal of ECA to lower tariffs so that Europe's exports to United States can be increased $2,000,000,000. Denies present United States tariff has any importance in current over-all international trade picture. An address by Mr. Anthony at a meeting of the export committee, American Paper and Pulp Association, New York City, February 22, 1950.)

The appearance of a Tariff League representative at a meeting of exporters might seem to be as perilous as the fly's acceptance of the spider's invitation to visit her parlor, but I assure you I anticipate no bodily harm. Indeed, I feel a community of interest for the league subscribes to the truth in that old cliche, "Trade is a two-way street." All we ask is that you recognize that two-way traffic requires a certain amount of regulation; that full freedom of traffic to wander where it will, although desirable perhaps as an ideal, is as unrealistic in practice as is free trade.

Is the exporter actually facing any problems fundamentally different from the salesman in the domestic market? Your domestic sales potential is not the sum total of demand for your and your competitors' products, but rather the demand of that segment of our population which is able to pay for them in dollars. By the same token, foreign demand for United States goods, unaccompanied by ability to pay in dollars, should not be taken as a true measure of sales potential abroad, unless you are in favor of continuing the present system of selling to foreign customers and sending the bill to the United States taxpayer. The fly in that ointment is that you are also a taxpayer and so are paying your customers' bills, at least in part.

When the exporter is thwarted from selling abroad all he thinks he should, he may become aggrieved and in his grief he is likely to forget that he has no inherent right to demand free access to any but the domestic market. Foreign sales are frosting on the cake. It's nice to have the frosting, but it is more important to have the cake.

However, there are some people, including Government officials, who will tell you that you can have the cake and the frosting and eat it all, too, by getting the United States to increase imports from foreign countries and so provide more dollars abroad with which to pay for your foreign sales.

Now, we in the league have no quarrel with that advice up to the point where they tell you that you should injure or even liquidate some domestic producers in order to buy more competitive products from abroad.

Our tariffs used to be set and revised in accordance with the needs of our domestic economy. Now they are talked of as expendable or, to be more exact, the American industries that depend on tariffs are now being treated as expendable, in the effort to foster imports and so balance our foreign trade at current abnormal export levels. Some of these industries are being marked for sacrifice and when they go, men lose jobs, investors lose money, suppliers lose customers, and the country loses some of the elements in a diversified economy.

CASE OF WALTHAM WATCH CO.

Can we stand the loss of the Waltham Watch Co.? We have only two old-line watch manufacturers left. Who benefits from liquidating Waltham? Switzerland perhaps? That admirable, democratic country is worth having as a friend, but is she making reciprocal sacrifices on the alter of friendship?

Here is what Prof. Friedrich A. Lutz, of Princeton, said about the Swiss at the last annual meeting of the Academy of Political Science: "Switzerland has no shortage of dollars, and yet she adheres to a system of bilateral trade agreements, chiefly because she aims at preserving a certain structure of her exports by making the partner countries to these agreements import watches and other Swiss export goods and allow their citizens to travel in Switzerland. She has even gone so far as to make balances of Swiss francs accumulated by Argentina and the bizone of Germany inconvertible into dollars, so as to force these countries to use the balances for purchases or travel in Switzerland."

Perhaps Switzerland must resort to these measures to protect her economy and her democratic processes. Whatever the answer, these Swiss measures are restrictive and discriminatory, whereas our low-average tariffs are the mildest kind of trade regulation.

Let's get down to fundamentals. We need certain raw materials and we like certain finished products that come from abroad. In order to induce the foreigner to send them to us we must send him what we have that he needs or wants. You can disguise and complicate the problem ad infinitum by the introduction of currency, exchange, etc., but the basic fact is that our foreign trade starts with a deficiency on our part which must be paid for by transfer of a portion of our production. The latter-day idea that the amount of goods we can or want to ship abroad should be the measure of what we

take in, even though some domestic producers go bankrupt in the process of balancing income and outgo, puts the cart half a mile ahead of the horse.

ECA PROPOSALS

The latest agency to urge that we should artificially foster our imports at the expense of certain of our domestic producers is the Economic Cooperation Administration.

The ECA had two jobs to do: (1) Geographical containment of communism, and (2) fostering economic recovery of foreign nations. In Europe both goals have been accomplished. Communism has made no further encroachment to the west; and the European ECA countries, except Germany, have either surpassed or achieved approximately their prewar production and export positions quantitatively.

Now ECA says, in effect: We are getting ready to pull out of Europe and when we go we want the incoming and outgoing elements in the United States-European trade to balance, and furthermore to balance at the current United States export level. Translated into figures, ECA's suggestion means that Europe must expand its exports to the United States by $3,500,000,000, an increase of 300 percent or more. Clearly, Europe is in no position to meet this extraordinary demand, no matter what inducements the United States may offer. Yet, ECA publishes a list of United States commodities on which there are individual tariffs of 25 percent or greater and says, in effect: Slash those and help close the gap.

We say it misleads the American public and lays the ground work for international ill-will to offer any such illusory hope that further slashing of our tariffs, which, at an average of 13 percent, are the lowest in our history, or even eliminating them entirely, will have any appreciable effect on closing the trade gap. Cutting tariffs in such an indiscriminate fashion can ruin individual companies or even whole industries in the United States, but it will not close the foreign-trade gap at the current export level.

The tariff has no measurable importance in the over-all trade picture anyway. Our imports rise and fall with our national income, despite the level of tariff at any particular time. Over the long years our imports have shown a general upward trend that echoes our increase in population.

It so happens that the amount necessary to balance the current ERP dollar deficit is roughly the same as the value of the products of the entire pulp and paper industry in the United States for 1947, i. e., $3,700,000,000. I assume you would not be willing to sacrifice your industry, employing 200,000 wage earners, in order to bring in imported commodities sufficient in value to equal that figure.

If you have any doubts about the misleading nature of the ECA recommendations, let me suggest that you read what the experts say and apply every statistical test of which you know. I have done both and the answer keeps staring me in the face—slashing tariffs is of no avail in tackling the trade-gap problem.

Here is what Prof. Seymour E. Harris, of Harvard, told that same Academy of Political Science meeting: "Despite the large reduction in tariffs here and increased restriction abroad, which should have facilitated European exports and depressed their imports, despite the widespread use of controls abroad to raise exports and reduce imports, despite the much larger rise in money wages here—despite all of these, the United States has been flooded with gold and the world is short of dollars."

Now, just a few figures to document the league's conclusions. The data are for 1948, but preliminary 1949 reports indicate no substantial change in the size of our foreign-trade gap. According to ECA's own figures, we imported from ERP countries in 1948, $2,400,000,000 of goods and services, of which $1,200,000,000 consisted of merchandise. We exported to those countries $5,900,000,000 of goods and services, resulting in an export-over-import imbalance of $3,500,000,000. That $3,500,000,000 is the gap. When people talk of cutting United States tariffs in order to bridge that gap they are suggesting that we expand $1,200,000,000 of merchandise imports from Europe to $4,700,000,000, a 300-percent increase. If they expect services, such as tourist expenditures abroad, to increase also, they may shave that merchandise figure, but still it is going to be close to 300 percent. Professor Harris says that should devaluation reduce dollar prices of western European products by a fifth, the required increase would be 400 percent. According to a year end International Monetary Fund report, such dollar prices are nearing that margin of decline.

I won't bore you further with figures provided you will take on faith that to ask a 300–400-percent increase in production for export in Europe is a fantastic demand, particularly when ECA is asking Europe to integrate its economy and step up its internal trade as well.

DANGER OF TARIFF TINKERING

Actually there is surprisingly little dispute over the figures or the facts. Practically everyone who has studied the trade-gap problem realizes that tinkering with the currently low-average United States tariff is not going to solve it, but what puzzles us in the League is why, with this general acceptance of the facts, there is the illogical demand to go ahead and cut tariffs across the board, anyway. We suspect that those who make this proposal are motivated not so much by a desire to close the trade gap as by a desire just to slash tariffs.

The favorite argument for tariff-cutting as a desirable operation per se, is that it will foster the importation of goods from low-labor-cost foreign countries and thus save money for the American consumer. Let me give you the latest illustration of how wrong this argument can be.

We have had a dwindling wool-raising industry in the United States for some years. During the war it was essential, if not vital, because hauling wool from Australia through submarine-infested waters was uncertain and dangerous. Since the war the argument that the wool tariff was adding pennies to the price of your winter suit came to the fore, and, despite the pleas of the American wool growers, the tariff on raw wool was cut at Geneva in 1947 for the benefit of Australia. Since then our western herds have dwindled still more and Australia has virtually cornered the market. Last month at the wool auction in Sydney, private buyers from the United States and Great Britain found themselves bidding against state trading company representatives from a number of countries for the wool clip, with the result that the price of wool has gone soaring and you may have to pay a little more for your next suit as a result, and despite the lower tariff.

While we are considering object lessons, I also would like to say that coffee, on which there is no wicked tariff whatsoever, is fast becoming a luxury in many households, indicating that free trade is not exactly a solution to the problem of the high cost of living.

The tariff still has a part to play in our economy. It is, by universal admission, the mildest and fairest regulatory measure in international trade and we need it to preserve competitive conditions in our domestic market as between foreign producers and certain of our industries with a high labor element in their total production costs. It is as unrealistic to demand the elimination of tariffs because most of those industries are not now being injured, as it is to demand the elimination of the fire department because the city's fire record has improved. There is nothing in the present state of affairs that gives us any confidence that the current abnormal level of domestic demand and production will continue in its present pattern. Indeed the pattern is beginning to change, and as it tends toward the normal situation, injuries due to unwise tariff slashing will come forcibly to public attention. Already a number of danger flags are fluttering.

Under a flexible tariff system we could vary our rates to match changing situations, but we have no flexible system at present. Our tariffs are being continuously cut by international agreement. Any move toward subsequent upward readjustment of a rate, however just, creates an international incident and so is avoided by our Government, although foreign governments can take such unilateral actions with impunity. We have also seen that the philosophy of downward revision only of tariffs has so permeated our Government departments and commissions that the trade agreements escape clause, which was supposed to safeguard our domestic producers from injurious duty cuts, has not once been invoked nor has any of the many showings of injury even been followed by recommendation that the clause be invoked. Some have not even been thoroughly investigated.

The tariff is important to certain domestic industries. It is not a tool with which you can tinker our international trade account into balance. I urge you to let the tariff perform the function for which it is best fitted, and to tackle the trade-gap problem with tools better adapted to the purpose.

SLAVE LABOR COMPETITION

[From the Ansonia (Conn.) Sentinel of March 29, 1950]

The Danbury News-Times has called attention to the fact that American imports of hats and hat bodies from Czechoslovakia increased 4,000 percent during 1949, while those from Italy rose 300 percent in dollar value. The figures were supplied by the Census Bureau.

Lowered tariffs on these products opened to foreign competition the world's richest market—the United States of America. In the case of the watch industry, similar tariff policies have been devastating even to such long established concerns as the Waltham Watch Co., where American craftsmen were thrown out of work by the hundreds and left to shift for themselves.

There are many strong arguments for a reasonable reciprocal trade program but when that program strikes at the very livelihood of American workmen it is only to be expected that there will be heightening demands for its reappraisal in the light of realistic comparisons of the living standards of the workers in the competing countries.

Generously giving foreign countries which are friendly to us a fair whack at the rich American market is a thing altogether different from giving them opportunity to put American industry out of business in the American market and American workmen out of jobs by lowering tariffs too much. One may well question the extent to which any serious effort is made to strike a fair balance that will give domestic manufacturers and their employees at least an even break.

But in the case of Czechoslovakia, taken over by the stooges of Moscow in a coup that replaced democracy by despotism, an altogether different factor enters the picture. The laborer in that country is not free. He works where his Red masters tell him to work and the government determines how long

he shall work and how much he shall be paid and how much his earnings shall buy. To put it plainly and simply, he is a slave laborer. Reciprocal trade policy which operates, at the cost of American livelihood, to enable Communist puppet regimes to consolidate their usurpations cannot be defended by any standard of fair play whatever. It is rather silly of our Government to tell Danbury's skilled hatters to go find other jobs because our high-policy makers in Washington persist in ignoring the fact that the Czechoslovakia with which we entered into a trade agreement was an altogether different Czechoslovakia from that Red puppet police state which today is using slave labor in a state owned and operated hat industry to do American workers out of their jobs.

[From the Torrington (Conn.) Register, March 27, 1950]

UNITED ACTION NEEDED

United action on the part of Connecticut's Senators and congressmen is vitally necessary to protect Connecticut's hat industry, which is threatened by a startling rise in imports of hats and hat bodies from Czechoslovakian and Italian factories, under reciprocal trade agreements.

Imports from Czechoslovakia, where the hats are manufactured in State-owned, red-controlled factories, with the profits presumably going to the red regime, increased 40 times in dollar value during 1946 to 1949. Similar imports from Italy increased 300 percent in dollar value during the same period. And every hat imported here means that there will be less work for employes of the hat factories in Danbury, Norwalk, and other hatting centers.

There is pressure in some government circles for further reductions in tariff rates on imports of hats and hat bodies, which, if granted, would cause further harm to the Connecticut industry.

The Federal Tariff Commission has promised the domestic hat industry to investigate the situation, but The Danbury News-Times reports that the attitude of some administration spokesmen is, in effect: "Let American hatters learn another trade."

That seems to be a strange attitude for persons who are paid to look after the best interests of the American people. Connecticut's congressional delegation certainly should waste no time in making certain that the jobs of their constituents are given full protection.

Spring's Call to Kansas

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. REES. Mr. Speaker, I would like to call the attention of the membership of the House to a very splendidly written article concerning our great State of Kansas. It is especially well written by one of the leading editors of Kansas, Mr. Rolla A. Clymer, editor of the El Dorado Times, El Dorado, Kans. It portrays a very splendid description of springtime in Kansas. I commend your reading it.

SPRING'S CALL TO KANSAS

Today marks the birth of spring—even though madcap March shows some unawareness of the fact—and all over Kansas land a surging stir is manifest. For this is the season of sowing, of awakening, and of renewed effort for sterling accomplishment here under the sign of the sunflower.

Kansas is not yet 90 years old, calculated by the date of her formal admission into the sisterhood of the States, yet has contrived to etch manifold achievements upon the consciousness of the Nation. She lies at that Nation's heart, her outline of the parallelogram sweeping upward and westerly from the valleys of the Missouri and the Kaw to the foothills of the Rockies.

Within her borders and from the wealth and variety of her soil a sturdy and self-reliant civilization has developed. Kansas has been endowed with a plentitude of what have aptly been called "plus factors," and these factors illumine the way as another vernal period dawns. Hearken to a partial list of them as buds burgeon on the branches of the cottonwood, the State tree, and while the meadow lark—the State's bird—begins to entertain first impulses toward her annual nesting.

Kansas long has been supreme as a grower of wheat. In other words, she produces sufficient of this grain to yield 50 loaves of bread a year for every American citizen. From her good earth spring two score agricultural products; she raises more cattle than 43 other States, and stands fourth in meat packing. No State mills as great a volume of wheat as she, while her bluestem pastures provide some of the finest grazing lands in the world. The big beef steer and his little red sister comprise her true animal aristocracy, and these specimens of royalty stand knee-deep in grass laced with the greatest variety of wild-flower life to be found anywhere in the Republic. The farm and orchard domain of Kansas covers the magnitude of 52,000,000 acres, and she excels in such widely separated particulars as growing 90 percent of all apple seedlings in the United States and having this country's largest market for broomcorn.

To this profuse agricultural array Kansas has welded a vigorous industrial empire from native resources—thereby bolstering her economy and assuring its long-time future. Thirty-one main types of products appear in her mineral field. The serried ranks of her oil derricks stretch away to the horizon in nearly two-thirds of her counties—and the State ranks fifth in production among the petroleum titans of the country. At Hugoton, she has the largest reserve of natural sweet gas in the world. Kansas stands third in zinc and sixth in lead output, and nearly two million tons of coal roll out annually from her mines. Cement plants feed plentifully from her lime deposits, millions of tons of building stone and ballast pour from her quarries and she has enough salt to savor the Nation's diet for half a million years. Kansas ranks second in the Nation in highway mileage and fifth in miles of railroads. a huge stream of electric power flows from her 27 privately owned and 71 municipal plants. She is a leading builder of aircraft, numbers more flying farmers than any other State, and provides more days suitable for flying than any other section of the country.

The most encouraging part of all this accounting is that Kansas keeps right on growing. While the percentage of increase of manufacturing workers in the United States during the period 1939–48 went up 53 percent, the Kansas portion rose 92 percent. When retail sales in the country gained 211 percent during those years, Kansas hiked its total 307 percent. Again, as the national value of minerals produced in those years showed an upthrust of 56 percent, the Kansas gain zoomed to 86 percent. Likewise, Kansas per capita income increased 237 percent, against the national 162 percent; and Kansas bank deposits swelled 312 percent against 151 percent.

All these attainments did not just happen, but came about both because of the richness of Kansas environment and the indomitable character of the State's people—many with pioneer background. Men and women are still living in Kansas today who saw the prairie broken—and who played important roles thereafter in the drama enacted upon its acres. They clearly perceived the challenge that was first laid down—and met it with courage and good will. Their course has been one of toil and perseverance—but they have seen it pay off with rich reward.

And now another spring smiles. All over Kansas the zestful urge that has animated her true-hearted sons and daughters all the way sends forth its tremors anew. Kansas' achievement has been vast but much remains to be wrought. So the present stir of planting and dressing and garnishing moves with mighty purpose. In this year of the half century, Kansas has reached a milestone which signifies no goal attained, but which serves only as a marker ordaining redoubled energies. Her eager spirit—kindred with her sunshine and prairie grass, her sheltered valleys, and rolling high plains—shuts out complacency and self-content, because she "has no ruins grey that men revere; her time is now—her heritage is here."

That Amerasia Case

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News:

THAT AMERASIA CASE

Senator MCCARTHY, in his inconclusive speech yesterday before the Senate, touched on a matter which, in our opinion, could be mined for real gold—if it were tackled by an exhaustive pick-and-shovel investigation.

We refer to the Amerasia stolen documents case of 1945.

It is doubtful that there is any other case in recent American history whose mishandling has had such a decisive and cumulative effect on the trend of United States policy in Asia and subsequent world developments.

The case broke while our war with Japan was still going on. A large number of important military secrets had been purloined from the State Department, Navy, and Office of Strategic Services. More documents—and more important—than all those involved in the Hiss-Chambers case. Six persons were arrested. By some abacadabra, never fully explained, the case was taken out of the hands of one grand jury and turned over to another. The latter grand jury indicted only three of the arrested six.

One was permitted to plead guilty and assessed a small fine. Another pleaded nolo contendere and paid a still smaller fine. The charge against the third was dismissed.

There was never any public trial.

We have often wondered what would have happened had there been a public trial with all the evidence spread out.

Remember, this happened a year before General Marshall was sent to China with a directive to force the Chinese Nationalists to take the Communists into their government. It happened before General Marshall arbitrarily cut off all United States arms to Nationalist China. Before the Russians delivered the Japanese Kwantung army's great store of munitions to the Chinese Communists.

Of course, we can only guess at what might have happened had there been a public trial. But our guess is that the pro-Communists in the Far Eastern Division of the State Department probably would have been fired from the State Department. That General Marshall would never have been given the directive to form a coalition government in China. That Chiang Kai-shek instead of being battered back to the island of Formosa, might have driven Mao Tse-tung's Red army into the fastnesses of Siberia.

And China's mainland, whereon reside 450,000,000 people, might today be ruled by a government friendly to the United States, instead of by a Soviet satellite.

Sure, that's only speculation—but with good reasons behind it. And it's pleasant to contemplate that we might have been today one long step up in this cold war—if only the lid had been taken off that smelly Amerasia case.

Fleming's Letter

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. BOLLING. Mr. Speaker, under the unanimous consent granted me, I include an editorial from the Washington Post of Wednesday, March 29, entitled "Fleming's Letter":

FLEMING'S LETTER

A remarkable agglomerate of confusion has wound up the new hearings of the Hardy subcommittee on the subsidy excesses of the soon-to-be-abolished Maritime Commission. Perhaps the high light of a pretty shabby performance by the Maritime Commissioners was the introduction on Monday of a letter from Commission Chairman Fleming to the Attorney General, dated February 3, stating plainly that he supported the subsidy actions in question. This development came just after General Fleming had testified that the review of past subsidy determinations was still in progress—in other words, that he had not made up his mind.

Last fall a scorching report by the Comptroller General charged, among other things, that the Maritime Commission had lost some $25,000,000 in the granting of unjustified subsidies and national defense allowances on three contracts involving six ships. The Hardy subcommittee of the House Executive Expenditures Committee held extensive hearings on Commission practices with respect to ship construction subsidies, and its report, backing up the Comptroller General, was adopted unanimously by the full committee. As a result, President Truman called upon the Maritime Commission to review its actions and asked the Attorney General to investigate the interpretation of the Merchant Marine Act. General Fleming's letter to the Attorney General was offered in connection with this request.

Although he took a definite stand in the February 3 letter, General Fleming testified later that the matter was still under review. This was his position before the Thomas subcommittee of the House Appropriations Committee on February 6. On February 7 he testified that Commissioner Mellen's letter of last September attempting to rebut all the Comptroller General's charges was no longer the official line. Yet on February 24 he wrote Representative THOMAS agreeing with the Mellen letter and asserting that everything the Commission had done was legal and proper and required no amendment.

These inconsistencies are magnified by the curious manner in which General Fleming's letter to the Attorney General was composed. He stated, for example, that he usually consulted the full commission on policy matters. Certainly this was a major policy decision. Yet it was brought out in the hearing that General Fleming wrote this letter without consultation—surely a usurpation of authority. He stated that he had sent copies to all members of the Commission. Yet Commissioner McKeough (the one-man minority exonerated by the previous Hardy report) testified that he had to get his copy from the Attorney General's office; and even Commissioner Carson, though he agreed with the letter, admitted confusion over how he obtained his copy.

What all this shameful pulling and hauling demonstrates is, first, that the chairman of the Commission has associated himself definitely with the subsidy excesses on the part of the Commission majority that led to the Presidential reorganization; and second, that either General Fleming's memory is very poor or his testimony was deliberately at variance with the facts. Surely the President should require no more evidence that both he and the public have been poorly served by the men to whom the Maritime Commission has been entrusted, with the conspicuous exception of Mr. McKeough. It would be compounding the disgrace to carry such men over as members of the new Maritime Board.

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. CURTIS. Mr. Speaker, I am one of those who has an abiding faith in today's young people. Through the years, it has been my privilege to speak to students in a great many schools. I have always found them eager to learn about representative government. And I have felt it a personal opportunity to point out to these young men and women, the blessing we possess in living under a government of law—a Republic.

Mr. Speaker, in this connection, I frequently have requests from students enrolled in civics and government classes asking for copies of the CONGRESSIONAL RECORD, bills, reports, and committee hearings.

The proceedings of this Congress, one of the last free legislative bodies in the world, should be available to the students of every school in the country, and I am always glad to comply with these requests because I feel such students are seeking first-hand knowledge in the procedures of representative government.

Such publications give valuable information on the issues facing the Nation and an added opportunity for those studying government to know the problems confronting our lawmakers.

It seems to me, that it is most important for our young men and women to become well acquainted with the operations of our Republic for it is they who soon will be the voting citizens that make the decisions of government.

Thus, in truth, we are providing the background for tomorrow's leadership.

Harold Russell, Both His Hands Gone, Learned of Man's Inner Resources

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1950

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Boston Daily Globe of March 29, 1950:

GUIDEPOSTS OF LIFE—TOUGH EXTERIOR OFTEN HID DEEP RELIGIOUS FEELING OF PARATROOPS—HAROLD RUSSELL, BOTH HIS HANDS GONE, LEARNED OF MAN'S INNER RESOURCES

(By Harold Russell)

It sometimes takes cold, black disaster to inspire one to achieve the heights of success.

But for my accident I would now be back at my prewar job as a butcher. Instead, I have been in motion pictures, on the radio, subject of magazine articles—but best of all, I have had a chance to show other disabled veterans like myself that it is possible to bounce back from utter despair to undreamed of success and happiness.

On that black June day in 1944 when I lay on a hospital bed looking down at two big bandages where my hands used to be, I frankly thought it meant the end of useful living for me. "What can I do now?" I asked myself bitterly. "Probably just live out my years on an Army pension."

This self-pity and despair didn't last very long though. There is something in most people that won't let them take defeat lying down. Call it anything you like, but to me it is faith—faith in God and in myself, faith that I can always rise from every set-back. A man is licked without this.

At Walter Reed Hospital there was no funeral atmosphere. Nobody pitied himself or anyone else. A guy with both legs gone was called "Shorty"; a man with but one leg "Limpy"; and a soldier with only one arm "Paperhanger." As for me—I was "Hooks." This may sound grim, but we had to develop a sense of humor, and this was the best way to do it.

My first reaction to the hooks which were to serve as my hands were one of dismay. The first day I tried them on, it was worse—it was torture. Unable to make them do anything, I was ready to give up. But the next day I tried again, and kept on trying until I made them work.

My first experiences out of the hospital were also trying ones. Those I met with a sense of humor were most helpful. Take the little old lady to whom I sold meat before the war. When she saw me, broke out with: "Oh, you poor boy."

Then, realizing that this was the wrong approach, she stopped and chuckled. "No wonder you lost your hands. Goodness knows you sold them to me often enough weighing my meat. They didn't belong to you anyway; I bought them many a time with my pot roasts."

I liked that reaction, frank and sassy.

Before my accident I recall during our combat training that religion never showed much on the surface, but was very much

there under the surface. All of us put up a tough front. We belonged to the school of realism. War was rough, so our actions and talk had to be rough, we figured. And the paratroops, I can safely say, were the toughest bunch of all.

One man in our company, Big Joe, was the most awesome physical specimen I have ever known. Huge in stature, a calloused hulk of muscle, Big Joe swore furiously, drank mightily, and was ready to fight at the drop of a hat. He might have been Satan himself as far as the others were concerned, but I knew different.

On our practice jumps I sat next to Big Joe in the plane and jumped right behind him. As the tense moment arrived just before we were to go spilling out into space, I could see Big Joe's face relax. It grew gentle, serene, and his lips moved in a quiet prayer.

At this moment I think he felt very close to God. But once on the ground, he was a man of fierce action again, ferocious, grim, the devil himself.

Not all soldiers concealed their religion with such camouflage. I know of one soldier—we'll call him Steve—who did just the opposite. He was friendly, brimming with good humor, a thorough extrovert in every sense. To appreciate this story, you must get the picture of the inside of an Army barracks. Bunks are lined up on either side, sometimes as many as 30 on one floor. Privacy simply doesn't exist.

In the evening, just before lights went out, there was always a terrific hubbub—men coming in from pass, loud arguing, singing, and constant traffic back and forth to the showers. Steve was always right in the middle of the loudest argument or the noisiest singing—until he saw time running short. Then he would break away and hustle out of his clothes.

But just before he climbed into bed, he always knelt quietly with folded hands at the side of his bunk and prayed.

The noise, the bright lights, the confusion never bothered him. No one ever made fun of him or kidded him for it. In fact, underneath these hard-bitten men admired and respected him for his open faith. To them it represented real courage in the face of possible ridicule. But I actually believe that Steve never felt that he was being conspicuous. To him it was the right and natural thing to do.

I mention these few experiences because I have heard so many people say that the youth of today are turning away from religion. Nothing can be further from the truth. What many people consider irreverence on the part of youth is merely impatience—impatience with churchmen who won't take more initiative in working out some of the postwar problems.

Young Americans, especially veterans of the past war, want to see the men of God roll up their sleeves and tackle some problems like these same ex-servicemen tackled the problem, say, of demolishing an enemy pillbox. Just talk isn't enough. They want action.

My chance to act the part of Homer Parrish in The Best Years of Our Lives was one of the finest things that will ever happen to me. Not because it made me a Hollywood celebrity, but because it gave me a chance to show thousands of other disabled people that a handicap can give them the necessary impetus to achieve more than if their calamity had never happened.

I know this to be true with many others beside myself. A close friend of mine was a great athlete before he lost both legs. This blow changed the course of his life, and now he is a brilliant lawyer with a great future before him. He admits that but for this accident his present achievements would never have been realized.

There are hundreds, thousands of similar cases. And they were all able to rise from the depths, I feel sure, not only because they had courage, but because they also had a great source of inner power, religious faith.

Back to Isolationism

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following thoughtful editorial, Back to Isolationism, appearing in the Newark Evening News of March 30, 1950:

BACK TO ISOLATIONISM

Appointment of John Sherman Cooper as his chief consultant represents a praiseworthy attempt by Secretary Acheson to arrest the disintegration of our bipartisan foreign policy. Mr. Cooper is, of course, a Republican. He is a former Senator from Kentucky who supported the administration's policies and program abroad, and he has served as John Foster Dulles' replacement on the United States delegation to the General Assembly of the United Nations.

On the score of capacity, there can be no doubt that Mr. Cooper has it. Less certain, however, is the likelihood that his appointment will appease those Republicans in the Congress who are intent upon wrecking domestic unity in world affairs and leading their party back to isolationism.

Bipartisanship works, or should work, both ways and there are some indications that the administration has not fulfilled the terms of such a partnership. Complaint has been frequent that the administration first makes decisions on foreign policy and only then looks for Republican assent. But such indifference to the spirit of bipartisan collaboration is not the primary cause of the resurgence of Republican isolationism in the Congress.

Mr. Cooper's designation, which follows so closely upon Senator VANDENBERG's patriotic appeal for a united front against communism, is obviously intended to redress the bipartisan balance. Yet, it is extremely doubtful that Mr. Cooper's selection, of itself, can moderate the all-out assault on the State Department of which Senator MCCARTHY's charges, the "economy drive" against ECA aid, Senator STYLES BRIDGES' one-man declaration of war on Mr. Acheson are major manifestations.

Unhappily for the country, and incidentally for the Republican Party, there appears to be less and less willingness by the party's real leaders in the Congress to accept the wise counsel of Senator VANDENBERG. In the existing situation there is little evidence that they intend to encourage that "practical harmony" among the western nations which he says is essential "for the effectual defense of their mutual heritage."

This drive against effective collaboration abroad is reaching its climax at a time when military experts at The Hague are attempting to evolve "an integrated defense plan" for the North Atlantic Treaty nations. But of what use will such planning be if our allies, notably Italy and France, are suddenly deprived of the economic supports which have thus far kept them from plunging into communism?

Republican isolationists may think this retreat to their pre-Pearl Harbor position is the way to win the congressional election of 1950. On them the political history of the last 20 years is wasted. They are apparently willing to risk again the public anxiety and mistrust which have impelled the people to reject at election after election Republican claims to national and international leadership.

A Tragic Situation Faces the Citizens of Chicago if Rent Controls Are Ended June 30, 1950

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. O'HARA of Illinois. Mr. Speaker, I have mentioned on several occasions in the House the tragic situation in which the city of Chicago would find itself if the protection of all rent controls was removed on June 30 of this year. The fact is that at the present time the housing shortage is so acute that there are practically no residences available to and within the financial means of families in the middle-income bracket.

In order that my colleagues may understand that there is no exaggeration in what I have been saying and that my motivation has not been political, I am including in my remarks a letter just received from a prominent Chicago lawyer and a Republican of high standing, Eugene T. Devitt, brother of the distinguished gentleman from Minnesota, former Congressman Edward Devitt.

Mr. Devitt's letter follows:

CHICAGO, *March 29, 1950.*

Hon. BARRATT O'HARA,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN O'HARA: I have noted with interest your position on a compromise rent bill now pending before the House Banking Committee.

I am particularly interested in the rent proposal because I was a trial attorney for the Office of Price Administration and the Office of the Housing Expediter from 1943 to 1949. I followed the progress of those past measures particularly close when my brother, Edward J. Devitt, was a member of the Eightieth Congress from St. Paul, Minn. In addition, I am especially interested as I live in Elgin, Ill., which, as you know, is some 38 miles northwest of Chicago.

Although I am a registered Republican and a candidate for clerk of the Supreme Court in the primaries on April 11, 1950, I feel that some form of Federal rent control is absolutely necessary to prevent chaos, particularly in the Chicago metropolitan area. As the father of three children, I believe it would be absolutely impossible for me to rent any housing accommodations in the city of Elgin under $100 per month. As a matter of fact, I feel rental housing is tighter in the city of Elgin than in a goodly proportion of various neighborhoods in the city of Chicago, and I sincerely believe that any proposal to continue controls in the larger cities should most assuredly encompass the entire Chicago metropolitan area.

Would you be kind enough to send me a copy of your proposed bill to extend rent control? I do know that the problem of enforcing such a bill is, and would be relatively easy in all of the suburban areas.

Thank you kindly,

Sincerely yours,

EUGENE T. DEVITT.

Mr. Speaker, from Mrs. John A. Renn, 3141 West Sixtieth Street, Chicago, I have received the following letter, which is similar to hundreds of others from Chicago housewives and heads of families:

CHICAGO, ILL., *March 23, 1950.*

Hon. BARRATT O'HARA,
Washington, D. C.

DEAR CONGRESSMAN: I need your help as do friends of mine all over the city of Chicago.

If rent controls are allowed to expire, we shall be caught in a trap. So will every person on a fixed income. You know my husband is a postal clerk, and his increases have never kept up with the rising cost of living. Like others, we have had to spend judiciously or go without, to build up a small savings toward old age. If rent controls die, we shall be drained of everything we can make, or have saved, to live. There will be nothing to prevent landlords from charging all the traffic will bear—and getting it, because housing is so scarce. In many cities and your own is one, the result will be chaos. Some form of rent control must exist for awhile, if thousands of people are to live, or want to keep on living. We have had a 15 percent rent increase since the war. Instead of rent control expiring entirely, another raise by percentages would be far better. A limit could be set on percentage raises according to the age and condition of the building, and services actually received by the tenants. When we must burn our gas oven and an electric heater, as we do all winter because of inadequate heat, (below 68°) then we have had, in effect, another rent raise. The same applies when we buy faucets, window shades, and new screening. For years most landlords have made their tenants put up with very little or no cleaning, and what we have done raises our rent higher.

We are trapped now by these circumstances, and submit to them because there is no place to move.

We beg of you, please do all that you can to help us, and thousands in a like plight.

Some form of rent control must remain—we must have help from Congress—or we face certain personal disaster.

Yours very truly,

ZORA E. RENN,
Mrs. JOHN A. RENN.

Foreign Economic Assistance

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. BROOKS. Mr. Speaker, H. R. 7797, to provide foreign economic assistance has been debated over a period of several days. It has been debated with unusual vehemence on both sides and this debate has served to bring out the real points at issue. As I have said repeatedly, if the measure does not serve to help keep our Nation out of a third world war, its real purpose will not have been accomplished. As I have spent most of my legislative life on the old Military Affairs Committee and the present Armed Forces Committee, I am most sensitive to the danger of and the need for preventing the outbreak of a shooting war which will usher in the use of the frightful atom bomb. I have therefore gone to unusual lengths to prevent such an eventuality.

The measure calls for the expenditure of a large sum of money, however, and taking into consideration the state of our national finances, we must strain a point and make some reduction of this authorization. I think a half billion dollars could be taken off the bill without destroying the effect of the program. I hope the bill is reduced to this extent.

This measure is an authorization measure. I have learned in many other instances that changes and reductions may be effected when the appropriation bill comes to us for consideration. While I realize the financial plight of this Nation; should conditions change after the passage of this measure but before the appropriation bill has come to a vote, further reductions may be brought about.

Petitions on the Repeal of the Excise Tax on Entertainment

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I would like to bring to the attention of this body some additional petitions that have come to my office from movie patrons in my district urging that the 20 percent Federal excise tax on movie admissions be repealed.

These petitions have come from the RKO Hillstreet Theater, from the Paramount Downtown Theater, from the Metzger-Srere Theaters, from the Fox Westlake, Los Angeles and Cameo Theaters, and from the Bill Robinson Theater.

On February 16, 1950, I submitted for the RECORD petitions containing almost 4,000 names. To date that number has been increased by close to 13,000 names, making a grand total of approximately 17,000.

These petitions represent the feeling that is current not only among my own constituents in the Fourteenth Congressional District in California, but in the country as a whole—namely, that the tax is discriminatory, that it falls on those least able to bear it, and that the war emergency which engendered it has long since passed.

I should like to quote briefly from a letter sent by one theater manager, but expressing the feeling of all:

We feel sure that if you were to witness the eagerness with which these petitions were signed you would realize how much the elimination of this tax means to the working classes, especially the low-salaried working classes of people who attend theaters as their only means of entertainment.

Since 1947 I have introduced bills to repeal various wartime excise taxes. My most recent bill, H. R. 6151, introduced on August 26, 1949, would repeal all wartime excise taxes except those of a purely regulatory nature, such as the tax on tobacco, liquor, narcotics, sugar, coconut oil, and adulterated butter.

I feel, as my constituents do, that the continuance of wartime excise taxes on such items as movie admissions and baby oil are unnecessary and unfair.

As additional petitions are received from movie patrons in my district, I will ask permission that they also be recorded.

Russian Crab Imports

REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. MACK of Washington. Mr. Speaker, on several occasions I have called the attention of the House to the fact that 59,000 cases of Russian crab meat, valued at $3,000,000 have been landed in the United States during the past month.

Of these shipments, 15,000 cases were purchased by an American importer from Russia and were shipped into the United States direct from Russia. The other 44,000 cases were obtained from Russia by Great Britain and then were trans-shipped into the United States by the British.

I wrote letters on March 17 to both ECA Administrator Hoffman and to Secretary of State Dean Acheson protesting to these imports of Russian canned crab meat, which, I said, if continued, will ruin our Atlantic and Pacific coast crab-fishing industries.

Today I received a reply to one of my letters of protest from William Foster, Acting Administrator of ECA. In this reply Mr. Foster says:

Although we recognize general objections to the distribution of any canned crab produced in the U. S. S. R., we believe it quite difficult to protest the sales of this product by the British when United States interests are also importing the same thing directly from the U. S. S. R.

This put the question of what is to be done about Russian crab-meat imports squarely up to Secretary of State Dean Acheson to decide. It is for him to say whether the State Department will continue to permit Russian goods, produced by slave labor, to invade American domestic markets and thereby destroy the property, the jobs, and the livelihood of American workers in the American fishing industry.

The State Department in reply to my letter of March 17 said it would investigate the matter of Russian crab-meat imports and give me a statement as to the Department's policy in regard to

these Russian crab-meat imports. Up to this time, 2 weeks after my letter, I have not received the State Department's reply.

I append to this statement copies of the letter which I wrote to ECA Administrator Hoffman and the reply to it which I received this morning from the Acting Administrator of ECA:

MARCH 17, 1950.

Mr. PAUL G. HOFFMAN,
Administrator, Economic Cooperation Administration, Washington, D. C.

MY DEAR MR. HOFFMAN: I am greatly disturbed, as have been many residents of the Pacific Coast, by recent announcements in the press that 59,000 cases of Russian canned crab, valued at approximately $3,000,000 have been landed at the ports of Seattle and Boston during the past month.

I cannot escape the conclusion that these imports of Russian crab are helpful to our cold-war enemy, Russia, and harmful to the economy of the United States.

Of the 59,000 cases of Russian canned crab imported, 44,000 cases came from Britain. The news reports said these 44,000 cases were part of a shipment of 80,000 cases secured by the British from the Russians in a barter deal.

I would like the ECA to obtain for me a statement from the British showing what goods the British gave the Russians in return for these 80,000 cases of Russian canned crab. I believe that the Congress and the country, because of our heavy American contributions to Britain through ECA programs, has a right to know what goods the British are supplying to Russia.

It is my understanding that the Russians did, with our consent, gain control and jurisdiction over most of the crabbing waters of Asia that were formerly fished by the Japanese. As a result, the Russians today have supplanted the Japanese as the great crab packing nation of the Far East. In prewar days Japan packed an average of 445,102 cases of canned crab annually and in some years as much as 600,000 cases. Russia, due to her new control over these crabbing waters, now, probably, is packing about 500,000 cases of crab annually.

Most of this Russian crab, caught and packed by slave labor, will, I fear, unless steps are taken to prevent it, be dumped onto the American market. Should that happen our Atlantic and Pacific coast crabbing industry, in which millions of dollars are invested and by which thousands of workers are employed, soon will be ruined. Such a calamity certainly would weaken our economy by adding to its unemployment and make America less able to carry on our cold war against Russia and assist Russia to more effectively wage her cold war against us.

Sincerely yours,

RUSSELL V. MACK,
Member of Congress.

MARCH 30, 1950.

Hon. RUSSELL V. MACK,
House of Representatives,
Washington, D. C.

DEAR MR. MACK: This is in reply to your letter of March 17, 1950, in reference to Russian canned crab meat which the United Kingdom has been exporting to the United States.

We are assurred by the British that the canned crab meat was not obtained from the U. S. S. R. as a part of the barter transaction whereby British goods were exchanged for the crab meat. However, there was a bilateral trade agreement between the two countries, signed in December of 1947, which included seafood as a permissive item. That is, in determining the balance of trade, any purchases of seafood by the British from the USSR would be counted. Any monetary settlement under that trade agreement was to be in pounds sterling.

Within the framework of that 1947 trade agreement the British negotiated for and purchased a quantity of canned salmon of U. S. S. R. production but, we are informed the Russians refused to sell the canned salmon unless an undisclosed quantity of canned crab meat was also purchased. Thus, the crab meat was obtained as a tie-in rather than through barter.

It is our understanding that none of the canned crab meat was intended for sale by the British Ministery of Food in England because the relatively high price would not fit into the food distribution program under the austere conditions prevailing there. It is our belief that the British, recognizing the dollar earning value of the canned crab meat, had planned that it would assist their economic recovery to a greater extent if sold for dollars than if sold for home consumption.

We have carefully examined the United Kingdom sales to the U. S. S. R. under the terms of the 1947 trade agreement and assure you that no items were sold which are considered to be critical or strategic materials. In general, the items were textiles, textile machinery, ceramics and similar goods.

Although we recognize general objection to the distribution of any canned crab meat produced in the U. S. S. R., we believe it quite difficult to protest the sales of this product by the British when United States interests are also importing the same product, apparently directly from the U. S. S. R. Any dollar earnings of the British reduce the need for economic assistance, and in estimating dollars to be available we are sure the British had contemplated the sale of the canned crab meat. One of the reasons the United Kingdom was willing to purchase United States canned fish, including salmon, last year was the anticipated dollar earnings from the sale of the crab meat.

We appreciate this opportunity to give you this information and to assure you we are satisfied that the crab meat was not obtained by the British from the U. S. S. R. either through barter or sale of goods to which the United States could object.

Sincerely yours,

WILLIAM FOSTER,
Acting Administrator.

Natural Gas and Oil

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution of the New England Council, Boston, Mass.:

FUELS FOR NEW ENGLAND

RESOLUTIONS ADOPTED BY THE EXECUTIVE COMMITTEE OF THE NEW ENGLAND COUNCIL, PROVIDENCE, R. I., MARCH 23, 1950

Natural gas

Whereas on March 19, 1948, the New England Council, at its ninetieth quarterly meeting sponsored the first public presentation of arguments for and against the introduction of natural gas into this region; and

Whereas while at that time no formal action was taken, it has become increasingly clear that the introduction of natural gas into this deficit fuel area would be not only desirable but immediately and importantly beneficial to a large proportion of the people of New England, both in their homes and in their economic activities: Therefore be it

Resolved, That the directors of the New England Council assembled at Providence in their ninety-eighth quarterly meeting, desire to be recorded with the chairman and members of the Federal Power Commission, in connection with hearings now in progress before that body, as strongly in favor of action by the Commission, at the earliest possible date, favorable to the transmission of natural gas into New England under terms and conditions most suitable to New England and equitable to all the interests concerned.

Oil

Resolved, That approval by Congress of any measure designed to restrict or reduce oil imports into the United States will be contrary to the best interests of New England.

ICC Understaffed and Handicapped in Efforts To Promote Rail Safety

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. PRICE. Mr. Speaker, the New York World-Telegram is to be congratulated on a series of articles which it has published on the subject of rail safety. I invite the attention of the House membership to these articles and urge every Member to read them carefully.

There is now pending in the House rail-safety legislation. I hope that it soon gains the approval of the Committee on Interstate and Foreign Commerce so that it can be considered on the floor.

Under leave to do so, I include herewith three of the articles which appeared in the World-Telegram:

[From the New York World-Telegram and Sun of March 25, 1950]

JAPANESE BEETLES VERSUS COMMUTERS' LIVES—UNITED STATES AND STATE SKIMP ON RAIL SAFETY CHECKUPS—ONLY 22 ICC INSPECTORS ON JOB; PSC SHORN OF POWER

(Prompted by the recent disaster on the Long Island Rail Road, the World-Telegram and Sun conducted an exhaustive study of conditions on all of the railroads serving the metropolitan area. It found that maximum safety is nowhere to be found, that human errors can bring new tragedies and that Government supervision is almost a mockery. Staff writer Allan Keller reports on the findings today in the first of a series of articles of vital interest to every person who rides a train.)

(By Allan Keller)

There are more Federal employees looking for Japanese beetles than there are checking on signals that protect the lives of about 300,000 commuters riding trains in and out of New York City each day.

There are more officials worrying about insecticides for livestock than there are inspecting the locomotives that pull hundreds of commuter trains.

POWER IS VESTED IN ICC

The safety of the commuter on the railroads serving New York—and every other community of large size—rests largely on the railroads themselves. The Interstate Com-

merce Commission, vested by Congress and the courts with the duty of insuring that safety, is short-handed, slow moving, and hamstrung by tradition.

The Public Service Commission of New York State, although empowered by legislative mandate to insure "safe and adequate" service, actually is shorn of any such power where it involves signal and safety device systems. It is superseded by the ICC, whose 22 signal inspectors are responsible for the greatest trackage on earth—hundreds of thousands of miles.

The picture of Government supervision of railroad safety is one of incredible ineptness, of criminal failure to give it the importance it rates and of actual reliance, in the final instance, on the railroads themselves.

That death has not ridden the rails more frequently is due to the engineering skill of most of the carriers and the general high level of performance of the men operating the trains.

DEVOTE ENERGIES TO RATE FIXING

As a matter of practical truth the Federal and State regulatory bodies supervising common carriers devote hundreds of hours to the fixing of rates and tariffs to every hour invested in the protection of human life and limb.

On the wall behind the desk of Col. J. Monroe Johnson, chairman of the ICC in Washington, there is a map of the United States. In it are stuck pins for the inspectors who look after the signal and control systems of the Nation's railroads. There are very few pins.

One pin jabbed into the map at Rutherford, N. J., represents the ICC inspector of signals responsible for all the commuting railroads feeding thousands of workers into New York every morning and taking them home every evening. On his shoulders rests the ultimate onus for enforcing the rules of the commission.

Naturally, the commuters are not the only persons involved. The long-haul passengers are equally his responsibility when in his district.

LONG GAPS BETWEEN PINS

Colonel Johnson's map has wide open spaces where the inspector must watch the operations of railroads over thousands of square miles. It is an insuperable task. Between the colored pin at Washington, D. C., and the pin at Jacksonville, Fla., there is no other along the eastern seaboard. The nearest is inland at Atlanta.

It would be incorrect to assume that the ICC is unaware of this situation. A short time ago Colonel Johnson went before a congressional committee studying the ICC budget and told the members of his predicament.

ONLY 22 SIGNAL INSPECTORS

"I scarcely see how 65 locomotive inspectors * * * are able to inspect more than 40,000 locomotives, nor how the 131 employees in the railroad safety bureau are able to maintain close supervision of the countless safety devices that govern our rail operations," he said.

It should be pointed out here that the latter classification of inspectors includes not only those who guard the signals and control devices but also those who check on such things as the hand brakes of boxcars, the handles on cars of all types, steps, running boards atop freight cars and the like. Only 22 are primarily concerned with the signal devices that guard the right-of-way.

A FISCAL DILEMMA FOR ICC

Congress recently ordered the ICC to pay certain echelons of employees more money and advised that the pay increases must be absorbed from funds presently available.

"There seems to be no way in which this can be done other than by placing a great number of employees on furlough without pay or by separating a lesser number from the service," said the Chairman.

HOOVER COMMISSION'S VERDICT

It is no wonder that the Hoover Commission task force that studied the regulatory commissions cited the fact that the ICC is understaffed, has vacancies that need filling, and is having difficulty obtaining the proper type of employee to meet its needs.

The Hoover Commission was a hard-headed group seeking economies in government, but it sensed the dangers that are inherent in a situation where a commission with many added duties has seen its total employment drop from 2,649 in 1940 to 2,139 in 1949.

[From the New York World-Telegram and Sun of March 27, 1950]

ONE-WAY TRESTLE OVER NEW JERSEY FLATS COULD MEAN DEATH A LA LONG ISLAND—TEMPORARY 3 YEARS, STRUCTURE SERVES TWO ROADS, HAS NO TRIPPERS

(By Allan Keller)

A commuter doesn't have to ride the Long Island Railroad to run the risk of death or injury on the railroads.

So much has been said about the Long Island Railroad many persons forget that the same lone inspector of the Interstate Commerce Commission who checks and approves signal and control devices for that line also is responsible for every other line running in and out of the metropolitan area.

VISUAL SIGNAL

Two of these are the Central Railroad of New Jersey and the Pennsylvania, which share the tracks of the New York & Long Branch Railroad, serving the Jersey seashore.

Over the waters of Matawan Creek, near Matawan, N. J., the line runs across a one-way wooden trestle built about 3 years ago to replace one that burned in 1946. Far beneath it are the tidal flats of an inlet from the Atlantic.

Although two railroads operate over this narrow trestle, with all the opportunities of such an operation for mistakes and errors, no automatic devices are installed to stop trains if the engineer ignores a visual signal.

LONG ISLAND PARALLEL

This is potentially such a death trap the engineers themselves slow the trains down before venturing across the temporary trestle. Riders on this line know, however, that the Rockville Centre gantlet track of the Long Island Railroad was also a dangerous spot. Nonetheless the engineer rocketed past full-stop signals and into the path of a train coming from the opposite direction—at a cost of 32 lives.

Any accident like that on Long Island, occurring on the Matawan trestle, scores of feet above ground and water, would lead inevitably to a major disaster.

At the time the trestle was built it was stated officially that it was a temporary replacement for the one that burned. Riders have often written to the railroads asking what was meant by the word "temporary" but have never received a definite answer.

JERSEY SUPERVISION

In Washington, officials of the safety bureau of the Interstate Commerce Commission told this writer that while their inspector had jurisdiction over the signals for this structure and the adjoining right-of-way, the Public Utility Commission of New Jersey supervises the bridge itself.

Just such overlapping and conflicting problems of jurisdiction bedevil all railroads and the Government bodies regulating them.

After the recent wreck at Rockville Centre, the Long Island road installed automatic brake trippers at the ends of the gantlet. Before it did, it sought authorization for the step, leading to the comedy of errors described by an official of the New York Public Service Commission in these words:

"Talk about your mix-ups * * * the Long Island didn't know whom to apply to for permission, so it applied to both the ICC and the PSC.

"The law establishing the public service commission instructs it to see that railroads maintain 'service that is safe and adequate' but we know the ICC supersedes us on that matter of safety. There are 13 railroads in the State, with thousands of miles of tracks and heavy train movements. Yet, the Federal law says the ICC shall inspect the signals and then it assigns two or three men at most to do the job."

LIVES IN BALANCE

This opera bouffe handling of jurisdiction would be comical if the lives of thousands of commuters did not hang in the balance. A passenger on a train that collides with another, or which hurtles off the track through an open switch, is disinterested in which government agency is responsible for supervising the railroad.

Another potential danger area exists where the trains from the shore join the main line of the Jersey Central, which also carries the Reading trains and those of the Baltimore and Ohio.

The routes come together at Elizabethport in a maze of cross-over tracks. Here, too, although located in a heavy commuter area, there is a right-angle crossing at grade. Trains from Newark roll across the four tracks of the main line, protected from collision by visual signals, but not by automatic brake trippers. Chance for human failure is always present.

[From the New York World-Telegram and Sun of March 27, 1950]

NEW YORK CENTRAL SAFE TILL SOMEONE ERRS—TRAIN EVERY 40 SECONDS OVER MAZE OF TRACKS UNGUARDED BY TRIPPERS

(By Allan Keller)

Every morning and every evening trains of the New York Central and New Haven Railroads roll in and out of the city on a headway that often runs under 40 seconds.

The four tracks from the junction near the Mott Haven yards in the Bronx to Grand Central are so crowded that often all four are occupied at once.

Yet from the station to the junction, above ground and underground, there are no automatic brake-tripping devices to serve as a safety check on human failure.

In this stretch of heavily used right-of-way is a drawbridge across the Harlem River that swings open to permit tugs and other river craft to pass. Dangerous as it is, it, too, is unguarded by automatic trippers.

TRACKS TURN OFF

North of the One Hundred and Thirty-eighth Street station in the Bronx, the tracks of the New York Central's Hudson River division, the main line, turn off from the Park Avenue route which carries the New Haven line and the Harlem division of the Central.

In this stretch of tracks, many blocks long, there is a labyrinth of switches over which trains move at a rapid pace. These switches are guarded by interlocking signals if anything is wrong or if two trains are in danger of collision.

These systems are virtually foolproof if the engineer or motorman is alert. Where they fall down is where the system at Rockville Centre gantlet track on the Long Island line broke down—when there is human failure.

USED BY THOUSANDS

Scores of thousands of commuters use these tracks each day and so do other thousands of riders on such crack trains as the Central's Twentieth Century Limited, the

Empire State Express and the Pacemaker and the New Haven's Merchants' Limited and Yankee Clipper.

New Haven commuters are familiar with the junction at New Rochelle, where trains for Grand Central Station and others for the Hell Gate Bridge route to Pennsylvania Station separate on their way to the city.

Many long freight trains originating on the Hell Gate route have to join the main line to New England at the same junction. Interlocking signals protect the riders but not as adequately as interlocking signals plus automatic train-stopping devices.

All these riders are relying, in the final analysis, on the men at the controls in the locomotive cabs. They are among the finest class of workmen on earth but, being human, they are susceptible to human failures.

The World-Telegram and Sun believes with many commuter organizations that sections of right-of-ways, where the traffic is as dense as that in this city and its suburbs, should have the added protection of brake-tripping devices.

One thing has been made patently clear since the disaster on Long Island: Passengers who rely upon the public service commission to guarantee safety are trusting to false gods. It is shorn of most of the power needed to force railroads to maintain maximum safety.

FEW ICC INSPECTORS

On the other hand, the Interstate Commerce Commission, with full responsibility for supervision of signal and control systems, is functioning with a bare handful of insectors, Col. J. Monroe Johnson, Chairman of the ICC, himself admitted that in practice the Government regulatory body must rely on the railroads to police their own trackage, with not too frequent checking by the undermanned safety bureau inspectors.

In the past two decades the ICC has been overburdened with the problems of supervising the motor carriers of the Nation. The incredible mushrooming of this type of business has had the effect of making rail transport of secondary interest to the Commission.

Most of the Commissioners would willingly see the work of the safety bureau transferred to a Department of Transportation if one were formed.

SEES LIMITED BUDGETS

"Until transportation—one of the five major businesses of the Nation—is given real stature by a place at the President's Cabinet table, you must expect limited budgets and curtailed services," said Colonel Johnson.

All of this makes tragic reading for the commuter. He knows of the billions being spent on farm crops that wind up as fertilizer. He knows eggs are being sold to Europe at a penny a dozen. He knows of scores of other places and ways in which the taxpayers' money is being spent by an easy-handed administration.

Inevitably he wonders why a few more dollars cannot be invested in the safety of American citizens who ride the trains to work each morning and each evening.

The FBI Files

EXTENSION OF REMARKS

OF

HON. ANDREW JACOBS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mr. JACOBS. Mr. Speaker, under unanimous consent I herewith insert three editorials from three newspapers.

The first is the Times-Herald, a radically bitter anti-administration publication.

The second is from the Indianapolis News, a Republican newspaper that puts patriotism above partisanship.

The third is from the Louisville Courier-Journal, which is a moderate Democrat publication as I understand it.

It is remarkable that each arrives at the same general conclusion.

[From the Washington Times-Herald of March 30, 1950]

IT'S THERE, FIND IT

J. Edgar Hoover has made a case nobody can shake for keeping FBI files confidential. That is clear. But it is equally clear that President Truman is hiding behind the FBI in his attempt to choke off senatorial investigation of State Department corruption at the hands of the Communists.

The situation sums up as follows: The Senate has directed the Tydings subcommittee to subpena executive department files as just one element of the investigation. Mr. Truman has ordered that no executive files be turned over, and is pushing the FBI out front as the clay pigeon for senatorial shooting.

WHAT DOES THE RESOLUTION SAY?

And now, believe it or not, just as the President refuses all executive files to the Senate, the President's own executive loyalty board asks the Tydings committee for its files on Communist matters. The fight therefore exposes itself as an absurdity, except as to the FBI.

Some Senators are saying that if Mr. Truman does not fork over in response to congressional subpena, he must be impeached. We cock an interested ear. But be that as it may, the Senate resolution which dictates the operations of the Tydings committee is one of the most powerful and all-inclusive ever written. It says for that committee to find out not only who is but also who has been corrupting our State Department through Communist influence.

Such an investigation does not stand or fall on the mere issue of whether the Senate can riffle through executive files. There is plenty of evidence elsewhere. Find it, Senators. And act on it.

[From the Indianapolis News of March 28, 1950]

END THE PARTISAN PROBE

J. Edgar Hoover, in whom the country has high confidence, is eminently right in opposing surrender of FBI loyalty files for congressional investigation. To do so would play directly into the hands of Moscow. The information thus revealed would be calculated to do this country far more damage than any possible service that might accrue.

It is to be hoped that the Hoover testimony will bring an early end to the grotesque and politics-ridden publicity field day that has surrounded the charges made by Senator McCARTHY against the State Department.

The national disservice which this so-called investigation has done can only lend weight to the responsible suggestion that the whole business be taken out of the hands of the politicians. Enough public fears have been aroused, however, to warrant a fresh start on an impartial and higher-minded basis.

What is called for is the appointment of a nonpartisan commission with a sufficient sense of responsibility and direction and with enough public confidence to conduct an inquiry on the evidence alone. Such an investigation, conducted with dignity and without headline hunting, should be able to produce the facts on the true situation in the State Department—and that is what the people want.

[From the Louisville Courier-Journal of March 29, 1950]

A PLOT TO TRUMPET WHISPERED CHARGES

In an atmosphere of which a gestapo-minded man might have taken prime advantage, FBI Director J. Edgar Hoover has acquitted himself admirably on two occasions in the last few days.

The first instance was Mr. Hoover's rejection of a proposal by Virginia's Representative HOWARD SMITH that the FBI be made to pass on the fitness of all employees of the National Science Foundation. It would have given the FBI unprecedented power as detective, prosecutor, judge, and jury over the inquiring minds of free men. It would have established in this country for the first time a secret police.

Now, Mr. Hoover has displayed equal vigor in protesting the use of FBI secret files in connection with Senator JOSEPH MCCARTHY's blunderbuss charges of communism in the State Department. At immediate issue are the FBI dossiers gathered in the course of loyalty checks on Federal employees.

As Mr. Hoover himself remarked, "One report may allege crime of a most despicable type, and the truth or falsity of these charges may not emerge until several reports are studied, further investigations made, and the wheat separated from the chaff."

The files include everything which neighbors or acquaintances have told special agents about the persons under investigation. Much of it is hearsay. Some of it may be the distortions of personal animosity or ignorance, or the overdramatizations of the suspicious. All of this misinformation is a rightful part of the secret file, because—to borrow Mr. Hoover's metaphor—investigators must gather chaff with the wheat before they can start winnowing. Aside from outright misinformation and unsupported charges that find their way into investigation files, there is a great deal of intimately personal information which has no bearing on the Communist or anti-Communist inclination of the subject. None of this material should be bandied about in public. There could be no worse invasion of the right of privacy.

Mr. Hoover advanced other reasons why he does not want the files put to a use for which they were not intended. They would reveal many of the FBI's informants, ruining their future value if not actually endangering their lives. Indeed, in one sweep, disclosure of the FBI confidential files would smear hundreds of innocent people; it would betray the whole intent of the Bureau since it was organized in the Department of Justice 42 years ago; and it would destroy much of the value painstakingly built into the Bureau.

It is neither the assigned nor intended function of the FBI to ruin or persecute innocent people. The Bureau has jurisdiction over investigations of espionage, sabotage, treason, and other offenses against internal security of the United States. In addition it is charged with investigating violation of some 120 Federal laws, including those dealing with banking, kidnaping, automobile theft, white slavery, and atomic energy.

Americans feel an instinctive revulsion against anything that smacks of a secret police. The outcry which invariably follows reports of wire-tapping is proof of this. The idea of a law-enforcement agency invading the privacy of any individual is distasteful enough even when the invasion is legally warranted, and the results are kept secret. But Senator MCCARTHY and Representative SMITH, ostensibly fighting totalitarianism, would cheerfully resort to its very

own weapons. Mr. Hoover, Attorney General Howard McGrath, and President Truman are defending American institutions when they take a stand against such folly.

Old-Age Funds Already Spent

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. ANGELL. Mr. Speaker, pursuant to permission heretofore granted, I am including as part of these remarks a timely article by Sigrid Arne entitled "All of $14,000,000,000 Collected as Old-Age Funds Already Spent," which appeared in the Oregonian, of Portland, Oreg., in my congressional district, in its issue of March 14, 1950. The article follows:

ALL OF $14,000,000,000 COLLECTED AS OLD-AGE FUNDS ALREADY SPENT

(By Sigrid Arne)

WASHINGTON, March 13.—Every dollar of the nearly $14,000,000,000 paid in under the old-age benefit section of the social-security program by employees and employers has been spent. It paid for office costs. It paid for the comparatively small number of monthly checks now going to workers who are 65 and over. It paid for $11,893,083,053 worth of United States Government bonds held in the United States Treasury for the old-age fund.

The money paid for these bonds went out to cover general Government expenses.

This is generally known to insurance and financial experts, but at Senate hearings on the social-security system Senator EUGENE MILLIKIN, Republican, Colorado, said he suspected the fact escapes public attention.

Money left after benefits and operating costs have been paid has to be turned in for Government bonds. The law says so. The law was written after long study in the thirties by a large group of insurance experts. These experts thought the money would earn interest if it was put into bonds and thereby increase the fund that must eventually pay workers their old-age checks.

Now that idea is under attack in the Senate Finance Committee and by the Brookings Institution, a private nonprofit research organization.

Social-security experts, including Administrator Arthur J. Altmeyer, stoutly defend the system. Here's the background, as they and Treasury Department people outline it:

Employees and employers in covered occupations pay into the social-security fund for every pay check. In 1948 payments amounted to $3,600,000,000.

Payments now more than cover the sums that have to be paid to retired workers.

But sometime there will be so many retired workers that payments will not cover their checks. Then the Social Security Administration will have to go to the Treasury, with its Government bonds in hand, and ask for cash.

When that happens the Treasury will have on hand just the money it has any year—the money that comes in that year. That includes (1) the taxes it collects; (2) any surplus, and (3) the money it gets by selling bonds to private investors.

The Treasury would have to tap one of those three sources.

Consider surplus first. There is little hope now for a surplus for many years to come.

The Government owed $256,477,511,689 as of late February. It paid off part of its debt in 2 years since the war: $750,000,000 in 1947 and $8,400,000,000 in 1948. Now the debt is jumping again.

TAXES BEST SOURCE

Even if the Government could pay off at the 1948 rate from now on, and if no more were added to the debt, it would take until 1982 to tear up the mortgage.

Now take bonds. Treasury experts think that is a likely source of quick cash. Even at the bottom of the depression, in 1933, the Treasury took in $3,000,000,000 in its bond deals with the public.

But the most likely source of revenue for old-age payments would be taxes.

But MILLIKIN said at the Senate hearings that he feels this would result in taxing people twice for their old-age benefits.

Altmeyer argued that the same people would not be taxed. MILLIKIN countered that it would be the same taxpayer, but Altmeyer maintained that the taxpayer would not be taxed twice for the same thing.

The Federal Reserve Bulletin for February says the Government has already used $38,000,000,000 out of the social security, postal savings, veterans insurance, and bank deposit insurance trust funds.

MILLIKIN said that as long as the Government was going to spend these trust-fund moneys, he feels it should use them to pay off the debt, and not just for the general Government expenses.

The Brookings Institution is much more critical than MILLIKIN.

It says: "Since the money is used by the Government in meeting its regular expenditures, no real reserve is created. The obligations of the Government deposited in a trust account do not represent assets; they merely record future obligations which can be fulfilled only through the levy of future taxes upon the economy in general. The trust fund is thus a fiction—serving only to confuse.

Treasury people argue that as long as the Government bonds pay interest they are assets. Brookings says:

"The operation of the old-age insurance fund is not similar in character to that of a private insurance company. Private insurance reserves are usually invested in projects that directly participate in, or promote, the production of goods and services. Thus they earn income."

Brookings adds the Nation may undergo another depression in which the Government will collect small tax totals and yet have to put out more in social-security payments.

It says there are four possible courses for the Nation's social-security program:

1. Helping old persons and others in need by paying the cost out of each year's taxes and making no long-term commitments. Brookings favors this course.

2. Payment of a minimum to all eligible needy without considering what other income they have.

3. Payment of a standard minimum to all eligible but with additional amounts to those who had higher earnings when they worked. This idea recognizes some relation between benefits and the customary living standard of the worker.

4. Payment of such high benefits that it would insure many workers their customary purchasing power.

Demopolis, Ala., Lock and Dam

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. ELLIOTT. Mr. Speaker, I, along with my colleagues from Alabama, was greatly disappointed when I learned that the House Committee on Appropriations had cut the budget recommendation for further construction on the lock and dam just below the confluence of the Tombigbee and Warrior Rivers at Demopolis, Ala., from $4,000,000 down to $358,000. This is a cut of more than 90 percent.

This great lock and dam at Demopolis, Ala., is a very vital step in improving navigation on the Warrior River, which connects the coal fields of Walker County, Ala., and the industrial city of Birmingham with the port of Mobile, Ala.

But this is not all, Mr. Speaker. The lock and dam at Demopolis is the first step in the development of the great Tombigbee inland waterway that would connect the Gulf of Mexico and the Great Lakes of this country by water transportation.

The Tombigbee inland waterway has great industrial possibilities, and of even more immediate importance its construction would be a great defense asset to us in that it would reduce the water distance between the Gulf of Mexico at Mobile and our atomic energy plant at Oak Ridge, Tenn., by some 300 miles.

I recognize that it is imperative that we do all we can here to exercise every reasonable economy in the operation of our Government. But a 90-percent cut at Demopolis is unwise and unjust. It seems to me that it would be much fairer to cut allocations for all river-and-harbor projects by a flat 10 percent.

When the appropriation bill comes on for debate next week an effort will be made to restore the $4,000,000 recommended in the President's budget message for the Demopolis lock and dam, less a reasonable across-the-board cut for all projects. I sincerely hope that the members of the House will see the justice of our position, and in the name of national defense and internal development will allow the project at Demopolis to go forward.

As a part of my remarks, I include an editorial from the Thursday, March 23, 1950, issue of the Cullman Tribune published at Cullman, Ala.:

LITTLE RECOGNITION

Alabama, famous for its many rivers, was given a severe jolt this week when the House Appropriations Committee cut a requested $4,000,000 waterways improvement to $358,000. This is less than one-tenth of the amount approved by Army engineers for the further development of the Black Warrior, Warrior, and Tombigbee Rivers and the lock and dam at Demopolis.

The Tribune is in agreement with those who are demanding less Federal spending. But it is false economy for the fund slashers

to cut appropriations as was done on the Alabama waterways. It would be well for the members of this committee to reconsider their actions concerning these projects. There are other Federal programs that could be trimmed in order to give more funds for the waterways.

Improvements of the rivers will afford protection and benefits. These public-service projects will give employment to many people on constructive work under planned supervision. When completed, there will be better navigation on the rivers and better flood control. Alabama, with its splendid dock facilities at Mobile, definitely needs more improvements on its rivers.

Maybe Alabama would attract more attention in Congress if there were a two-party political system in operation. It certainly received little recognition for its waterways.

Fate of Freedom

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following editorial which appeared in the New York Journal-American of March 30, 1950, and in other newspapers throughout the country:

FATE OF FREEDOM

(By Harry H. Schlacht)

"He who holds Alaska holds the world." (The late Gen. Billy Mitchell.)

Today marks the eighty-third anniversary of the Alaskan Purchase. The treaty under which the United States acquired the Territory from Czarist Russia by payment of $7,200,000, was signed March 30, 1867. The pact was negotiated under the stewardship of William H. Seward, Secretary of State in President Johnson's Cabinet. Alaska is a fabulous country. It is a land of tomorrow. It is a land of today. It is a source of great wealth in the fish from its waters, the gold from its sands, the silver from its mines, the lumber from its forests, and the choicest of furs. It is preeminent as an empire of scenic wonders.

Soviet Russia has claimed that Alaska belongs to it. At the United Nations Conference in San Francisco, Molotov declared that the purchase of Alaska was a fraud. Russia today has numerous air bases in Siberia. She is building additional airfields there. She is concentrating on air power. She is believed strong enough to seize our Alaska bases, from whence she could launch attacks against the United States proper.

The Hearst newspapers long have publicized the shocking inadequacy of military defenses in the arctic and subarctic areas.

Alaska's Governor Gruening has warned that the Territory's Army, Navy, and air bases are so weakly garrisoned that they can be overpowered by a comparatively small air-borne enemy force.

Let us sound the clarion call for action. Let us shout, "Wake up, America." There is but one thing that the Russians understand and respect. That is strength.

Soviet Russia is planning to exterminate democracy. She is planning to crucify humanity. For the sake of our Nation, for the sake of freemen everywhere, let us admit Alaska and Hawaii into the Union. Statehood for these Territories and adequate defense are inseparably linked.

The President of the United States has recommended statehood for both. The House of Representatives has approved such action. Let the Senate of the United States take a similar patriotic course. Let that action be taken at once. Let us give Alaska and Hawaii statehood now.

Do We Dare?

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial in the edition of April 1950 of the Methodist Challenge, published by Robert P. Schuler, pastor of Trinity Methodist Church, Los Angeles, Calif.:

DO WE DARE?

Do we dare acknowledge the facts? Are we courageous enough to face the cold, unpleasant truth? The people called Methodists are in a position where they must search their souls. Our church has been accused of friendliness with an atheistic ideology that is seeking to enslave the world. We are also under grave suspicion of having lent ourselves to organizations and agencies that seek the destruction of the American way of life. These accusations do not extend to the whole membership of either the clergy or the laity. Indeed those accused are very few among us, but very strong and powerful in church organizations and councils. The accusations are undoubtedly true and justified.

The Alabama Christian Advocate is the only Methodist publication that I have seen that actually faces up to the facts. The Christian Advocate (Chicago) does say that the Methodist Federation for Social Action has no right to speak for the Methodist Church, but further editorial comment is weak and spineless. The Michigan Christian Advocate and others go to the defense of the situation as is. I have seen two very cautious statements from two of our bishops, in which they deplore and defend. A strange silence has characterized those bishops and other leaders named in the accusations.

However, the daily press and secular publications generally are speaking, and they are of one accord. Several of the largest churches in Methodism have spoken through their official boards and they have not minced words. While most Methodist pulpits have mouthed weasel words of alibi and excuse, yet more than one pulpit has heard the challenging voice of a real Methodist prophet who has proclaimed against this terrible thing that has been done to us by a minority of our leaders.

Thus far I have not heard or read one actual denial of the facts. The line of defense is as unworthy as the cause. The Michigan Christian Advocate voiced it perfectly. Stanley High and John T. Flynn got part of their information from an "unfrocked" Presbyterian, while Flynn himself is a Roman Catholic, so reported by the Michigan Advocate. What a confession! Have we no stronger defense than that? Is the great Methodist Church, 9,000,000 strong, dependent on name calling and a resort to bigotry for a defense against the charge, proven by documentary evidence, that a group of powerful Methodist leaders have been flirting with atheistic communism? What a confession.

What matters where the information came from, if the information is true? Who cares what church John T. Flynn belongs to, if he wrote and published the truth in his book, "The Road Ahead"? That High and Flynn have published the truth is conceded. Many of the facts published by them have been published before and are not disputed. True, a few frightened apologists seek to mislead by claiming that the facts are fragmentary and that some quotations were not complete. The facts are full enough to be horrible and the quotations complete enough to convict beyond any doubt at all.

Face this: The Methodist Federation for Social Action has its office at 150 Fifth Avenue, New York, gets its mail there, has its telephone there and does business there. That's Methodist headquarters, my dear reader. Then face this fact: A Methodist bishop is president of this indefensible organization and four Methodist bishops and a dean of a Methodist school of divinity are vice presidents. Face this fact: Sixteen bishops of the Methodist Church, two heads of two of our most important boards in Methodism, numerous editors of Methodist publications, and district superintendens galore are active members of this organization, listed by the Attorney General of the United States as subversive. Face this fact: The executive secretary of this now notorious organization is appointed every year to his place of leadership by a Methodist bishop.

Then face this: "The federation rejects the method of struggle for profit as the economic basis for society, and seeks to replace it with social-economic planning to develop a society without class or group discrimination and privilege." (Taken from the masthead of Social Questions Bulletin, official organ of the Methodist Federation for Social Action. That's as near as Americans dare write the creed of communism.)

If some dense mind needs more, face the fact that the executive secretary, spokesman for the federation, recently declared that the purpose of the organization was not the "improvement of the present social order but its revolutionary abolition and replacement anew." That's Marxism.

No amount of twisting and squirming will do now. Whitewash is not enough to wash this stain away. We must either repudiate this subversive movement and soundly rebuke those who have betrayed us or we must suffer the just and merited contempt of all good Americans of whatever name and creed. This is an hour when Methodist people must awaken, arise, advance, and stand upon the walls for the protection of that which is genuine in our church and Nation. We have been betrayed.

Personally, I am grateful to Mr. High and to Mr. Flynn for having brought out the facts and presented the truth which our Methodist sentinels either failed to see or were too cowardly to announce.

I am also encouraged that many of our pastors and people have refused to swallow blindly the alibis and flabby efforts at defense of a few of our leaders, following this unsavory revelation. Unfortunate as is our plight, there is in it the possibility of great blessing if only we awaken, arise, assert ourselves, and refuse to be delivered by a little group of Socialist planners and fellow travelers.

A New Concept on Asia: Asians, Not Americans, Are Chief Losers to Russia and Communism—Filipino Advances New Suggestions

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. McDONOUGH. Mr. Speaker, Mr. Vicente Villamin, Filipino lawyer, writer and economist, has a new analysis of the situation in Asia and the role that America plays on that continent of more than 1,000,000,000 people. I hope and urge those who are interested in the subject, specially the State Department policy makers, to read his analysis, for it may be the key to a new approach to the problem that is becoming more and more involved everyday.

Mr. Villamin's thesis in his own words is as follows:

(a) The Asian peoples should be made clearly to realize that the basic issue in Asia today is not between Russian communism and American democracy, not between Russia and the United States, but rather between Russian communism and Asian nationalism, culture, religion, economic interests, and its own philosophy of life—the Asian old order; (b) that it is of infinitely less consequence for America to lose Asia, as many Americans put it, than for Asia to lose America; and (c) that in losing America, Asia would be getting Russia, with its material poverty, its ideological severity, and its comprehensive restriction of individual freedom and liberty.

Mr. Speaker, I ask leave to make Mr. Villamin's statement a part of my remarks.

The statement follows:

A NEW REALISTIC ATTITUDE TOWARD ASIA

(By Vicente Villamin)

At present, by force of circumstances, the United States policy actions in Asia may be said to be on a day-to-day basis. That is practical. That is a necessity. As long as the intent is honest and the purpose constructive, inconsistency in action is not a violation of virtue. The United States wants to help Asia, continuing a long tradition and policy. And Asia wishes that help to continue. But the Russians and the Communists have muddled up everything, misrepresented the United States and, unrealized as yet by the Asian peoples, are placing those peoples under the Communist severe regime, lorded over by the powerful and undaunted masters of the Kremlin.

There is an imperative need for a redefinition and reclarification of what the present attitude of America is and what it might be. There is no necessity for a fundamental modification of policy, for it is honest and constructive. What is desirable is a revision in the placement and intensification of emphasis.

The thesis of this paper is this: (a) The Asian peoples should be made clearly to realize that the basic issue in Asia today is not between Russian communism and American democracy, not between Russia and the United States, but, rather, between Russian communism and Asian nationalism, culture, religion, economic interests, and its own philosophy of life—the Asian old order; (b) that it is of infinitely less consequence for America to lose Asia, as many persons put it, than for Asia to lose America; and (c) that in losing America, Asia would be getting Russia, with its material poverty, its ideological severity, and its comprehensive restriction of individual freedom and liberty.

This new approach to the Asian situation requires a repositioning of the observer of the Asia-American scene from the present vantage point of the United States. There are many Americans who think and talk as though their country, instead of Asia, would be the chief loser to communism and to Russia. And that is center and circumference of the present misunderstanding of the issues that are being fought on that continent.

"We (Americans) Are Losing Asia Fast"—that is the title of an article in the Saturday Evening Post by Mr. Stewart Alsop, a writer who recently made a flying visit in Asia. He says that Asia is being lost by America to communism, which means to Russia.

One does not lose anything, tangible or intangible, unless he owns or possesses it. What is America losing in Asia since she does not own or possess it physically or ideologically? Is it Asia's friendship she is losing? Is it Asia's democracy that is being lost by the Asians themselves?

Governments in Asia may be at odds with America on certain questions, but it is safe to state that the Asian peoples are friendly and grateful to America for solid reasons. Of all the "foreign devils," referring to all Western foreigners, the American has been the least selfish and the most helpful. Those peoples have a suppressed fear of the Russians, who say "comrades" in one side of the mouth and shout "obey" in the other.

Asia never has had any democracy, the sort America has, to lose to communism. Every realist knows that basic fact. It has its own philosophy of life, individual, family and national, that is neither communistic nor democratic.

What then is Asia losing to communism? What Asia is losing to communism is its very soul—the old order, which is its very own and its most precious possession. Asia, not America, is the loser. But America, cleverly aided and abetted by Russia, is creating a delusion for herself and confusion among the Asians by seeming to be the loser. That is why many Asians place the responsibility for their ultimate salvation on America instead of on themselves, and also why America is causing so much disappointment to them today. But that is not all the harm that is being done. America is unwittingly preventing the Asians from fully realizing that it is their very soul, their old order, that they are losing to communism.

Therefore, let this be crystal clear: Russia is ousting from Asia the Asian old order rather than America, which is hardly there. Russia wants the world to think that she is driving out imperialist America from Asia for the good of Asia. And apparently America, an unknowing victim of Russian propaganda, believes that Russia is doing just that and she worries about her world mission to save democracy and about her own world security. But the plain, commonsense fact is that Russia is planning communism in Asia for her own good by suppressing its old culture, its religion, its civilization, and its time-honored way of life.

It cannot be too strongly emphasized that, largely as the result of the clash of American and Russian actions and propaganda, Asia does not yet comprehend that the issue it is facing is not Americanism against Russianism, but Russian communism against the Asian old order. When Asia comes to realize that this is the issue, it will find itself more consciously, assert its innate nationalism, and consider Russia as another foreign devil to be resisted, shunned, and rejected.

Russia's work of proselyting Asia is effective because she has a definite objective in Asia, which is to establish her authority and her system there, to have it in her political orbit and under the protection of the Russian armed forces. On the contrary, America's counsels on Asia are chaotically diverse, contradictory, and nebulous. No wonder Russia advances, while America falls back. And even American thinkers say we are losing Asia fast.

Because the real issue is befuddled, Asia does not realize clearly another tremendous fact. It is that Asia is losing America, the only foreign country that can and is willing to help it; substantially and unselfishly. Asia does not seem to know of Russia's poverty in material things and in spirit to be of help. Asia should know that Russia's plan is to help herself to the human and economic resources of Asia. When Asia loses America for Russia, it will result in the intensification of its poverty and the restriction or constriction of its liberty.

What is the logical philosophy of action for America in the present situation?

If America's influence in support of the old order is to be felt in Asia, she must make more positive disclosure of her motivations and objectives. As a part of that disclosure, America must make unequivocably clear that those motivations and objectives are radically different from Russia's, citing historical and contemporary precedents, and interpreting their respective purposes in the light of their comparative natural resources and their financial and industrial potentials. Asia will see the elemental wisdom of being with rich and liberal America than with poor, tightfisted and totalitarian Russia.

Asian governments may become communistic or "peoples'" governments because presently nationalism is defeating itself, but when the people come to know fully and clearly the mission of Russian communism, on the one hand, and the loss of American assistance and collaboration, on the other, they will present such formidable resistance to the new order, even if it be silent at least in the beginning, that the new Communist leaders of Asia will be compelled to relax their relations with the Russians and to reject both their actual and subtle domination of Asian life and affairs. That would be Asia's day of revindication and regeneration.

What the old order in Asia is differs with each country. But at bottom it is identical. It is the quintessence of thousands of years of both recorded and unrecorded history. Between it and Russian communism there is much more conflict than harmony and they are fundamentally beyond conciliation or even synchronization. They are oil and water.

In China, the old order was represented by the Chiang Kai-shek government. That government had done or did not do many things that made it unrepresentative of that order and the people lost faith in it. It is the loss of that faith, which infected even the army, that helped the Communists to win.

In Indochina, the Communists are good tacticians enough to say that they are fighting French colonialism and thus native nationalism; the old order is left dormant and beguiled. The political expedient of putting up a former royal playboy as the head of the country, when everyone knows that his main support is the French Army of 150,000 men, will inevitably be declared a failure.

In Korea, the Communists have separated themselves and created North Korea. In South Korea, the Japanese order has been expunged and under President Rhee there is a reassertion of the old order. America is directly helping that country to help herself.

In India, the old order is Indian, which was influenced at the top by British philosophy and culture. With its present political

independence and its circumspect and cautious leaders, India is a formidable bulwark against communism.

In Indonesia, the old order clings around the broad conceptions of Buddhism and Mohammedanism built on an agricultural and oceanic economy. Four hundred years of Dutch colonialism have served both to develop the country materially and to accentuate the nationalism of the Indonesians to the point that many of the present leaders of the Indonesian Republic fought against the Dutch in the last war on the side of the Japanese, for whom they do not have much love. Indonesian nationalism, the efflorescence of the old order, will beat communism hands down.

In the Philippines, American democracy has taken deep root and communism is being fought according to the democratic rules—enlightment instead of suppression. The preservation and strengthening of the Philippine democracy will serve to make it a visible model for all the peoples of Asia to emulate.

In the face of militant communism, fighting down discredited nationalism and old-fashioned colonialism, and encountering disorganization and disintegration, Asia seems fated to succumb and be annexed to Russia's ideological dominion. If that happens it would be but a transient condition, for when the peoples of Asia find out that they have lost America, lost their age-old liberties, and have acquired Russia, its poverty, its severity, and its regimentation, they will rally to the old order and, with their leaders, the wiser for the experience, they will expunge communism from their life and tell Russia to quit Asia for good and all.

America, either voluntarily or upon the urging, either expressed or implied, of Asia, could help powerfully the Asian peoples to preserve their old order in an atmosphere of the present-day concepts of liberty, opportunity, and independence.

The Legion G-Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following short editorial that appeared in the Boston Post, March 29, 1950:

THE LEGION G-DAY

The American Legion and its national chaplain, the Reverend Edward J. Carney, OSA, of Lawrence, are to be congratulated for the establishment of G-day—a day to be set aside during the week of April 16 for observance as God's Day. The nearly 17,500 Legion posts and nearly 13,500 women's auxiliary units, located in virtually every village and hamlet in the Nation, should prove a powerful factor in turning the attention of peoples of all faith and creeds back to God.

This nonsectarian observance, which has already won the endorsement and approval of leaders of all faiths, can be a tremendous force in every community, large and small, and should show the American people that the Legion's motto, For God and Country," really means something to the members of the world's biggest and greatest association of war veterans. The Legion should have full public support in making this splendid observance a great success.

Congress Due To End 25-Year Back-Pay Row

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the New York World-Telegram and Sun of Monday, March 27, 1950, which gives the background of a bill, H. R. 7767, now before the Judiciary Committee, to provide for the payment to Federal Customs employees of extra compensation for services performed on Sundays and Federal holidays after September 29, 1931:

CONGRESS DUE TO END 25-YEAR BACK-PAY ROW—BILL WOULD MEET CUSTOMS CLAIMS

(By Roger Stuart)

WASHINGTON, March 27.—A controversy which started a quarter of a century ago over back-pay claims of Federal customs inspectors may be settled soon by congressional action. A measure spelling out rights to overtime pay of inspectional employees has been drafted by the National Customs Service Association and introduced by Representative JOHN D. DINGELL, Democrat, Michigan.

There are 2,530 customs inspectors at various United States ports. Approximately a fourth of these are stationed in New York. John F. Doyle, of the customs service's liquidation division in New York City, is vice president of the group which drafted the proposed legislation.

LONG, UPHILL FIGHT

Alfred F. Beiter, national president of the association, asserted today that congressional action to provide for back-pay claims is long overdue. Officers and employees of the customs service, he declared, "Have tried for years to have their rights to amounts earned under extra compensation statutes fairly and fully recognized by the administrative departments."

The controversy started early in the 1920's, Mr. Beiter explained. It continued until the middle of the 1930's, when employees took a test case to court. It dragged for several years, but a favorable decision was finally handed down by the Supreme Court in 1944.

DID NOT APPLY TO ALL

Under that decision, according to Mr. Beiter, certain of the employees received payment back to September 1, 1931. But when the employees attempted to persuade the administrative department to apply the Supreme Court decision to other cases where the same type of services was performed, the department refused and still further litigation was necessary.

The customs inspectors won another favorable Court of Claims decision in 1946. Nevertheless, Mr. Beiter said, the administrative departments "have continued since then to refuse to recognize certain aspects of the judicial decisions in settling similar claims, and the matter is still not satisfactorily settled. It is the objective of this bill effectively to dispose of that long-standing problem."

The Dingell bill provides that if any person to whom extra compensation may be payable has died or become legally incapacitated, the money will be paid to his legal representative.

WOULD GET UP SPECIAL UNIT

The measure would lead to creation of a special committee to determine the amounts of money to be paid to any employee. One member would be appointed by the Secretary of the Treasury, another by the Comptroller General and the third, an employee representative, by the chairman of the Civil Service Commission.

The bill has been referred to the House Post Office and Civil Service Committee for consideration. Representative DINGELL said he would press for early action.

Strengthening the Army of Liberty

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an article by Mr. Harry H. Schlacht which appeared in the Hearst newspapers of March 28, 1950:

STRENGTHENING THE ARM OF LIBERTY

(By Harry H. Schlacht)

"On my honor, I will do my best to do my duty to God and my country."

We salute today the Boy Scouts of America on the happy completion of four decades of distinguished service to American boyhood. The Boy Scouts of America have become part of the very heart of our Nation. The group is an American institution. It is representative of our Nation. It is nonsectarian. It is adapted to the boys' needs. It teaches our lads to practice the fundamentals of good citizenship, of self-reliance, of fair play for others, of the love of God.

The boys are trained in the Scout spirit, living the ideals of Scouting, living the ideals of team work in the homes and church, in the schools and community.

They are taught to cherish loyal and devout adherence to the principles of Americanism. They are taught to respect and support their religious institutions, for a republic cannot live without the spiritual strength of God. They are taught that democracy is America and that America is democracy. The boys live it. The boys practice it.

The Boy Scouts of America have initiated their declaration of purpose in 1950 to strengthen the arm of liberty. They believe that true liberty is rooted in a belief in God and in the brotherhood of man. They believe that love of country is born and fostered through the spirit of service.

The Boy Scouts of America in this fortieth anniversary crusade year are pledged to strengthen the arm of liberty by strengthening themselves through the practice of the Scout Oath "To keep myself physically strong, mentally awake, and morally straight."

They pledge to strengthen community and Nation through civic good deeds, through faithful performance of religious obligations, through contributions to good citizenship in terms of self-reliance and self-discipline.

This modern crusade for strong Americanism launched by the Boy Scouts of America is America's answer to all the modern isms of dictators.

This epic crusade is a bugle call and a challenge to every American.

And so we say on this happy birthday, a hearty toast from coast to coast to the Boy Scouts of America.

Sustained by faith in America, sustained by faith in God, may you help achieve the objective of mankind, peace—not by force, but with freedom.

Our greatest weapon is our example.

Our greatest strength is our devotion to God and country.

Federal Spending

EXTENSION OF REMARKS
OF
HON. DEAN P. TAYLOR
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. TAYLOR. Mr. Speaker, the people in my congressional district are becoming very concerned because of this continuous spending of their money, and they are alarmed over the growing magnitude of the national debt. They want to know for whom and for what their money is being spent and what brakes, if any, the Congress is applying. It is hard for them to keep up with all the programs of the Fair Deal and the New Deal.

For instance, let us examine just one program. There is confusion in the minds of people in my district over the so-called price support program—some believing that the farmers in my district receive benefits under the CCC program—some believing that the program is paying for itself. Nothing could be further from the truth. Yesterday, Ralph S. Trigg, the head of the Commodity Credit Corporation, the Corporation that runs the price program, told a congressional committee that on February 28 this Government had invested more than $4,000,000,000 in farm-price supports. We are to be confronted soon with a request of the Secretary of Agriculture for another $2,000,000,000 for the same program. From January 1 to February 28 the amount invested in this price program increased $400,000,000 and, in simple arithmetic, that means that the Government has been spending on this program about $10,000,000 for every business day. If these programs were a success, perhaps no one could complain but, in potatoes alone, the losses to the taxpayer run into millions and millions of dollars. Just to pick a few of the items in addition to corn, cotton, and wheat which amount to about a billion dollars each, we find listed $14,000,000 in tobacco; $92,000,000 in beans; $23,000,000 in peanuts; $100,000,000 in dried eggs; $1,000,000 in raisins, and so on and so on. The cost of carrying charges—storage, insurance, and so forth—for these items is $25,000 per hour or $400 per minute. Does this look like the program pays for itself? Incidentally, the farmers in my district do not raise tobacco and cotton and the taxes they pay are not just peanuts.

How silly can these governmental agencies be? Well, at the very time when we had stored millions and millions of dollars' worth of surplus food, we find an agency of the United States Government, to wit: the Quartermaster General, advertising in a newspaper in Poughkeepsie, N. Y., for bids on potatoes and eggs for the use of the armed services. Small wonder that the people have become obstinate about this spending program.

As long as we are stuck with the program, we should try to do a few things to alleviate its impact upon the taxpayers' pocketbooks. I have introduced a bill which would compel any agency of the United States Government to first receive a certificate from the Secretary of Agriculture or the CCC that there are no surplus eggs or potatoes available before bids can be received by any of these agencies for the purchase of eggs or potatoes. Why buy something we alreay have paid for and is going to waste? I hope that the Committee on Agriculture and the Members of the House will support this bill. If the CCC authorities who are entrusted with the power of disposing of surplus commodities lack sufficient business acumen to dispose of these commodities in a businesslike way, then the Congress should take the necessary action to force this agency to do so.

The Burleson amendment should be adopted. Under it we could use spoiling surplus commodities for hard dollars. Why give money when we have in abundance the very things these ECA countries could buy elsewhere—with American dollars?

One other disposition of surplus is feasible: the grain surpluses which are hoarded by the CCC should be distributed to our poultrymen who badly need these grains at a fair price, thereby assuring the Government of at least some return. These are only three suggestions to ease the burden. There are many, many others.

Mr. Speaker, the time has come when the hard-working people who have to pay for all of these "shots" are in revolt against the ruthless expenditure of their money. In good conscience let us reassess our position and, as representatives of the American people, let us try to do a decent job for them. The bill under consideration now on the floor of the House, and the appropriations bill soon to come, provide us all with a golden opportunity to do just that.

Title III of the ECA Bill

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. JAVITS. Mr. Speaker, I append two telegrams showing the support of two of the great churches of our country for technical assistance to underdeveloped areas. These are eloquent and self-explanatory support for this measure:

NEW YORK, N. Y., *March 30, 1950.*

JACOB K. JAVITS,
House Office Building:

The Council for Social Action of the Congregational Christian Churches hopes you will give strong support to point-4 legislation now being considered. We consider leadership of United States of utmost importance in this matter. We urge also that provision be made to give such technical assistance through United Nations so far as possible.

RAY GIBBONS,
Director.
HERMAN F. REISSIG,
International Relations, Secretary, Council for Social Action.

NEW YORK, N. Y., *March 30, 1950.*

Hon. JACOB K. JAVITS:

Urge strong support for legislation which will enable our country to play leading role in expanded program of technical assistance under auspices of United Nations Federal Council of Churches on record believing point-4 program of genuinely international character should be in forefront of American bipartisan foreign policy.

WILLIAM SCARLETT,
Episcopal of Missouri, Chairman, Federal Council, Department International Justice and Good Will.

The Brannan Plan

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD I include herewith a copy of a speech which I recently made over the radio on the Brannan farm plan:

It is now almost a year since the Brannan farm plan was presented to the public. During that time it has been widely discussed. In fact, during a period which has been notable for the happening of many world-shaking events and when some history-making sensation occurs almost every day, the Brannan farm program has continued to be a subject of great interest. This interest is due in part at least to two things: First, the plan's unquestionable political appeal and, second, its questionable economic soundness.

The secret of its political appeal is that it offers something to everybody. From that standpoint it's a stroke of political genius. On the one hand its advocates say to the farmers, "The United States Government is going to guarantee you an income at high wartime levels." And to consumers they say, "We are going to give you low-priced food." That comes mighty close to being utopia. It sounds too good to be true. And unfortunately it is, because when you bring the plan down from the stratosphere and look it over to see what makes it tick you find that a lot of ugly, unutopian things show up.

You find that this isn't legerdemain after all and that if farmers are to get high incomes and consumers are to have cheap food, someone is going to have to pay a bill, and a pretty big bill it's going to be if the plan is carried out on the scale envisioned by its proponents. How big? Secretary Brannan says he doesn't know. Up to date no advocate of the plan has come along with any

figures. They don't like to talk about that part of it.

A good many people have tried to make an estimate. The Department of Agricultural Economics of the University of Illinois has said: "It could easily be as much as the total Federal budget before the war." The same department, taking hogs as an illustration, has estimated that hog supports alone might cost $700,000,000 annually and hogs represent only one-seventh to one-eighth of the output of our farms. The American Farm Bureau Federation, after a study of the cost of the plan as to milk alone, estimated it would amount to $2,480,000,000 annually.

Other estimates as to the cost of the plan as proposed have ranged from $2,000,000,000 to $10,000,000,000 per year. Some of the advocates of the plan have compared it to the British food subsidy program, the cost of which has increased every year, amounting in 1948 to the colossal sum of $2,272,000,000. Our population is three times as large as that of Britain so on the basis of population alone the cost of a similar plan here could run to almost $7,000,000,000. But that doesn't take into account that the British are on an austere diet. If they consumed per capita the food we do in this country their cost would undoubtedly be higher and so we are safe in assuming, I think, that the plan here would cost more than three times as much as the British plan is costing.

To make the plan work someone is going to have to dig up billions of dollars because there's no other way to give the farmer high income and the consumer low prices. And where will the money come from? Well, from Uncle Sam—and the only money Uncle Sam has is what you and I give him. That means that every consumer and every farmer is going to have to dig down in his pockets and fork over the money to carry out this gigantic spending operation, and when you count taxes this cheap food may be pretty high-priced food.

But suppose we don't dig up the dollars? Suppose Congress says that with a five-and-a-half-billion-dollar deficit already existing, we just can't appropriate the additional billions which will be necessary to enable Uncle Sam to pay a part of everybody's grocery bill.

What will happen then? Well, initially at least the farmer will be left holding the sack. He will have done his part. He will have produced all that the Secretary of Agriculture asked him to produce. By reason of this heavy production his prices will have declined just as they always do in a time of heavy production when there are no price supports. The consumer will be getting his cheap food but the Secretary will have to tell the farmer. "It's too bad but Congress didn't appropriate the money." Maybe consumers will think that is a good thing, but if they do they will be taking a very short-sighted view because low farm prices and bankrupt farmers in the end mean depression and hard times for everyone. At least that's been the case in the past.

So the Secretary will have to look around for some other means to make good his promise of high incomes for farmers. What can he do? Well, for one thing he can start limiting and controlling the production of farm products on the theory that scarcity will bring high prices. To do that in any effective way will in all probability result in the ultimate nationalization of agriculture. We'll have in this country exactly the same thing they have in England where the Government tells every farmer what he must produce and how much he must produce and if he doesn't carry out the orders in that respect he loses the use of his farm and it is turned over to someone else to operate.

If this sounds farfetched to anyone I suggest they write their Congressman and get a copy of the bill S. 1971 which puts the Brannan plan into legislative form. This bill was written in the Department of Agriculture and sent to Congress for introduction. It was introduced in the Senate on May 31, 1949. It is 86 pages long. A part of it is a restatement of some of the laws already on the books but much of it is new. Fifteen pages of the 86 relate to penalties upon farmers and there are more pages with penalties for those who deal in agricultural products. I think most farmers would be interested in reading the provisions of section 401 (b) on page 79 of the bill. This section provides that all farmers must keep such books and records and make such reports as may be required by the Secretary; and that if they fail to keep these reports and records they will be deemed guilty of a misdemeanor and upon conviction fined not more than $500. And if they make a false report of record they shall be guilty of a misdemeanor and upon conviction fined not more than $1,000 and imprisoned for not more than a year. My prediction is that if this bill ever becomes a law we'll either have to have more farm bookkeepers or bigger jails.

We've never had any experience here with an absolute Government-controlled agriculture so we don't know exactly how it will work out but if the history of other countries is any criterion we know that such control will eventually mean less production and more inefficient production. It will mean higher food prices. So in the end the Brannan plan will be just as much of a gold brick for the consumer who has been led to think he will get cheap food as it is for the farmer who wakes up some morning and finds that he has lost control of this farm. Is all this an exaggeration? Not in the least, if the Brannan plan is actually carried out to the extent necessary for its proponents to make good on the promises which they have been making to both producers and consumers.

I think it should be said in justice to the farmers of this country that the Brannan plan did not originate with them. They were not consulted. They had no part in formulating it. Rather it originated with the political leaders of organized labor. It is frankly an effort on their part to form a political coalition between farmers and organized labor. They say in effect to farmers, "Help us elect Members to Congress who will repeal the Taft-Hartley law and we'll help you get the Brannan plan." The labor politicians can't lose on that one. If successful they get repeal of Taft-Hartley toward which they've been moving heaven and earth, and cheap food temporarily. And I know of no way farmers can win on it because the ultimate result must inevitably be lower farm prices, or in the alternative Government control of all agricultural production and ultimate nationalization of the industry. Politically what will happen is what has always happened when a farmer-labor coalition has been attempted. The labor politicians take over the organization and the farmer is left out in the cold.

Now let me make it clear that what I have been discussing is the political Brannan plan of something for everybody. That's the basis on which its proponents are trying to sell it and the basis on which it must be judged. I don't think the farmers of this country will fall for this political Brannan plan. They are too smart to be caught that way. The wonder is that anyone who knows farmers would expect them to be for it. I am afraid that the labor politicians who concocted this plan have gotten their idea of a farmer from the funny papers and are laboring under the delusion that he will buy the Brooklyn bridge if a sufficiently clever line of salestalk is used.

A lot of farmers are wondering why, if the Brannan plan is such a good thing for farmers, it wouldn't be just as good for the manufacturer and the workingman. Why not apply it to the production of automobiles or farm machinery or much-needed housing? Everybody knows the prices of those things should come down. This could be done by reducing wages and cutting other costs. No one would lose. Workers would get a subsidy out of the Treasury to make up the loss of wages. Employers would be given Government payments to make up their losses. And the public would get cheap automobiles and farm machinery and housing and maybe a lot of other things. Something for everybody. Isn't it lovely?

Insurance Against Mass Hysteria

EXTENSION OF REMARKS
OF

HON. RAYMOND W. KARST

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mr. KARST. Mr. Speaker, on Friday, March 17, the Union Labor Advocate of St. Louis, Mo., a newspaper dedicated to the upholding of the principles of the American Federation of Labor, carried a story pointing out the useful purpose which transit radio can serve in these unsettled times.

It is heartening, indeed, Mr. Speaker, to learn in these times of uncertainty that organized labor recognizes the value of civil defense and is appreciative of any and all elements in connection therewith which might save the lives of thousands in the event of an attack upon our cities.

Most of us can recall the chaos that was caused in this country in the late thirties by what was intended to be an entertaining broadcast by an imaginary invasion by men from Mars upon New York City. There was at that time no threat of war facing this Nation. There were no stories being circulated at that time even of flying saucers. Yet the mass hysteria caused by that supposedly entertaining radio broadcast startled this Nation and made us the laughing stock of the world.

Today even the most optimistic authorities admit that we must expect, in the event of war, attacks upon our centers of population. We as a democratic nation must also assume that such attacks will be our first knowledge that we are at war.

It has been said recently by members of the Senate that mass hysteria could do more damage to America's war-making potential than the bombs in an atomic attack on this country.

Our communications, particularly all elements of broadcasting, mobilized to meet such an emergency constitutes our best defense against the chain of fear which might result in mass hysteria, for only through communications can people be warned and fears dispelled.

Again may I say that it is encouraging to note that organized labor has, according to the story which I have mentioned

in the Union Labor Advocate, published in my city, recognized the value of transit radio as an element of defense.

Under leave to extend my remarks, I include the story to which I have referred:

PUBLIC LIKES TRANSIT RADIO, JACOBS FINDS—POLL AMONG RIDERS OF STREETCARS, BUSSES, PROVES IT, UNION CHIEF SAYS

The present newspaper uproar over the merits of transit radio on streetcars and busses is not only rather silly, but not in accord with the opinion and feelings of the riding public say several union officers who were interviewed by an Advocate reporter.

Union memberships in sampling polls said they enjoyed music while they rode, these labor leaders said. The innovation is new to St. Louis and a few complaining letters have appeared in the daily newspapers.

It is evident, however, that the other side, while the vast majority of riders, has been less vocal.

One rider after another, interviewed, said they enjoyed the transit radio programs, music, news, weather reports, etc., as relaxation after a hard grind on the job. Objectors were few.

Among the prominent union officers making such checks of bus and streetcar riders was Business Manager Frank W. Jacobs, of AFL Electrical Workers, Local No. 1.

Other officers and members of local No. 1 took part in the opinion survey, with results already noted.

Besides a desire to ascertain public opinion factually, local No. 1 has an additional interest, since members of that union install and service radio in busses and streetcars and also are employed by radio stations.

Many of the objectors could be classed as cranks and confirmed "crabs," Jacobs told the Advocate, after compiling results of the check-up.

In these unsettled times, Jacobs points out, transit radio can serve a decidedly useful purpose by discounting possible false rumors and advising the public promptly of major happenings, advance knowledge of which could put the people on their guard.

Jacobs characterized the scattered attacks on transit radio as a tempest in a teapot—a cracked pot, at that.

Reorganization Plans of 1950

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, April 3 (legislative day of Wednesday, March 29), 1950

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD memorandums compiled by the staff of the Senate Committee on Expenditures in the Executive Departments on the 21 reorganization plans submitted to the Congress by the President on March 13, 1950. Each of the 21 plans is covered in detail as to purpose, background, their relation to the Hoover Commission reports, and possible issues that may be involved.

I submitted for the RECORD on Tuesday, March 21, 1950, as appears at pages 3699–3702, a brief summation of these plans in relation to their conformity with and deviation from the Hoover Commission recommendations.

Plans Nos. 1 to 6 are covered in a single memorandum, all of them providing for the centralization of functions in the Departments affected—Treasury, Justice, Interior, Agriculture, Commerce, and Labor. A special memorandum on plan No. 1, on which resolutions of disapproval—Senate Resolutions 246 and 247—have been filed, will be prepared and submitted to the Senate prior to beginning of hearings, on April 11.

The general provisions of plans 7 to 13, on regulatory agencies, are also covered by a single memorandum, relating to the vesting of administrative functions in the chairman, appointment of chairman by the President, and so forth. A separate memorandum covers details of plan No. 12, scheduled for hearings before the committee beginning Tuesday, April 4.

Separate memorandums are submitted on plans 14 to 21, inclusive.

These memorandums have been prepared with a view to assisting Senators in answering inquiries relating to the plans, and to provide them with a concise summation as to the contents and intent of each of the reorganization plans.

There being no objection, the memorandums were ordered to be printed in the RECORD, as follows:

SENATE COMMITTEE ON EXPENDITURES IN THE EXECUTIVE DEPARTMENTS,
March 25, 1950.

[Staff Memorandum No. 81–2–40]

REORGANIZATION PLANS 1–6 OF 1950: CENTRALIZATION OF FUNCTIONS IN (1) TREASURY, (2) JUSTICE, (3) INTERIOR, (4) AGRICULTURE, (5) COMMERCE, AND (6) LABOR DEPARTMENTS

On March 13, 1950, the President transmitted various messages to Congress for reorganization of Government agencies, under authority of the Reorganization Act of 1949: (a) A general message discussing 21 proposed individual plans as a whole; (b) another general message on the first 13 of the 21 plans; and (c) 21 messages presenting individual plans. His first general message describes plans 1 to 13 as designed "to establish clear and direct lines of authority and responsibility for the management of the executive branch" which is urged in general terms in Hoover Commission Report No. 1 on general management, and in specific terms in Commission reports on individual departments.

The second general message discusses more fully the centralization in six department heads of the functions now scattered among subordinate officials (the other three Cabinet Departments of State, Defense, and Post Office were acted on last year). It emphasizes a "principal finding of the Hoover Commission (that) the first and essential step in the search for economy and efficiency in the executive branch of the Government is to correct the present diffusion of authority and confusion of responsibility. * * * Without this action all other steps to improve organization are doomed to failure. * * * The heads of departments must hold full responsibility for the conduct of their departments (and) department heads must have adequate staff assistance. * * *"

The second message then states that the above Hoover Commission finding is developed in plans 1–6 through provision of "a clear line of responsibility and authority from the President through the department heads down to the lowest level of operation in each department * * * Each department head (is provided an Administrative Assistant Secretary) to assist him in the managerial side of his responsibilities (because) specific improvements in management can be made only through continuous attention to the effective performance of such aids to management as budgeting, accounting, personnel, and management analysis. Appointment of these new civil service officials by the department heads with the approval of the President will tend to establish a career pattern for these positions extending across departmental lines. (Additional Assistant Secretaries) will provide more adequate staff assistance in supervising and directing the policies and programs."

Resolutions of disapproval of plan No. 1 were introduced in the Senate (S. Res. 246 and 247) for Senators ROBERTSON and CAPEHART, on March 31, 1950, and hearings are scheduled before the committee beginning on Tuesday, April 11.

Other provisions: Plans 1–6 authorize each Secretary to delegate functions, to transfer records, property, personnel, and unexpended balances of appropriation, and to appoint an administrative assistant secretary under the classified civil service, with the approval of the President, at $14,000 per year. In addition, the President is authorized to appoint assistant secretaries, subject to confirmation by the Senate, at the usual salary, as follows: One in Interior, in addition to two now authorized; two in Agriculture, in addition to one now in office (only one addition is urged in the Hoover Report on the Department of Agriculture); and one in Justice, who will replace an assistant solicitor general to be abolished, and who will supplement the six present assistant attorneys general and one solicitor general. (A deputy attorney general is also created in lieu of the present assistant attorney general). No addition is proposed to the present three assistant secretaries in the Labor Department, and to the two each in Commerce and Treasury Departments. (Hoover Task Force E on Departmental Management recommends at least three assistant secretaries in even the smallest department.)

ISSUES INVOLVED

The limited opposition to plans 1 to 6 thus far indicated follows:

Plan 1, Treasury Department: The American Banker, banking newspaper, is opposing centralization of Treasury functions because it would further detract from the prestige and authority of the self-supporting Office of the Comptroller of the Currency. This old office supervises and controls national banks, especially through regular examinations, meets with the FDIC, and reports to Congress. The newspaper states that few bankers will question the present Secretary of the Treasury * * * since he was, at one time, a national bank examiner (but) future Secretaries of the Treasury might, in effect, virtually end the office's time-honored functions, and adds that the merger of Treasury and Comptroller legal divisions under Mr. Morgenthau's regime in effect, ended the assumed independence of the Comptroller.

A total of 300 communications, from 37 States, have been received by the committee to date, all except one being in opposition to the plan.

Plan 2, Justice: There has been some oral objection voiced to the proposed centralization of powers in the Attorney General as weakening the status of the FBI. Actually the plan would increase his present powers in but small degree.

Plan 6, Labor: This plan would centralize in the Secretary all functions throughout the Department of Labor. It was included in the original 1947 proposal to return the United

States Employment Service to the Department of Labor, but was dropped before that return was authorized after two rejections by Congress. The present limited plan again raises the question of the propriety of a head of a Labor Department (which, by organic act of 1913, is dedicated to fostering primarily the welfare of the wage earner) taking over regional determinations under the Fair Labor Standards Act relative to wages and hours, now independently administered by the Administrator of the combined Wage and Hour and Public Contracts Divisions. In practice the same Division personnel, both departmental and field, takes care of wage, hours, safety, and other requirements of the Public Contracts Act, and the child-labor provisions of the Fair Labor Standards Act, although the Secretary of Labor has ultimate authority.

The National Lumber Manufacturers Association has submitted a memorandum urging rejection of Plan 6 on the grounds that (a) it was a segment of the larger related rejections by Congress already mentioned; (b) it would improperly subject the above Administrator to a Secretary charged by statute with partisan labor interests; (c) it would be unthinkable to place the present particularly partisan Secretary in direct punitive power over practically all employees, and (d) not even the most fair-minded Secretary should be asked to resolve the basic conflict which exists.

With respect to all six plans, it is to be expected that objections will frequently be voiced over any disturbance of the status quo of subordinate officials. The basic question pertinent to each plan is whether power should be centralized in the responsible department head or be scattered among his subordinates.

HERMAN C. LOEFFLER,
Professional Staff Member.

[Staff Memorandum No. 81–2–35]

REORGANIZATION PLANS NOS. 7–13 OF 1950 RELATING TO REGULATORY COMMISSIONS

INTRODUCTION

The major purpose of Reorganization Plans 7–13 of 1950 is to vest all administrative responsibility for day-to-day operations of the Government's regulatory commissions in each Commission chairman.

This is accomplished by (1) transferring (subject to certain limitations hereafter defined) of all executive functions to the Commission Chairman and (2) authorizing the Chairman to delegate these functions to officials, employees, and staff units of the Commission as he deems appropriate.

Such action is in accord with recommendations of the Hoover Commission, not only in its first report on general management of the executive branch (recommendation 14, "Heads of departments must have full responsibility for conduct of their departments"; recommendation 18, "Each department head should receive from Congress administrative authority to organize his department"; recommendation 20, "The department head should be given authority to determine the organization within his department"); but more specifically in its report on regulatory commissions (recommendation 1, "We recommend that all administrative responsibility be vested in the Chairman of the Commission"; and recommendation 6, "That the statutes be amended to permit commissions to delegate routine * * * work to members of (their) staffs.")

Elsewhere the Commission observed: "Purely executive duties * * * have been imposed upon these commissions with the result that these duties have sometimes been performed badly"; and, "Administration by a plural executive is universally regarded as inefficient. This has proved true * * * with these commissions."

ANALYSIS OF REORGANIZATION PLANS 7–13 OF 1950

Provisions applicable to all regulatory agencies concerned

Plans 7–13 transfer functions relating to (1) appointment and supervision of personnel; (2) distribution of business among personnel or administrative units; and (3) use and expenditure of funds, subject to limitations noted, to the Chairmen of the following regulatory bodies: Interstate Commerce Commission, Federal Trade Commission, Federal Power Commission, Securities and Exchange Commission, Federal Communications Commission, National Labor Relations Board, Civil Aeronautics Board.

Limitations: The Chairman shall be governed by general policies of the Commission authorized by law; appointment by Chairman of heads of administrative units shall be subject to Commission approval; full time, regularly employed personnel in Commissioners' offices (other than Chairman's) are exempted from plan; budget estimate revision and distribution of appropriated funds are reserved to the Commission.

The plans also authorize the Chairman of the affected regulatory Commissions to authorize the performance by any officer, employee or administrative unit under his jurisdiction of any functions transferred to him under provisions of the plans.

Provisions applicable exclusively to individual agencies

Plan No. 7 (ICC) provides specifically that director of locomotive inspection and two assistant directors shall perform their functions subject to direction of Chairman.

Plans Nos. 7 (ICC), 8 (FTC), 9 (FPC), and 10 (SEC), transfer the functions of choosing a chairman from the Commissions to the President. The Commission made no comment on this proposal, but the task force report made specific recommendations to this effect. (Already provided by statute for FCC, NLRB, and CAB.)

Plan No. 12 (NLRB) provides specifically for transfer of functions of general counsel to Chairman, or to NLRB. Abolishes the general counsel.[1]

CONCLUSION

Firm resistance from many quarters has developed to Reorganization Plan No. 12 which would abolish the general counsel of the National Labor Relations Board.

The House Committee on Expenditures in the Executive Departments on March 23, 1950, rejected House Resolution 516 (HOFFMAN of Michigan) to disapprove Reorganization Plan No. 12, reporting it unfavorably by a vote of 18 to 7, with four Members reserving the right to support the resolution on the floor. The Senate Committee on Expenditures in the Executive Departments in the Executive Departments will hold hearings on a resolution of disapproval introduced by Senator TAFT on April 3, beginning on Tuesday, April 4.

The statutory background of the general counsel, issues involved in the current dispute between the National Labor Relations Board and the general counsel over the latter's independence from the Board, and arguments relating to his retention under existing statutes and his abolishment under legislation pending are contained in Staff Memorandum No. 81–2–33, March 20, 1950.

Some opposition has been previously expressed relating to the vesting of all administrative responsibility in the respective Commission chairmen.

CAB considered such action impractical in its report on the Hoover Commission's recommendations (S. Rept. 1153, p. 261). FPC disagreed with the recommendation (and also the task-force recommendation that its chairman be appointed by the President) for fear "our other members would be subordinated to the chairman," and that the proposal would enable the chairman "to exercise dominant authority in respect to policy matters" (S. Rept. 1158, p. 279).

It is understood, however, that these objections would not necessarily apply to Reorganization Plans Nos. 7 to 13, since the plans are not as extensive in coverage as proposed in the legislation pending before the Congress. The Bureau of the Budget has informed the staff that the plans were cleared with the Commissions before presentation to the Congress.

[Staff Memorandum No. 81–2–33]

REORGANIZATION PLAN NO. 12 OF 1950, TO REORGANIZE THE NATIONAL LABOR RELATIONS BOARD

PROVISIONS

Section 1 transfers to NLRB Chairman executive-administrative functions of the Board and of the general counsel, including: (a) appointment and supervision of personnel, (b) distribution of business among personnel and administrative units, and (c) use of expenditure of funds; subject to following limitations:

(A) The Chairman shall be governed by major policies, regulatory decisions, findings, and determinations of the Board as authorized by law;

(B) The appointment by the Chairman of the heads of the major administrative units under the jurisdiction of the Board shall be subject to approval of the Board;

(C) Full time, regularly employed personnel in the immediate offices of members of the Board other than the Chairman are exempted from provisions of the reorganization plan;

(D) The Board's functions relating to revising budget estimates and determining distribution of appropriated funds according to major programs are reserved to the Board.

Section 2 authorizes the Chairman to delegate to any officer, employee, or administrative unit of NLRB any function transferred to him by section 1.

Section 3 transfers all functions of general counsel not transferred by section 1 to the board. Abolishes office of the general counsel.

STATUTORY BACKGROUND OF THE GENERAL COUNSEL

Labor-Management Relations Act, 1947

The office of the general counsel of the NLRB was established by section 3 (d) of the Labor-Management Relations Act of 1947 (Taft-Hartley Act) as amended, Public Law 101, Eightieth Congress, first session (29 U. S. C. 153 (d). Its provisions follows:

"SEC. 3 (d). There shall be a general counsel of the Board who shall be appointed by the President, by and with the advice and consent of the Senate, for a term of 4 years. The general counsel of the Board shall exercise general supervision over all attorneys employed by the Board (other than trial examiners and legal assistants to Board members) and over the officers and employees in the regional offices. He shall have final authority, on behalf of the Board, in respect of the investigation of charges and issuance

[1] In its final report on Regulatory Commissions the Hoover Commission made no recommendations exclusively directed to either the National Labor Relations Board or its general counsel. (See Staff Memorandum 81–2–33 on NLRB, March 20, 1950.)

of complaints under section 10, and in respect of the prosecution of such complaints before the Board, and shall have such other duties as the Board may prescribe or as may be provided by law."

Senate and House managers of the conference upon H. R. 3020 which became Public Law 101 of the Eightieth Congress expressed their intent in establishing the general counsel in the following language of the conference report: [1]

Conference report on Labor-Management Relations Act of 1947

"The conference agreement does not make provision for an independent agency to exercise the investigating and prosecuting functions under the act, but does provide that there shall be a general counsel of the Board, who is to be appointed by the President, by and with the advice and consent of the Senate, for a term of 4 years.

"The general counsel is to have general supervision and direction of all attorneys employed by the Board (excluding the trial examiners and the legal assistants to the individual members of the Board), and of all the officers and employees in the Board's regional offices, and is to have the final authority to act in the name of, but independently of any direction, control, or review by, the Board in respect of the investigation of charges and the issuance of complaints of unfair labor practices, and in respect of the prosecution of such complaints before the Board. He is to have, in addition, such other duties as the Board may prescribe or as may be provided by law. By this provision responsibility for what takes place in the Board's regional offices is centralized in one individual, who is ultimately responsible to the President and Congress.

"The House bill, in the section providing for the Administrator, provided that the regional directors and the chief regional attorneys were to be appointed by the President with the advice and consent of the Senate. It was believed that better administration will result in having responsibility lodged in one person rather than having it diffused through numerous regional directors and regional attorneys, and the conference agreement omits this provision.

"Section 4 of the conference agreement provides that each member of the Board and the general counsel of the Board shall receive a salary at the rate of $12,000 per annum. This section also provides that the Board may not employ any attorneys for the purpose of reviewing transcripts of hearings or preparing drafts of opinions, with the exception that any attorney employed for assignment as a legal assistant to any Board member may, for such member, review transcripts and prepare such drafts. There was a provision in the House bill and also in the Senate amendment having the same effect. This section of the conference agreement also provides that no trial examiner's report can be reviewed either before or after its publication by any person other than a member of the Board or his legal assistant, and in addition trial examiners are prohibited from advising or consulting with the Board with respect to exceptions taken to their findings, rulings, or recommendations. A similar provision was contained in the Senate amendment, but there was no such provision in the House bill. The combination of the provisions dealing with the authority of the general counsel, the provision abolishing the Board's review division, and the provisions relating to the trial examiners and their reports effectively limits the Board to the performance of quasi-judicial functions."

National Labor Relations Act of 1949

S. 249, the National Labor Relations Act of 1949 (81st Cong., 1st sess.) as reported would have repealed the Labor-Management Relations Act of 1947 (Taft-Hartley Act) and reenacted with minor changes the National Labor Relations Act of 1935 (the Wagner Act), thus abolishing the office of general counsel of the NLRB. A substitute for this act by Senator TAFT et al., which passed the Senate June 30, 1949, reenacted major provisions of the Taft-Hartley Act with numerous important changes, one of which was abolition of the general counsel.

Report of Senate Committee on Labor and Public Welfare on S. 249

In its report on S. 249 (S. Rept. 99, 81st Cong., 1st sess.) the Senate Committee on Labor and Public Welfare declared that "the broad powers of prosecution and administration which the act (the Labor-Management Relations Act of 1947) concentrates in the new office of general counsel, plus additional powers delegated to that office by Board (NLRB) members, make the general counsel a virtual dictator in the administration of the law."

Other pertinent comments upon the general counsel by the committee (pp. 39–40, S. Rept. 99) follow:

"The general counsel has unlimited discretion, 'on behalf of the Board,' over the investigation of charges and the issuance of complaints of unfair labor practice. When the general counsel exercises this discretion by refusing to issue a complaint his action cannot be reviewed by the Board. Three consequences flow from this statutory provision: (1) In such cases the general counsel is both prosecutor and judge, exercising in fact quasi-judicial functions similar to those entrusted to the Board, and his decisions cannot even be reviewed by the courts; (2) the general counsel has an absolute control over the cases which he will allow to come before the Board; and (3) conflicting rules can be established in similar cases, because the general counsel can refuse to issue a complaint in a case which under Board decisions would be an unfair labor practice.

"One of the most acute impacts of the evil of dual policy making is felt in the area of injunctions. It is generally recognized that an injunction of even the briefest duration will effectually dispose of the issues which give rise to a strike, since the employees are deprived of the only real bargaining power they have, the use of the strike. The interests of thousands of workers may thus be effectively jeopardized by a single decision of a single individual. Through the medium of securing preliminary injunctions, the general counsel may effectuate, and indeed has effectuated, views which the Board may later wholly repudiate.

"Although in entertaining petitions for injunctions, the courts are restricted to granting or denying temporary relief and only the Board may adjudicate the merits of the complaint, two United States courts of appeals, on appeals from district court preliminary injunctions, have passed upon the statutory construction of sections 8 (b) (4) (A) and 8 (c) in their impact on peaceful picketing in aid of a secondary boycott (*United Brotherhood of Carpenters, etc.* v. *Sperry* (the Klassen and Hodgson case) (170 F. (2d) 863); *Printing Specialties Union* v. *LeBaron* (23 L. R. R. M. 2145)). The act thus undermines the purpose of Congress in enacting the National Labor Relations Act of relying upon the Board's expert judgment for the decision of cases. If the Board disagrees with the court of appeals should it accept the court's view of the law, and abdicate its duty under section 10 (c) or should it overrule the court to which, ultimately, the Board's order will go on review? Since original adjudication has been reposed by statute in the Board, it would seem appropriate that the Board's views as to applicable law as well as facts be available to the court when it is called upon to deal with a case. An advantage of original adjudication by an administrative agency in a complex field like labor relations is that the courts, on review, have the benefit of the deliberations of a specialized body. The dual lines of appeal created by the Taft-Hartley Act reverse this process. The general counsel's independent views are tested in the first instance by the courts, with the danger that the Board may ultimately be reduced to the status of a mere finder of facts.

"Another fertile field for internal agency conflict has been the administration of representation cases. In this area the effective use of consent procedures makes it necessary that Board policy be effectuated regionally with a minimum of delay. Under present procedure, all instructions to field staffs are formulated by the general counsel, frequently without clearance by the Board. The Board members are thus isolated from their staffs and are substantially restricted to formal decisions in laying down representation case policy. They exercise no supervision over employees engaged in the performance of duties for which they, as Board members, are responsible.

"The Board members, of course, exercise ultimate decisional authority over representation cases. But even the Board's decisional authority in representation cases is impaired by the separation of functions. Section 9 (c) (3) of the act provides that economic strikers who have been replaced (as distinguished from workers whose strike was caused or prolonged by employer unfair labor parctices) shall not be eligible to vote in Board elections. In the Board's own view it must presume and hold that strikers have lost their eligibility to vote unless the general counsel issues a complaint against the employer and the complaint is sustained (*Matter of Times Square Corp.* (22 L. R. R. M. 1373)). Thus the general counsel is able to determine the outcome of an election conducted during a strike. If for any reason he refuses to proceed on charges filed by the striking union, the strikebreakers will vote in place of the strikers whose jobs they hold.

"Another source of internal friction lies in the general counsel's dual legal role. As prosecutor before the Board he is a litigant; as counsel for the Board he is required to express to the courts the Board's view of applicable law. In the past, the Board's views have differed from those of the general counsel on many important questions, both procedural and substantive. In such cases, the Board has no authority over the actions of the individual responsible for the views.

"The separation of powers constitutes a constant threat to the functioning of the agency. An adamant position too long maintained can lead to chaos. An area in which this danger is acute is that involving the bonds of the agency's jurisdiction. The Board members tend to adhere to the position taken by them under the Wagner Act. Except where secondary boycotts are involved, they reserve the right to decline to exercise jurisdiction where the effect of a dispute on commerce is slight. The general counsel, however, holds that under Taft-Hartley the agency must exercise jurisdiction wherever it can be said technically to exist. Where the minimum legal requirements are present, he denies the power of the Board members to decline to exercise jurisdiction. Neither side has shown signs of yielding. Unless the general counsel alters his position, he will bring to trial and present to the Board for decision cases which he knows the Board will decline to accept—an absurd potential result of the two-headed monster which the act creates. Meanwhile unions and employers in border-line industries must remain uncertain as to their coverage under the law."

[1] Conference report, Labor-Management Relations Act, 1947 (H. Rept. No. 510, 80th Cong., 1st sess.), pp. 37–38.

CONFORMANCE OF REORGANIZATION PLAN NO. 23, WITH HOOVER COMMISSION RECOMMENDATION

Reorganization Plan No. 12 conforms to the Hoover Commission's recommendations affecting the Government's regulatory commissions in that it vests administrative authority in the Chairman of the National Labor Relations Board and gives the Chairman authority to delegate functions to subordinates as recommended by the Hoover Commission in its Report on General Management of the Executive Branch (pt. III), as follows: (Recommendation 14) "Under the President the heads of departments must hold full responsibility for the conduct of their departments. There must be a clear line of authority reaching down through every step of the organization, and no subordinate should have authority independent from that of his superior."

In its Report on Regulatory Commissions, the Hoover Commission made the following specific recommendations supplementing those in its Report on General Management of the Executive Branch: (Recommendation 1) "We recommend that all administrative responsibility be invested in the chairman of the Commission." (Recommendation 6) "The Commission, therefore, recommends that the statutes be amended so as to permit the commissioners to delegate routine, preliminary, and less important work to members of their staffs under their supervision."

However, nowhere in its final reports did the Hoover Commission recommend that the office of general counsel, or the general counsel, be abolished. The Commission made no recommendation which exclusively affected NLRB.

The Hoover Commission's task force on regulatory commissions, which conducted an organizational survey of the National Labor Relations Board at the Commission's direction, held that the position of the general counsel (1) is an unstable one, (2) has given rise to several internal administrative problems, (3) is anomalous. The task force's comments follow:

Comment of Hoover Commission task force upon NLRB general counsel [3]

"Another problem that has caused us considerable concern is the position of the general counsel. As indicated above, he is a prosecutor, an administrator, a policy maker. The incumbent, Mr. Robert Denham, has noted that his powers are broad and absolute and his authority final to an outstanding degree seldom accorded a single officer in a peacetime agency." [4]

"The existence of such an office, independent both of the Federal departmental structure and of the Board, marks a departure from previous administrative practice. If permitted to set a pattern for future Government organization, it may lead to a diffusion of responsibility.

"Such an official is in a peculiarly exposed position. In view of the wide powers of the office, it is inevitably subject to heavy pressure from all sides, and lacks the protection of either a multiheaded agency or an executive department in resisting such pressures. Experience during the first year indicates a tendency to develop close working relations with the joint congressional committee established by the act. To the extent that this has involved advice and suggestions with respect to interpretation of the act and its application to specific situations, the practice seems doubtful and likely to blur the desirable separation between the legislature and administration.

"But the administrative position of the general counsel is also anomalous. Thus the field offices under his supervision are engaged partly in representation work which is the direct responsibility of the Board, and partly in investigating, issuing, and prosecuting complaints, on which the general counsel has final authority. Under the act, the Board has the authority to appoint the regional directors and other employees. In part, as has been seen, the work of the general counsel is essentially prosecution of violations of specific offenses under the act. But insofar as his actions establish policy, they are of the kind frequently assigned to an independent commission.

"The unusual position of the general counsel has given rise to several internal administrative problems. One is significant enough to be noted here: In unfair labor practice cases, regional directors issue complaints, though only with the approval of the general counsel in some types of cases. The finality of refusal to issue a complaint has led to demands for an appeal; and it has been further urged that an appeal to the same unit in the counsel's office whose advice was followed in the original refusal is illusory, and that the appeal should be to an independent body. This problem high lights the nature of the authority the general counsel is exercising.

"Our conclusion is that the present position of the general counsel is an unstable one. Various proposals have been made for integrating the position more securely into the Government structure. Some have suggested assigning him to the Department of Labor or of Justice, but each has serious drawbacks as the preceding discussion of his functions should indicate.

"Our staff recommends the creation, by Executive order, of a Council of Labor under the chairmanship of the Secretary of Labor, and including the general counsel and other Federal officials concerned with labor problems. The function of the council would be to coordinate Federal labor policy and to advise the President on appropriate action. This represents a compromise between the present independent status of the general counsel and his subordinates to a department head.

"Others have strongly urged that the office should again be placed under the Board. To this the objection is made that the prosecuting functions should be separate from the hearing of complaints. But as has already been indicated, only in part are his present duties genuinely prosecution; some parts are administrative and parts are a species of rule or policy making. It may be that the administrative and policy-making functions could be subordinated more clearly to the Board's control while still maintaining an adequate separation of the truly prosecuting activities."

DIVERGENCE OF REORGANIZATION PLAN NO. 12 FROM HOOVER COMMISSION RECOMMENDATIONS

As indicated previously, the Hoover Commission made no specific recommendation for abolishment of the office of general counsel or of the general counsel of the NLRB.

Nor did the Hoover task force recommend the abolishment of the office, but suggested creation of a council of labor which would include the general counsel. (See above.)

POSITIONS OF NATIONAL LABOR RELATIONS BOARD AND OF GENERAL COUNSEL

The positions of the National Labor Relations Board and of the NLRB general counsel upon the independence of the general counsel under provisions of the Taft-Hartley Act are expressed in the attached statements of recent date issued by each.

On March 23, 1950, the House Committee on Expenditures in the Executive Departments rejected House Resolution 516 (HOFFMAN), which would disapprove Reorganization Plan No. 12, by a vote of 18 to 7, thus in effect approving the plan. The Senate Committee on Expenditures will begin hearings on the plan April 4.

(Attachments: (1) Statement by National Labor Relations Board revising delegation of functions to general counsel. February 25, 1950. (2) Statement by Robert N. Denham, general counsel, NLRB, relating to revision of delegation of functions, March 2, 1950.)

NATIONAL LABOR RELATIONS BOARD,
Washington, D. C., February 25, 1950.

NLRB REVISES DELEGATION OF FUNCTIONS TO GENERAL COUNSEL

The National Labor Relations Board today announced revision of the delegation of authority under which the general counsel performs certain functions on behalf of the five-member Board.

The general counsel's powers derive both from the provisions of the Labor Management Relations Act and the Board's delegation of authority to him. Today's revisions—the first since the memorandum of delegation of functions was adopted by the Board in August 1947—do not, of course, affect in any manner those powers of the general counsel which flow from the statute.

Today's revisions, the full text of which will appear in the Federal Register, are mostly of a clarifying nature. They were originally discussed by the Board with General Counsel Robert N. Denham in September and October 1949.

The two major revisions in the delegation of functions involve: (1) A clarification of the general counsel's role in the enforcement of Board orders in the courts; and (2) a modification of personnel policy affecting the agency's top field officers and the establishment of regional offices.

(1) Court litigation of Board decisions: As regards the enforcement of decisions and orders of the Board in the Federal courts the statute (sec. 10 (e)) provides: "The Board shall have power to petition any circuit court of appeals of the United States * * * for the enforcement of such order." The Taft-Hartley Act further provides (sec. 10 (d)): "The general counsel of the Board shall exercise general supervision over all attorneys employed by the Board (other than trial examiners and legal assistants to Board members)."

The 1947 memorandum of delegation of functions provided:

"General counsel will, upon direction and in behalf of the Board, petition for enforcement * * * and resist petitions for review of Board orders as provided in section 10 (e) and (f). * * * When directed to do so by the Board, the proceedings described immediately above will be initiated by general counsel without exception. Successive proceedings by way of appeal or on petition for certiorari will be prosecuted by general counsel unless directed to the contrary by the Board."

Today's revisions in the delegation of functions changed the above section to read as follows:

"On behalf of the Board, the general counsel of the Board will, in full accordance with the directions of the Board, petition for enforcement * * * and resist petitions for

[4] Remarks of Robert N. Denham before the labor-relations section of the American Bar Association, Cleveland, September 23, 1947.

review of Board orders as provided in section 10 (e) and (f). * * * When he is directed to do so by the Board, the proceedings described above will be initiated and processed by the general counsel without exception. Successive proceedings by way of appeal or on petition for certiorari shall be prosecuted by the general counsel upon, and in full accordance with, the directions of the Board."

(2) Regional offices: As regards the personnel in the agency's regional offices, the statute (sec. 3 (d)) provides: "The general counsel of the Board shall exercise general supervision over * * * the officers and employees in the regional offices." The statute further provides (sec. 4 (a)): "The Board shall appoint * * * examiners and regional directors, and such other employees as it may from time to time find necessary for the proper performance of its duties."

The 1947 delegation of functions to the general counsel gave him "full and final authority on behalf of the Board over the selection, retention, transfer, promotion, demotion, discipline, discharge, and in all other respects of all personnel engaged in the field * * *."

Today's revisions in the delegations of functions added the following language to the above grant of authority to the general counsel: *"Provided, however,* That no appointment, transfer, demotion, or discharge of any regional director, or of any officer in charge of a subregional office, shall become effective except upon approval by the Board. * * * The establishment, transfer, or elimination of any regional or subregional office shall require the approval of the Board."

Shortly after the Board adopted the delegation of functions in 1947, the Board's Chairman thus described what was originally intended in the memorandum of delegation of functions:

"The Board (had to devote much of its energy during the early weeks to the pioneering tasks of devising new administrative procedures which would both implement the intent of Congress and make for operating efficiency. * * * Several objectives had to be kept in mind:

"In the first place, the unfettered independence of the general counsel in investigating and prosecuting unfair-labor-practice cases was axiomatic under the provisions of the new law.

"Second, it was necessary to preserve the Board's own ultimate responsibility for the administration and interpretation of the statute as a whole, and its continuing responsibility for the conduct of representation and (election) proceedings.

"Third, it was essential to accomplish these things without either imposing on the taxpayers the burden of having two entirely separate staffs in the Board's field offices, or creating a single hybrid field staff. * * *

"A practical solution was called for. The Board therefore made an agreement with the general counsel that was premised upon his statutory authority to supervise the field and most of the legal staff without interference by the Board. * * * It was understood that so much of this authority as is delegated could be revoked by the Board at any time. * * *

"The law requires separation; it does not contemplate divorce."

The Board now consists of four members: Chairman **Paul M. Herzog**, and members John M. Houston, James J. Reynolds, Jr., and Abe Murdock. **Paul L. Styles** will be the fifth member when he assumes office next week.

NATIONAL LABOR RELATIONS BOARD,
Washington, D. C., March 2, 1950.

STATEMENT BY ROBERT N. DENHAM, GENERAL COUNSEL, NATIONAL LABOR RELATIONS BOARD

When I was appointed to the office of general counsel of the Board, President Truman, in the presence of the then members of the Board, instructed me that, notwithstanding his opposition to the Taft-Hartley Act, it was the law of the land and as long as it remained such, he expected me to administer the law the way it is written and in accordance with the intention of the Congress. For 2½ years, I have done this, without criticism from my boss, the President.

The National Labor Relations Board, however, on February 23, 1950, attempted to revise the structure of organization under which the Taft-Hartley Act has been so administered. The Board, in commenting on the attempted revision, stated that it does not, "of course, affect in any manner, those powers of the general counsel which flow from the statute."

It is because the so-called amendments which the Board is attempting to accomplish affect powers of the general counsel which do, in fact, flow from the statute, and would, if effective, deter the general counsel from the performance of the duties and the carrying out of the responsibilities imposed on him by Congress, that he finds it necessary to advise the public of that fact and of his refusal to submit to such action.

One of the primary objectives of Congress in enacting the Taft-Hartley Act was to separate the judicial from the prosecuting functions of the agency. Thus, the conference report of the managers on the part of the House, CONGRESSIONAL RECORD, volume 93, part 5, p. 6362, commenting on the duties and powers of the general counsel, stated:

"The general counsel is to have general supervision and direction of all attorneys employed by the Board (excluding trial examiners and the legal assistants to the individual members of the Board), and of all the officers and employees in the Board's regional offices, and is to have the final authority to act in the name of, but independently of any direction, control, or review by the Board in respect of the investigation of charges and the issuance of complaints of unfair labor practices, and in respect of prosecution of such complaints before the board. * * * By this provision responsibility for what takes place in the Board's regional offices is centralized in one individual who is ultimately responsible to the President and Congress.

"The House bill, in the section providing for the Administrator, provided that the regional directors and the chief regional attorneys were to be appointed by the President with the advice and consent of the Senate. It was believed that better administration will result in having responsibility lodged in one person rather than having it diffused through numerous regional directors and regional attorneys, and the conference agreement omits this provision."

If the above expressed intent of Congress means anything, it is obvious that the Board, by its action of February 23, is trying to exercise authority it does not possess. Contrary to these clear expressions of the intent of the Congress, it undertakes to assume control over "what takes place in the Board's regional offices" by attempting to control "the selection, retention, transfer, promotion, demotion, discipline (and) discharge" of all regional directors and officers in charge of subregional offices. While this is limited to a single class of field personnel, it clearly carries with it a presumption that the Board also has the power to exert similar control over all other regional office personnel, as well as the attorneys who are under the same "general supervision."

The job of the regional officers is to investigate and prosecute violations of the Taft-Hartley Act. Because the statute makes this prosecuting function the responsibility of the general counsel rather than of the Board, it follows that the regional officers can only be responsible to and controlled by the general counsel. Otherwise the general counsel could not function independently of the Board as was intended by the Congress. The general counsel could not legally delegate this prosecuting function to a Board member or to the Board itself. Obviously, therefore, he could not delegate the function to an agent controlled by the Board members. In the present scheme of things, the regional directors are clothed with broad autonomy, as the general counsel's representatives, to exercise this prosecuting function.

During the past 2½ years the criticism formerly common under the Wagner Act that the Board was judge, jury, and prosecutor has not been heard. The reason is that the general counsel acting through the regional officers, has investigated and prosecuted violations of the statute "independently of any direction, control, or review" by the Board members. He has been able to do so because of the erstwhile recognition by all concerned that the regional officers must be likewise independent of control by the Board members and responsible only to the general counsel, who in turn is responsible only to the President and the Congress. The Board has been, and by Congress was intended to be, judge and jury, but not prosecutor. Should the Board possess the authority it is now attempting to assert, such independence of action in the regional directors would be impossible.

It is important, particularly at this critical time in the Nation's economic history, that everything be done to maintain the confidence of the public and of labor and management in the fact that the labor laws of the country will be administered in the manner prescribed by the peoples' representatives. Because that is so and for other reasons herein stated, the general counsel should not and cannot acquiesce in this attempt by the Board to usurp authority not granted it either by the letter or spirit of the statute. Were the general counsel to take any other position in this matter, he would not be fully and faithfully carrying out the responsibilities which the people, through the Congress and the President, have imposed upon him.

Other material changes attempted to be made by the Board's action of February 23 have to do with the enforcement and defense of its orders before the courts.

Obviously the Board is entitled to look to the general counsel for representation before the courts and to direct the general counsel when and whether to proceed with enforcement petitions and defensive actions. However, there are some limitations on this obligation of the general counsel, measured by the nature of the issue involved, by the effect such action might have on the relation of the general counsel to the court as an officer of the court, or by the canons of ethics that apply to all attorneys. An outstanding example is found in several cases where the Board has issued orders which, in effect, assert that it has the authority to decide whether or not a complaint should have been issued at all, even though the facts show a violation and the Board has clear jurisdiction in the case. Two of these orders are now before the United States Court of Appeals for the Ninth Judicial Circuit (*A-1 Photo Service*, (83 NLRB No. 86), and *Haleston Drug Stores, Inc.* (86 NLRB No. 125). In

each case the general counsel has argued to the Board that its order exceeds its own statutory authority and invades that of the general counsel contained in his exclusive and final authority to issue complaints or to refuse to do so. The general counsel cannot now, on behalf of the Board, urge the courts to approve this action. Accordingly, the general counsel has suggested that briefs in such cases be prepared under the supervision of the Board's Solicitor with the aid of whatever help may be required from the general counsel's staff, and that the case then be presented to the court by the Solicitor. This procedure will insure that the courts are fully informed of the Board's position in those cases. The general counsel, however, cannot be expected to urge the courts to approve the Board's incursion into his own area of statutory responsibility or to accept the Board's delegation to him of this type of assignment.

In the other cases where the status of the general counsel as an officer of the court has been affected, he has similarly suggested that briefs be supervised, signed, and argued by the Solicitor to avoid embarrassment and to insure an adequate presentation of the Board's position.

With the exception of such unusual assignments, of which only four or five have arisen, the general counsel is prepared as always to enforce the Board's order to the best of his ability consistent with his obligation to the court and in conformity with the canons of ethics governing the profession.

MARCH 21, 1950.

[Staff memorandum No. 81-2-36]

REORGANIZATION PLAN NO. 14 OF 1950, LABOR STANDARDS ENFORCEMENT

PURPOSE

There are a number of Federal laws which provide for the maintenance of certain standards as related to the employment of laborers and other persons engaged on contracts to which the United States is a direct or indirect party. At the present time the administration of these acts prescribing labor standards and the enforcement thereof are a responsibility of the heads of the respective agencies which may be involved. Thus, it may be seen that such administration and enforcement vary according to interpretation and to method utilized under the processes of any particular agency.

For the purpose of assuring uniformity throughout the Federal Government, both as to administration and enforcement in relation to all such labor standards provisions, authority is centralized by this plan in the Secretary of Labor to prescribe uniform standards, regulations, and procedures for observance by all Federal agencies concerned and to make investigations so as to insure compliance with, and enforcement of, such standards.

CONFORMANCE WITH RECOMMENDATIONS OF THE HOOVER COMMISSION

In his letter of transmittal, the President states that this reorganization plan is in general accord with recommendations of the Hoover Commission. While the staff finds no specific recommendation of the Commission for the action taken by this plan, the following paragraphs would tend to indicate that this centralizing in the Secretary of Labor of responsibility for rules of administration and enforcement of labor standards is agreeable to the tenor of the Commission's attitude toward the Department of Labor and with the Commission's general position that similar functions should be grouped together.

The Hoover Commission definitely favored rebuilding of the Department of Labor by returning to it many functions previously severed and by placing in that Department functions hitherto lodged elsewhere. For example, in Report No. 13, Department of Labor, Recommendation No. 7 is prefaced by a statement that " 'Prevailing wage' inquiries incident to determining wages for blue-collar Federal employees are now conducted by the several agencies, and should be centered in the Bureau of Labor Statistics." Recommendation No. 7 itself states that there should be centralized in the Bureau of Labor Statistics responsibility for collection of data, research, and analysis relating to wholesale prices and living costs, employment and unemployment, working hours, wages, pay rolls, and productivity.

Further, at the beginning of chapter IV the Hoover Commission's report on the Department of Labor is an enumeration of eight separate agencies and functions suggested for transfer to the Department of Labor. This does not constitute one of the numbered major recommendations of the Commission but is in the nature of an inferential recommendation. The fifth item in the enumeration is "enforcement of labor standards in Government contracts (from contracting departments and agencies)." The staff wishes to emphasize to the committee the distinction between the significance of the foregoing quotation and the transfer proposed by Reorganization Plan No. 14. That distinction is that, whereas the quoted excerpt from the Hoover Commission's report relates to the actual enforcement of labor standards in Government contracts, Reorganization Plan No. 14 relates to the prescribing by the Secretary of Labor of "appropriate standards, regulations, and procedures" with respect to the administration and enforcement of labor standards in Government contracts. The importance of the distinction is that the enforcement and administration of labor standards are not transferred by the plan but remain vested in the individual agencies and departments of the Government.

Particularly pertinent to Reorganization Plan No. 14 is the following quotation from chapter V, entitled "Enforcement and Promotion of Employment Standards," of the Hoover Commission Task Force on Public Welfare (appendix P, p. 459):

"1. Regulation of employment standards is an established function of the Federal Government, partly as a means of preserving prevailing wage rates in the construction industry on Federal public-works contracts, and partly to promote economic stability by establishing a national wage floor for economic competition. These functions are centralized in the Labor Department, with the exception of the enforcement responsibilities in connection with contract violations, and the Maritime Commission's function of setting minimum wages in operating-differential subsidy contracts with private American companies engaged in foreign shipping. These are appropriate functions of the Labor Department, to which they should be transferred in connection with clarifying amendments to the coverage and exemptive provisions of the Fair Labor Standards Act."

ACTS AFFECTED

This reorganization plan enumerates the laws of the United States in which are found the labor standards provisions with respect to which authority for prescribing standards, regulations, and procedures, and for the making of investigations as to compliance and enforcement is centered in the Secretary of Labor. There follows a list of those laws and a brief identification of each.

Act of March 3, 1931: This is a general law which provides that each contract in excess of $2,000 to which the United States or the District of Columbia is a party and which involves the construction, alteration, or repair of public buildings or public works, shall contain a provision stating the prevailing minimum wages as determined by the Secretary of Labor to be paid various classes of laborers and mechanics to be engaged.

Act of June 13, 1934: This is a provision of law that prohibits anyone from inducing, through threat, intimidation, or similar force, any person employed under a construction contract to which the United States is a direct or indirect party to give up any part of his compensation. The Secretary of Labor is already, in this case, empowered to establish reasonable regulations for contractors and subcontractors.

Act of August 1, 1892: This is an 8-hour law for laborers and mechanics generally, and specifically for any persons employed to perform services similar to those of laborers and mechanics in connection with dredging or rock excavation in any river or harbor of the United States or the District of Columbia, on work for which the United States or the District of Columbia is the direct employer or is a contract party.

Act of June 19, 1912: This law is similar to the act of August 1, 1892, and may be defined as a general 8-hour law for laborers and mechanics involved in work to which the United States is a contract party.

Act of June 3, 1939: This is a law relating to insurance by the United States of financial institutions to preserve them from loss as a result of loans and advances of credit and similar financial operations in connection with alterations, repairs, and improvements to existing structures and the building of new structures.

Specifically, section 212 (a) of this act provides that the National Housing Administrator shall not insure against loss in connection with construction unless the principal contractor certifies that the laborers and mechanics employed on the project have been paid not less than locally prevailing wages for corresponding classes of employees. This law already provides that determination as to prevailing wages shall be by the Secretary of Labor, and this plan would transfer to him additional authority relating to uniform administration and enforcement of labor standards.

Act of August 13, 1946, Hospital Survey and Construction Act: This is a law relating to construction of hospitals. Specifically, section 625 (a) of the act provides that a State plan for construction thereunder must include assurance to the Surgeon General of the United States that rates of pay for laborers and mechanics engaged in construction on the project will not be less than prevailing wages, as determined by the Secretary of Labor, for similar work.

Act of May 13, 1946, Federal Airport Act: This is a law relating to construction of airports. Specifically, section 15 (b) of the act provides that all contracts in excess of $2,000 for work on projects approved under the act and wherein labor is involved shall contain provisions establishing minimum rates of pay, such rates to be predetermined by the Secretary of Labor. Under this reorganization plan the Secretary of Labor will be empowered to prescribe rules relating to the administration and enforcement of labor standards, in addition to his existing authority relating to determination of prevailing wages.

Act of July 15, 1949, Housing Act of 1949: This law relates to slum clearance, community development, and allied activities. Specifically, section 109 provides that each contract for financial aid under the act shall contain provision for payment of locally prevailing salaries to architects, engineers, draftsmen, and technicians, and for the payment of locally prevailing wages to laborers and mechanics employed on the project, such locally prevailing wages to be determined by the Secretary of Labor. Reorganization Plan No. 14 will empower the Secretary of Labor

to prescribe rules for the administration and enforcement of labor standards in addition to such determinations of prevailing wages.

CONCLUSION

So far as the staff has been able to determine there is no important objection to this reorganization plan. It should be reported, however, that the proposal was previously made in Reorgan'zation Plan No. 2 of 1947, defeated by both the Senate and the House of Representatives. That plan consisted of three sections, the third designed to accomplish the same results as this present Reorganization Plan No. 14. Section 1 would have transferred the United States Employment Service permanently from the Social Security Board (Federal Security Agency) to the Department of Labor, in which it had been placed originally after creation by the Wagner-Peyser Act of 1933; and section 2 would have transferred the functions of the Administrator of the Wage and Hour Division of the Department of Labor to the Secretary of Labor.

The House Committee on Expenditures in the Executive Departments recommended disapproval of the plan and, with respect to section 3 thereof, stated that, while there appeared to be some justification for centering in one official the responsibility for coordinating the administration and enforcement of Federal labor standards laws, it was felt that at that time it would be more appropriate to require careful consideration of the matter by appropriate congressional committees. The House had no more to say regarding section 3 and the significance of what it did say is not apparent from the record.

Reorganization Plan No. 2 of 1947 was considered by the Senate Committee on Labor and Public Welfare, which recommended against passage of the concurrent resolution to defeat the plan. In its report, the Senate committee stated with regard to section 3 that coordination by the Secretary of Labor of the administration and enforcement of labor standards provisions should make for more consistency therein. Thus it may be seen that, when the ends sought to be attained by this present Reorganization Plan No. 14 were previously before the Congress, the Senate Committee on Labor and Public Welfare was in favor thereof while the House Committee on Expenditures in the Executive Departments took an adverse viewpoint, although the exact nature of the objection is not apparent. Nevertheless, Reorganization Plan No. 2 of 1947 was defeated by both Houses of Congress. Obviously, however, that defeat sprang from objection to sections 1 and 2, and was not due to any important objection to section 3, with the purpose of which we are here concerned.

The staff wishes to report further that this plan has been discussed with legal representatives of the Department of Labor. We are informed that, although under the language of the plan it may well be possible to construe that by it the Secretary of Labor is given authority with respect to "white collar" employees, the Department takes the view that the plan is intended to convey to the Secretary of Labor authority as to "blue collar" workers only.

THOMAS A. SAPPINGTON,
Professional Staff Member.

WALTER L. REYNOLDS,
Staff Director.

MARCH 27, 1950.

[Staff memorandum No. 81-2-41]

REORGANIZATION PLAN NO. 15, ALASKA AND VIRGIN ISLANDS PUBLIC WORKS

PURPOSE

This plan proposes to transfer the responsibility for administering the Alaska and Virgin Islands public-works programs from the General Services Administration to the Department of the Interior.

Government sources have indcated that the following basic administrative improvements may be effectuated if the plan is permitted to become effective:

(a) That local public works will be geared to the long-range interests of the inhabitants, and coordinated with the Department of the Interior's policies and programs for promoting the general welfare of the people of Alaska and the Virgin Islands.

(b) The GSA's primary mission is central administrative services, whereas these programs authorize construction which may be considered as an adjunct to community development, and properly belong in the Department of the Interior.

(c) The Department of the Interior has a paramount interest in the affairs of Alaska and the Virgin Islands, and should, therefore, be responsible for these programs.

(d) The centralization of these functions in a single agency will reduce duplication of effort and facilitate administration. This will also make it possible to hold designated officials responsible for execution of the programs.

(e) The plan is comparable to, and in accord with, the theory underlying the transfer of the Alaska Roads Commission to the Department of the Interior (44 Stat. 446).

THE ALASKA PUBLIC WORKS PROGRAM

The Alaska public works program was authorized by Public Law No. 264, Eighty-first Congress, approved on August 24, 1949. The purpose of the plan is to foster a settlement program and increase the number of permanent residents of Alaska, to stimulate trade and develop resources, and to provide facilities for community life through a program of useful public works, including schools, hospitals, sewer and water systems, colleges, institutional and public buildings, incinerators, and other community facilities.

Under Public Law 264, any public body may apply for public works construction. The application must be made to the Community Facilities Service of the General Services Administration. The application must be approved by the Governor of Alaska and concurred in by the Secretary of the Interior, after which the Community Facilities Service enters into a contract with the local body stipulating that the Community Facilities Service will build the facilities and, on completion of the project, that it will be turned over to the local body at not less than 25 percent or more than 75 percent of the estimated cost.

The size of the Alaskan public works program is limited by law to a ceiling of $70,000,000, and duration of the program shall continue until the $70,000,000 is obligated, or, in any event, is to terminate on June 30, 1955.

THE VIRGIN ISLANDS PUBLIC WORKS PROGRAM

The Virgin Islands public works program was authorized by Public Law No. 510, Seventy-eighth Congress, approved on December 20, 1944. The act was designed to assist in the internal development of the islands, and authorized an appropriation of $10,028,420 for construction of about 29 projects specifically set forth in the act.

The act provided further that an appropriation of $2,028,420 should be made in fiscal year 1945, and $2,000,000 each year thereafter during the next 4 years. To date allocations total $5,643,942, or about one-half of the original program has been financed. The General Services Administration has, however, requested $1,300,000 in appropriations and $1,460,000 in contract authorizations in the budget for fiscal year 1951.

ADMINISTRATION OF THE PROGRAMS

Pursuant to Public Law No. 264, the General Services Administration is responsible for administering the Alaska public works program. The administration of public works in the Virgin Islands was vested in the Federal Works Agency by Public Law No. 510. When that agency was abolished, under Public Law 152, Eighty-first Congress, its functions were also transferred to the General Services Administration. The Senate Public Works Committee has considered the question of jurisdiction over public works in Alaska and the Virgin Islands on three different occasions during the past 3 years. The long years of experience of capable technicians and the established organization available in the General Services Administration influenced the committee in making its recommendations that this agency should retain jurisdiction over these public works programs.

STATUS OF THE PROGRAM

No public works have been constructed in Alaska under Public Law 264, because the building season has been closed since the approval of the act. Appropriations of $1,000,000 and $4,000,000 in contract authorization, were approved by Congress on October 28, 1949, for fiscal year 1950. The General Services Administration requested an appropriation of $12,000,000 for this program for fiscal year 1951, and contract authorizations in amount of $13,000,000. The Administration recently opened a district engineers office in Juneau, to which has been assigned four employees who are authorized to supervise the local projects and to establish field offices in order that the program may be carried forward as soon as the weather permits.

Public works construction in the Virgin Islands was initiated in 1944, pursuant to Public Law No. 510, which vested the responsibility for administration in the Federal Works Agency. On July 1, 1949, this Agency was abolished and its functions transferred to the General Services Administration by Public Law No. 152. The General Services Administration is responsible for the design and construction of the projects, but, on completion, the projects are turned over to the local authorities for use and administration. Some of the programs have been developed and prosecuted within the limits of available funds. Others have been retarded because the officials in charge failed to consider local needs, had misconceptions in design, and failed to maintain adequate liaison with local officials. As a result some of these programs are behind schedule.

HOOVER COMMISSION RECOMMENDATIONS

The Hoover Commission made no specific recommendation relating to this plan. The Commission did recommend (No. 2, Department of the Interior) that the Department of the Interior be reorganized along more functional and major-purpose lines, and that community services (including public works) be transferred to the Department of the Interior, because of the major-purpose aspect. (Recommendations No. 4 and 8—Department of the Interior.)

The Commission supported these recommendations in the following language (Report on Department of the Interior, p. 17):

(a) Regrouping of development of natural resources and construction, according to major purposes, to secure coordinated policies in these fields.

(b) Provision of a center for coordination of State and Federal action in these fields.

(c) Provision for the Congress of an overall view of the major construction activities of the Government.

(d) Provision of a center for planning and action of Federal construction to be coordinated with the ebb and flow of employment.

The Commission did recommend that Federal construction should be centralized in

the Department of the Interior, and grants-in-aid or loans for construction should be vested in the major-purpose agency.

HOOVER COMMISSION DISSENTS

Commissioners Acheson, Pollock, and Rowe dissented in a separate report (p. 54) in which they admitted that the Department of the Interior should be reorganized, but contended that: "Finally, the addition of all Federal construction programs, as some members (of the Commission) suggest, even further dilutes the major purpose of a resources department. To combine in one agency works and resources emphasizes too largely the construction aspect. The purpose of the construction, which varies greatly from one agency to another, is lost, as it were, in this effort to build a department of many unrelated purposes."

These members of the Commission submitted the following alternate recommendations:

(a) Placing public building construction in the General Services Administration.

(b) Community services with health, education, and other related major-purpose activities.

(c) Hospital construction work in the agency concerned with Federal hospitals (the United Medical Administration).

ISSUES INVOLVED

In contacts with the various agencies affected by this plan, the staff has been advised that there are certain provisions of this plan which should be carefully considered by the committee, some of which are as follows:

(a) The Department of the Interior does not have the technical facilities to administer these programs.

(b) Centralizing all such responsibility in one agency, would not permit of intergovernmental checks by one group as against another.

(c) Local pressure on residential Government officials might result in one community's getting "the lion's share" of the projects, while another goes begging.

(d) Conflicts between the Alaska Field Committee and the Division of Territories and Island Possessions of the Department of the Interior might bring about confusion, delay, and discatisfaction.

(e) No savings in funds or personnel is indicated or claimed by the administration should this plan become effective.

CONCLUSION

This plan does not accord with specific Hoover Commission recommendations, nor with the views of Commissioners Acheson, Pollock, and Rowe, in the following respects: (a) The President has not established a central public-works agency either in the Department of the Interior or as a separate agency; and (b) the plan, therefore, proposes to transfer a few small construction functions to the Department of the Interior without reorganizing the parent department as recommended by the Commission.

MARCH 28, 1950.

[Staff memorandum No. 81-2-43]

REORGANIZATION PLAN NO. 16, ASSISTANCE TO SCHOOL DISTRICTS AND WATER-POLLUTION CONTROL

PURPOSE

This plan proposes to transfer the functions relating to assistance to local school districts, and grants and loans for water-pollution-control projects, from the General Services Administration to the Federal Security Agency.

The President's message accompanying the plan states that by placing these functions in the agency of the Government best informed in matters of public-school administration, and the agency presently responsible for the preparation and adoption of plans for water-pollution control, will simplify Federal-State relations and improve administration of these programs.

FEDERAL AID TO SCHOOL DISTRICTS

Federal aid to overburdened school districts was originally authorized under title II of the Lanham Act, approved June 28, 1941 (55 Stat. 361). The provisions of this act have been extended each year during the past 4 years. The last extension was by Public Law No. 306, Eighty-first Congress, approved September 10, 1949. Under this act the General Services Administrator is authorized to make contributions to local school agencies located on Federal reservations or other federally owned property, to overburdened schools adjacent to defense areas, and in those areas where acquisition of land by the Federal Government has reduced school revenues.

WATER-POLLUTION CONTROL

The Federal water-pollution-control activities are based chiefly on Public Law No. 845, Eightieth Congress, approved June 30, 1948. This act authorized governmental action of several types, and distributes the responsibility of the program between the Public Health Service of the Federal Security Agency and the Federal Works Agency. (The functions of FWA were recently absorbed by the General Services Administration.) Under this act the Public Health Service (FSA) is charged with the preparation and adoption of comprehensive pollution-control plans for interstate streams. These plans are developed in cooperation with other Federal agencies with State and interstate water-pollution agencies and with the municipalities and industries affected.

A further function of the Public Health Service is that of initiating legal action to compel the abatement of water-pollution conditions declared to fall under the act's definition of public nuisance. On the other hand the Administrator of General Services Administration is authorized to make loans to States, municipalities or interstate agencies for construction of sewage treatment works. The loans cannot exceed $250,000 or 33⅓ percent of the estimated cost, whichever is lower. The plans must be approved by the Surgeon General (PHS), the Administrator of General Services, and the State water pollution agency.

ADMINISTRATION OF THE PROGRAM

At the present time a number of agencies are engaged in helping local school districts overcome the financial burdens imposed by the withdrawal of taxable land for governmental purposes, or by sudden increases in the child population caused by the establishment or reactivation of Federal installations. The programs of the agencies involve different standards and varying financial arrangements, with the result that the situation generally is unsatisfactory both from a Federal and local standpoint.

Last year an appropriation of $7,250,000 was made available for aid to schools in defense areas and on Federal reservations to be allocated by the Administrator of General Services. Practically all other Federal aid to education programs are administered by the Office of Education. Plan No. 16 is designed, through the transfer of these functions to the agency best informed on these matters to bring about improvement and better coordination of these programs.

Approximately $1,750,000 has been appropriated each year since enactment of Public Law No. 845, Eightieth Congress, for the purpose of eliminating water pollution. Under this act the prevention and abatement of water pollution and treatment of industrial waste and other filth discharged into interstate streams has been under the joint administration of the Public Health Service, the General Services Administration, and the State pollution agencies.

The Public Health Service is responsible for the preparation or adoption of pollution-control plans for interstate streams. The plans are developed in cooperation with other Federal agencies, with State and interstate water-pollution agencies and with the local municipalities. In effectuating these responsibilities the surgeon general is authorized to conduct joint investigations with the cooperating agencies. He is also directed or authorized to encourage cooperative activities by the States, promote the enactment of uniform laws relating to water-pollution control, encourage compacts for the prevention and abatement of water pollution, disseminate information relating to water pollution, and make investigations into specific problems upon the request of any State or interstate agency.

SENATE PUBLIC WORKS COMMITTEE CONSIDERED JURISDICTION OF WATER POLLUTION

The jurisdiction and control of water pollution was carefully examined by the Senate Committee on Public Works during the first session of the Eightieth Congress and the committee stated that the responsibility for diagnosis of the causes of stream pollution is properly entrusted to the Public Health Service. The execution of the remidies, involving the design and construction of sewage-treatment works by non-Federal public bodies and industries were to be financed, in part, by loans from the Federal Government. The committee further indicated that the agency presently organized on a Nation-wide basis and best qualified to supervise this type of non-Federal construction program is the Federal Works Agency—now GSA. (Senate Rept. No. 462).

The committee further stated that—

"The Public Health Service and the Federal Works Agency, each contributing its special skills and working together cooperatively, can accomplish more than either of them working alone."

HOOVER COMMISSION RECOMMENDATIONS

This plan is not specifically covered by any of the recommendations of the Hoover Commission, but is in accord with its determination that Federal-State relations be concentrated where feasible, within the Federal Security Agency, and that major-purpose functions be grouped together in a single agency.

The Commission did recommend that Federal construction should be centralized in the Department of the Interior and grants in aid or loans for construction should be vested in the major-purpose agency. The major functions involved under this plan are public health, and their transfer to the Federal Security Agency is, therefore, in accord with this recommendation.

ISSUES INVOLVED

The issues involved in this plan may not be considered serious, with possibly one exception, and it is understood that both the GSA and FSA have agreed that the responsibility for administering Federal aid to overburdened school districts should be transferred to FSA.

A subcommittee of the House Committee on Education and Labor has held extensive hearings on H. R. 4115, after which a clean bill, H. R. 7940, was introduced (March 30, 1950) to provide financial assistance for local educational agencies in areas affected by Federal activities. This bill also provides for transferring the administrative responsi-

bility for Federal aid to education in those areas from the Departments of Army, Navy, and Air Force, and the Bureau of Reclamation to the FSA. If this bill is approved, the FSA will be responsible for administering all of the Federal-aid programs except those which are under the Atomic Energy Commission and the Bureau of Indian Affairs.

Under the law and procedures now in effect the Public Health Service of the FSA is responsible for administering the major portion of those functions created by Public Law No. 845 relating to water-pollution control. Should this plan be approved there is some question as to whether the GSA will be able to liquidate its functions by the time the plan goes into effect. Part of this objection will be overcome by transferring the funds, records, and personnel to FSA as contemplated by Reorganization Plan No. 16.

CONCLUSION

There is considerable merit and general agreement that the responsibility for administering Federal aid to education should be vested in the Office of Education. This plan merely transfers one of these functions, however, and it is believed that similar functions now administered by other agencies, such as Deparment of Defense, Bureau of Reclamation, etc., should likewise be transferred to the Office of Education.

On the other hand the functions involved in water-pollution control are administered jointly by the GSA and the Public Health Service. This program may be classified as a construction function relating to areas in which the Federal Government has a primary responsibility, whereas the local communities have added interests which relate to health, education, and community facilities. Notwithstanding the construction phase of this part of the plan it is reasonable to assume that water pollution is a function that is directed chiefly toward the improvement of health of inhabitants of urban or rural communities.

The committee has received no indications as to any opposition to the plan, and only one letter, from the National Council of Chief State School Officers, favoring its adoption.

[Staff Memorandum No. 81-2-46]

REORGANIZATION PLAN NO. 17, PUBLIC WORKS ADVANCE PLANNING AND OTHER FUNCTIONS

PURPOSE

This plan proposes to transfer the functions relating to advance planning of non-Federal public works, and the management and disposal of certain war public works from the General Services Administration to the Housing and Home Finance Agency.

The administration believes that by centralizing these responsibilities in a single agency better administration will be attained, and simplified relationship will be possible between the Federal and local agencies concerned with non-Federal public works as well as improvement in the management of certain war public works activities.

ADVANCE PLANNING FOR NON-FEDERAL PUBLIC WORKS

Public Law No. 352, Eighty-first Congress, authorized the Administrator of General Services to advance Federal funds to State and local governments for the purpose of preparing plans for non-Federal public works. The purpose of the act is to encourage States and other non-Federal public agencies to maintain an adequate reserve of fully planned public works readily available in order that construction may be started promptly when economic conditions make such action desirable. A similar program was carried out under title V of the War Mobilization and Reconversion Act, during the period 1944 to 1947 which is now being liquidated. The current activities are for the most part concerned with recovery of advances previously made under the act of 1944.

Advance planning as contemplated under the new act is an extensive operation, but its duration is temporary in that all applications for approval must be submitted on or before October 13, 1951. Each application for an advance must be reviewed and approved by GSA from the standpoint of local planning, engineering, legal, and financial responsibility of the governing body to support the projects. After an application is approved funds are allocated to the local body for use in preparing blueprints, engineering surveys, and plans for construction. As soon as construction is commenced the local agency repays the Government for the total amount advanced, without interest. The act specifically provides that the making of advances to States or other political subdivisions for preparation of public works plans does not commit the Congress to appropriate any funds for construction.

The types of public facilities which have been planned with the aid of advances under Public Law No. 352, and its predecessor, consisted of sewer and water systems, schools, hospitals, and recreational facilities. These facilities contribute to the health, comfort, and welfare, as well as the physical development, of the communities in which they are located. Many of the loans under this legislation have been made to rural districts and comparatively small communities.

WAR PUBLIC WORKS

Under title II of the Lanham Act, as amended (55 Stat. 361), the Federal Works Administrator was authorized to provide public works necessary to the health, safety, or welfare of persons engaged in national defense activities. The facilities provided consisted of water, sewage, and sanitary facilities, hospitals, schools, and necessary public buildings. These facilities were provided under two categories: (1) Those in which the local community financed construction with the aid of loans or grants from the Federal Government, and (2) those facilities financed and constructed by the Federal Government. The latter public works were owned and operated by the United States and as a result maintenance and disposition of such property became a Federal responsibility. It is this phase of the title II program, together with the liquidating functions on locally sponsored facilities, which continues today as a function of the General Services Administration. These responsibilities will be transferred under this plan to the Housing and Home Finance Agency, where the Administration believes that they can be carried on more effectively than is possible under the present arrangement.

Since 1944 the Federal Government constructed 1,572 war public works projects at an aggregate cost of over $179,000,000. As of February 28, 1950, 985 of the 1,186 projects which were to be disposed of by sale had been sold or leased with an option to purchase. The 201 projects which remained to be sold represented an initial cost of over $36,000,000.

It is contended that the Government will have a substantial number of the title II projects on hand for a long time because some of them serve emergency housing projects. Experience in disposing of these projects to date indicates that many communities are reluctant to make a reasonable offer for these facilities due to the possibility that bills may be introduced in the Congress authorizing donation of such property to the municipality or local subdivisions.

ADMINISTRATION OF THE PROGRAM

As indicated above, the Administrator of General Services is responsible for reviewing applications for advance planning of non-Federal works. This entails screening such applications from the standpoint of engineering feasibility, conformance with legal requirements, and the financial position of the applicant. It is understood that the functions and activities involved in administration of the program have been performed efficiently. The proponents of the plan contend that from an organizational standpoint, this work should be performed by a line agency which is primarily responsible for community development instead of an agency whose primary object is procurement, property management and central administrative services. It is understood that only 17 employees are engaged in property management and disposal of the title II facilities now on hand in the General Services Administration. This represents a very small proportion of the total number of employees and magnitude of a similar program which is presently being administered by the Housing and Home Finance Agency. Because of the relationship of sewer, water, and other related facilities to housing development and the disposition of war developed housing projects it is almost impossible to dispose of the utilities without disposing of the housing projects. It is contended, under the present arrangement of dual responsibility that neither war or defense housing, nor community facilities, are being liquidated effectively because of inter-agency negotiations together with the correlation of the activities of each with the local communities. Other informants have denied that any such difficulty exists, stating that very few, if any, of the remaining facilities serve housing projects still held by the Government.

RESPONSIBILITY FOR ADVANCE PLANNING

The Senate Committee on Public Works considered the question as to whether or not the General Services Administration was the proper agency to handle advance planning programs and unanimously decided that, inasmuch as its predecessor (the FWA) had been doing this type of work since 1945, the GSA was best qualified, and, therefore, delegated such functions to that agency under Public Law 352.

HOOVER COMMISSION RECOMMENDATIONS

The Hoover Commission did not make any recommendations which specifically cover this plan. The advance planning program was not established until after the Commission had completed its survey of the executive branch.

The Commission did recommend that Federal construction should be centralized in the Department of the Interior, and grants-in-aid or loans for construction should be vested in the major purpose agency.

ISSUES INVOLVED

(a) Advance planning of non-Federal public works is independent of public housing financed by the Federal Government: It is conceivable that if plan 17 is approved the development of advance planning in small communities and rural areas would be neglected or subordinated to plan preparation for urban districts.

The reason given in the President's message for vesting the responsibility for advance planning in the Housing and Home Finance Agency is that the transfer "will result in more economical administration of those activities of the Federal Government which are concerned with the over-all planning and development of communities." It

may be noted, however, that the community planning functions of the Housing and Home Finance Agency are performed in connection with its public housing and slum clearance and urban redevelopment programs. Thus, they are primarily big-city projects. The advance planning program, on the other hand, is designed to provide a shelf of public works for communities of all sizes and even for rural areas.

(b) Dispersal of Community Facilities Services of GSA: It is contended that plan No. 17 (and to a certain extent plans 15 and 16) are intended to transfer functions from GSA which are unrelated to its primary mission of providing central administrative services for the executive branch of the Government.

A careful examination of this claim and other information on the subject indicates that these plans are intended to disperse the functions of the Community Facilities Service; transfer those functions to HHFA which that agency wants, but leave stranded in GSA certain other functions which are equally unrelated to its so-called primary mission.

In the latter classification are certain functions now in GSA which are not transferred by any of the plans now before the Congress and which so far as is known are not to be transferred. These consist of the liquidation of the following programs:

1. Public Works Administration.
2. Works Progress Administration.
3. War Public Works in the District of Columbia.
4. Veterans' education and facilities program.

These are liquidation functions, but so is the disposition of war public works which is transferred to HHFA under plan No. 17.

(c) Transfer of programs of limited duration: As indicated above, the disposition of war public works is in process of liquidation. Likewise, the act (Public Law 352) authorizing advance of Federal funds for public works planning is a temporary measure which expires on October 13, 1951. Some question may arise as to whether it is worthwhile to effect transfers of this sort of temporary program in view of the delay and disorganization that may result from such moves from one agency to another.

(d) Diverse types of projects: The advance planning program is very broad in its scope. Under the statute advances may be made for detailed preparation of plans for public works of all types, exclusive of housing. Over-all community planning is to some extent a function of HHFA, but that agency is primarily concerned with housing, which is specifically excluded from the advance planning program. Hence it may be argued that by reason of its diversity there is no agency to which the advance planning program should go under the "major purpose" concept, and that it should properly remain with the "general service" agency of the Government where it can be administered more impartially as between competing types of projects than in any "functional" agency.

[Staff memorandum No. 81-2-39]

REORGANIZATION PLAN NO. 18, BUILDING AND SPACE MANAGEMENT FUNCTIONS

PURPOSE

The purpose of this plan is to transfer to the Administrator of General Services the functions now vested in other agencies with respect to leasing and assigning general purpose space in buildings, and the operation, maintenance, and custody of office buildings. This proposal is aimed primarily at centralizing the responsibility for leasing, maintenance, and control of office buildings outside of the District of Columbia.

Functions transferred

(a) Responsibility for leasing (except post offices), and assignment of general purpose space from other agencies to the General Services Administration.

(b) Excess of space not needed by post offices to the General Services Administration.

(c) Operation, maintenance, and custody of leased and Government-owned buildings to the General Services Administration, (excludes post offices predominantly occupied by the postal service).

Special purpose buildings excluded

(a) Military posts, arsenals, navy yards, hospitals, etc., and other special-purpose space, unless authorized by the Secretary of Defense.

(b) Post Office Department's leasing authority.

(c) Buildings located in foreign countries.

(d) Post Office building space used by it or leased for its purpose.

(e) Other Government space which GSA finds is wholly or predominantly used for special purposes, such as housing, manufacturing plants, penal institutions, etc.

(f) Treasury Building, Bureau of Engraving and Printing, buildings occupied by Bureau of Standards, and the Smithsonian Institution.

Priority

(a) The Post Office has priority in assignment of space in its buildings.

BACKGROUND

Under exising law the General Services Administration is largely responsible for leasing and allocating space, custody, maintenance and repair of Government office buildings in the District of Columbia. The responsibility for performing these functions outside of the Washington metropolitan area is now largely vested in other departments and agencies of the Government. The President, in his message accompanying the plan, states that he believes centralizing these functions in a single agency, will improve administration through the elimination of confusion, waste, and inefficiency, and effect considerable savings in space, maintenance, personnel, and funds. The plan classifies the functions outside of the District of Columbia into those that relate to general purpose building space, that is space which is suitable for use by a number of Federal agencies, and special purpose space. Under the special purpose classification is included buildings on military posts, arsenals, navy yards, hospitals, laboratories, factories, and other similar installations.

The assignment of space in Government-owned buildings outside of Washington is divided among many agencies. While the Public Building Service constructs a large part of the Government buildings, it operates and controls the assignment of space in only a small portion of them. The Post Office Department operates and allocates the space in post-office buildings, several hundred of which contain substantial amounts of office space available for other agencies. During and immediately after the war several other Federal agencies acquired office buildings in the field. As their activities diminished, surplus space in many of these structures became available for other use. Since there was no central clearing house available in the field to equitably allocate the space, excessive space was occupied by some agencies or it remained unoccupied, while others were going into the open market to procure high-cost space to meet their requirements.

This plan excluded the leasing functions now vested in the Post Office Department and such space which is used by that Department for postal service. This exclusion is intended to safeguard the interest of the Post Office Department by giving it priority on all space under its jurisdiction, while at the same time make it possible to release such space as is in excess of its needs. In other words, if a postal building is predominantly used by that Department its custody and operation would remain under the Department; but, if only a portion of the building is used for the postal service, the remainder of the building would be allocated to the General Services Administration for assignment, maintenance, and upkeep. Under this arrangement it is anticipated that insofar as the cost of operating the postal system is concerned a reduction will be made because these nonpostal expenses are now charged against postal revenues.

A recent survey conducted by the Public Buildings Service of the General Services Administration shows that as of September 30, 1949, 11,088,000 square feet of Government-owned office space, outside of the District of Columbia, was under the control of various agencies, representing approximately 58 percent of the total space in field offices. In addition, the Government leased over 11,000,000 square feet of space now under the control of various agencies. This represents over 54 percent of the total space leased by the Government. A tabulation of space in the postal buildings located in major cities throughout the country shows that, of the total space available, from 51 percent to 90 percent is now used for nonpostal purposes. Under this plan, the space which is excess to the needs of the postal service would be assigned to other agencies by the General Services Administration.

SUMMARY

(a) Approval of this plan will make possible better utilization of Government space, reduction in personnel, appropriations, and space requirements.

(b) Centralized control should reduce confusion and facilitate coordination of the Government's space requirements with proper centralized administration responsibility.

(c) The plan is in accord with the spirit and intent of the Federal Property and Administrative Services Act of 1949.

HOOVER COMMISSION RECOMMENDATIONS

This plan is in conformance with the Hoover Commission's recommendation No. 6 on Office of General Services (pp. 10–11, Report No. 3).

ISSUES INVOLVED

The National Association of Post Office Maintenance Employees has issued a "special news letter" urging its members to communicate with Members of Congress urging disapproval of this plan. These employees contend that, if the plan is approved and they are transferred to GSA, a reduction in salary from $20 to $740 per annum, involving reductions in every classification will be effected. At present, maintenance and custodial employees are paid under the rates established by Public Law 134 of the Seventy-ninth Congress (Postal Classification Act of 1945), whereas employees performing comparable work for other governmental departments are paid at lower rates established pursuant to the Classification Act of 1949 (Public Law 429, 81st Cong.). In each classification or pay group postal employees are paid more than their counterpart in other agencies of the Federal Government.

The staff has been informed by the Bureau of the Budget that a regulation or administrative order is being issued to protect the pay grades, and to make appropriate adjustments in regard to accumulated annual and sick leave of the postal employees who may be transferred by virtue of the taking effect of this plan.

MARCH 21, 1950.

[Staff Memorandum No. 81-2-37]

REORGANIZATION PLAN NO. 19 OF 1950, EMPLOYEES' COMPENSATION FUNCTIONS

PURPOSE

This reorganization plan transfers the Bureau of Employees' Compensation and the Employees' Compensation Appeals Board from the Federal Security Agency to the Department of Labor. The plan also transfers from the Federal Security Administrator to the Secretary of Labor functions with respect to employees' compensation, including workmen's compensation, and functions with respect to the Employees' Compensation Appeals Board. The distinction here made as between the functions of the agencies and the functions of the heads thereof is necessary because there are involved certain organizational responsibilities peculiar to the position of agency head rather than to the agency itself.

Also transferred from the Federal Security Agency to the Department of Labor, as a necessary adjunct to the transfers enumerated above, are related personnel, property, records, and funds.

CONFORMANCE WITH RECOMMENDATIONS OF THE HOOVER COMMISSION

As stated by the President in his message of transmittal, this plan is in exact conformity with recommendation No. 2 of Hoover Commission Report No. 13 on the Department of Labor, which is as follows:

"We recommend that the Bureau of Employees' Compensation and the Employees' Compensation Appeals Board be transferred to the Department of Labor."

In this relation, however, it may be pertinent to record that, in the Hoover Commission's Report No. 15, Social Security, Education, and Indian Affairs, a minority statement by Vice Chairman Acheson and Commissioners Aiken and Rowe contains a recommendation that the Bureau of Employees' Compensation be retained in a Department of Welfare, which would have been created from the Federal Security Agency. This dissent sets forth the opinion that the compensation functions administered by the Bureau of Employees' Compensation bear no resemblance to any other program of the Department of Labor. On the contrary, the dissent maintains workmen's compensation is a form of social insurance and therefore naturally belongs in the Federal Security Agency.

As also relevant to the foregoing, the staff feels that due note should be made of the fact that the dissent referred to was transmitted to the Congress in report No. 15 on March 18, 1949. On June 20, 1949, the President submitted to the Congress Reorganization Plan No. 2 of 1949 which transferred, among other things, the Bureau of Employment Security, including the function of unemployment compensation, from the Federal Security Agency to the Department of Labor and, although resolutions of disapproval were presented to both Houses of Congress through the appropriate committees, the resolutions were disapproved and the plan became law on August 20, 1949. Thus the statement in the dissent that workmen's compensation functions bear no resemblance to any existing operating program of the Department of Labor cannot be said to be true at the present time.

HISTORICAL BACKGROUND

The functions of the present Bureau of Employees' Compensation and of the Employees' Compensation Appeals Board originally were lodged in the United States Employees' Compensation Commission, an independent organization. Under authority of Public Law 263, Seventy-ninth, the Reorganization Act of 1945, approved December 20, 1945, the President on May 16, 1946, submitted to the Congress Reorganization Plan No. 2 of 1946. Section 3 of that plan abolished the United States Employees' Compensation Commission and transferred its functions to the Federal Security Agency to be administered under a single head, as distinguished from its previous administration by a quasi-judicial commission of three. Section 3 of that plan also directed that there be established in the Federal Security Agency a Board of three persons which would discharge the appeals functions formerly discharged by the United States Employees' Compensation Commission. Thus, in lieu of the single agency, the United States Employees' Compensation Commission, there came into existence, as a result of Reorganization Plan No. 2 of 1946, two entities, the Bureau of Employees' Compensation and the Employees' Compensation Appeals Board, both located in the Federal Security Agency.

On June 24, 1946, the Committee on Expenditures in the Executive Departments of the House of Representatives reported favorably House Concurrent Resolution 151, disapproving the reorganization plan. In accompanying House Report No. 2327, the committee stated that its recommendation for disapproval of the reorganization plan was based on its belief that the abolition of the United States Employees' Compensation Commission violated section (5) (a) (6) of the Reorganization Act of 1945, which provides, in part, that no reorganization plan thereunder should impose on any quasi-judicial function then possessed by an independent agency any greater limitation upon the exercise of that function than existed prior to the reorganization. The committee stated further its belief that Federal employees who have claims under the United States Employment Compensation Act are entitled to appeal to a bipartisan commission that is not subject to the administrative control of another executive agency or department head.

On July 9, 1946, the Senate Committee on the Judiciary reported unfavorably Senate Concurrent Resolution 65, which would have disapproved Reorganization Plan No. 2 of 1946. As to section 3 of that plan, the Senate committee stated that the language therein to the effect that the functions of the United States Employees' Compensation Commission should be performed "in such manner" as the Federal Security Administrator "shall prescribe," referred only to the technical performance of functions, that is the matter of forms, procedures, etc. The committee took the position that there was no intent or attempt to place the appeals determinations of the Commission under the jurisdiction of the Federal Security Administrator. Thus, it would appear that the Senate committee found itself completely out of sympathy with the stand of the House committee. In any event, the plan was disapproved in the House, but disapproval failed in the Senate and thus the plan became law, the United States Employees' Compensation Commission was abolished and its functions have since been discharged in the Federal Security Agency by the Bureau of Employees' Compensation, under a Director, and the Employees' Compensation Appeals Board, consisting of three members, one of whom is Chairman.

LAWS INVOLVED

The several acts of Congress which are administered by the Bureau of Employees' Compensation are as follows:

Act of September 7, 1916, as amended: This is the basic compensation law for Federal employees and provides compensation for civilian employees of the United States who suffer personal injuries while in the performance of duty. The act benefits, in addition to all civil employees of the Federal Government, certain employees of the District of Columbia; members of the Naval Reserve Force, of the Officers' Reserve Corps, and of the Enlisted Reserve Corps of the Army, of the Coast Guard Reserve, and of the Women's Army Auxiliary Corps, under certain conditions; evacuees in war relocation camps, persons employed on certain Federal relief projects, commissioned officers of the Public Health Service, and certain other groups.

Act of March 4, 1927: This law provides workmen's compensation benefits for employees in private enterprise while engaged in maritime employment on navigable waters of the United States.

Act of May 17, 1928: This law extends the provisions of the act of March 4, 1927 (see preceding paragraph), to private employments in the District of Columbia.

Act of August 16, 1941, as amended by the act of December 2, 1942: These two acts extend the provisions of the act of March 4, 1927 (see identification above), to employees on United States military, air, and naval bases in foreign countries, on certain military and naval installations outside the continental limits of the United States, and on certain other projects of the United States outside the country.

Act of July 3, 1948: This is the War Claims Act of 1948, certain parts of which are involved in this transfer of functions, relating specifically to claims of employees of certain contractors with the United States for wages due on account of detention by the enemy during World War II.

Other legal functions: In addition to the foregoing, there are also involved certain miscellaneous activities involving civilian war benefits and claims of certain American civilians and certain contractors arising from World War II.

CONCLUSION

So far as the staff has been able to determine, there is at present no important objection to this plan.

Attention is directed, however, to the Hoover Commission minority dissent reported above under "Conformance with recommendations of the Hoover Commission." Also in this relation, in a letter of July 14, 1949, addressed to the chairman of this committee, Mr. Oscar R. Ewing, Federal Security Administrator, commented as follows with respect to the Bureau of Employees' Compensation and the Employees' Compensation Appeals Board:

"As these two functions relate primarily to compensation for injuries of civilian employees of the Federal Government, I am considering them together. Frankly, I can find no tangible reasons why these functions should be transferred from this agency. I feel strongly that the relation of these functions to other Federal social insurances is of much greater importance, and call your committee's attention to the separate statement of Vice Chairman Acheson and Commissioners Aiken and Rowe, which appears on pages 46, 47."

After quoting from the dissent of Vice Chairman Acheson and Commissioners Aiken and Rowe, Mr. Ewing concluded as follows: "I am opposed to the proposal to transfer these functions."

The staff has again consulted the Federal Security Agency regarding this transfer as contemplated by Reorganization Plan No. 19. We are advised that, although the letter of July 14, 1949, referred to above, expressed the views of the Federal Security Agency at that time, now, in view of the President's announced program, the agency voices no present opposition to the transfer.

WALTER L. REYNOLDS,
Staff Director.

MARCH 27, 1950.

[Staff memorandum No. 81-2-42]

REORGANIZATION PLAN NO. 20 OF 1950, TRANSFER OF FUNCTIONS FROM THE SECRETARY OF STATE AND THE DEPARTMENT OF STATE TO THE ADMINISTRATOR OF GENERAL SERVICES

PURPOSE

The purpose of this reorganization plan is to transfer to the Administrator of General Services certain preservation, publication, and certification functions now lodged in the Secretary of State and in the Department of State with respect to Acts of Congress, amendments to the Constitution of the United States, certificates of appointment, and votes of electors of the President and Vice President of the United States, and official papers of the Territories from which the States of the United States were formed. The Administrator of General Services would be empowered to delegate this authority within the General Services Administration as he may consider appropriate.

The plan would also abolish certain obsolete functions now required to be performed by the Secretary of State, namely (a) the procuring of copies of all statutes of the States of the United States, which function is now performed by the Library of Congress; and (b) the publishing of Presidential proclamations and treaties in a newspaper of the District of Columbia, now published in the Federal Register. Further, treaties are now made available in slip form.

In conjunction with the functions transferred, there are also proposed to be transferred incidental records, property, personnel, and funds.

CONFORMANCE WITH RECOMMENDATIONS OF THE HOOVER COMMISSION

There is no specific recommendation of the Hoover Commission relating to the transfer of the functions covered by this reorganization plan. However, the plan is in direct conformance with the position of the Hoover Commission as expressed in Report No. 1, General Management of the Executive Branch, to the effect that improvement of the organization and administration of the Government must include "a more orderly grouping of the functions of Government into major departments and agencies under the President." The Commission further stated in Report No. 1 that by placing related functions together in an agency duplication could be eliminated and coordinated policies could be developed.

A part of the General Services Administration is the National Archives and Records Service, and, as will be seen from the ensuing section of this memorandum, the statutory enactments involved place the functions proposed to be transferred squarely within the operational field of that Service.

LAWS INVOLVED

Enactments of Congress affecting functions proposed to be transferred:

Section 204, as amended, Revised Statutes (5 U. S. C. 159): This is a requirement of law deriving from an act of September 15, 1789. It requires the Secretary of State to preserve the originals of all acts of the Congress.

Title 1, section 112, United States Code: This provision of law requires that the Secretary of State shall cause the compiling, editing, indexing, and publishing of the United States Statutes at Large, prescribes the contents thereof, establishes the status of the Statutes at Large as to legal evidence, and provides for the timeliness of their publication.

Section 210, as amended, Revised Statutes (5 U. S. C. 165): This provision of law requires that the Secretary of State shall furnish to the Public Printer a correct copy of every act of Congress and of every treaty and international agreement.

Sections 3805 and 3806, as amended, Revised Statutes (44 U. S. C. 192, 193): These statutes, respectively, relate to correction by the Secretary of State of newly printed acts of Congress and treaties and to printing by the Public Printer of postal conventions, which are considered as international agreements.

Act of January 12, 1895 (28 Stat. 609, 615, as amended; 44 U. S. C. 191, 196): This law, as incorporated into the two sections of the United States Code, provides, in the first instance, for certain mechanics of printing of laws and international agreements, and, in the second instance, constitutes a repetition of the contents of the law referred to above at title 1, section 112, United States Code.

Act of April 12, 1904 (33 Stat. 587; 44 U. S. C. 197): This provision of law relates to certain mechanics in the preparation of the United States Statutes at Large.

Section 205, Revised Statutes (5 U. S. C. 160): This is a provision of law which requires the Secretary of State to have published, and to certify with respect to, amendments of the Constitution which have been adopted.

Title 3, sections 6, 11-13, United States Code: These sections of the law relate to custody by the Secretary of State of actions by electors of the President and Vice President of the United States.

Act of March 3, 1925 (43 Stat. 1104, as amended; 5 U. S. C. 167, 168): This law relates to collection by the Secretary of State of the official papers of the Territory from which each State of the United States was formed, and to publications thereof.

Act of July 31, 1945 (59 Stat. 510; 5 U. S. C. 168d): This provision of law relates to the functions enumerated under the law defined in the paragraph immediately preceding.

Enactments of Congress affecting functions proposed to be abolished:

Section 206, Revised Statutes (5 U. S. C. 161): This is a provision of law which requires the Secretary of State to maintain a complete collection of the statutes of all of the States of the United States. (Now also performed by the Library of Congress.)

Act of July 31, 1876 (19 Stat. 105, as amended; 44 U. S. C. 321): This is the provision of law which requires publication in a newspaper of the District of Columbia, as designated by the Secretary of State, of Presidential proclamations and treaties. (Now also published in the Federal Register.)

CONCLUSION

In the preceding section of this memorandum, there are defined briefly the various legislative enactments involved under Reorganization Plan No. 20. An important feature of the plan is the reservation of the Secretary of State of all printing and publication functions, including compiling, editing, and indexing, with respect to treaties, other international agreements, Presidential proclamations related thereto, and postal conventions. So far as the staff has been able to determine, there is no important objection to any feature of the plan. Discussions have been had with various representatives of the Department of State and the General Services Administration. It is generally agreed that the plan is thoroughly sound and marks a distinct step forward in the development of better governmental administration. It may be said that the plan places all functions involved, which are of a domestic nature, in the hands of the Administrator of General Services, while retaining those of an international character in the hands of the Secretary of State.

LEGISLATIVE RECOMMENDATION

In the course of its investigation of this plan, the staff disclosed and directed to the attention of both agencies concerned a contingency corollary to this reorganization plan, and which inevitably must ensue almost immediately after the plan becomes effective. The staff wishes to direct this matter to the attention of the committee because in the interest of better administration some action of a legislative nature should be taken. At the present time the United States Statutes at Large are issued as required by law on the basis of a session of the Congress and, through custom, publication is made in two segments, the first containing, generally, public laws and reorganization plans, if any, and the second containing, generally, private laws, treaties, other international agreements and related proclamations. Thus, it is readily apparent that retention by the Secretary of State of his functions with respect to the Statutes at Large as related to treaties and other international agreements and proclamations, creates a difficulty for the reason that the function of incorporating private laws and any other inclusions into the second segment of the Statutes at Large are transferred by this reorganization plan to the Administrator of General Services. Obviously, either an unwieldy working arrangement must be attained between the Department of State and the General Services Administration so as to correlate their respective work as to publication of the second segment of the Statutes at Large, or, as an alternative, the Statutes at Large must henceforth be published somewhat differently, as to segments, so as to permit the Department of State to perform its functions regarding treaties and other international agreements and proclamations independently of the General Services Administration.

This latter alternative is exactly what the Department of State and the General Services Administration feel should be done. Further, both agencies agree that, as there is no particular relationship between a session of the Congress and the publication of treaties and other international agreements and proclamations, it should be permissible to have the publication thereof done on the basis of a calendar year. The reasons for this change are very persuasive and the staff is wholly in sympathy therewith.

It should be reported further that, by identical letters of June 10, 1949, to the Senate and the House of Representatives, the Secretary of State submitted for consideration of the Congress a proposed draft of legislation which would amend applicable law to permit removal of treaties, related proclamations, and other international agreements from the Statutes at Large and authorize their publication in a separate volume on the basis of a calendar year. This draft bill was referred to the Senate Committee on Rules and Administration, where, after some preliminary investigation, it has remained dormant. The matter has been discussed at length with representatives of the Department of State and the effect sought to be attained by the legislation is still desired by the Department. Of course, the draft bill should be thoroughly revised so as to reflect developments proposed to be brought about by Reorganization Plan No. 20.

The staff recommends in this relation that, immediately upon Reorganization Plan No. 20 becoming effective, an appropriately revised bill be drafted and submitted to the appropriate committee for consideration. The benefits from such legislation can reasonably be expected to be manifold, including better administration with respect to publication of the international documents and a very probable considerable monetary saving arising from elimination of the so-called Malloy volumes in which, from time to time, such international papers have been printed as Senate documents.

[Staff Memorandum No. 81-2-44]

MARCH 28, 1950.

REORGANIZATION PLAN NO. 21: TRANSFER OF FUNCTIONS OF THE UNITED STATES MARITIME COMMISSION TO THE DEPARTMENT OF COMMERCE

PURPOSE

This reorganization plan provides for the establishment of a Federal Maritime Board and a Maritime Administration in the Department of Commerce to which would be transferred all the functions of the United States Maritime Commission, in the following manner:

To Federal Maritime Board:

(a) To the Chairman: Executive and administrative functions of present chairman (including functions transferred by Reorganization Plan No. 6 of 1949).

(b) To the Board: Regulatory functions over rates, services, practices, tariff rules, etc.

(c) Subsidy awards, hearings, sales, assignment or transfer of subsidies.

To Maritime Administration:

(a) The administration of subsidy agreements made by the Board.

(b) Administration of the operating programs, such as ship construction, charter, operation, and sale.

The functions transferred to the Maritime Administration would be vested in the Secretary of Commerce with authority to redelegate such responsibility to the new Administrator or any other subordinate. The Maritime Commission would be abolished.

BACKGROUND

Within the past 3 years three different groups have studied the administration of the Maritime Commission. All have concurred that the operating deficiencies of the agency arise from inadequate, inappropriate, and unsound organization, and that a fundamental reorganization is essential. The first study was made in 1947 by the President's Advisory Committee on the Merchant Marine. This committee stated:

"It appears to the committee that the organization structure of the Maritime Commission as set up in the Merchant Marine Act of 1936 is wholly inadequate for the efficient conduct of the multitude of diverse activities for which the Maritime Commission is now responsible. The deficiencies of the statutory organization for action are regarded by the committee to be the most serious obstacle standing in the way of the development of the merchant marine of this country."

In 1948, the staff of the Senate Committee on Expenditures in the Executive Departments made a management survey of the Maritime Commission and reported on December 31, 1948, in part, as follows:

"The Maritime Commission is generally considered to be an independent agency in the executive branch of the Government, but its position is anomalous. It is almost wholly independent of the President and he has virtually no power to require that it conform with the general policies of the Government. The Commissioners who direct the agency are appointed by the President, with the advice and consent of the Senate, and the Chairman of the Commission is named by the President. However, after they have been appointed, confirmed, and installed, they can act independently without fear of removal from office, except for neglect of duty or malfeasance, until the expiration of their 6-year terms.

"Although matters over which the Maritime Commission has control affect many other departments and agencies in the executive branch, it is possible for the Maritime Commission to be operated without regard to national policy. In times of emergency, this lack of correlation with other components of the Government could have serious results.

"It might be said that the Maritime Commission is responsible only to the Congress. However, this responsibility is nebulous and is only effective through the control of the purse strings and through specific substantive legislation.

"In the discharge of certain of its duties, its independence is an asset. In performing its quasi-judicial, quasi-legislative, and regulatory duties there is an advantage of shielding it from political influence and reprisals. However, as a promotional agency, as an operating arm of the Government, and as a potential military auxiliary, it should be controlled, directly or indirectly, by the President and be operated in conformance with current national policy" (p. 3).

The report then concluded:

"The fundamental weakness of the Maritime Commission as it is now constituted lies in its prescribed organization."

The Hoover Commission in its report on the Department of Commerce, in discussing the Maritime Commission, stated:

"The United States Maritime Commission, made up of full-time members, has a dual function. It exercises regulatory functions affecting the whole merchant marine and at the same time buys, sells, and subsidizes shipping and makes loans on ships on a huge scale.

"It is an anomaly that a regulatory commission should also conduct the executive function of managing a huge business; that executive functions should be carried on by an agency that is not subject to Presidential direction; that executive functions should be carried on by a full-time board of which all members have equal responsibility and authority, instead of by a single administrator" (p. 17).

Basically the administrative difficulties of the Maritime Commission as it is now constituted arise from the fact that the agency is responsible for administering two types of programs which are incompatible and diametrically opposed to each other. These programs are (a) regulatory and (b) operating and promotional. Management consultants and organization specialists who have participated in the surveys discussed above agree that the regulatory functions of the Maritime Commission should be performed by a separate organizational component from that which is responsible for the operating and promotional activities.

FEDERAL MARITIME BOARD

Reorganization Plan No. 21 provides for the establishment of a Federal Maritime Board to be composed of three members who would be appointed by the President and confirmed by the Senate.

The Board members would be appointed for terms of 4 years and the President would designate the Chairman who would be ex officio administrator of Maritime Administration. Not more than two members of the Board would be of the same political party.

The Board would be an agency within the Department of Commerce, but independent in carrying out its responsibility in respect to holding hearings, recruiting and supervision of its personnel, issuing rules and regulations, establishing rates, tariffs, subsidies, and related functions, but coordinated with the general policies of the Secretary of Commerce.

MARITIME ADMINISTRATION

As indicated above, the Chairman of the Federal Maritime Board would be ex officio Administrator of the Maritime Administration. The plan also provides for a Deputy Maritime Administrator to be appointed by the Secretary of Commerce, after consultation with the Administrator. The Deputy Administrator would be under the classified civil service and perform such duties as prescribed by the Administrator, but would not sit as a member or acting member of the Federal Maritime Board.

GENERAL PROVISIONS

Under Secretary of Commerce: The plan provides for the establishment of an office of "Under Secretary of Commerce for Transportation."

Joint utilization of personnel: The Chairman and Administrator may make joint use of the employees under their control.

Conflict of interest: The provision contained in section 201(b) of the Merchant Marine Act of 1936, which prohibits any commissioner, officer, or employee of the Maritime Commission who has a pecuniary interest in water carriers, contractors, shipbuilders, and so forth, from employment by the Commission, is extended by this plan to all officers and employees of both the Board and the Maritime Administration.

Interim appointment: Until other commissioners, officers, or employees are appointed, the present personnel shall continue in office until new appointments are made, but such personnel shall not continue in office in excess of 90 days unless reappointed.

Transfer of records, property, and funds: The records, property, personnel, and funds of the Maritime Commission will be transferred to the Department of Commerce to be used and expended in connection with the purpose of this transfer; however, the Director of the Bureau of the Budget is authorized to make such determinations or dispositions as he feels consonant with the plan.

Abolition of Maritime Commission: The United State Maritime Commission would be abolished, and the Secretary of Commerce would terminate any outstanding affairs not otherwise provided under this plan.

The functions transferred under this plan are not subject to the provisions of plan No. 5 of 1950 (which transferred to the Secretary of Commerce all of the functions heretofore vested in subordinates of that Department).

HOOVER COMMISSION RECOMMENDATIONS

The Hoover Commission recommended (No. 2 in its report on Department of Commerce and No. 9 on Regulatory Commissions) that the functions of ship construction and the operation, charter, and sale of ships be transferred from the Maritime Commission to the Department of Commerce, and that the functions relating to rates, conditions of service, and the granting of subsidies remain with the Commission.

The above recommendations were based upon the conclusion of the Hoover Commission's task-force report on independent regulatory commissions (staff rept. on U. S. Maritime Commission, pt. 4, p. 32), which are summarized as follows:

"1. Creation of Maritime Administration:

"A. A Maritime Administration, headed by an Administrator should be established in the executive branch.

"B. The Administrator should take over from the Maritime Commission all its operating, administrative, promotional, and other functions except as stated in 2 below.

"C. The Administration should be part of an appropriate department; in peacetime, the Department of Transportation, if one is established or if not, the Department of Commerce; * * * and in time of war, the Department of Defense.

"2. Changes in Maritime Commission:

"A. If recommendation 1 is adopted, the Maritime Commission should continue as a five-man independent agency—

"(1) It should exercise regulatory control over rates, fares, charges, agreements, and practices in the maritime industry, upon complaint by the Administrator.

"(2) The Commission should also have authority, upon the petition of carriers, to investigate the administration of the subsidy program by the Administrator and to report publicly its conclusions.

"B. If the Maritime Administration is not established (as recommended in 1 above),

the Chairman of the Maritime Commission should be made responsible to the President for the administration of the agency and for policy making as to its operating functions."

Other general observations of the Hoover Commission relating to reorganization of the Maritime Commission follow:

(a) Appointment of Commissioners is frequently below standard because of inadequate salaries or appreciation of the importance of the position.

(b) Purely executive duties have been imposed on the Commissioners with no one really vested with over-all authority.

(c) The amount of work in the regulatory field has been so heavy that promotional functions have been neglected.

(d) Delegation of authority to the staff is practically nonexistent.

(e) The Chairman is too frequently the presiding officer with no over-all planning responsibility.

(f) Lack of coordination between the Commission and executive departments (pp. 3 and 4 of Report No. 12 on regulatory commissions).

MINORITY VIEW OF THE COMMISSION

Commissioners Brown and Pollock dissented from the majority, in that they believed that all of the regulatory functions in the transportation field should be consolidated in a single transportation regulatory commission, and that the Maritime Commission should be abolished in favor of a new agency created to take over its regulatory functions.

ISSUES

It is possible that the shipping interests may oppose this plan, but there are indications that the industry is apprehensive lest the whole question of subsidies be brought into the debate if they appear before the committee in opposition to the plan. Large shipping interests may ask to appear against the plan, but in that event the small shipping lines may ask to testify in favor of the plan (in order that their interests may be more sympathetically considered by the Federal Government).

One specific question has arisen as to the application of that part of section 106 (page 3) providing for the administration of functions, under which the chairman "shall be guided by the general policies of the Secretary of Commerce with respect to such functions." It is contended that this provision is in conflict with the language of the same section, which states that the chairman "shall be independent of the Secretary of Commerce," and that "general policies" might encroach on the functions of the chairman.

COMMENTS BY THE CHAIRMAN AND OTHER MEMBERS OF THE MARITIME COMMISSION

In 1949 when the Hoover Commission report was received by Congress, the Maritime Commission was requested by the chairman of this committee to comment on the recommendations contained therein. The chairman of the Commission opposed the recommendations affecting it (pp. 261–263, S. Rept. No. 1158) concluding that:

"The so-called business or executive operations of the Commission are in fact so closely interwoven with the regulatory and subsidy activities of the Commission that to separate them would only compound the alleged difficulties in the present administration of the law. * * *

"The Commission is convinced that the belief (which is hardly more than a hope) that the administration of nonregulatory, or executive, or business operations of the Commission can be separated from the regulatory and subsidy functions without serious complications is without foundation. * * * The Commission cannot emphasize too strongly the undesirability and danger of attempting to establish separate administrative agencies for governmental activities in respect to the oceangoing merchant marine. Historically and basically the continuance of promotional or operational or business functions concerned with the merchant marine in the same agency charged with the regulatory activities is a fundamental necessity for the successful administration of the merchant marine policy for the United States. Any other method would simply be a case of letting one hand function without the required amount of coordination with the other hand. * * *

"The Commission is unanimously and vigorously opposed to any proposed splitting of the functions now vested in the Maritime Commission with respect to the merchant marine."

Recently the chairman and two members of the Commission stated to the press that they would support the President in his efforts to improve the merchant fleet and promote efficiency in the administration of maritime affairs, and that they would not oppose the plan. The fourth Commissioner (Mr. Mellen) stated that "he was highly in favor of the President's Reorganization Plan No. 21."

FBI National Academy

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 31, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the program in connection with the graduation exercises of the members of the forty-third session of the FBI National Academy, and a very able and constructive address delivered by our colleague, the Honorable JOHN J. ROONEY, chairman of the House Subcommittee on Appropriations for the Departments of State, Justice, Commerce, and the Federal Judiciary:

PROGRAM

Call to order—Mr. Hugh H. Clegg
Assistant Director, FBI
Invocation—Rev. Robert S. Lloyd, S. J.,
Manresa-on-Severn, Annapolis, Md.
Address—Mr. Lester H. Eisenhut
Fort Wayne, Ind., president of the graduating class
Address—Hon. JOHN J. ROONEY
Representative from New York
Address—Dr. Norman Vincent Peale
Marble Collegiate Church, New York City
Presentation of the guests of honor—
Director John Edgar Hoover, Federal Bureau of Investigation
Recommendation for the awarding of the diplomas—Mr. Clegg
The awarding of the diplomas—
Solicitor General Philip B. Perlman and the Director
Benediction—Rev. Robert S. Lloyd, S. J.
Musical program—
The United States Marine Band and Orchestra

The inspiring address of Congressman ROONEY is as follows:

I am indeed honored and very happy to have the privilege of being here with you this morning. The FBI National Academy, since its founding in 1935 under the guidance of Mr. J. Edgar Hoover, Director, Federal Bureau of Investigation, has symbolized law enforcement at its best—aggressive, alert, and loyal to the democratic tradition of America. The peace officer, in the truest sense of the word, has become the guardian of the rights, lives, and property of the citizenry of our Nation.

The National Academy, to my mind, symbolizes a fundamental principle—the voluntary cooperation of law enforcement, local, State, and National, through democratic methods to achieve a common aim. This principle could be applied, I think, with great benefit to many other phases of our national, yes, even our international, life. This idea of which you, as the forty-third graduating class are a part, presents a solution, at least to some extent, to many of the evils of our time.

As chairman of the House subcommittee on Appropriations for the Departments of State, Justice, and Commerce, and the Federal Judiciary, I have closely followed the work of the FBI. Just a short while ago Mr. Hoover appeared before our committee and gave his usual frank, extremely lucid, and interesting analysis of the many phases of the FBI's activities. I was greatly impressed by the FBI's deep interest, and the amount of time and energy expended in strengthening local law enforcement. The Identification Division, the FBI laboratory, the uniform crime reporting program, the FBI National Academy—all of these FBI facilities are available, free of charge, to local police departments, sheriffs' offices, State police organizations. My own State, New York, for example, has 115 graduates from the National Academy. And I am proud to say that the graduating class today contains two more men from the great Empire State of New York.

Almost 15 years have passed since the establishment of the National Academy. At that time we had divided allegiance in law enforcement. Many law-enforcement officers were intensely jealous of their own prerogatives and privileges. They were reluctant to cooperate, not only with other law-enforcement agencies, but even with brother officers. If they possessed an informant, a special investigative technique—well, that was their property, and no persuasion or threat could prevail upon them to share it. These men were "self-contained men"—at least they liked to think of themselves as self-contained. They thought, through their own abilities and talents, they could handle the problems of law enforcement on their beat, in their city or county. Not only were they unwilling to share, but they were unwilling to learn. When law enforcement was dominated by men—and departments—possessing this mentality, it became a merry-go-round, going round and round in the same groove, while the criminals robbed, murdered, and raped to their heart's content.

I need not recall to you the conditions of crime and law enforcement in 1935. Vicious gangs were roaming large areas of our Nation: kidnaping, bank robbery, and murder were common occurrences. Criminals were sneering at law enforcement, almost daring officers of the law to come after them. For example, Alvin Karpis, one of America's most notorious criminals, was still at large. In November 1935, Karpis and four associates, armed with machine guns, shotguns, and automatic pistols held up an Erie Railroad train at Garrettsville, Ohio. They made a score of $34,000 in currency and several thousand dollars in securities. Imagine the audacity of hardened criminals like Karpis and Harry Campbell holding up an American railroad train in broad daylight—amid the circus effects of a wild-west show. Certainly, something had to be done—criminals like Karpis, Campbell, and their ilk, had to be swept from the American scene. The

challenge was there—open for all to see. The criminals were utilizing the latest scientific techniques—the automobile, the radio, the airplane. They crossed State lines with virtual impunity, and learned to cooperate with fellow hoodlums—all for the purpose of preying upon the law-abiding citizens of the Nation.

Americans everywhere, I think, are today proud of the record achieved by law enforcement, by you men and your brother officers at home, in counteracting the criminal challenge. Law enforcement, working harmoniously together, blunted the criminal attack. The criminal gangs were broken up, some members were killed while resisting arrest, others brought before the bar of justice. Not that crime was extinguished. Not at all. Unfortunately today, after a terrible war, crimes rates are high, much too high. But the spirit of cooperation, of a united law enforcement, local, State, and National, linked together, in voluntary and fraternal association, is the thrilling point. Better training, more modern equipment, higher professional status—these are the components of good law enforcement. But good as these are, or may be in the future, the key point is the spirit of the men themselves. Unless the will to succeed, the urge to conquer the evildoer, is present, the very best in training and equipment falls to the ground—mere dead letters.

The impetus of the National Academy, which, for 15 long years kept sending out graduates, men like you, helped turn the tide. Mr. Hoover, in founding the Academy, realized the weaknesses of law enforcement, and set about doing what he and the FBI could to remedy them. He knew that local officers, wherever they may be, must possess the latest equipment, be well-trained, and, above all, be animated by the spirit of moral integrity and a devotion to duty. I can testify, as a former prosecuting attorney [in Brooklyn] to the good work which well-trained, fully equipped law enforcement can accomplish. The law-enforcement officer is a man of many skills, each skill dedicated to the service of his fellow man. He must be ready, day and night, in season and out of season, to render the maximum protection to his community. To do anything else would mean betraying the past and forfeiting the future.

Most important, however, in recalling the history of law enforcement during the past 15 years, is this fact: American law enforcement, unlike in so many other Nations of the world, developed in the democratic tradition.

Our law-enforcement agencies are not secret police. They are not sending men and women to concentration camps, to die in a dungeon or on a bleak, snowy hillside. No, indeed not. American law enforcement is the servant of the citizenry, controlled, directly or indirectly, by the elected representatives of the people. It is dedicated to preserving, not assassinating, the liberties of the individual.

The National Academy, by training selected police officers from throughout the Nation, is strengthening the democratic tradition. Some people have the effrontery to say the FBI is a Gestapo. This is pure nonsense and hokum. If these critics were here today they could see, with their very eyes, the stupidity of their charges. The National Academy itself is a bulwark against a police state, a fascinating and effective instrument to improve and to strengthen local law enforcement. Mr. Hoover time after time has reiterated that America has no need for a national police state. He has just hung up a record of 25 years of service during which time he has gained a shining place in public esteem for the FBI.

The system of voluntary law enforcement, local, State, and National, has in the past and will continue in the future to handle the problems of the day. The inadequacies in law enforcement—and there are many—are due, not to the system itself, but the way it operates. And that is what the National Academy—with your help as honored graduates—desires to do; to improve, in a voluntary and democratic manner, the American system of law enforcement.

As a Member of Congress, I am intimately familiar with the principle of the separation of powers, between the executive, the legislative, and judicial branches of our Government and the vital need, in order to advance the best interests of our Nation, for sincere and wholehearted cooperation. This does not mean the stifling of discussion, the predominance of one unit over another, or the adoption of a single way of doing things. Absolutely not. Sincere cooperation encourages free discussion, the free interplay of ideas, the expression of dissent. All sides of the question—and many issues have more than two sides—are discussed, analyzed, weighed. Each person has his share to contribute and to learn. That is the way progress is achieved in a democracy.

America today, perhaps more than in any previous period in its history, needs the cooperation of its citizens to work toward a common, mutually beneficial goal—the fundamental principle symbolized in law enforcement by the National Academy. Sinister forces, the demons of communism, are abroad in the world today. They have conquered large areas and are attempting, with ruthless determination, to subject the free world. Who is not with them, they reason, is against them. Democracy, the way of life which has nurtured the magnificent blessings of freedom and liberty in this Nation, must be destroyed. Every speck of free thought must be identified, tracked down, and exterminated. The dunce cap of intellectual sterility and moral perversion, the essential elements of Communist philosophy, must be slipped over the head of the world. Then, and only then—when the entire world has been conquered—will clear vision, straight thinking, and individual judgment be liquidated. And, then, the age of darkness will have descended—and the age of communism begun.

We Americans must work together to conquer this menace. There will be voices of doom, wailing that America must compromise, must give way, at least partially, to the Communist ideology. I defy this point of view—America can, and must, defeat the totalitarian threat. To compromise, in the least iota, is to undermine the very foundations of democratic society. The principles of free government are sacred and inviolate. If this Nation is to remain free, and to serve as a symbol of justice and right for the peoples of the world, we must work unceasingly to unmask the Communist and to expose, for all to see, his true wares: hate, hypocrisy, sham, and intolerance.

The task will be long and hard—make no mistake about it. The best energies and talents of each individual citizen will be required. Communism must be fought, straight from the shoulder, with truth, knowledge, and the unimpeachable facts.

The entire Nation—and world—could benefit from the principle epitomized by the National Academy—the voluntary cooperation through democratic methods to achieve a common aim. This principle is wider than law enforcement—it encompasses the entire range of human life. If this philosophy could be applied honestly and sincerely today, many of our troubles would disappear. As you return to your various communities this afternoon, you gentlemen can well feel proud of being a part of this great endeavor to make law enforcement ever more effective. By doing your part, wherever you may go, you are doing a share for your Nation.

Letter of Students of Cleburne (Kans.) Rural High School

EXTENSION OF REMARKS

OF

HON. ALBERT M. COLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. COLE of Kansas. Mr. Speaker, I am pleased to include in the RECORD a splendid letter written by the high-school students of the Cleburne (Kans.) Rural High School.

This display of intelligent and vigorous citizenship is to be commended. I hope my colleagues will read the letter with care.

The letter follows:

CLEBURNE RURAL HIGH SCHOOL,
Cleburne, Kans., March 28, 1950.

Hon. ALBERT M. COLE,
House of Representatives,
Washington, D. C.:

Believing that, in ourselves our future lies, and that the present is yours, the future ours, we, the undersigned students of the Cleburne Rural High School, feel impelled to raise a red flag warning you of some dangers ahead.

Among other things, we study history, citizenship, and current events. We have decided to pool a few of our ideas and send signed copies to our United States President, Vice President, Congressmen, and some committee members. If we are concerned enough about the future of our country to spend 3 weeks formulating this letter, you should give 15 minutes of your time to read it personally. Some of us are Democrats and some Republicans, but we believe parties are only means to an end, namely, the welfare of the people.

First. We are unable to understand how so frequent big strikes function to promote social unity and economic stability in a healthy democracy. When labor is allowed to dictate to a property owner, and by clubs and guns, tell him how to run his business, our laws are weak somewhere. We are taught that America stands for a free-enterprise system. Any laborer should have a right to take a job as it is or leave it alone, but he has no right to shoot another man who is willing to work under the employers' terms.

We believe John L. Lewis is a dictator, working for the interests of communism, and is apparently powerful enough to bluff Congress and the President of our United States.

If a hungry man steals a loaf of bread he is fined; if I overspeed my car I am judged a menace to society and fined. Lewis can shake the economic and social foundations of our country and keep his freedom, and gets every demand he asks for. When the sum of the parts get to be greater than the whole, then both geometry and democracy are only fairy tales.

Secondly. We are much alarmed over the economic stability of our country. We are taught thrift, economy, saving for emergency, and the dangers of spending beyond our income. It is a pretty weak admonition for a parent who steals, to try to teach his children honesty. Likewise, we look to our Government which is supposed to have the best experts in economic training, as our best and most authoritative teacher. If you Government experts (?) think you can spend the country out of debt or save an economic crash by piling up debts, we cannot go along with you. One may keep climbing a ladder,

even add extensions and climb higher, but finally it will get top heavy and fall with a crash. Are economic laws any less inevitable than physical laws? Just how long do you figure you can spend $5,000,000,000 to $7,000,000,000 a year more than your income, and still avoid a crash? If you can't make ends meet in prosperous times when wages jump up every time John L. Lewis says "frog," and production is high, how will you pay your debt when hard times come, as they surely will?

This joy ride we are taking on the road to prosperity with borrowed money is a delusion. It cannot work. Let's think of the long walk back home, and stop this runaway vehicle before we wreck the machine. Red-ink financing and increasing of taxes will rob us of everything we have including our personal freedoms. History and logic both prove that statement.

Suppose we merely balance the budget (which we are not doing) we still could never get out of debt. Suppose we pare down present unnecessary and extravagant Government expenditures $15,000,000,000 a year. We could easily do this and still not weaken our economic or social structure in the least, nor would it lower our standard of living. Five billion dollars paid annually on our debt, plus $5,000,000,000 a year interest, would take us 55 years to square up. That is a long time but it won't get any less by adding $5,000,000,000 debt to it every year. Furthermore, a depression could strike in the meantime, and as our parents know, then even interest alone is hard to raise under such circumstances.

We say it is an alarming situation and high time to decide whether we are willing to sacrifice our freedoms for the miragelike panaceas of planned economy which have ruined other nations, or take the simple lesson seventh-grade arithmetic teaches.

You can lay politics aside, use some common sense, and cut out thousands of your unessential employees, merge departments, stop overlapping similar activities, and quit paying money to man one group to a certain thing (example, reclaim waste land to produce more food), and another group to do the opposite (take care of surplus and curtail production).

We believe that there are too many subsidies and too much price support, and wages are going too high. It's like the hitchhiker, the more free rides he gets the more dependent he becomes on free rides. He finally forgets how to run his own vehicle. Too many people are thinking of security instead of opportunity. We feel that there is too much centralized power and that all this bureaucratic concentration of power adds up to socialism. We don't want that. It is only one step from socialism to communism. Let he who craves socialism move to England, and if he craves still more centralized power let him take the first boat to Russia. We want democracy in Washington.

We know the gigantic public debt must be paid or we perish. Why must you hand down to innocent generations the burden of your folly? You are selling our birthright for a mess of pottage.

Third. We believe Congress should submit to the States an amendment to the Constitution providing for a maximum of two terms for any one person to act in the capacity as President of the United States. A longer term provides too great temptation to accumulate power. After three or four terms in office a political machine can be built up with a wall impervious to the will of the voters. It is too much "you vote for me or else." That smacks of totalitarian tactics. Furthermore, 8 years of the physical and mental strain entailed in the great responsibility as President of the United States is enough for any one man.

Fourth. We are giving too much aid to foreign countries. When we give too much of our own blood, who will furnish a transfusion for us? More wisdom, less waste, and less politics, will accomplish greater good at less expense.

Fifth. We do not believe in the present draft system. It is undemocratic. In peace or war you should adjust salaries and other conditions, making them so attractive that enough volunteers will always meet our needs. That is fair to all, and no one could have any logical objection.

Sixth. We do not favor the building of the Tuttle Creek Dam project, suggested by the Army engineers, across the Big Blue Valley. This is proposed under the guise of flood control. People do not treat a thorn in the flesh by putting on salve and wrapping the wound. The wise method of treatment is to pull the thorn out, and it will heal itself. So, why not control floods at the source? This dam calls for $80,000,000. One-half of that amount spent on resodding hillsides, planting forest trees and shrubs, together with a few small dams properly placed in the upper tributaries of the Big Blue Valley will accomplish in a much more sensible way the control of floods. Slow run-off is the answer.

Seventh. We stand for the equal and civil rights of all men regardless of religion, race, or color. Give every man the same rights under similar circumstances.

Eighth. We present these seven outstanding points as constructive criticism. In a democracy the Government promotes the welfare of all the people. There is a cooperative spirit and sense of joint ownership. We are taught that the qualities of each official has much to do with the success of our democracy.

We are soon to assume the responsibilities you now have. We do not want to inherit a public debt beyond our ability to pay, nor a "yes-yes" government controlled by lobbyists, strike leaders, and antidemocratic politicians.

We are emotionally conscious of the tenacious struggle and sacrifices of our forefathers against famine, flood, disease, and tyranny. Overcoming obstacles is the only road to success. The all but overwhelming struggles of the past have given birth to our heritage, the democratic freedoms. So well does it meet the needs and demands of a progressive people that it has stood the ravages of many isms both from within and without.

We believe a properly guided democracy will live forever, just as we believe that all truth, good, and beauty will ultimately triumph over evil. The Almighty will not fail in His purpose. But His creation is not finished. We have very fundamental responsibilities in helping Him finish the task. Just as He has furnished the raw materials and man refines and molds them into finished fountain pens, watches, and radios, so He has given us a mind capable of reason, and certain talents and responsibilities. We must take these and refine and mold them into a great democracy built of happy homes, useful schools, and influential churches, the fundamental foundation stones of a democracy.

If you do not hand down to us a more stable democracy than you took over, then you have failed in your trust. We expect you to put the highest good of the people above all else. We cannot afford to be bribed by the false concept that we can get something for nothing. To lose our freedom is to lose our individuality, our most valuable of all possessions. It is too this end we are preparing to take over. We have faith in America.

We ask you today to underwrite our faith by sacrificing your personal ambitions and proving that the public good is your supreme purpose.

Kent Leavitt, Every American Is Indebted to You for a Job Well Done

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. JENSEN. Mr. Speaker, we have been hearing a great deal in recent weeks about some of the problems of agriculture. We have tried to deal with troublesome situations in the production of potatoes, cotton, peanuts, and so forth. It was not long ago that some of us were concerned with another outbreak of destructive floodwaters in the Middle West. In New York City and other parts of the country, problems of water supply are becoming more and more acute.

It is probably natural that we spend more time on the problems of agriculture and natural resources than we do on the successes. Apparently, some of the troubles now besetting us can be solved only by action of Congress. Even so, I think it is a hopeful sign, and a heartening one, when people of the country join forces to get an important job done without relying 100 percent on the Government. I think we ought to take notice of such things and encourage them. I think the leaders of such movements should be praised and encouraged.

The National Association of Soil Conservation Districts is dedicated to the development of individual initiative, the exercise of local responsibility, and the accomplishment of constructive work in the conservation of soil and water resources. Its record of achievement has been almost phenomenal. Within a few years, this association has banded together the leaders of soil-conservation districts in all parts of the country to put strength, unity, and a voice of influence behind its principles and goals. This is not a Government organization, nor is it subsidized by the Government. It is made up almost entirely of plain dirt farmers and ranchers. They have joined together because they have a common interest—the conservation of soil and water through cooperative action under local control.

Their purpose, I take it, is shared by all of us. A large number of my distinguished colleagues here in the House have helped, I am happy to say, in the formation and strengthening of this organization. I know, too, that the interest in soil-conservation districts is growing steadily on all sides. Each year the accomplishments of these districts, in terms of land and water actually conserved, and in terms of improved understanding on the part of the people, has been increasing.

These things do not happen without reason. From the beginning, the districts have had the assistance of experienced technicians from the Soil Conservation Service. They have also had help in some places from the Bureau of

Reclamation, the Forest Service, and the State extension services. A great many local organizations have helped, too, including farm-equipment dealers, newspapers and radio stations, magazines, banks, chambers of commerce, and boards of trade.

In addition, soil-conservation districts have been blessed with vigorous, public-spirited leaders, recruited from within their own ranks. One of these men, an outstanding leader and champion of conservation, retired last month as president of the national association after more than 2 years of service, without pay in the public interest. His name, as many of you know, is Kent Leavitt. He is a dairy farmer living near Millbrook, N. Y. For his untiring efforts to build soil-conservation districts, I believe the Nation owes him a debt of real gratitude. He has helped, in his own way, to build a stronger America—one that is stronger by virtue of more protection for natural resources, and stronger also by virtue of greater numbers of Americans taking an active, responsible part in their own community affairs.

For the past several years I have followed the progress of soil-conservation work with a keen interest. I watched the work of Mr. Leavitt with admiration, and sometimes amazement. For weeks on end he traveled from one end of the country to the other, working with State associations of soil-conservation districts and with individual districts. On some occasions he was away from home for as much as 6 weeks at a time attending first hand to district business.

As far as I have been able to find out, Mr. Leavitt has traveled to every State in the country, and to some States many times, in the interest of building stronger and better districts, and in the process he has helped and encouraged other men—other farmers and ranchers—to take a larger part in conservation and district affairs. Probably more than any other one man, he is responsible for the rapid growth and wedding together of the National Association of Soil Conservation Districts. When he took over the post of president in September 1947, the association was a new and loosely constructed organization, still searching for the ways and means to make itself most useful. Today it is certainly a growing force in American agriculture and one to be reckoned with.

In his final letter to district supervisors, Mr. Leavitt summarized well.

Together, in these years—

He wrote—

we have built an association of landowners and operators covering the bulk of our agricultural land. We have built it as carefully as possible, under the circumstances, in the image of democracy. Although it has its faults and weaknesses, none of them is of such nature but that it can be corrected by a little hard work and sound thinking. In building our association, we have kept it free of partisan politics. We have made it independent of any one agency—public or private—although we have never refused any assistance which any cared to proffer. We have dedicated our efforts to the development and protection of independent soil-conservation districts and we have proven our ability and shown our willingness to fight for these objectives whenever necessary.

For his efforts of the past 2½ years, Mr. Leavitt can count among his rewards a wide personal friendship with thousands of farm and conservation leaders in every State and in Washington. He can take justifiable pride in the solid growth of the association, and he has had a unique opportunity to study and gain first-hand understanding of the Nation's conservation problems.

One can only hope that in relinquishing the presidency of the National Association of Soil Conservation Districts, Kent Leavitt will not retire completely from public service.

Every American is indebted to Kent Leavitt for a job well done.

Employees in Internal Revenue Bureau

EXTENSION OF REMARKS

OF

HON. OTTO E. PASSMAN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following list of the number of employees in the Internal Revenue Bureau from 1940 through 1951:

Treasury Department, Bureau of Internal Revenue

	Number of employees on rolls [1]	Budget estimate	Amount appropriated
Fiscal year 1940:			
Dec. 31, 1939	22,462	$60,700,000	$59,877,500
June 30, 1940	23,082		
Fiscal year 1941:			
Dec. 31, 1940	25,107	66,667,760	66,006,860
June 30, 1941	28,061		
Fiscal year 1942:			
Dec. 31, 1941	27,771	80,527,975	77,725,421
June 30, 1942	30,927		
Fiscal year 1943:			
Dec. 31, 1942	30,550	103,309,400	103,109,680
June 30, 1943	40,348		
Fiscal year 1944:			
Dec. 31, 1943	41,713	135,094,065	133,821,735
June 30, 1944	47,843		
Fiscal year 1945:			
Dec. 31, 1944	49,200	149,200,000	146,900,000
June 30, 1945	49,814		
Fiscal year 1946:			
Dec. 31, 1945	52,623	179,740,000	176,650,000
June 30, 1946	59,693		
Fiscal year 1947:			
Dec. 31, 1946	57,731	208,417,400	204,417,400
June 30, 1947	52,830		
Fiscal year 1948:			
Dec. 31, 1947	49,119	208,000,000	188,000,000
June 30, 1948	52,143		
Fiscal year 1949:			
Dec. 31, 1948	51,381	233,323,000	210,859,000
June 30, 1949	52,266		
Fiscal year 1950:			
Dec. 31, 1949	54,239	[2] 237,768,000	226,300,000
June 30, 1950	[3] 56,495		
Fiscal year 1951:			
Dec. 31, 1950	[3] 59,358	253,000,000	
June 30, 1951	[3] 59,383		

[1] Includes temporary employees.
[2] Includes $5,000,000 estimated cost of authorized pay increases.
[3] Estimated.

America's Responsibility of Leadership

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by my colleague the gentleman from Pennsylvania [Mr. WALTER] before the Veterans of Foreign Wars at Easton, Pa., on March 31, 1950:

Like so many other words which can be used to convey different meanings to different people, the term democracy—and I mean with a small "d"—is frequently abused.

Personally, I prefer to use the word democracy as describing the principle and the process by which the people of this Nation govern their affairs.

That process, or method, is to arrive at our decisions by free discussion and majority consent. In all of my years in Congress from the black days of depression and bank closing, through the period of recovery and reform, the era of World War II and now the postwar chapter with its threat of a new war, I know of no decision on national policy which has been reached in any other manner.

Today we are in the midst of another great public discussion on grave issues confronting the United States, not only internally but affecting our relations with the rest of the world.

The situation today is without precedent. After the first World War we blithely resumed our peacetime preoccupations, rejected the League of Nations, and let the rest of the world go by. With the result that we had to fight another world war.

But this time we find no relaxation from the physical and emotional trials of the war years. The relief and the let-down all of us hoped for and expected cannot be ours. Instead, the strain and tension has continued.

We are just beginning to realize that it may continue for some years, and that we will have to learn to live with it. Because, the postwar period has brought us not peace, but uncertainty. Scarcely had we beaten down one threat to the security and stability of the world than we are faced with the threat of new aggression by a ruthless totalitarian force.

By the pressure of armies of occupation, by subversion and propaganda to create internal disunion, communism spread its police-state power across the face of Europe. One after another, small countries fell prey to subjugation.

The war-weakened nations of western Europe, just taking the first halting steps toward economic recovery under the Marshall plan, were hesitant and fearful to oppose the juggernaut. Not only was peace endangered; not only was our own security threatened, but the future of all western civilization hung in the balance.

Could America take the easy path? Could we appease communism?

One would think that the bitter lessons of two world wars had taught us, first, that when maddogs are astray in the world you must be well-armed and keep your powder dry. Secondly, that this Nation's freedom cannot exist, that its economy cannot thrive, under conditions imposed by an encroaching dictatorship seeking world domination.

In the forum of the United Nations, in occupied Germany, in Korea, and in all the

normal channels of diplomacy, Soviet Russia flouted its international obligations and agreements. Its whole record repudiates the practices of comity among nations.

Unfortunately, communism seems to understand no other language and recognizes no other warning sign than that of a superior armed force.

Thus, the inevitable course of destiny has thrust upon us the role of guardian of individual human liberty and of the way of life we cherish so dearly.

The responsibility of leadership of the free nations of the world is ours. We could not dodge it, we could not shun it. We could not ignore it—and we could not escape it.

The United States took the necessary steps to restore the morale of those who wavered in the struggle to save continental Europe from a new slavery. We pumped new strength into their economic life. We are supplying the material to restore their military strength, and we have taken steps to open up the normal channels of trade.

Under the program enacted at the first session of the present Congress, we are the strongest Nation on earth. We must remain so, because our very strength discourages any dictator or group of international gangsters from further aggressive action.

Now, all the steps we have taken to prevent a new war—the Marshall plan for European economic recovery, the North Atlantic Pact to unify the defenses of non-Communist nations, the military assistance program to supply them with arms—were consummated only after the fullest and freest discussions.

Not only in the Halls of Congress but in the newspapers, over the radio, and in public forums of every description, the issues were debated all over the land. The final decision was made by you, the people of this country. And the actions of your elected Representatives in Congress was an expression of that public will.

Since the policy has been fixed and it is now being carried out in accordance with specific laws laid down by the Congress, then what are all the current public discussions about? Do we want to change our policy in these matters? Are people weakening and faltering in the course they have laid down for themselves?

No. I do not think so. But our problems have not ended. Most public concern and questioning, I believe, centers around the cost of these commitments.

Some people are worried about taxes. They complain that the country is being ground between the millstones of mounting costs of Government at home and fulfilling our responsibilities abroad.

It is true that the costs are tremendous. But the job we have undertaken in the world is a momentous one. The price of freedom has always come high.

"But," the doubters ask, "where will it all end? Aren't we reaching the limit of our capacity to pay?"

Administrator Paul Hoffman, of ECA, pointed out the other day that if communism ever overruns Europe the cost will be even greater. We must reconcile ourselves to face that very realistic fact. There is no other alternative than to carry on.

And this brings me to the first answer to the questions of cost that have been raised. It lies within our own spirit and the will for the task—and, above all, in our faith in ourselves and our destiny.

Tom Paine had such a faith. In December 1776—when the cause of the American Colonies seemed almost lost—he wrote:

"'Tis the business of little minds to shrink; but he whose heart is firm and whose conscience approves his conduct, will pursue his principles unto death. * * * By perseverance and fortitude we have the prospect of a glorious issue; by cowardice and submission, a sad choice of a variety of evils—a ravaged country, a depopulated city, habitations without safety, and slavery without hope.

"Tyranny, like hell, is not easily conquered. What we obtain too cheap we esteem too lightly; it is dearness only that gives everything its value. Heaven knows how to put a proper price upon its goods; and it would be strange indeed if so celestial an article as freedom should not be highly rated."

Yes, the price is high, and even greater today. But America, too, is greater today and better equipped to guard the freedom of the world.

And there is a second answer to those of defeatist attitude who spread dire predictions. It is in our untapped natural wealth, the reservoir of human resources in our growing population—which has now passed one hundred and fifty millions—and in the ingenuity and the initiative of American know-how.

Dr. Harold G. Moulton, economist and president of the Brookings Institution, has just completed a study which those of little faith should take to heart.

It shows that the United States has the capacity and the technical knowledge to support a standard of living eight times as high as that enjoyed today for a population double the present size.

Does this sound as though this country has reached the end of its rope? Does this sound as if there are no new frontiers? Does this sound as though we are headed for national bankruptcy?

The fact that we enjoy the highest standard of living ever attained by any nation in the world does not necessarily mean that progress is at an end.

That standard is the highest because it is in comparison with that of other countries. But by the standards we have come to accept, and to expect, America's goals are still to be reached.

Do you know that the House and Senate Joint Committee on the Economic Report just last month issued the results of a study showing that nearly 10,000,000 families in the United States have incomes of less than $2,000 a year, that nearly 18,000,000 families have incomes of less than $3,000 a year?

Do you know that 27,000,000 Americans have no kitchen sink?

Do you realize that 40,000,000 Americans have neither bathtub nor shower in their homes?

In fact, one million need new homes this year.

Eighteen million Americans lack washing machines.

Twenty-five million Americans do not have vacuum cleaners.

Who can say, under these conditions, that opportunity in America is dead? That either our capacity to consume or to produce has reached its limit?

There is one businessman, of whom I read recently, who knows the score.

"Let's not talk about what we've got," he said, listing all those needs. "Let's be more concerned with what we haven't got. We must be concerned for two reasons: First, because these are human needs that should be met; and second, because these needs provide dramatic illustration of the fact that we have not finished anything—we're only beginning.

"There is enough urgent work on hand—" he said, "for every business now in existence—and for industries yet unborn—to keep busy for generations to come. In common sense, we have no excuse for a recession, let alone a depression."

All of this is not to deny that problems confront the Nation, but since when have Americans been licked by problems?

If the people of this country had always surrendered abjectly to difficulties, if we had customarily defaulted to obstacles, if we had always retreated in the face of fears, the United States would not exist today. Our glorious history is testimony of that fact.

I believe we need a revival of that unshakable fighting faith in ourselves that the late President Roosevelt displayed at the height of the banking crisis when he said: "The only thing we have to fear is fear itself."

And we need, too, to recapture the calm assurance of his message to Congress 10 years later when he said:

"The state of this Nation is good; the heart of this Nation is sound; the spirit of this Nation is strong; the faith of this Nation is eternal."

It seems to me the time has come to call a halt on our self-belittling, to take stock of our real situation, and to revise our outlook.

When that call for courage in the face of adversity was sounded in March 1933, only 36,000,000 of the labor force of the Nation was employed. Today more than 60,000,000 are at work.

Liquid savings of individuals amounted to only $43,700,000,000 at that time. Today these savings total $200,000,000,000. Personal income in 1933 amounted to only forty-six and six-tenths billions. Today it is two hundred and fifteen billions. And today's dollar buys twice as much as a 1933 dollar.

So what are we griping about?

True, our economy is not perfect. True, we have not reached the millenium in our social relations. But this only means, as Dr. Moulton has pointed out, that our potentialities have not been exhausted. It means we have room for improvement and expansion. It means that there is opportunity for enterprise, for invention, for research, for productive expansion.

The survival of a free world depends upon America's economic strength and continuous growth. To this every element—business, agriculture, labor, and the Government—must continuously contribute.

We are all equal partners and share in the obligation to discharge the duties imposed upon us by our heritage; and from which we must not shrink.

Only in this way can we hope to achieve, through humanity's long upward struggle, our ultimate goal of a peaceful and prosperous world, a true brotherhood of man under the fatherhood of God.

Non-Communist China Still Alive and Resisting Despite Repeated Premature Obituaries by American Officials and Leftist Writers

---

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of March 20, 1950:

THE SUNGMEN RAID

The Nationalist Government of China cannot be written off as a dead loss. It has ground troops who will fight, with planes and ships to support them. It is able to execute the most difficult of maneuvers, a landing from the open sea on a hostile shore. This much must be conceded if we accept the assertion that Nationalist troops landed Saturday at Sungmen, 200 miles below Shang-

hai, and killed or drove off the Communist forces along that stretch of coast.

The communiqué given out at Nationalist headquarters on Formosa described this episode as a raid. Commentators in this part of the world were reminded of the Dieppe landing of August 1942, which preceded by nearly 2 years the successful invasion of Normandy. These comparisons are not worth much except as they suggest that a long continental coastline cannot be completely defended against attacks from concentrated enemies based on islands. To reconquer China 2 years—or any number of years—from now, the Nationalists would need vastly more men and material than they now possess. Or they would have to receive instant and effective support on landing from a population ready to rise against the Communist regime. These conditions will not be easy to meet.

Yet, Chiang Kai-shek, less than 3 weeks after resuming his office as president, has made himself felt. The Sungmen raid will have it echoes at Lake Success. It will encourage a wait-and-see policy on the part of some governments which might have been ready to recognize the Chinese Communists. It will influence popular sentiment, in ways hard to measure, throughout Asia.

What Nationalist China needed, beyond the essential tools and materials of war, was discipline, a willingness to fight and a faith in the future. The men who landed at Sungmen must have possessed these qualities; otherwise they would have fled or surrendered, as so many of their predecessors did, at the first Red volley. If there are a few thousand such men there may in time be many thousands. Famine stalks the mainland of Communist China. Disillusion must have overtaken multitudes who have waited in vain for long months the coming of the Communist heaven.

The tide may have turned. We do not know. But as long as there exist Chinese soldiers who will fight as well as the Sungmen raiders seem to have done the cause of Chinese freedom is not dead—not even with all the power of imperial Russia against it.

Centenary of the Sisters of St. Ann and Silver Jubilee of St. Jean de Baptiste School

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. FURCOLO. Mr. Speaker, I know that all my friends in Congress will want to join with me in extending greetings and best wishes on the centenary of the Sisters of St. Ann and the silver jubilee of St. Jean de Baptiste School.

There is a celebration at the parish of St. Jean de Baptiste in Ludlow that will continue through Easter. I know that Rev. J. Armand Silvain and all who are associated with the church, the order, and the school will be pleased to know that Members of Congress throughout the Nation are joining with them in spirit during this celebration.

I know you will all be pleased to join with me in extending our greetings and best wishes to them.

The Reckless Efforts of Republicans To Find Campaign Issues

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. McCORMACK. Mr. Speaker, our friends on the other side of the aisle are somewhat amusing at times in their strained efforts to drum up political issues on which to base their campaigns this year and in 1952.

Having nothing in the way of an affirmative Republican Party record to offer the voters of the country, they rush frantically from one question to another. From day to day they are attacking, denouncing, and hurling reckless charges without regard to facts. The consequences of their reckless utterances fall upon this Government and the Nation itself, rather than upon our Democratic Party.

Understand, what they give forth are not suggestions offered in a constructive spirit, but political sniping designed to gain widespread publicity for Republican propaganda, aimed at a Democratic administration.

Political speech making has its place in our American system. Their own party principles and party causes should be supported by the partisans of each party. That is the way we operate. And I am for it.

But when truth is distorted, when facts are twisted, we on this side of the aisle are going to nail those distortions. We are going to expose those misstatements of fact. We are going to let the people know the real motives and the truth behind these barrages of artificially created scandals.

One of those more recently cooked up by the GOP is the alleged invasion of individual rights of privacy by questions in the census relating to income.

Now, what are the facts on this situation?

Article I of the Constitution provides the foundation in law for United States censuses.

Acts of Congress from 1790 onward provided for each decennial census, and up through the 1920 census listed questions to be asked by the census takers.

President Herbert Hoover signed the act of June 18, 1929, passed by a Republican Congress. It provided for the 1930 census and subsequent decennial censuses. This act is the authority for the 1950 census. Section 4 of this act lists the subjects of population, agriculture, and unemployment among those concerning which inquiries are to be made and delegates to the Director of the Census the responsibility for determining the number, form, and subdivision of these inquiries, subject to the approval of the Secretary of Commerce.

In determining the inquiries, to be made in the 1940 census, the Director of the Census consulted with leaders in business, industry, labor, education, and government. On their advice and with the approval of the Secretary of Commerce, questions on income were included in that census. The Census Director employed this same procedure in choosing the questions for the 1950 census and in conformity with the continuing demand for up-to-date information on incomes, to measure the geographical distribution of purchasing power, the income questions were retained for this census.

A census, if it is to be one worthy of the name and if its product is to be of any value, cannot be static. It must keep in step with the times. It must collect information of the most value to the most users within the limits of practicability.

The census collects information on the population and its social characteristics. Items such as age, sex, race, marital status, occupations, employment and unemployment, education, and citizenship are traditional parts of the census. Such information has been collected in some form during the last 100 years at every census.

Now is it proper for us to know these things about ourselves? Long since we have accepted these inquiries as a proper part of a national census. How much more valuable all this information becomes when we are able to relate it to information about our purchasing power, to information about our economic condition.

The census collects information about the Nation's manufacturing output.

The census collects information about the Nation's farm production.

The census collects information about the Nation's retail and wholesale distribution.

The census collects information about the Nation's consumers (population) of these goods and services.

Why should we not have information, too, on the distribution of the Nation's purchasing power? How is that purchasing power to be determined without collecting information on income?

This information is of the greatest value when all the various items are in focus as to time, to establish the relationship to each other in a complete picture of our Nation populationwise and economically.

The income inquiries in the 1950 census were not conceived as a new proposition for this time. The act of Congress providing for the 1937 census of unemployment directed that information on income also be obtained. The 1940 census of population also included questions on income and that information has been of great value during the last 10 years. Certainly there never was any complaint that this information was abused.

How could a true statistical measurement be made of the effect of unemployment without taking into account income loss?

How can a true picture of employment be painted without including in the colors the cardinal pigment that income represents? To omit that would be as foolish as a painter's attempt to complete a portrait with a dry brush.

Business wants this information. Business has been pleading with the Census Bureau for years to provide income information and purchasing power data. Thousands of letters pour into the Census Bureau each year from all sorts of users asking for this information. Let me quote the observation of one businessman who certainly knows of what he speaks. Dr. Vergil D. Reed, associate director of research of the J. Walter Thompson Co., the largest advertising agency in the world, has this to say in an address on April 1, 1950, before the 1950 annual convention of the American Association of Advertising Agencies, and I quote:

> This income data should prove extremely valuable, in fact the most valuable economic index yet available by all geographic areas.

And may I remind my colleagues, that Dr. Reed is a man who has worked on both sides of the street. During the 1940 census he served as acting director of the Census Bureau. Before and after, he was in business. Incidentally, he is a member of the Republican Party.

It should be noted that the 1930 census conducted during President Hoover's administration for the first time included a question on the value of home owned for owner-occupied units and the monthly rental paid for tenant-occupied units. The answers to these inquiries were collected under the same 1929 Census Act carrying the same penalty provisions covering the 1950 census. The legality of these questions was not challenged nor were they presumably contrary to the intent of the law as interpreted by the then Director of the Census and then Secretary of Commerce under President Hoover. Their legal justification was the same as is the legal justification for the 1950 income questions. In a report to the Congress of the Commission on Organization of the Executive Branch of Government signed by ex-President Hoover in February 1949, there appears the following statement:

> Government policy depends upon much detailed knowledge about the Nation's employment, production, and purchasing power.

Income is certainly an important measurement of purchasing power.

All this being true, what other reason than political can there be for the Republican complaints at this late date? There was ample opportunity before the census began to revise the legislation. The list of questions to be used in the 1950 census of population were submitted to the subcommittee of the Committee on Appropriations of the House of Representatives on February 28, 1949, and are printed in the hearings on the Department of Commerce appropriation bill for 1950 on page 149 and following. Following the hearings the Congress appropriated the necessary funds for the conduct of the population and other censuses for fiscal year 1950.

There is a considerable demand on the part of business, labor, and Government agencies for family income statistics as distinguished from individual income statistics. The family, rather than the individual person, is the consumer unit for many consumer goods. For example, it is the family that is the consumer unit for consumer durable goods such as housing, automobiles, refrigerators, and the like. American business interested in the measurement of potential markets needs statistics showing the number of families in each of the various income classes. Moreover, the effect of unemployment, whether it be for a few days, weeks, or a prolonged period on family income provides a measure of the severity of unemployment as well as a measure of losses in purchasing power. Family income data for these and other purposes are not available from any other source.

Incidentally, I want to stress that those who have incomes over $10,000 do not have to furnish any other figure. They merely say their income is over $10,000.

Income statistics are needed by small geographic areas. The Census Bureau plans to publish the 1950 census income statistics for each city haveing 2,500 or more inhabitants, for each county, for the urban and rural-non-farm parts of counties, and for small statistical areas within our larger cities called census tracts averaging about 6,000 persons per tract. These data, too, are available from no other source.

Many persons with low incomes or with types of income not taxable are not required to file tax returns, or not required to report the nontaxable parts of their income. The Bureau of Internal Revenue statistics do not cover all the income of all the people. For 1948, for example, the Bureau of Internal Revenue received 52,500,000 returns. For the same year, information was collected by the Bureau of the Census in its sample current population survey which indicated that there were 70,100,000 income recipients.

The income information furnished to the Bureau of the Census is confidential and census enumerators are sworn not to reveal it to anyone. However, individuals who prefer not to give the income information to the census enumarator have an alternative course they may pursue. The census enumerator will provide the respondent with a special form which may be filled in by the individual and mailed direct to the Census Director in Washington.

The Census Bureau publishes the information only in statistical tables so designed that personal information relating to an individual is not revealed. Every possible safeguard for the individual's anonymity is observed.

In conclusion, I would like to quote from the seventeenth decennial proclamation issued on March 23, 1950, by President Truman:

> No person can be harmed in any way by furnishing the information required. Individual information collected under the seventeenth decennial census will not be used for the purposes of taxation, investigation, or regulation, or in connection with military or jury service, the compulsion of school attendance, the regulation of immigration, or with the enforcement of any National, State, or local law, or ordinance. There need be no fear that disclosure will be made regarding any individual person or his affairs. For the due protection of the rights and interests of the persons furnishing information, every employee of the Census Bureau is prohibited, under heavy penalty, from disclosing any information which may come to his knowledge by reason of his employment.
>
> Life and liberty in a free democracy entail a variety of cooperative actions for the common good. The prompt, complete, and accurate answering of all official inquiries made by census officials should be regarded as one of the requirements of good citizenship and exercise in fundamental democracy.

I include a fine article on the subject written by Lowell Mellett and appearing in a recent issue of the Washington Star:

THERE'S NO REASON TO BE ANNOYED BY QUESTIONS OF THE CENSUS TAKERS

(By Lowell Mellett)

Politics being politics, it is not surprising that an effort has been made to turn the census taking this year into something sinister. So certain Members of Congress who miss no opportunity to embarrass the administration, have been expressing concern over what they term an unwarranted invasion of the privacy of citizens.

One question to be asked by the 140,000 enumerators, when they start out Saturday, has to do with income. One individual in every five, aged 14 or over, will be asked to tell his annual income. In the census of 10 years ago the question was asked of every individual of that age group, but this time it is felt that an extensive sampling process is sufficient for the purposes of the Government and the people who have use for Government statistics.

MEASURING NEEDED

The users of the statistics are business houses, needing to measure their actual and potential markets, manufacturers wishing to determine the need for consumer goods; Federal, State and local agencies having policy decisions to make, and Congress with legislation to consider. The Census Bureau publishes the information only in statistical tables so designed that no information relating to an individual can be revealed. Any census employee violating this right of privacy is subject to a $1,000 fine and 2 years in prison.

These are the essential facts concerning this phase of the census, yet some politicians who profess to be the champions of business and industry and who decry what they call the hostility of the Government to business, have sought to make an issue of it. They blandly ignore the part that representative business organizations have had in setting up the questionnaires to be used by enumerators.

Among the things the census is expected to show is an unprecedented increase in the total number of married couples, a substantial increase in the number of households, and an upward turn in the average size of young families. Exact information with respect to such matters is important to manufacturers and distributors of household goods of all kinds. That goes for the makers of furniture, refrigerators, washing machines, and radios. It goes very much for the builders of baby buggies.

LINCOLN REMARK RECALLED

As Abraham Lincoln said, in justifying the general census, "If we could first know where we are and whither we are tending, we could better tell what to do and how to do it."

So, if the census taker wants to put down the kind of house you are living in, its condition, the number of rooms, the number of occupants, the water supply, the toilet facilities and provision for bathing, the year the house was built, the heating and cooking equipment, the refrigeration, electric lighting, radio and television installations; and, if you rent, the amount of your rent and any additional payments for electricity, gas, and water; or, if you are a farmer, the number of your horses, cattle, sheep, hogs, goats, chickens, turkeys; how much you receive from the sale of milk, eggs, and poultry; how many bees you keep, how much honey they produce, and how much you collect for same—you mustn't be annoyed.

He is not being nosey and is not prying into your personal affairs for the benefit of neighborhood gossip. The facts you give him will be just a few of the 15,000,000,000 facts that are gathered concerning the 151,000,000 of us and they will be lost, so far as personal identification is concerned, in a vast compilation of impersonal statistics.

Flood Control on Lower Mississippi River

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, one of the most interesting and informative articles on the status of flood-control works on the lower Mississippi River recently appeared in the New Orleans Times-Picayune.

The article is particularly timely in that it reviews these structures in the light of the tremendous quantity of water recently handled by the lower Mississippi and the Atchafalaya.

The author, Mr. George W. Healy, Jr., is the managing editor of the New Orleans Times-Picayune. By virtue of background and training he is the best-informed writer in the United States on these problems. He served with distinction during the war as the director of the OWI.

The article follows in full:

GROUP TOURS FLOODWAY; SEES NEED FOR EARLY FINISH—CHECK OF MORGANZA POINTS UP URGENCY

(By George W. Healy, Jr.)

A group of New Orleanians returned during the past week from an inspection of the Atchafalaya, Old, and lower Mississippi Rivers with definite impressions about the 1950 winter flood and its implications.

Among these impressions are:

1. That the Morganza floodway should be completed at the earliest possible moment.

2. That the 1950 flood, being passed safely to the Gulf of Mexico as this is written, was potentially the third most serious flood since 1844.

3. That this 1950 flood increased the proportion of water being carried to the Gulf of Mexico by the Atchafalaya River—in relation to the flow of the Mississippi River.

Members of the inspection group were guests of Brig. Gen. P. A. Feringa, president of the Mississippi River commission; Brig. Gen. A. L. Culbertson and Dewitt Pyburn, members of the commission, and Col. Charles G. Holle, district engineer.

General Feringa assured the group that his commission is anxious to complete the Morganza floodway before another flood may require its use.

Guide levees of the floodway have been finished from Morganza, on the Mississippi River between Baton Rouge and Old River, to Morgan City. Flowage rights within the floodway have been purchased by the Federal Government. Utility crossings at Krotz Springs have been completed, and the Texas & Pacific Railroad crossing at Melville should be ready within 60 days.

ONLY NEED—MONEY

A highway and the Louisiana & Arkansas Railroad will be carried across the floodway at Morganza, on top of the weir structure which will control release of water into the floodway. Only the approaches for this structure have been built. Test piles have been driven, but the work of building the dam remains to be done.

"All we need to complete this work," says General Feringa, "is the money."

The general is hoping that current appropriations by the Congress will permit him to proceed with the final phases of the spillway work.

The first phase of this final work will be building of a foundation for the dam structure. Because extreme water pressure will be exerted against the dam during high-water periods, piling for the foundation will be driven at an angle to insure the greatest resistance to this pressure.

The second phase will be construction of the concrete dam itself; and the third phase will be the building of the highway and railroad crossings on top of the dam.

DIVERT A FLOOD

"We do not expect to perform these three tasks at three different times," General Feringa explained. "After advertising for the foundation work, probably before the end of the current fiscal year, we will advertise for bids for the other jobs. As the foundation work proceeds, building of the dam will be started. Then before the dam is complete, construction of the rail and highway crossings will be undertaken. If we waited until each job were done before starting the succeeding job, we couldn't finsh the floodway before January 1, 1953, when we hope it will be ready for efficient operation."

When it is ready for operation, the Morganza floodway will be capable of diverting 600,000 cubic feet of water each second from the Mississippi River.

Bonnet Carre spillway, operated in 1937, 1945, and this year, has a rated discharge of 250,000 cubic feet of water per second.

The Morganza Dam will be higher than but not as wide as the Bonnet Carre needle dam. More water will flow through the Morganza Dam than through the Bonnet Carre Dam because its height—or head—will be greater.

Whereas the engineers open and close the Bonnet Carre Dam by removing or replacing wooden needles in the dam structure, they will open and close the Morganza floodway by opening or closing steel gates.

Actually, Morganza would have been opened last month if its dam structure had been ready.

CARRYING MORE

At the peak of this winter's flood the Mississippi River carried 1,498,000 cubic feet of water per second past Morganza. The engineers feel that it should never carry more than 1,500,000 cubic feet of water per second, including 250,000 cubic feet which may be diverted into Lake Pontchartrain by way of the Bonnet Carre spillway.

Incidentally, the proportion of water carried by the Atchafalaya River to the Gulf continues to increase in relation to the volume being carried down the main stream.

In 1927 75 percent of the water originating above Old River moved to the Gulf down the main stream, and 25 percent moved down the Atchafalaya River.

In 1949 72 percent was going down the Mississippi River and 28 percent down the Atchafalaya.

This year, at the crest, 70.3 percent moved down the Mississippi and 29.7 percent down the Atchafalaya.

SHORTER ROUTE

The latter percentage is based on preliminary calculations by the United States engineers of discharge at the crest of this winter's flood. These calculations show that at the crest 1,498,000 cubic feet of water per second moved down the Mississippi and 633,000 cubic feet per second moved down the Atchafalaya.

The Atchafalaya and Mississippi Rivers have been connected for several centuries by Old River. Except on rare occasions, the direction of flow through Old River is into the Atchafalaya from the Mississippi. On these rare occasions Old River, fed by Red River, may flow into the Mississippi River when the latter is very low.

Because the Atchafalaya River route to the Gulf of Mexico is 163 miles shorter than the route via the main stream, water has a tendency to follow the Atchafalaya route. The only reason all water originating above Old River does not go down the Atchafalaya is that the channel of the Atchafalaya is not large enough to accommodate it.

Since sills at the head of the Atchafalaya River were washed out in 1927, the Atchafalaya has been enlarging. These sills, or sunken dams, were placed in the river late in the nineteenth century to halt its enlargement.

Recent enlargement of the Atchafalaya channel has not alarmed members of the Mississippi River Commission, although they acknowledge that ultimately the Atchafalaya could capture all the flow to the Gulf.

MAY NEED CONTROL

This capture, they believe, will be deferred by the completion of the Morganza floodway. Use of this floodway, about 20 miles south of Old River, would reduce the head of water flowing through Old River to the Atchafalaya at times of flood, consequently retarding enlargement of the Atchafalaya Channel.

Some day, the engineers concede, it may be necessary to control the flow of water from the Mississippi into the Atchafalaya to regulate its volume. That day, they believe, is not imminent.

Guests of General Feringa, who made the recent inspection trip, are convinced that the day for action on the Morganza floodway is today.

The Morganza floodway has been in the statutes and on the planning boards for 22 years, and work on the floodway has been under way 12 years.

SEEK FUNDS

World War II interrupted building of the floodway but other delays should be blamed on lack of money to prosecute the work.

C. C. Walther, president of the New Orleans Chamber of Commerce, and other civic leaders are undertaking a campaign to insure that adequate appropriations will be made available to complete the floodway without further delay.

Walther was a member of the group which recently inspected the Atchafalaya, Old, and lower Mississippi Rivers with General Feringa. Others in the group were Robert L. Simpson, president of the dock board; Lester F. Alexander, president of the Tidewater Canal Association; Lloyd J. Cobb, president of International House; J. Lester White, director of the Louisiana Department of Public Works; H. A. Sawyer, member of the dock board and the city railroad terminal board; Ralph Nolan, member of the terminal board; Harold E. Meade, vice president of New Orleans Public Service, Inc., and this writer.

Election of the President and the Washington Post

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. MACY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include some comments of my own and certain letters that have been exchanged between myself and the editors of the

Washington Post, and two editorials which appeared in that publication.

I think even a casual reader will get a clearer insight into the mental barrel rolls, loop the loops, and tail spins of the editors of the Washington Post after reading the editorial, my letter concerning it, and the reply to it from Mr. Herbert Elliston who is identified as editor.

An examination of the second paragraph of Mr. Elliston's letter will disclose that he meets himself coming down the road. Any reader of the Post editorial would conclude from perusal of it that the Post favored the election of majority Presidents, as opposed to minority, since that is the usual interpretation of the word "minority" in connection with presidential elections.

Mr. Elliston cunningly attempts to find himself an escape clause by contending that the Post was talking about a different kind of minority President—one who gets less popular votes than his opponent. He admonishes me for writing an intemperate letter and accuses me of "itching for a petty controversy in semantics."

Thus, if Mr. Elliston represents the Post's viewpoint—and from the confused thought of his letter I can quite readily understand that he may well represent it—the Post is actually coming out in favor of the election of plurality Presidents, which is what the so-called democracies of Europe had before they fell one by one.

If the Post and Mr. Elliston eventually reach some conclusion about what they actually stand for, I will be glad to incorporate it in the CONGRESSIONAL RECORD, but in the meantime I will have to content myself with pointing out that if the proposed Lodge-Gossett amendment to the Constitution had been in effect in 1896 Bryan would have been elected over McKinley 221.3 electoral votes to 215.3 despite the fact that McKinley's popular vote was 7,035,638 to Bryan's 6,467,946.

The matter above referred to follows:

[From the Washington Post of March 8, 1950]

MINORITY PRESIDENT

Senator TAFT finds himself in strange company in fighting the Lodge-Gossett resolution, for the most vehement opposition to date has come from the special pressure groups. These groups fear that if the electoral votes were distributed among the candidates for President and Vice President in proportion to the popular vote cast in each State, their opportunity for bringing pressure upon the major parties in the key States would be minimized. Senator TAFT fears that this proposed change in the Constitution would be fatal to the hope of electing a Republican President if the election is in any way close. Both complaints obviously reflect selfish interests that ought to be put aside in passing upon the merits of a proposal to correct a serious defect in our electoral system.

Mr. TAFT fears that, under the proposed system, the GOP would not gain enough electoral votes in the South to make up for its sharing of electoral votes in the big States of the North. This seems to us an unwarranted fear, for the reason that the Democratic Party, in order to win, must carry a number of large States in the East, Middle West, and West. And the unit system of counting electoral votes swings a big State to the Democrats on a small margin as easily as it does to the Republicans. In the close election of 1948, for example, the Democratic Party carried California, with 25 electoral votes; Illinois with 28; Massachusetts with 16, and Ohio with 25; but the Republicans carried Indiana, with 13 electoral votes; Michigan with 19; New Jersey with 16; New York with 47; and Pennsylvania with 35. The point is this: The net effect of the voting under the present system was to give Mr. Truman 303 electoral votes to 189 for Mr. Dewey; under the Lodge-Gossett resolution, the division would have been—Truman, 258; Dewey, 221.4.

What Senator TAFT seems to be complaining about is that, in unusual circumstances, the resolution might deprive the Republicans of the opportunity of putting a minority President into the White House. In presenting his proposal to the Senate, Mr. LODGE pointed out that a shift of about 30,000 popular votes in three States would have given the election to Governor Dewey, in spite of a plurality of nearly 2,000,000 popular votes for Mr. Truman. It is precisely this evil that the resolution is designed to prevent. Does Senator TAFT openly and candidly favor the election of minority Presidents? That certainly seems to be the implication of his opposition. We can think of few worse political disasters that may befall the country under the present system than to have a minority President. For that matter, the election of a man to this position without a popular majority behind him would be a calamity for the President himself and for the party which sponsored him.

It is true, of course, that the Lodge-Gossett resolution would not entirely eliminate the danger of electing a minority President. The fact that each State has two electoral votes (corresponding to its two Senators) which do not represent population would make it possible for a candidate to win with fewer popular votes than his rival even under the proposed amendment. But the greatest danger arising from the unit rule of counting electoral votes would be eliminated. We do not see how any man can oppose the amendment on this ground unless he is willing to admit that he favors the election of a minority President, if only his party can win. To us, this seems to be one of the strongest arguments for the change.

MARCH 8, 1950.

Mr. PHILIP L. GRAHAM,
President and Publisher,
The Washington Post,
Washington, D. C.

DEAR EDITOR GRAHAM: In your editorial today, Wednesday, March 8, 1950, titled "Minority President," you assert:

"We can think of few worse political disasters that may befall the country under the present (electoral college) system than to have a minority President. For that matter, the election of a man to this position without a popular majority behind him would be a calamity for the President himself and for the party which sponsored him."

There is scarcely a day goes by that the editorial writers of the Washington Post fail to bathe publicly in their own ignorance. I have felt called upon on several occasions to draw the attention of Washington Post readers to the fallacious reasoning, specious argument and misstatement of fact which persistently characterizes Washington Post editorials.

Why doesn't the Washington Post wake up? Political disaster has already befallen us. Calamity has already been visited upon the White House. We have a minority President in the White House at this very moment.

If the Washington Post editorial writers will take out their pencils and make a simple calculation, they will discover that Harry S. Truman received only 49.5 percent of the 1948 vote which elected him to office. Yet despite the elements of disaster and calamity which every thinking American knows exist in the President's neo-Socialist policies, the Washington Post supports 95 percent of them, minority President or not.

Sincerely yours,

W. KINGSLAND MACY.

THE WASHINGTON POST,
Washington, D. C., March 10, 1950.

Hon. W. KINGSLAND MACY,
House of Representatives,
Washington, D. C.

DEAR MR. CONGRESSMAN: Your intemperate letter of March 8, addressed to Mr. Philip L. Graham, publisher of the Washington Post, has been referred to me. If you will read the editorial, Minority President, to which you refer so abusively, you will note that it makes no reference to Mr. Truman being a majority President or a minority President. It simply does not go into that subject, because it had no bearing on the point that the editorial was making.

In saying that we now have a minority President in the White House, however, you seem to rely upon a strained meaning of the word. Webster defines minority as the smaller number; the smaller in number of two aggregates. If Truman is to be regarded as a minority President, where is the majority? You couldn't possibly find any other majority than his in the 1948 election unless you should add the Wallaceites and the Dixiecrats to the Republican Party. Is that your reasoning?

It is obvious from the text of the editorial that our reference to a minority President was to one who gets fewer popular votes than does his nearest rival. I do not see how you could misunderstand that acceptable meaning of the word unless you were itching for a petty controversy in semantics.

We have never professed to be infallible, and no newspaper that I know of is more anxious than the Washington Post is to correct misstatements of fact when they are brought to its notice.

Sincerely yours,

HERBERT ELLISTON.

MARCH 15, 1950.

Mr. HERBERT ELLISTON,
Editor, Washington Post,
Washington, D. C.

DEAR MR. ELLISTON: Your letter of March 10 came up here to Albany where I am attending the monthly meeting of this board.

I regret that the facts I stated should have caused you so much mental indigestion.

It would seem to me that this controversy in all fairness might appropriately be tested with your readers.

Faithfully yours,

W. KINGSLAND MACY.

[From the Washington Post of March 18, 1950]

WHAT IS A MINORITY?

Representative W. KINGSLAND MACY takes exception to our editorial of March 8 about the Lodge-Gossett resolution in which we said:

"We can think of few worse political disasters that may befall the country under the present system than to have a minority President. For that matter, the election of a man to this position without a popular majority behind him would be a calamity for the President himself and for the party which sponsored him."

Mr. MACY's contention is:

"Political disaster has already befallen us. Calamity has already been visited upon the White House. We have a minority President in the White House at this very moment.

"If the Washington Post editorial writers will take out their pencils and make a simple calculation, they will discover that Harry S. Truman received only 49.5 percent of the

1948 vote which elected him to office. Despite the elements of disaster and calamity which every thinking American knows exist in the President's neo-Socialist policies, the Washington Post supports 95 percent of them, minority President or not."

There are, of course, several definitions of minority President. Webster defines minority as the smaller number. In a limited sense, Mr. Truman is a minority President because he did not receive a majority of the total vote cast, although the customary usage of the term is to designate a President who has fewer popular votes than his nearest rival but wins the office because the strategic location of his popular support gives him a majority of electoral votes. In this sense, of course, Mr. Truman is not a minority President. It seems plain from the context of the editorial that we were using the term in this sense. If Mr. Truman were to be regarded as a minority President, moreover, where would one find the man with the majority? While we never profess to be infallible, we cannot help thinking that Mr. MACY would make more progress toward converting his party into a majority if he gave more attention to building a constructive program and less to quibbling over a word.

Federal Farm Problems

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. HILL. Mr. Speaker, the Record Stockman, the voice of the western livestock industry, is published at Denver, Colo. It covers the mountain and plains section of the United States very completely. Recently they have been conducting a nonpolitical poll asking the stockgrowers to express their sentiments on farm programs. The following results are interesting:

BULK OF STOCKMEN OPPOSE FEDERAL FARM PROGRAMS

Fifty-seven percent of the hundreds of stockmen voting in the Record Stockman farm-plan poll indicated that they do not want any Government farm program, tabulations of returns from 21 States indicated late Wednesday. Eleven percent of the ballots favored the Brannan farm plan; 16 percent favored the present farm program, and 16 percent supported some other type of farm plan.

Those who voted against all farm programs showed their sentiments in a write-in vote on the Record Stockman ballot published 2 weeks ago. No space was provided for a negative answer. Nevertheless, 57 percent of the stockgrower voters wrote their opposition to all farm programs into the blank space provided on the ballot for an outline of other type of farm plan.

Dozens of ballots were returned with attached sheets outlining proposed farm programs, expressing opposition to the Brannan plan or to any form of farm subsidy. Many of these statements declared that ranchers and farmers with livestock oppose controls, or want to return to the American way, or let us alone, or we can take of ourselves and our problems.

Ballots were returned from these 21 States: Colorado, Wyoming, Nebraska, New Mexico, South Dakota, Idaho, North Dakota, Iowa, Montana, Minnesota, New York, Washington, Utah, Oklahoma, Kansas, California, Nevada, Illinois, Texas, Missouri, Maryland.

Returns by several States in percentage of votes:

	Percent
Colorado:	
Favor the Brannan farm plan	12
Favor present farm plan	15
Favor some other farm plan	17
Oppose any Government farm plan	56
Wyoming:	
Favor the Brannan farm plan	11
Favor present farm plan	5
Favor some other farm plan	21
Oppose any Government farm plan	63
Nebraska:	
Favor present farm plan	10
Favor other farm plan	20
Oppose any Government farm plan	70
New Mexico:	
Favor the Brannan farm plan	17
Favor present farm plan	8
Favor some other farm plan	25
Oppose any Government farm plan	75
Montana:	
Favor the Brannan farm plan	7
Favor present farm plan	27
Favor some other farm plan	7
Oppose any Government farm plan	64
Kansas:	
Favor the Brannan farm plan	14
Favor present farm plan	15
Favor some other farm plan	14
Oppose any Government farm plan	57

The Committee on Un-American Activities and Its Work

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, several days ago when the House had before it for consideration House Resolution 482 providing additional funds for the continuation of the work of the Committee on Un-American Activities, I had hoped to make a brief statement in connection with the accomplishments of the committee under the able chairmanship of the gentleman from Georgia [Mr. WOOD]. Unfortunately, the House met at 11 a. m. on that day and I was engaged in an executive session of the Committee on Ways and Means.

Under the chairmanship of the gentleman from Georgia, this committee has become one of the most important and useful bodies in the House of Representatives. Chairman WOOD has worked diligently, without fanfare, and without notoriety. In doing so, however, in his quiet, statesmanlike manner, he has greatly expanded the constructive work of this committee and tremendously enhanced its reputation. He has also staffed the committee with competent personnel who are exposing all subversive activities in this country, whether coming from the left or the right. Recently the House of Representatives passed legislation strengthening the security laws of this country by extending the statute of limitations in espionage cases and by providing much greater safeguards for the protection of confidential Government documents and military and atomic installations. This legislation was largely the result of the constructive work of the gentleman from Georgia.

I shall not go into detail about the many investigations which have been conducted during the past 2 years. But they have been extensive and productive. The staff of the committee is at present engaged in the investigation of communism in Hawaii, the Ku Klux Klan, communism in labor unions, and other organizations, including Government departments. The committee is also investigating Fascist organizations in the United States.

The gentleman from Georgia fully understands that communism is an attack upon our free institutions and our way of life. He also understands that it attempts to infiltrate into honest reform movements and all branches of our society, particularly those devoted to humanitarian and similar purposes. Under his direction the committee has adopted a splendid program of education. Factual information on the Communist procedures and methods has been widely circulated. Unsuspecting loyal Americans have thus been acquainted with these devious methods and have consequently been able to meet the Communists on their grounds. We have thus seen the educational institutions, the unions, and many other groups moving on their own initiative to expel all Communists and their sympathizers from their respective organizations.

I believe that the Members of the Congress owe a debt of gratitude to the gentleman from Georgia and his colleagues on the committee. I think the overwhelming vote of last Thursday, when only 12 members of the House of Representatives voted against providing adequate funds for the committee, is the finest testimonial that can be given to the chairman of this committee and his colleagues. I have served in the House of Representatives, with the exception of several years during the war period while in military service, since 1940 and I am quite certain that this is the largest vote of confidence that the committee has ever received. It indicates that the Members of the House of Representatives appreciate the time and effort and intelligence of our distinguished friend from Georgia.

Unfair Attack

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by E. L. Shaner, editor in chief of Steel, titled "Unfair Attack." Being a member of the Joint Committee on the Economic Report, I feel that this is a fair appraisal of the hearings that were held, and quite

agree that Mr. Shaner's criticism of the methods used by the majority members of the committee is justifiable:

Careful examination of the majority report of the Joint Committee on the Economic Report on steel prices shows it to be unbelievably loaded with prejudice, vindictiveness, and deliberate misrepresentation.

Therefore, it is not surprising that six dissenting members of the committee, in a minority report, felt called upon to cite chapter and verse in a score or more of instances wherein the majority of eight displayed bias, usually by distorting or ignoring pertinent evidence. Nor is it surprising that Senator RALPH E. FLANDERS, in an individual comment on the majority report, said: "I am sorry that the joint committee is putting out reports of this caliber and I find myself astonished that some of my respected associates on the committee have read it so carelessly that they are willing to sign it."

To these charges of unfairness we could well add our resentment that the author of the majority report lifted 13 words out of an article appearing in the December 26, 1949, issue of this publication and in so doing deliberately gave a false impression of the real meaning of our text.

After reading the majority report it is apparent what happened. When United States Steel raised prices, Senator O'MAHONEY burst out in immediate, hotheaded criticism. He was unimpressed by evidence presented at the hearings. Staff members who drafted the report very likely took their cue from the chairman and thus slanted it against the steel companies in shameful fashion. It is quite possible that some members of the committee who signed it were not aware of its bias.
